| 465 | Anonymous                  | Part 3: Summary for Decision-Makers | ge              | We have stated elsewhere in the document that we do not support the two-tier implementation approach. We also consider it a real problem that the IC "recognizes that some carbon-crediting programs will likely meet a significant number of the criteria and requirements." This indicates that the IC is fully aware of the degree of disruption this will cause in the VCM, yet it has not made any plans to mitigate its impact. Serious attention to this very significant problem would be welcome.                                                                                                                                                                                                                                                                                                                                                                                                        | See above.                                                                                                                |

| 471 | Anonymous                  | 0                                   | ge              | With respect to Section F: Sustainable Development. The provisions under this section will in all likelihood be overly onerous for project developers to meet and carbon crediting programmes to monitor, to the point that this consideration becomes impossible to fulfil. While we are not denying that they are critical to consider, the level of scrutiny for projects will depend on the type of project being implemented, the size of the project and the location of the project. For example, projects in the land/forestry sector could well require greater scrutiny than those focusing on renewable energy or recycling, for example. This is alluded to through reference to the Cancun Safeguards , Forest Carbon Partnership Facility and BioCarbon Fund Initiative, but requirements for projects outside of this sector are not distinguished (similar to what is done for permanence below). | This section should be rewritten to indicate that the level of analysis should be linked to the project type and context. |

| 484 | Anonymous                                       | 0                   | te              | Standards and VVBs must improve their collaboration to ensure a higher level of consistency in the processes of certification. When the very same subject, issue, activity design, etc. is assessed differently by two different auditors that share the same Standard guiding principles, this is a signal of market weakness. The occurrence of these situations should be minimized over time.                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| 485 | Anonymous                                       | 0                   | te              | The text reads "Sometimes, accounting systems interact which leads to a situation in which claims necessarily overlap. This kind of "double counting" is not problematic as it is a natural part of a nested accounting system. For instance, the emission reductions counted towards a state target might also be counted towards a national target. The emission reductions achieved by a company towards its target might also be counted by the state or country in which it resides". Suggestion to include "as long as this very same certified emission reduction or removal is not exported by the host country to offset the emissions of a third country". | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| 488 | Anonymous            | 0                   | te              | · ICVCM must be clear about how it will handle scenarios where programs permit many different approaches for demonstrating additionality, and where programs may permit projects to use methodologies developed under other programs. For instance, Verra permits methodologies to use various approaches to demonstrating additionality (positive lists, CDM additionality tool, etc.). Likewise, Verra allows projects to apply methodologies that were developed under the CDM, each of which may use a different approach to demonstrating additionality. This leads to a web of different approaches for demonstrating additionality that Verra projects can apply, and the ICVCM assessment must be clear on how it assesses these layers of scenarios. | NA                                                                                                                                                                                                                                                                     |
| 488 | Anonymous            | 0                   | te              | · ICVCM should consider the fact that additionality is a dynamic concept i.e., what is additional today may not be additional in a few years (as it happened with solar PV). Moreover, additionality is not a binary concept. There are projects that are more additional than others.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                      |
| 488 | Anonymous            | 0                   | te              | · ICVCM should help establish the frameworks to value externalities and impacts beyond carbon. This way, projects with higher co-benefits which, in turn, are more additional than other projects that "just" fight climate change e.g., enabling low deforestation land uses in which human society and biodiversity thrives has a higher intrinsic value than changing a boiler fuel type and should be more attractive activities to certify (and already are in the voluntary market).                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                      |
| 489 | Anonymous            | 0                   | ge              | It is not clear whether ICVCM intends to assess these principles for every methodology in the market. This seems an infeasible initiative given the sheer volume and complexity of methodologies in the space. How would ICVCM intend to assess these principles in light of this inherent problem of scope?                                                                                                                                                                                                                                                                                                                                                                                                                                                  | NA                                                                                                                                                                                                                                                                     |

| 490 | Anonymous            | 0                   | te              | Despite the good intentions of this approach, if ICVCM's mission is to ensure a baseline level of integrity of offset credits, then it should not put in place OPTIONAL criterion such as this sort of label.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                      |
| 491 | Anonymous            | QUESTIONS           | ge              | The principles, criteria and the requirements are clear. The headlines are selected explanatory. The biggest point is all those principles, criteria and requirements have to be updated on time in each year. The VCM is changing so fast, for this reason it will not be enough to update those data for once in a fiscal year. The most significant trends also have to be added in the principle, criteria and requirement parts. I.e. the problem related with the renewable energy technologies for carbon reduction, the significant increase of technology-based removals etc.                                                                                                                                                                        | -                                                                                                                                                                                                                                                                      |
| 492 | Paul Renaud          | QUESTIONS           | ed              | It is important to express the principles exactly once in the materials to prevent the possibility of conflicting descriptions as the standard is evolved over time. The assessment framework is an expansion on the principles, so expression of the principles earlier in the standard should be at a sufficiently high level as to not conflict with more detailed elucidation later. Since the devil is always in the details, the assessment framework and procedure need to provide guidance as increasing level of detail is provided.                                                                                                                                                                                                                 | The Core Principles should express intent and context. The Assessment Framework should provide clarification and examples, but not a restatement of purpose. The Assessment Procedure should be terse and focus on steps required under the guidance of the framework. |

| 494 | Guy Pinjuv           | QUESTIONS           | ge              | There are also fairly low quality standards that have produced high quality projects that would not be approved by your system (see Plan Vivo, this is a high level ex-ante crediting system meant to provide finance for projects in developing countries and has yielded some high quality projects in terms of climate benefits). We feel like the expert review and core carbon principles assessment framework should take projects and standards like these into account. To address these issues, we also feel that a project level review could be done at a results level. See linked blogpost to a dynamic observed baseline for carbon crediting .                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 494 | Guy Pinjuv           | QUESTIONS           | ge              | All standards use some version of a baseline where a hypothetical future is predicted with historical data, and this is not necessary for all credit types with new technologies (e.g., forest carbon avoided deforestation projects could use new remote sensing, artificial intelligence, and machine learning algorithms to observe "control projects" for an observed baseline rather than a predicted future).                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 494 | Guy Pinjuv           | QUESTIONS           | ge              | One example where crediting programs have not kept pace with the dynamic external market environment and new technologies is that none of the existing standards or methodologies currently use a dynamic observed baseline for carbon crediting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 494 | Guy Pinjuv           | QUESTIONS           | ge              | See: <a href="https://pachama.com/blog/4-ways-dynamic-baselines-can-transform-carbon-crediting/">https://pachama.com/blog/4-ways-dynamic-baselines-can-transform-carbon-crediting/</a> . We believe the use of a dynamic observed baseline should be a criterion where possible.                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 494 | Guy Pinjuv           | QUESTIONS           | ge              | Are the most important principles, criteria and requirements included in the draft CCPs and the draft Assessment Framework?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | See general comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 494 | Guy Pinjuv           | QUESTIONS           | ge              | At a high level, the most important principles, criteria, and requirements appear to be included in the draft CCP's. It is worth noting that the most granular level of approval by the council is at the 'methodology' level. While we agree that standards, credit types, and ultimately methodologies are a good indicator of credit quality. It is Pachama's stance that both good and poor projects can be the result of the same carbon methodology and the distinction is project implementation. We would like to see a review of the project's design and implementation plan of a methodology where possible, as this is where the gaming tends to occur (e.g., assumptions that would affect baselines). | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 494 | Guy Pinjuv           | QUESTIONS           | ge              | Approval by the council appears to be a replication of the role that registries currently play, and could potentially slow down scaling of the voluntary carbon market by adding an additional step in the process to credit issuance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 494 | Guy Pinjuv           | QUESTIONS           | ge              | Are there principles, criteria and requirements that are not relevant or should not be included in the draft CCPs and draft Assessment Framework?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 494 | Guy Pinjuv           | QUESTIONS           | ge              | No, we felt that all included criteria and requirements are relevant                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 494 | Guy Pinjuv           | QUESTIONS           | ge              | Are there principles, criteria and requirements that are not included and should be added?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 494 | Guy Pinjuv           | QUESTIONS           | ge              | Yes, see above answer. We believe that there should be requirements for project design and implementation, with guidance for a minimum set of data transparency. There is a huge range of project quality within the same standard.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 495 | Aya Yamazaki         | QUESTIONS           | ge              | As I stated elsewhere, the idea to limit the use of VCs to only Scope 3 and beyond should be discarded and eliminated.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Modification of the text in accordance my comments is requested.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 495 | Aya Yamazaki         | QUESTIONS           | ge              | For the transition, VCs are indispensible for Scope 1 and 2 reduction.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 497 | Anonymous            | QUESTIONS           | ed              | ICVCM should not go down to the level of approving individual methodologies or projects. This would be cumbersome and instead of scaling up the market lead to a waterhead function with infinite delays for sustainable development & low carbon projects.                                                                                                                                                                                                                                                                                                                                                                                                                                                         | ICVCM should rate types of credits (ex-ante / ex-post, emission reduction / removal, CA/non-CA, quality standard / low quality standard), but not go into the level of individual methodologies or projects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 498 | Calvin Tran          | QUESTIONS           | te              | One concept we would like to see further guidance on is buffer pools. Currently, there are not many existing science-based guidelines or standardized norms and criteria for developing robust and resilient buffer pools. We would like to see guidance on the minimum requirements for buffer pools to meet some threshold of force majeure reversals over 50-year and 100-year commitments, as well as what role buffer pools could play against "avoidable" reversals (which are primarily protected against through program design).                                                                                                                                                                           | We would like to see criteria for additionality that speak more to the scientific rigor and innovation from smart project designs. Referencing CCP#1 on additionality, we are surprised that the primary criteria for carbon-crediting programs only go so far as to seek out financial (Criterion 8.1 and 8.6a) and legal (Criterion 8.4) requirements for additionality. For example, a project's methodology that utilizes a dynamic baseline rather than projected estimates of a baseline is a more rigorous and conservative methodology for carbon accounting, and the use of a control group for accounting could be an alternative qualification on which to rank the likelihood of additionality as "Very high" or "Medium." |

| 498 | Calvin Tran                      | QUESTIONS           | te              | We have no concerns with the list of principles. However, we take issue with financial assessments being given primacy as a criterion for additionality. This criterion would exclude grouped smallholder projects where financial conditions vary within the project, and is an unnecessary condition when dynamic baseline approaches to additionality (described further in the additionality section of our comments) are implemented properly.                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                           |
| 499 | Arnold Hui                       | QUESTIONS           | ge              | ICVCM shall not tinker with the functions of project/methodology approval for potential conflict of interest as the draft principles play a critical role for the approval assessment process.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Suggest to segregate the function of standard-setting and that of approval.                                                                                                                                                                                                                 |
| 501 | Pietro Carpena                   | QUESTIONS           | te              | Local/indigenous governance (which encloses the aspect of inclusion) is an important element that i do not see sufficiently underlined in the carbon principles. Should we not be much more vocal with regards this aspect and how we must ensure local communities are duly leading when it comes to high quality carbon projects.                                                                                                                                                                                                                                                                                                                                                                                       | We would like to see criteria for governance that speak more on locally-led governance.                                                                                                                                                                                                     |
| 501 | Pietro Carpena                   | QUESTIONS           | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Also need more on benefit-sharing in the principles and attributes                                                                                                                                                                                                                          |
| 501 | Pietro Carpena                   | QUESTIONS           | te              | Also little on benefit-sharing. should the principles be more vocal on this aspect to ensure a strong component/ proportion of the project finances directly benefits the local community                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                           |
| 502 | Anonymous                        | QUESTIONS           | ge              | We welcome the work of the IC-VCM and is fully supportive of its mandate to create a set of universally applicable core carbon principles that signal integrity in voluntary markets. Today, it is critical to build trust in carbon markets to ensure that they can deliver their fullest potential of urgently funnelling finance towards climate action, nature conservation and sustainable community development.                                                                                                                                                                                                                                                                                                    | None                                                                                                                                                                                                                                                                                        |
| 502 | Anonymous                        | QUESTIONS           | ge              | Overall, we support the Core Carbon Principles. However, we have some concerns about the stringency of criteria and requirements laid out in the Assessment Framework as they could hamper the market's ability to scale by adding multiple requirements that increase cost, add market uncertainty and or distort the market away from nature-based solution. Indeed, the assessment methodologies in many cases do not currently exist or cannot easily be applied. Moreover, the monitoring and governance systems required to enforce these criteria involve tremendous resources and pose a potential multi-year bottle neck in bringing CCP units to market, at a time when it is key to accelerate climate action. | 0                                                                                                                                                                                                                                                                                           |
| 502 | Anonymous                        | QUESTIONS           | ge              | We do not see additional principles or criteria to be included among the CCPs. We only point out that within the Type of mitigation activity:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                           |

| 505 | individual/employee, Farm Africa | QUESTIONS           | ge              | The list is derived from 'best practice' of donor and WB funded experiences over the last 10 years, guided by solid 'market economics' from the Council's Board. In this approach, the market is the main focus and the impact this market might have on local communities is looked at under a 'safeguards' framework to assess the 'sustainable development' credentials of the carbon credit awarding scheme – i.e.: to what extent does this market represent a risk to local communities, alongside its risk to the environment.                                                                                                                                                                                     | · Rename 'Sustainable Development' as 'Environmental Sustainability' and add a new principle of 'Social (or Just) Development'                                                                                                                                                              |
| 505 | individual/employee, Farm Africa | QUESTIONS           | ge              | This is unsatisfactory. First of all, it appears to consider local communities not as market agents but as collateral. Secondly, it considers communities in the same 'box' as 'the environment' (biodiversity, pollution, ...), which could potentially lead to social impacts being offset against environmental ones.                                                                                                                                                                                                                                                                                                                                                                                                  | · Consider 'Social (or Just) Development' in terms of:                                                                                                                                                                                                                                      |

| 507 | Individual/employee, Radicle             | QUESTIONS           | ge              | The criteria being used by the IC-VCM is too stringent and will leave the possibility for most standards - if not all standards - to not participate. Specifically the areas around Additionality, Permanence, Paris A6, and SDGs are way to stringent and that as of currently, no standard and no compliance mechanism would be able to even attain CCP designation based on the current criteria. The IC-VCM may make itself irrelevant if its recommendations are seen as killing or hampering the market. While the IC-VCM has looked at the right set of principles, the thresholds being set are nearly untenable.                                                                                                                                                                     | See above comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 508 | Individual/employee, NBS Brazil Alliance | QUESTIONS           | ge              | In general terms, the NBS Brazil Alliance supports the Core Carbon Principles. Though, our members have some concerns that the criteria and requirements presented in the Valuation Framework could bring some difficulties to the market, especially regarding limiting projects applicability due to some proposed requirements.                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Considering the importance of Natural Climate Solution (NCS) projects, it is frustrating that their approach has not been more expressive in the texts available for public consultation. The Assessment Framework places conditions that could not be met by most NCS projects, mainly with regard to additionality and permanence. In other words, NCS projects, which are so important for us to reach the net-zero emissions target, would probably not be eligible under the CCP.                                                                                                                                                                                                                                                                         |

| 509 | Anonymous                                | QUESTIONS           | te              | The document refers to the key role of LCIP in the stewardship of forests, climate, biodiversity, etc., however, this is not reflected as a stand-alone CCP. Our view is that emission reductions and removals can only be sustainable over time if LCIPs have "full ownership" to design their own mitigation strategies in a way that solves their priority societal challenges (Seddon et al. 2021). By "full ownership" we mean that LCIP's land tenure rights are recognized, that social organization and governance are enhanced, that sustainable management of their lands is promoted, and that locally-controlled enterprises are developed (Rainforest Alliance, 2021). "Full ownership" means that LCIPs have sufficient autonomy to address their priority societal challenges. | We suggest that the ICVCM help us evolve our traditional concepts of "carbon project" and "consultation" by including a new CCP requiring that LCIPs have "full ownership" of projects. Not only is this a moral and ethical imperative, but it is also strategic to promote sustainability (Seddon et al. 2021), i.e. permanence of mitigation outcomes. Working with local and indigenous organizations must be based on the principles of partnership, program ownership, long-term commitment, flexibility and a multiplicity of actions and solutions (Rainforest Foundation, 2022). This is how we propose the ICVCM to "go beyond widely established best industry practices on social and environmental safeguards" as currently included in the CCPs. |
| 510 | Anonymous                                | QUESTIONS           | ge              | The Assessment Framework also significantly deviates from the approaches currently used by all of the Registries in multiple ways. While continual improvement is always desirable, these deviations are rarely explained and without a rational, it is challenging to rationalize the significant investments that will be required from current market participants (e.g., projects, programs, Standards, Validation and Verification Bodies. We believe such deviations should be justified by either scientific review, practical application or demonstrated gaps in current market approaches that they are intended to correct.                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 510 | Anonymous                                | QUESTIONS           | ge              | As currently drafted, the CCPs and AF will likely directly conflict with the ICVCM's core objectives – they interject unnecessary uncertainty, increase cost, and intrude on key commercial information with related legal matters to the extent that the market will stall and not expand, registries could choose not to participate, and developers will develop off registry (and reduce transparency and credibility). Furthermore, they pose the very real risk stranding existing investments in large scale mitigation activities (including, for example, the \$1 billion that has been raised under LEAF for jurisdictional REDD+ credits) and halt new investments.                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 510 | Anonymous                                | QUESTIONS           | ge              | Some CCP requirements will also push project developers toward creating credits off registry – which means that they will develop and sell carbon credits without due regard to registry quality requirements and tracking. This is already a significant issue and could be made worse because of several of the CPP suggested requirements.                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 510 | Anonymous                                | QUESTIONS           | ge              | In addition, a variety of the ICVCM requirements will create significant market uncertainty, which can impact the ability of the market to scale. Document 4, page 74. Identifies that the ICVCM Expert committee will assess methodologies for their robustness. Robustness can be a subjective measure and it creates the potential for ICVCM to undermine and substitute its own opinion for the rigor of the protocol development process. We recommend that Registry staff and protocol working group members be a large part of any assessment process.                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| 510 | Anonymous            | QUESTIONS           | ge              | Document 4, page 23. Requires protocols (or projects) to be “net zero consistent”. Net zero consistent is subjective and depends on the timing of crediting, jurisdiction, and sector. If a project meets all of the other requirements including additionality, there is no need for an additional screen for net zero consistent.                                                                                                                                                                                                                                                                                                                                     | 0               |
| 510 | Anonymous            | QUESTIONS           | ge              | All offsets should be of the highest quality, reflecting reductions, avoidance or removals that are additional to those that would occur in the absence of demand for the offsets; are measurable and verified by a third-party, and are generated from activities and programs that have measures in place to address risks of non-permanence and leakage. In addition, they should be associated with a credible standard-setting body that provides transparent and processes for registration, validation, monitoring, verification, methodology assessment and revision over time, and retirement tracking.                                                        | 0               |
| 510 | Anonymous            | QUESTIONS           | ge              | Recognized, science based, peer-reviewed registries have a long, credible history and should have the primary role in assessing and establishing their methodologies. This is where regionally necessary, and topic specific experts reside. In addition, they should continue to regularly review existing methodologies including baseline determination, additionality assessment and monitoring and quantification protocols to reflect the latest science, economic and technological advances, or changes in domestic regulation. ICVCM should not substitute its untested technical review for peer-reviewed, expert processes currently used by the registries. | 0               |
| 510 | Anonymous            | QUESTIONS           | ge              | Document 4 page 17. Timing crediting periods to alignment with the Paris agreement. When credits are officially “authorized” for use under the Paris Agreement, they will still be created under the rules and procedures in voluntary registries and thus their timing will depend on their development. Changing the start dates for credits created prior to 2031 could result in some projects potentially being cut short, which could decrease their value and viability. This will again create uncertainty and lessen investment in projects that could potentially be “authorized”.                                                                            | 0               |
| 510 | Anonymous            | QUESTIONS           | ge              | Document 4, page 17. Defining key indicators of performance different from the criteria identified like additionality, permanence, etc. will interject additional uncertainty. The suggestion, for example, to use a "rate-based" performance metric is an example where a different metric is unhelpful. Each project is ostensibly reducing emissions and making its own contribution. Projects should not be penalized by buyers for being "inefficient" compared to others following the same methodology, especially given the numerous site-specific externalities that can impact performance.                                                                   | 0               |

| 510 | Anonymous            | QUESTIONS           | ge              | The explicit connection to social benefits, for example, is excessive. As a project developer, Anew presently identifies SDG benefits (co-benefits) in every carbon emission reduction project we develop. This is not about the integrity of the climate emission reduction but about the emission reduction's co-benefits aligning with carbon credit buyer preferences. These co-benefits do not affect the empirical impact in meeting climate goals. While social issues are of critical cultural importance, adding SDG co-benefits as an offset qualification to the CCPs will materially slow the qualification process of offsets, delay the uptake of the ICVCM offset characterization, and candidly cause transaction confusion. We have lived this out over the last several years. Moreover, there are no time and market tested quantification platforms (acknowledging the IFC platform among others). | 0                                                                                                                                                                                                                                                                                                                                                                                                             |
| 510 | Anonymous            | QUESTIONS           | ge              | The excessive nature of the required social benefit quantification could also limit and skew project development away from projects that create these benefits because the development costs for these types of projects will be much higher than projects that don't create these extra societal benefits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                             |
| 510 | Anonymous            | QUESTIONS           | ge              | First Question: Yes, but many of the CCP's go beyond carbon and, in doing so, interject unnecessary uncertainty, increase cost, and intrude on key commercial information with related legal matters. Unquestionably, these will negatively impact VCM adoption and scalability.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | n/a                                                                                                                                                                                                                                                                                                                                                                                                           |
| 510 | Anonymous            | QUESTIONS           | ge              | In addition, some of the assessment framework and related criteria include provisions that require subjective criteria, like "robust" or net-zero aligned. The meaning of these requirements is not clear at this point and should these be used by an Expert Panel to assess methodologies and programs, it is unlikely they will produce consistently applied outcomes, especially when applied by different reviewers because they are open to interpretation.                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                                             |

| 510 | Anonymous            | QUESTIONS           | ge              | We support the need for high quality credits, the emphasis on transparency and use of Registries like CAR, VCS, ACR and Gold Standard. We also agree with the importance and need to scale the VCM so that it can provide meaningful financial assistance to address climate change. Clearly the ICVCM spent considerable time and gave significant consideration to many of the key issues facing the carbon market today. Nonetheless, several of the requirements, we believe are at odds with the stated goal of helping the market to scale.                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                                             |
| 510 | Anonymous            | QUESTIONS           | ge              | All in all, we believe a more simplified list of topic-based criteria across all topics (for both projects and programs) covered by the ICVCM would be much better from a practical perspective than the detailed and prescriptive requirements identified for both registries and projects. Criteria could provide the additional rigor sought by ICVCM while also providing flexibility needed to accommodate the various registries, project types, governance structures and scale of the existing carbon market. Such a system builds on the detailed and peer reviewed requirements already in existence without substituting the judgement of potential non-experts.                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                             |

| 510 | Anonymous            | QUESTIONS           | ge              | While REDD qualifications are discussed, due to the meaningful scale and impact of REDD, there are inconsistencies and discrepancies that need to be addressed in non-REDD and REDD projects – such as permanence and additionality.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                             |
| 511 | Emma van de Ven      | QUESTIONS           | ge              | 2. The carbon farming perspective is falling short. Most of the criteria are geared towards a carbon credit portfolio of classic forestry-based mitigation activities, while farm-based MAs require a different approach                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 2. Include supply chain mitigation activities under double claiming risks, acknowledge the (im)permanence of farming and handing over the farm to the next generation when addressing permanence, acknowledge the importance of the side benefits of carbon farming (soil health, biodiversity, food security and livelihoods of smallholder farmers for example) before punishing shorter permanence periods |
| 511 | Emma van de Ven      | QUESTIONS           | ge              | 3. The focus on removals, as the latest IPCC report suggests, is lacking. Limitations on removals are disproportionate due to the penalty for shorter permanence periods & quantification models that need to be extremely accurate (comparing models that can quantify year-on-year changes in biomass with models that quantify standing stock of carbon). This is prohibitive for any NBS removals project, compared to classic avoided deforestation programmes                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 3. Removals are absolutely key and should not be discouraged compared to avoided deforestation or emission reductions. There should be guidance on adding relatively more emphasis on removals (according to the VCM standards for example, or the WBCSD's guide for credit buyers, or through higher price incentives), not a higher penalty for the related impermanence                                    |
| 511 | Emma van de Ven      | QUESTIONS           | ge              | 4. Guidance on benefit sharing is extremely limited.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 4. Not benefit (profit) shares should be transparent, but the full business case of the programme, including fee payments to project developers, should be transparent. This is essential when dealing with IPLC & smallholder landowners who depend on their land for their livelihoods.                                                                                                                     |

| 511 | Emma van de Ven           | QUESTIONS           | ge              | 1. One major thing that is missing is transparency on costs and payments. Who pays for the CCP "stamp", what costs are charged by the ICVCM, how does the ICVCM ensure objectivity?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 1. Add a full chapter on the functioning of the ICVCM, with complete transparency on costs made, prices of assessment for carbon crediting programmes, etc. Currently, this is too opaque to offer the security of objectivity.                                                                                                             |
| 512 | Anonymous                 | QUESTIONS           | ge              | · In order to use the CCPs to assess the quality of credits certified under existing carbon-crediting programs (e.g., VCS/Gold Standard), it would be useful for the IC-VCM to issue more detailed additional specific guidance according to credit types. For example, additional guidance would be appreciated for AFOLU-related projects, particularly where risks are greater/there are higher levels of uncertainty under the principles of permanence, robust quantification of emissions reductions/removals and prevention of leakage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                           |
| 512 | Anonymous                 | QUESTIONS           | ge              | · The most important principles are covered in the draft CCPs and the draft Assessment Framework.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | n/a                                                                                                                                                                                                                                                                                                                                         |
| 512 | Anonymous                 | QUESTIONS           | ge              | · Our concerns related to specific criteria and requirements (either too stringent or too broad) are covered in other comments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                           |
| 513 | Anonymous                 | QUESTIONS           | ge              | We agree with the principles and criteria as presented, and applaud the ICVCM for including key elements such as incorporation of SDG's, as well as the focus on transparency and comparability/standardization. However, the approach taken for ensuring implementation of these principles and criteria requires modification. The most impactful and important role of the ICVCM is to set this threshold, not to decide in detail how each standard will meet it. The standards, methodology development processes, and market functions at this level represent a much broader and deeper experience, evolution, and learning than any one committee at ICVCM could capture. The ICVCM should seek to tap into, not replace, this depth of experience. If the ICVCM seeks to engage and govern at the level of the methodologies themselves, it will both damage the existing integrity of systems in place as well as set an unrealistic work plan and timeline for itself, and set up an unhelpful relationship between itself and the standards. To govern at the level proposed would be an unprecedented, unnecessary and destabilizing move. It would represent undue concentration of influence and unhelpful constriction of expertise and input in addition to being obviously unrealistic. | The ICVCM should set the minimum threshold for quality and set up a process whereby standards can inform and improve how they can meet that threshold in a clear and comparable manner.                                                                                                                                                     |
| 515 | Individual/employee, BBVA | QUESTIONS           | ge              | Too many principles can render their application more difficult.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Regarding "Transition towards Net-Zero Emissions", we believe it is not robust enough to serve as a Core Principle. CCPs should be about guaranteeing that carbon credits meet high quality standards. Limiting the amount of carbon credits companies can purchase is a matter already addressed by SBTi and other industry organizations. |

It is indirectly included in the "Robust quantification of emissions reductions and removals" principle but it deserves stronger focus as part of the principle.                                                                                                                                                          |
| 515 | Individual/employee, BBVA | QUESTIONS           | ge              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Finally, there should be more explicit emphasis on monitoring. Programs should ensure that the most recent technology is used for measuring and monitoring the appropriate development of the assets carbon credits are based on.                                                                                                           |
| 515 | Individual/employee, BBVA | QUESTIONS           | ge              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | In addition, the principles of "Program governance" and "Robust independent third party validation and verification" show some commonalities which could make them somewhat redundant.                                                                                                                                                      |
| 516 | Molly Brown               | QUESTIONS           | ge              | The principle of "Do no harm" is missing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | .                                                                                                                                                                                                                                                                                                                                           |

| 517 | Anonymous                                     | QUESTIONS           | ge              | XXXX advocates for the retention of Sustainable Development Impacts (SDI) as a Core Carbon Principle. They are an integral requirement for mitigation activities, especially Natural Climate Solutions (NCS). Even for mitigation activities that are not nature-based, there is evidence of displacement, poverty, and other harm to IPLCs from renewable energy projects. (See: <a href="https://www.business-humanrights.org/en/mozambique-heather-grady-says-sustainable-investments-are-not-always-what-they-seem-often-harming-communities-livelihood-their-land-rights">https://www.business-humanrights.org/en/mozambique-heather-grady-says-sustainable-investments-are-not-always-what-they-seem-often-harming-communities-livelihood-their-land-rights</a> ) It would thus be dangerous to relegate SDI impacts to an attribute, since now is the time for the industry to take a strong stand to deliver positive impacts to key stakeholder communities, which would ultimately also benefit the projects and programs. | As we retain positive SDI as a CCP, we support a ramp up or ratchet mechanism that starts off at current best practice without disrupting the market and increases ambition over the years such that all mitigation activities deliver positive SDIs. We are keen to engage with the IC VCM to explore the timeline for this ambition, to understand the time requirements for different project types, and other relevant questions.                               |
| 517 | Anonymous                                     | QUESTIONS           | ge              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Avoiding negative impacts on IPLCs and enabling participation of key stakeholders should be part of the initial threshold for all mitigation activities. From here onwards, an ideal ratchet would first incentivize mitigation activities that benefit biodiversity and community, secondly require qualitative assessment of SDI, and later dictate the requirements for quantitative SDI assessment as SDG reporting metrics improve in the market.              |
| 518 | Anonymous                                     | QUESTIONS           | ge              | XXXX would like to put forward IPLCs' strong support for positive impact on Sustainable Development Goals to be retained as a Core Carbon Principle. For natural climate solutions (NCS) respecting IPLC rights and supporting our lives and livelihoods cannot be subject to a ratchet or ramp-up mechanism. It needs to be ensured at the Initial Threshold.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | It is true that further work is required to identify what metrics are suited to best measure SDG impact. However, as SDG reporting improves, the industry must continue to strive for positive impact of mitigation activities on lives and livelihoods. The Assessment Framework should require a qualitative assessment of positive SDG impacts in the beginning, and ratchet up to quantitative assessment of SDG impacts as and when the metrics are developed. |
| 518 | Anonymous                                     | QUESTIONS           | ge              | Even for activities that are not nature based, there is sufficient evidence that current practice has failed IPLCs. Carbon projects, such as wind power, renewable energy, and others have caused displacement, poverty and harm to IPLC lives and livelihoods in Mexico, Brazil, Ethiopia, Guyana, Malaysia, and Peru, Indonesia, The Philippines and more. (See: Reports from the Business Human Rights Centre and the United Nations Permanent Forum on Indigenous Issues).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Socio-economic development for IPLCs is an integral part of high-quality forest carbon, and not an additional attribute.                                                                                                                                                                                                                                                                                                                                            |
| 518 | Anonymous                                     | QUESTIONS           | ge              | Even though social progress and the protection of biodiversity have historically been labeled as “co-0 benefits” to carbon offset projects, they are in fact integral to reducing emissions from deforestation. This benefits both the communities and the project developers/proponents. Studies have shown that local forest communities with stronger rights and higher investments sequester more carbon (World Resources Institute, 2014 See: <a href="https://www.wri.org/research/securing-rights-combating-climate-change">https://www.wri.org/research/securing-rights-combating-climate-change</a> ). As the threats to biodiversity, climate change and forest communities increase, we need holistic solutions that acknowledge the interconnected nature of the issue. If social-economic impact is not included, the Core Carbon Principles will fail to address a key aspect of the problem at hand.                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 518 | Anonymous                                     | QUESTIONS           | ge              | Many argue that long-term carbon projects will only be sustainable if they also bring social and economic benefits at the local level, and reduce community members' reliance on exploitative activities (Xu et al., 2017 See: <a href="https://www.sciencedirect.com/science/article/pii/S0301479706002878">https://www.sciencedirect.com/science/article/pii/S0301479706002878</a> ). The carbon impact may ultimately be undermined if social-economic impact is not equally prioritized.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 519 | Individual/employee, ClimatePal Services GMBH | QUESTIONS           | ge              | Was a negative list of project types discussed? E.g. banning activities related to HFCs, large hydro, coal mines etc.?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Explain why negative lists and vintage are not considered                                                                                                                                                                                                                                                                                                                                                                                                           |
| 519 | Individual/employee, ClimatePal Services GMBH | QUESTIONS           | ge              | Was a cut-off date for project registration discussed? E.g. the year 2013 marks important changes in the offsetting market. A negative list of project types and further restrictions for the use of offsets in the EU ETS became effective after the first commitment period of the Kyoto Protocol 2008-2012. Offset programs have improved a large number of methodologies and tools to evaluate the additionality of offset projects and to monitor and calculate emission reductions since then.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 519 | Individual/employee, ClimatePal Services GMBH | QUESTIONS           | ge              | Was vintage of carbon credits discussed? A vintage requirement with respect to the issuance date of offsets could be added. Some experts say that a 5-year limit strikes the right balance between validity and practicality.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| 520 | Individual/employee, CLA | QUESTIONS           | te              | <p>Additionality is a critical principle. However, it is not necessary to specify a financial additionality test. If a nature-based project is additional then all the environmental services that it delivers are additional. Financial additionality tests disincentivise investment in nature based carbon markets as they make a project commercially less attractive, and should not be used for nature based projects. Financial additionality tests are also vulnerable to manipulation at the project level, and therefore a flawed way to determine additionality. Assessing additionality using baseline environmental and legal tests will ensure projects deliver genuine additional environmental benefits while being commercially attractive, thereby enabling private finance in environmental markets to scale. For further information please refer to the Broadway Initiative report: Financing UK Nature Recovery available at <a href="https://www.broadwayinitiative.org.uk/publications">https://www.broadwayinitiative.org.uk/publications</a>.</p> | As above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 520 | Individual/employee, CLA | QUESTIONS           | te              | <p>The Country Land and Business Association (CLA) is the membership organisation for owners of land, property and businesses in rural England and Wales. Our members own or manage around half the rural land in England and Wales and more than 250 different types of businesses.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 521 | Phil Cryle               | QUESTIONS           | te              | <p>A standardised scoring approach would be a critical enabler of fungibility across credit types and markets. This should be linked to the proposed risk-related assessment outcomes for certain offset quality attributes under the CCPs, such as additionality (i.e., very likely or medium, as per Figure 3, p. 45 and Table 40 p. 55 in Part 4: Assessment Framework) and permanence (i.e., low or zero risk of non-permanence as per Table 43, p. 61 in in Part 4: Assessment Framework).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <p>A standardised scoring approach would be a critical enabler of fungibility across credit types and markets. | 521 | Phil Cryle               | QUESTIONS           | te              | <p>One key barrier to a deep, liquid, standardised and scalable offset market is the fragmentation of the market and lack of “fungibility” of carbon offsets within and across carbon markets. The CCPs will contribute to fungibility by providing standardised criteria that different markets can use to establish the benchmark for eligibility in their offsetting programs. However, not all offsets that meet this benchmark standard will possess the same level of quality above that standard. There remains an inherent differentiation across offset units with respect to their performance against attributes of quality such as additionality, permanence, leakage risk, vintage and co-benefits.</p>                                                                                                                                                                                                                                                                                                                                                        | <p>One key barrier to a deep, liquid, standardised and scalable offset market is the fragmentation of the market and lack of “fungibility” of carbon offsets within and across carbon markets. The CCPs will contribute to fungibility by providing standardised criteria that different markets can use to establish the benchmark for eligibility in their offsetting programs. However, not all offsets that meet this benchmark standard will possess the same level of quality above that standard. There remains an inherent differentiation across offset units with respect to their performance against attributes of quality such as additionality, permanence, leakage risk, vintage and co-benefits.</p> |
| 521 | Phil Cryle               | QUESTIONS           | te              | <p>Despite the demand for “high quality” offsets (as demonstrated by the market premium they attract), there is currently no accepted standard for quantifying the equivalent performance of an offset unit across different quality attributes (and labelling / tagging it accordingly) in a way that provides an understanding, and facilitates a comparison of, offset unit quality.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>Despite the demand for “high quality” offsets (as demonstrated by the market premium they attract), there is currently no accepted standard for quantifying the equivalent performance of an offset unit across different quality attributes (and labelling / tagging it accordingly) in a way that provides an understanding, and facilitates a comparison of, offset unit quality.</p>                                                                                                                                                                                                                                                                                                                          |

| 521 | Phil Cryle           | QUESTIONS           | te              | The effective operation of the market in this way is dependent on robust information on the type / scale of offset qualities that is trusted by market participants and is comprehensive and consistent across jurisdictions and voluntary markets. A blockchain enabled global 'super registry' where the tagged attributes (and scores) of offsets are tracked could enable cross-market transactions and ensure trust and transparency. This could align with the intention of this comment: "the Integrity Council is proposing standardised attributes for tagging carbon credits...As the market scales, the Integrity Council may consider more granular attributes" (p. 17 Summary for Decision Makers). Over time, market forces (supply and demand) would drive changes in the quality of offsets that are available on the market, with benchmark standards such as the CCPs playing an important role in safeguarding the required quality standard for market entry. | The effective operation of the market in this way is dependent on robust information on the type / scale of offset qualities that is trusted by market participants and is comprehensive and consistent across jurisdictions and voluntary markets. | 522 | Phil Cryle           | QUESTIONS           | te              | Nonetheless, transparency and integrity are critical enablers to scale carbon markets and so a balance is necessary to ensure the increased burden on project developers / marketers does not disincentivize investment. Instead of weakening the CCP criteria and requirements in response to this criticism, the Integrity Council could usefully explore ways to streamline CCP eligibility in a way that does not impinge on perceived or actual integrity of carbon offsets, such as the cautious use of "positive lists" that enable credit types / offset projects (for example) to qualify for CCP eligibility based on their broad characteristics.                                                                                                                                                                                                                                                                                                                      | Nonetheless, transparency and integrity are critical enablers to scale carbon markets and so a balance is necessary to ensure the increased burden on project developers / marketers does not disincentivize investment. | 522 | Phil Cryle           | QUESTIONS           | te              | · The proposed approach to having both an initial and full threshold is sensible as it will enable conformity with the CCPs whilst providing for an increase in standards over time. However we caution that the initial threshold should be set at a level that does not exclude the majority of credit types (methodologies) from globally recognized standards bodies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | · The proposed approach to having both an initial and full threshold is sensible as it will enable conformity with the CCPs whilst providing for an increase in standards over time. | 522 | Phil Cryle           | QUESTIONS           | te              | We are aware of the concerns raised by some market participants that a significant number of issued credits will struggle to meet the initial threshold criteria, and that demand for these credits will therefore disappear. We are not in a position to assess the veracity of this claim however we believe this warrants careful consideration from the IC. We deem this to be a plausible scenario because large buyers of offsets, such as BHP, face scrutiny of their offsets portfolio from investors and other stakeholders who may treat the CPP initial threshold as a minimum requirement. In this scenario, all other credits could be deemed 'low quality' in the market and demand would fall accordingly.                                                                                                                                                                                                                                                         | We are aware of the concerns raised by some market participants that a significant number of issued credits will struggle to meet the initial threshold criteria, and that demand for these credits will therefore disappear. | 522 | Phil Cryle           | QUESTIONS           | te              | The IC should therefore consider whether an acceptable quality threshold would serve the market better in combination with enhanced degrees of differentiation above the threshold for projects that perform better on quality dimensions, including co-benefits. Bond ratings provide a good example: there is a binary distinction between 'investment grade' and 'junk' bonds, and further levels of distinction within each category. The IC should consider where the initial threshold sits within the quality range: is it at B- or AAA+?                                                                                                                                                                                                                                                                                                                                                                                                                                  | The IC should therefore consider whether an acceptable quality threshold would serve the market better in combination with enhanced degrees of differentiation above the threshold for projects that perform better on quality dimensions, including co-benefits. The IC should consider where the initial threshold sits within the quality range: is it at B- or AAA+?                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 522 | Phil Cryle           | QUESTIONS           | te              | Any weakening of the criteria and requirements as they are currently set out in response to this consultation should be undertaken with caution so as not to risk undermining the objective of the CCPs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Any weakening of the criteria and requirements as they are currently set out in response to this consultation should be undertaken with caution so as not to risk undermining the objective of the CCPs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| 523 | Phil Cryle                                     | QUESTIONS           | te              | The ongoing storage of carbon within natural carbon sinks provides a value to society that is not recognised within the principle of additionality unless there is an emission reduction associated with avoiding an imminent threat of degradation / destruction of a carbon sink. However, proactive conservation of natural carbon sinks is critical to the global carbon budget. The widespread destruction of the global natural environment (Dasgupta Review, 2021) arguably means that all natural carbon sinks are at risk of depletion. Consideration should be given to how the proactive conservation of carbon sinks (where there is no immediate threat of destruction) can be incentivised through the carbon market / CCPs. For example, this could be via payments for the protection of high value carbon sinks (i.e., large tonne CO2e per hectare sites) that have accumulated over thousands of years and cannot be regained once lost. Instead of being considered low-quality on the basis of additionality (i.e., because there is no quantified emission reduction), these projects would enable payments for carbon storage as a critical ecosystem service. This is particularly relevant to jurisdictional REDD+ schemes as the ecosystem services supplied extend beyond national boundaries. | The ongoing storage of carbon within natural carbon sinks provides a value to society that is not recognised within the principle of additionality unless there is an emission reduction associated with avoiding an imminent threat of degradation / destruction of a carbon sink. | 523 | Phil Cryle                                     | QUESTIONS           | te              | The title of the principle “robust quantification of emission reductions and removals” suggests that it is primarily concerned with quantifying the gross reduction / removal of emissions from offsetting projects rather than the net reduction / removal, after leakage is accounted for. Given the importance of the issue of leakage avoidance to the actual and perceived integrity of carbon offsetting as a mechanism to reduce global carbon emissions, it could be given greater prominence in the CCPs, even if this is simply by amending the title of the principle to reflect leakage avoidance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | The title of the principle “robust quantification of emission reductions and removals” suggests that it is primarily concerned with quantifying the gross reduction / removal of emissions from offsetting projects rather than the net reduction / removal, after leakage is accounted for. | 524 | Individual/employee, Pavilion Energy Singapore                       | QUESTIONS           | ge              | It should be supplementary label added on carbon credits, not exhaust assessment to replace the existing validation/verification of the carbon projects. The full confidence should be granted for such aspects, additionality, robust validation/verification and emissions reduction quantifications, which has been well established in those carbon crediting programs.                                                                                                                                                                                                                                                                                                                                                                 | 0                                         |
| 525 | Anonymous                                                            | QUESTIONS           | ge              | Additionality is a key principle to determine the physical addition of a nature based carbon emission reduction or carbon sequestration project. It is not necessary or desirable to include a financial additionality test and the inclusion of this will act as a blocker on developing additional projects due to the way it is interpreted.                                                                                                                                                                                                                                                                                                                                                                                             | See above                                 |
| 525 | Anonymous                                                            | QUESTIONS           | ge              | Project funding may come from multiple sources but that has no physical bearing on whether the project is additional and takes no account of the level of incentive required to create behavioural change.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                         |
| 526 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | QUESTIONS           | ge              | · Issues related to Paris Agreement alignment: We do not recommend that the ICVCM require a share of proceeds to benefit the Adaptation Fund, an OMGE or require corresponding adjustments for all voluntary transactions, which is just another burden on governments and Indigenous Peoples. These provisions can be optional.                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                         |
| 526 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | QUESTIONS           | ge              | · Transition to net zero emissions: All agree that carbon offsets should not be the only tool employed and that purchasers must also work on reducing their own emissions. However, carbon offset projects and programs can be an immediate means of achieving greater ambition while longer internal emission reduction projects are designed and implemented. It is not clear why it is necessary for the ICVCM to evaluate this criterion for projects. We recommend that ICVCM remove this requirement as it is outside the mandate of carbon programs.                                                                                                                                                                                 | 0                                         |

| 526 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | QUESTIONS           | ge              | The current ICVCM draft Assessment Framework defines high quality in a way that no project or jurisdictional REDD+ program currently meets and creates an entirely new threshold for quality that goes beyond even the UN's ICAO framework and decisions on credits eligible for CORSIA in addition to the Paris Agreement itself. The fact that no crediting programs or credits in the market today will meet the current proposed ICVCM threshold and therefore will not be deemed CCP compliant will send a harmful signal to the marketplace. This creates a real risk that buyers stop investing in existing or forthcoming jurisdictional programs and that governments are disincentivized from developing jurisdictional programs. | 0                                         |

| 526 | Individual/employee, Emergent, the coordinator of the LEAF Coalition                               | QUESTIONS           | ge              | · Robust quantification of ERRs: 1) Remove the inclusion of international leakage until such time as better means of quantifying the value are obtainable. 2) Allow flexibility in nesting arrangements to be developed in line with Program requirements. 3) Do not require crediting periods to align with NDC reporting to permit crediting periods to begin when the project or program is ready and to be of a duration that is appropriate to the nature of the activity. 4) Remove the requirement for emission reductions and removals to be attributed to specific activities for jurisdictional programs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0               |
| 526 | Individual/employee, Emergent, the coordinator of the LEAF Coalition                               | QUESTIONS           | ge              | · Mitigation activity information: 1) Make reporting on transaction terms optional. 2) Do not require documents to be publicly available outside of what is required by the GHG Programs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0               |
| 527 | Individual/employee, Drax                                                                          | QUESTIONS           | ge              | While we broadly agree with the Core Carbon Principles, we do have two fundamental issues which we strongly suggest you address in the final publication:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | N/A             |
| 527 | Individual/employee, Drax                                                                          | QUESTIONS           | ge              | Transition from avoidance / reduction credits to carbon removal with permanent geological storage. If the world is to follow a 1.5°C pathway we need to reach Net Zero by 2050. Achieving this will require all residual emissions to be neutralized by removals. We would have expected the IC-VCM to take a stance on the need to fully transition from avoidance and reduction credits to removal credits by the mid-century. Furthermore, to stabilize our climate in the long run, removals will need to be permanent. Hence, we would also expect a clear signal on the need to increasingly transition to permanent removals through geological storage over time.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0               |
| 527 | Individual/employee, Drax                                                                          | QUESTIONS           | ge              | New CCP "Transition towards net-zero emissions". We welcome the principles behind this category. However, we disagree with one of its statements, which appears to set a negative tone towards the use of biomass, or at least is ambiguous in this regard. The document currently states that credits meeting the CCPs "shall not involve a technology or practice that constitutes an inefficient use of a resource, such as biomass, that might be important for climate mitigation". The IPCC and others make clear that BECCS is required at scale in order to meet global decarbonisation targets. We rather believe you should be encouraging the efficient use of biomass, by using residues that have zero or even positive leakage impact. Any such use of biomass should follow safeguards set by standard setters such as Sustainable Biomass Program (SBP), the Sustainable Forest Initiative (SFI), Forest Stewardship Council® (FSC®) and the Programme for the Endorsement of Forest Certification (PEFC). It goes without saying that any use of biomass should also adhere to the principles outlined in social / environmental impact section of the CCPs. | 0               |

It may be appropriate for verification bodies to have access to information which is not necessarily publicly disclosed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0               |
| 528 | Individual/employee, Grantham Research Institute, London School of Economics and Political Science | QUESTIONS           | ge              | The draft documents reflect a strong approach that pursues coherence with the Paris Agreement, allowing voluntary markets to serve as a mechanism for effective carbon finance at pace and scale. It is especially important in light of this 'pioneering' function that the provisions for integrity are not compromised. Growth of the VCM requires the perceived legitimacy of offsetting using carbon credits, and that social legitimacy in turn requires a step-change in the quality of projects and programmes issuing credits, compared with past experience. For these purposes, criteria on environmental and social safeguards and on compatibility with a net-zero transition are especially important to embed in the VCM at this juncture.                                                                                                                                                                                                                                                                                                                                                                                                                     | N/A             |
| 529 | Anonymous                                                                                          | QUESTIONS           | ge              | We think that key principles are covered in this draft, and more. You have managed to co-create a regulative framework that captures the essential: governance, transparency and robust quantification of real impact that can be attributed to the credit. We understand that compromises will be made after this consultation but hope that the key principles are not watered down.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | None            |
| 529 | Anonymous                                                                                          | QUESTIONS           | ge              | Clearly the carbon market today is not serving our climate targets. If the market was full of free-of-criticism and robust carbon credits issued by the current crediting programs, we would not need a new regulation. When that is not the case in the current market in general, the new regulation has to build integrity and be uncompromised in the key principles. The CORSIA is a good example of having to take a sub-set of credits within accredited programs to have the quality of credits needed for airlines, when CORSIA decided to exclude dubious vintages and methodologies from programs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0               |

| 529 | Anonymous            | QUESTIONS           | ge              | We believe you have the mandate and a possibility to become mainstream voluntary regulation to be followed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0               |
| 530 | Anonymous            | QUESTIONS           | te              | 3. In 4.1 Double Counting, The Criteria 'No double claiming with mandatory domestic mitigation schemes. We presume this is not referring to a country's NDC, in that a voluntary credit without a Corresponding Adjustment is eligible to county towards the NDC. It would be useful to make this distinction, for clarity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0               |
| 530 | Anonymous            | QUESTIONS           | te              | 4. As a general point, where feasible, it should be possible for each country to explain how various principles and criteria are met through national regulation and standards, rather than requiring each carbon credit programme to ensure they are meeting each ISO standard that covers those principles and criteria. This may be easier for domestic programmes rather than for global programmes, but should be an option.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0               |
| 530 | Anonymous            | QUESTIONS           | te              | Principles Not Relevant or that Should Not be Included: We think that the following criteria may either be impractical to apply or un-necessary given other legislative and policy measures that exist in different countries:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0               |
| 530 | Anonymous            | QUESTIONS           | te              | 2. Section 8 on additionality states that the assessment framework should first assess the "overall likelihood of additionality for the type of carbon credit based on the typical financial viability...". We understand the intention here but would add that some jurisdictions – such as the UK – are very heterogeneous and, therefore, generalisations on the likelihood of additionality should recognise that there is geographical variability in financial returns. For example, the financial viability of afforestation and peatland restoration will vary substantially across different areas of the UK.                                                                                                                                                                                                                                                                                                                                                | 0               |
| 530 | Anonymous            | QUESTIONS           | te              | 3. The consultation document proposes that 3rd party verifiers are rotated. Verifiers under the UK Woodland Carbon Code and soon for the UK Peatland Code are accredited to perform this function by the UK Accreditation Service. We think this proposal to rotate verifiers would be practically difficult and not workable in the UK where we currently only have two verifiers with different capacity levels.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0               |
| 530 | Anonymous            | QUESTIONS           | te              | 1. The principle on 7. Sustainable development impacts and safeguards states that activities "go beyond widely established best industry best practices on social and environmental safeguards". In the UK, all forestry projects adhere to the UK Forestry Standard ( <a href="https://www.gov.uk/government/publications/the-uk-forestry-standard">https://www.gov.uk/government/publications/the-uk-forestry-standard</a> which sets out a range of requirements and guidelines covering biodiversity, people, landscape, water, soil, historic environment and climate change. The UK Forestry Standard is internationally recognised as a measure of sustainable forest management. It would not be practical to suggest that all carbon projects exceed the standards set out in the UK Forestry Standard. We suggest the text is amended to say "meet high social and environmental standards in line with a fair and just transition to a low carbon economy" | 0               |
| 530 | Anonymous            | QUESTIONS           | te              | 1. The consultation document states that standards should contain information on legal underpinnings of carbon credits, including custody and liability provisions (including liability for over-issuance, responsibility for cancelling units issued in error). We suggest that standards focus on providing clarity and consistency on the need for effective contracts but that the detail of how such liabilities are addressed is a matter to be specified in individual contracts at a project level. We are seeing that projects are already taking action to address these issues. Greater consistency in contract specification by projects is a good way to address this issue.                                                                                                                                                                                                                                                                             | 0               |
| 530 | Anonymous            | QUESTIONS           | te              | 2. The consultation refers to the need for standards to meet the following ISO standards: ISO2600 (social responsibility) and ISO27001 (anti-bribery) and ISO20022 (anti-money-laundering). This is not a matter for carbon standards but is rather a wider legal issue which carbon standards have not been set up to address. We expect all projects to abide by all the laws that apply to business in the UK but it is not practical to incorporate these into carbon standards themselves.                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0               |

| 530 | Anonymous                                  | QUESTIONS           | te              | 4. There is also a proposal that SDG benefits are quantified by carbon standards. We think that the priority must be that standards provide assurance that no harm is being done. Second, there should be evidence that projects are adhering to high standards of social and environmental sustainability in line with sustainable development goals; the UK Forestry Standard provides this evidence in the UK for afforestation projects. Some quantification of SDGs may be possible but a proportionate approach is needed that does not add undue burden to projects when they are already, in the case of forestry, demonstrating high standards of sustainable forest management.                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                       |
| 530 | Anonymous                                  | QUESTIONS           | te              | Inclusion of important principles: Generally, these are the principles that we'd expect to see, and we support them. We have a note of caution on a few points:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | See Comments Above                                                                                                                                                                                                                                                      |
| 531 | Individual/employee, Oxford Net Zero       | QUESTIONS           | te              | Question Are the most important principles, criteria and requirements included in the draft CCPs and the draft Assessment Framework?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Add the principle of co-benefits and positive outcomes for local and indigenous communities, active participation of stakeholders (in both the market design and governance as well as in project design and implementation) and ensure compatibility with human rights |
| 532 | Individual/employee, KOKO Networks Limited | QUESTIONS           | ge              | The program governance shall include requirements for programs and VVBs to implement robust system for data management and protection.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | n/a                                                                                                                                                                                                                                                                     |
| 533 | Sadie Frank                                | QUESTIONS           | te              | Are the most important principles, criteria and requirements included in the draft CCPs and the draft Assessment Framework?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | See our comment.                                                                                                                                                                                                                                                        |
| 533 | Sadie Frank                                | QUESTIONS           | te              | At a high level, the draft CCPs and the draft Assessment Framework cover the key principles, criteria, and requirements that are relevant to carbon market integrity. We are glad to see the IC-VCM include governance provisions, such as requirements for public availability of program documents, conflict of interest procedures, and grievance mechanisms, in its criterion for assessment. These provisions are urgently needed, and will contribute to overall market trust and transparency.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                       |
| 533 | Sadie Frank                                | QUESTIONS           | te              | We also commend the decision to disallow tonne-year accounting schemes, and ex-ante crediting, from receiving an IC-VCM accreditation. These approaches undermine integrity, and do not contribute to achieving net-zero targets or goals.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                       |
| 533 | Sadie Frank                                | QUESTIONS           | te              | While the scope of the draft CCPs and Assessment Framework is comprehensive, there are several areas where improving the content of the Assessment Framework and application of the CCPs themselves is needed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                       |
| 533 | Sadie Frank                                | QUESTIONS           | te              | Are there principles, criteria and requirements that are not relevant or should not be included in the draft CCPs and draft Assessment Framework?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                       |
| 533 | Sadie Frank                                | QUESTIONS           | te              | We feel the draft CCPs and draft Assessment Framework are comprehensive with respect to the principles, criteria, and requirements covered.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                       |
| 533 | Sadie Frank                                | QUESTIONS           | te              | Are there principles, criteria and requirements that are not included and should be added?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                       |
| 533 | Sadie Frank                                | QUESTIONS           | te              | We recognize that the purpose of the IC-VCM is to establish standards for the 'supply' side of the market, and that the use of credits by buyers is not within the scope of the draft CCPs and Assessment Framework. Even so, we believe it's important that IC-VCM acknowledge that credit quality is contextual to credit use. For example, IC-VCM appropriately proposes that credits be tagged as either carbon removal or emissions reductions, in recognition of the fact that these are distinct climate benefits that support distinct climate claims. However, using avoided emissions credits that meet the IC-VCM standard to claim a buyer has hit an interim net-zero target would not constitute a high-quality outcome, since rigorous net-zero standards do not allow for the use of carbon offsets to substitute for internal mitigation. Just as the Voluntary Carbon Market Integrity Initiative (VCMI, a buy-side standard) points toward IC-VCM as a guarantee of credit quality, we suggest IC-VCM should acknowledge that buying quality credits produces quality outcomes only if they are used correctly. | 0                                                                                                                                                                                                                                                                       |
| 533 | Sadie Frank                                | QUESTIONS           | te              | We also suggest the IC-VCM take a clear stance throughout its guidance on the need to respect the mitigation hierarchy, where near-term emissions cuts are followed by a scale-up of permanent carbon removal. To the extent that non-removal credits are applied in support of a "carbon-neutral" or "compensation" claim, these credits should function as beyond value chain mitigation, and not be substituted for internal mitigation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                       |
| 534 | Vega Tapia                                 | QUESTIONS           | ge              | Although Repsol Foundation supports the definition of high integrity criteria and the mechanisms to supervise their implementation, we consider key that, especially in initial phases of the CCPs implementation, a balance between highest integrity and practical implementation is taken into account.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | In initial phases of the CCPs implementation, a balance between highest integrity and practical implementation should be taken into account.                                                                                                                            |

| 536 | Anonymous                          | QUESTIONS           | ge              | Broadly, we believe that the Core Carbon Principles cover the most important principles that are needed to ensure integrity of offset projects and credits. However, we are concerned with some of the detailed requirements described in the criteria of the Assessment Framework. Our concerns are largely because many of the criteria are far too onerous, costly, or simply not workable or achievable. We are also concerned that because no standard or project currently meets the criteria it could result in failure of the ICVCM. We also believe that a proposal containing such significant changes and such a large number of changes should be accompanied with significant justification of the requirements and analysis of its workability and verifiability. And finally, we are concerned with the heavy reliance on the expert judgement of the Expert Panel. Many of their assessments will be based on limited project information, and will be based on criteria that are written in a manner that will lead to inherent subjectivity. We are also concerned that the Expert Panel review will result in bottlenecks, and could result in significant grievances considering the gravity of the decisions that they are being asked to take. We hope that a more iterative and transparent process for determining the key issues and gaps in the current Standards and for addressing those gaps can be adopted moving forward to ensure that a more workable set of criteria and a realistic timeline and transition period are developed. | See comment above.                                                                                                                             |
| 537 | Anonymous                          | QUESTIONS           | ge              | We think all of the principles are relevant. However, there are several criteria that should not be included, for various reasons, including; 1. They are redundant with existing frameworks and do not add value, 2. They fall out of the scope of offset standards responsibility, 3. They are subjective and lacking sufficient detail, 4. They are unworkable, 5. The assessments rely far too heavily on the Expert Panel's judgement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | see comment.                                                                                                                                   |
| 538 | Oda Almas                          | QUESTIONS           | ge              | "Adherence to international human rights instruments" should be adopted as an alone-standing principle. As the principles stand, the protection of human rights (including the rights of indigenous peoples to their lands, territories and resources) is not clearly enough established as a core principle, yet the credibility and legitimacy of any carbon credit rests on the assurance that land rights are protected at the level of "production" of the credit. This is somehow currently hidden within language on safeguarding and SGs - which is not satisfactory.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | N/A                                                                                                                                            |

Please see full comments provided on the Assessment Framework.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                              |
| 540 | Anonymous                          | QUESTIONS           | ge              | The criteria for the Mitigation Activity Information CCP in the Assessment Framework is repetitive of other CCPs' criteria.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | The Integrity Council should explore merging the Mitigation Activity Information CCP and its criteria with other CCPs to reduce repetition.    |
| 541 | Ronan Carr                         | QUESTIONS           | ge              | Regarding credit quality, many of the key issues are covered by the CCPs. In particular, BeZero endorses the new thresholds that drive high-quality and the need to avoid double counting. BeZero is a strong advocate of mandating much more robust minimum standards of disclosure, and ensuring rigour in the quantification and auditing of emissions reductions. Indeed, the CCPs requirements mirror many of the components in BeZero's own analytical framework.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | na                                                                                                                                             |
| 541 | Ronan Carr                         | QUESTIONS           | ge              | However, there remain several areas which need strengthening. Crucially, more transparency is required around sources used to determine performance benchmarks, as well as greater disclosure on project size and location. More standardised terminology and processes pertaining to commitment periods and buffer pools is also needed across accreditors.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                              |
| 541 | Ronan Carr                         | QUESTIONS           | ge              | Similarly, the CCPs make progress in establishing improved systems of governance and validation, and we support the plan to draw on assessments conducted by other bodies such when conducting their own assessment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                              |

| 541 | Ronan Carr                                     | QUESTIONS           | ge              | Yet, there are still discrepancies in MRV processes across accreditors which must be addressed. There needs to be market-wide requirements on frequency of reporting and more robust safeguards against conflicts of interest.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0               |
| 541 | Ronan Carr                                     | QUESTIONS           | ge              | In terms of sustainable development impacts and the transition towards net zero, the current CCPs are problematic. We suggest that amendments are made to the qualitative assessments of SDG impacts and for defining which technologies are incompatible with net zero targets.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0               |
| 542 | Individual/employee, Intercontinental Exchange | QUESTIONS           | ge              | ICE believes that the most important principles and requirements are included in the draft CCPs and the draft Assessment Framework. We recommend that the CCPs clearly define a commitment period for credit and risk buffers in the CCPs. In particular, it would be a positive development to achieve more alignment in the treatment of buffer pools across frameworks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | See above.      |
| 542 | Individual/employee, Intercontinental Exchange | QUESTIONS           | ge              | We see however the need for improvement as to the assessment framework's criteria and requirements regarding the principles of sustainable development, additionality and permanence. In our opinion, some of the criteria proposed lack practicability. See below for more detail under the dedicated questions on sustainable development, additionality and permanence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0               |
| 543 | Polly Thompson                                 | QUESTIONS           | ge              | We agree that the CCPs address the most important aspects that should be considered when assessing credit quality at the levels proposed by the IC-VCM. However, we think some aspects of the proposals for operationalising the CCPs, as outlined in the AF, are incomplete or too onerous for the current state of the VCM. It is a significant challenge to set universal standards that neither are too lax and fail to reliably identify low integrity credits, nor too stringent, excluding much of the market and decreasing confidence. We suggest an adapted approach that focuses on assessments at the standard level, but considers how that standard approaches credits from different sectors using differentiated criteria, to reflect the different key considerations for different types of credit. For example, standards with REDD+ methodologies should be assessed on their approach to baselines and leakage, and standards with methodologies for technological solutions such as DAC and CCS should be assessed on how they consider life cycle assessments (which are less relevant to e.g. Nbs). | See above       |
| 544 | Anonymous                                      | QUESTIONS           | ge              | We appreciate the IC-VCM's efforts to create a new and comprehensive standard for quality in the voluntary carbon market (VCM), and recognize the difficulty of creating a framework that represents real improvements while also remaining within reach for current market participants. In our view, this framework remains too far within the existing model for certification, and therefore fails to truly raise the bar on quality. Our central reasoning is that the draft CCPs remain focused on process as a sufficient stand-in for outcomes. We believe that to truly ensure quality and transparency, the VCM needs to move to an evidence-based system that values evidence of outcomes over description of process.                                                                                                                                                                                                                                                                                                                                                                                           | See above.      |
| 544 | Anonymous                                      | QUESTIONS           | ge              | Standards for high quality should focus on evidence-based solutions that generate observed climate benefits, rather than on inflexible qualitative requirements. As currently written, this framework's criteria would allow low-quality credits from incumbent certifiers to continue entering the market, while excluding new programs that use innovative methods. In our view, this set of complex rules: 1) does not differ significantly from the status quo; 2) will not ensure that the VCM has real positive impact; and 3) will not scale in time to meet the climate challenge ahead.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0               |
| 544 | Anonymous                                      | QUESTIONS           | ge              | First, we are concerned that this Framework will reinforce the same flawed rules for carbon crediting that we already have, and protect incumbents while shutting out newcomers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0               |
| 544 | Anonymous                                      | QUESTIONS           | ge              | Currently, most NBS carbon crediting projects cannot demonstrate that their stated climate benefit really occurred because much of the benefit is promised decades into the future. To try to fix that problem, it appears that IC-VCM has doubled down on the current certification model, creating an extensive compendium of criteria that are supposed to ensure impact. If we follow this approach, we will end up with more complex rules and a market still beleaguered by questions of its real efficacy. Importantly, the VCM is already replete with multiple layers of authoritative bodies claiming integrity, yet there is still significant confusion as to which standards and principles are to be trusted. Any new framework should focus on simplifying and clarifying the opportunities in the VCM for high-quality credits, not add additional confusion.                                                                                                                                                                                                                                               | 0               |

| 544 | Anonymous            | QUESTIONS           | ge              | It's important to note under the current Assessment Framework, much of the current market would likely be CCP-approved, with some small modifications needed to meet "Full" Threshold requirements. At the same time, study after study shows that the current generation of carbon credits are failing to deliver their stated impact—whether from shortcomings in additionality, delivery risk, or their inability to scale at a meaningful pace.                                                                                                                                                                                                                                                                                                                        | 0               |

| 544 | Anonymous            | QUESTIONS           | ge              | If we create a standard that is merely a more complex version of what has come before it, the VCM will not improve and innovators on both sides of the market will be turned away. And worse, the lack of demonstrable climate benefit that plagues many current crediting approaches will not be adequately addressed, risking the reputation of nature-based solutions as a key element in the broader climate mitigation campaign.                                                                                                                                                                                                                                                                                                                                      | 0               |
| 544 | Anonymous            | QUESTIONS           | ge              | For example, IC-VCM proposes a two year minimum track record for eligible programs. This criterion seems misplaced. Plenty of existing standards have a track record. But it is that very track record and its shortcomings that created the need for IC-VCM in the first place. Longevity does not equal quality. The requirement for two years in operation will not guarantee a program's institutional stability, nor permanence of the credits that it issues. It will, however, discourage the innovation that is so urgently needed to fix the climate. A standard with extremely limited uptake will not help us solve the climate emergency. Standards and organizations that govern them should be judged on their merits, not on their length of incorporation. | 0               |
| 544 | Anonymous            | QUESTIONS           | ge              | Second, we recommend that this framework should focus more on objective measures of fully delivered impact rather than prescriptive qualitative assessments of promised future impact. Unfortunately, the proposed compendium of criteria appears less effective for demonstrating real impact, and more geared towards evaluating methodologies that simply cannot be quantified because they promise to deliver their impact too far into the future. Such methodologies have a very high risk of not ever delivering their stated climate benefit and therefore are effectively ex-ante credits.                                                                                                                                                                        | 0               |
| 544 | Anonymous            | QUESTIONS           | ge              | There are plenty of objective measures that would help address real problems like risk of reversal and non-additionality. These include, for example: requiring more spatially explicit dynamic baselines; requiring projects to issue truly ex-post credits at the end of the project period rather than at the beginning; or requiring more scientific rigor in deductions for buffer pools to meet a more realistic level of risk of non-delivery risk. If a methodology is able to robustly and consistently demonstrate impact, it should not have to meet each one of the extensive collection of draft criteria.                                                                                                                                                    | 0               |

| 544 | Anonymous            | QUESTIONS           | ge              | Finally, we recommend that IC-VCM put a greater emphasis on scalability. To meet the climate emergency we need a radically increased magnitude of carbon storage. But current methodologies and certification processes have very limited uptake in the market. For example, even after 16 years of deployment, there are only 6,316,922 acres of forestland enrolled in improved forest management projects in the U.S (acreage calculated from project documentation for IFM projects from 2005-2021, Berkeley Voluntary Registry Offsets Database; <a href="https://bit.ly/3ykWp6T">https://bit.ly/3ykWp6T</a> ). This is just 2% of all private forestland ( <a href="https://www.fs.usda.gov/nrs/pubs/gtr/gtr_nrs199.pdf">https://www.fs.usda.gov/nrs/pubs/gtr/gtr_nrs199.pdf</a> ), leaving potentially hundreds of millions of acres on which landowners could be incentivized to sequester additional carbon. Simply put, the current methodologies have not been attractive to forest landowners, therefore making this category of NBS nearly irrelevant at a scale commensurate with the climate problem.                                                                                                                                                                                             | 0                                                                                                                                                                                 |
| 544 | Anonymous            | QUESTIONS           | ge              | We need an assessment system that incentivizes and rewards methodologies that can: 1) increase accessibility for new innovative programs while holding them accountable for results; 2) increase overall carbon storage in the near-term when it is most critical (Univ. of Oxford 2020, <a href="https://bit.ly/3xYxN3w">https://bit.ly/3xYxN3w</a> ; Lenton et al. 2019, <a href="https://www.nature.com/articles/d41586-019-03595-0">https://www.nature.com/articles/d41586-019-03595-0</a> ); and 3) reduce liability for developers and buyers of NBS, so we know that net-zero claims being made today will be substantiated later on (UNEP 2021, <a href="https://bit.ly/3Re28Sh">https://bit.ly/3Re28Sh</a> ).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                 |
| 544 | Anonymous            | QUESTIONS           | ge              | As currently written, this Assessment Framework threatens to codify many of the serious problems that already exist in the VCM:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                 |
| 544 | Anonymous            | QUESTIONS           | ge              | · Risks of non-delivery created by up-front or “ex-ante” crediting, insufficient buffer pools, and long commitment periods                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                 |

| 546 | Anonymous            | QUESTIONS           | ge              | We believe that financial additionality for crediting environmental activity should not apply. While financial additionality can be more easily satisfied by industrial activities that permanently remove carbon from the atmosphere, the inclusion of this clause is inconsistent with the reality faced by foods, fuels, and fibers producers. In the truest sense, “would this have occurred, if not but for the payment” forces a producer of a credit to not be able to make a claim unless they can prove that it wouldn’t have been profitable. This rule unwittingly penalizes those who are already profitable in their operation, to be unable to participate in continued or enhanced action of delivering climate action. In effect, this rule only provides partial or suboptimal support from an environmental good that can be backed by robust and transparent accounting. Moreover, this rule creates artificial counterfactuals for only part of one project, simply to create an approved project, and discounts the ability to track the outcome from other activities that are already causing climate impact, and are profitable. At worst, this disconnects from critical data connected to business intelligence for the producer of that credit to do more environmental interactions. | Include data interoperability as a principle to drive greater climate impact                                                                                                      |
| 546 | Anonymous            | QUESTIONS           | ge              | True permanence is not possible on nature based solutions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                 |
| 546 | Anonymous            | QUESTIONS           | ge              | Carbon as an element moves through a system. Natural cycles affect the persistence or residence time of the carbon in any sink. Current methodologies for nature based solutions assume a 100 year time for sequestration but the payment is for a shorter period of time.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                 |

| 546 | Anonymous            | QUESTIONS           | ge              | High risk of carbon myopia and inconsistent silos                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Instead of approving siloed tools in bespoke processes, voluntary carbon markets could create standards around trusted databases, and support core data standards and parameters for tools selected for explicit opportunities for interoperability and compatibility. This could ensure greater apples to apples comparisons and work toward consistency for scope 1, 2, and 3 accounting. Moreover, this data has linkages to supply procurement decisions, business intelligence at the project and enterprise level, insets, and other forms of catalytic finance. As the monitoring, reporting, and verification (MRV) industry increasingly digitizes, this presents an opportunity to ensure truly accurate data that has uses for other purposes. This will have an added value of producing lower cost, and more accurate MRV system. |
| 546 | Anonymous            | QUESTIONS           | ge              | By placing a carbon value on land based systems without taking into account water, biodiversity, social dynamics, and ecosystem services more broadly, projects seeking to generate credits under this framework are at risk of creating carbon tunnel vision. There is often a tradeoff between fast growing carbon stocks and a highly biodiverse and resilient area. In areas experiencing drought exacerbated by a warming climate, water is also an increasingly important concern to many projects.                                                                                                                                                                                                                                                                                                                                                                     | Establish flexible frameworks for multiple high integrity asset classes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 546 | Anonymous            | QUESTIONS           | ge              | Inconsistent quantification of project area boundaries occurs on two counts. First, when the method selected to establish baselines uses proprietary algorithms, or is unable to take into account better methods. Second, on the fact that the only quantifiable metric used for offsets is Carbon, thereby neglecting consistencies in other societal and ecological indicators across those project area boundaries.                                                                                                                                                                                                                                                                                                                                                                                                                                                       | We believe that the voluntary carbon markets can become a valuable innovation sandbox for collecting and distributing funding for climate. We do not think that they should only be developed for balancing fossil carbon emissions, but can go beyond as a structure that accurately quantifies, and rewards climate positive activity. Moving beyond permanence, and financial additionality, voluntary carbon offset markets could simply create ways to reward actors who are reducing, retaining, or removing carbon. Actors able to retain carbon can be rewarded for both their retention and accrual, and funding through carbon market structures can be used as catalytic finance to more efficient ways to produce foods, fuels, and fibers.                                                                                        |
| 547 | Spencer Meyer        | QUESTIONS           | ge              | NCX (the Natural Capital Exchange) recommends that IC-VCM shift to crediting based on results rather than subjective and process-oriented criteria.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Please see above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 547 | Spencer Meyer        | QUESTIONS           | ge              | We appreciate the IC-VCM's efforts to create a new and comprehensive standard for quality in the voluntary carbon market (VCM), and recognize the difficulty of creating a framework that represents real improvements while also remaining within reach for current market participants. In our view, this framework remains too far within the existing model for certification, and therefore fails to truly raise the bar on quality. Our central reasoning is that the draft CCPs remain focused on process as a sufficient stand-in for outcomes. We believe that to truly ensure quality and transparency, the VCM needs to move to an evidence-based system that values evidence of outcomes over description of process.                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 547 | Spencer Meyer        | QUESTIONS           | ge              | Standards for high quality should focus on evidence-based solutions that generate observed climate benefits, rather than on inflexible qualitative requirements. As currently written, this framework's criteria would allow low-quality credits from incumbent certifiers to continue entering the market, while excluding new programs that use innovative methods. In our view, this set of complex rules: 1) does not differ significantly from the status quo; 2) will not ensure that the VCM has real positive impact; and 3) will not scale in time to meet the climate challenge ahead.                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 547 | Spencer Meyer        | QUESTIONS           | ge              | First, we are concerned that this Framework will reinforce the same flawed rules for carbon crediting that we already have, and protect incumbents while shutting out newcomers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 547 | Spencer Meyer        | QUESTIONS           | ge              | Currently, most NBS carbon crediting projects cannot demonstrate that their stated climate benefit really occurred because much of the benefit is promised decades into the future. To try to fix that problem, it appears that IC-VCM has doubled down on the current certification model, creating an extensive compendium of criteria that are supposed to ensure impact. If we follow this approach, we will end up with more complex rules and a market still beleaguered by questions of its real efficacy. Importantly, the VCM is already replete with multiple layers of authoritative bodies claiming integrity, yet there is still significant confusion as to which standards and principles are to be trusted. Any new framework should focus on simplifying and clarifying the opportunities in the VCM for high-quality credits, not add additional confusion. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| 547 | Spencer Meyer        | QUESTIONS           | ge              | It's important to note under the current Assessment Framework, much of the current market would likely be CCP-approved, with some small modifications needed to meet "Full" Threshold requirements. At the same time, study after study shows that the current generation of carbon credits are failing to deliver their stated impact—whether from shortcomings in additionality, delivery risk, or their inability to scale at a meaningful pace.                                                                                                                                                                                                                                                                                                                        | 0               |

The Climate Solution Actually Adding Millions of Tons of CO2 Into the Atmosphere <a href="https://www.propublica.org/article/the-climate-solution-actually-adding-millions-of-tons-of-co2-into-the-atmosphere">https://www.propublica.org/article/the-climate-solution-actually-adding-millions-of-tons-of-co2-into-the-atmosphere</a> )                                                                                                                                                                                                                                                                                                                                                                                             | 0               |
| 547 | Spencer Meyer        | QUESTIONS           | ge              | · (Song and Temple, ProPublica, 2021. A Nonprofit Promised to Preserve Wildlife. Then It Made Millions Claiming It Could Cut Down Trees. <a href="https://www.propublica.org/article/a-nonprofit-promised-to-preserve-wildlife-then-it-made-millions-claiming-it-could-cut-down-trees">https://www.propublica.org/article/a-nonprofit-promised-to-preserve-wildlife-then-it-made-millions-claiming-it-could-cut-down-trees</a> )                                                                                                                                                                                                                                                                                                                                           | 0               |
| 547 | Spencer Meyer        | QUESTIONS           | ge              | If we create a standard that is merely a more complex version of what has come before it, the VCM will not improve and innovators on both sides of the market will be turned away. And worse, the lack of demonstrable climate benefit that plagues many current crediting approaches will not be adequately addressed, risking the reputation of nature-based solutions as a key element in the broader climate mitigation campaign.                                                                                                                                                                                                                                                                                                                                      | 0               |
| 547 | Spencer Meyer        | QUESTIONS           | ge              | For example, IC-VCM proposes a two year minimum track record for eligible programs. This criterion seems misplaced. Plenty of existing standards have a track record. But it is that very track record and its shortcomings that created the need for IC-VCM in the first place. Longevity does not equal quality. The requirement for two years in operation will not guarantee a program's institutional stability, nor permanence of the credits that it issues. It will, however, discourage the innovation that is so urgently needed to fix the climate. A standard with extremely limited uptake will not help us solve the climate emergency. Standards and organizations that govern them should be judged on their merits, not on their length of incorporation. | 0               |
| 547 | Spencer Meyer        | QUESTIONS           | ge              | Second, we recommend that this framework should focus more on objective measures of fully delivered impact rather than prescriptive qualitative assessments of promised future impact. Unfortunately, the proposed compendium of criteria appears less effective for demonstrating real impact, and more geared towards evaluating methodologies that simply cannot be quantified because they promise to deliver their impact too far into the future. Such methodologies have a very high risk of not ever delivering their stated climate benefit and therefore are effectively ex-ante credits.                                                                                                                                                                        | 0               |
| 547 | Spencer Meyer        | QUESTIONS           | ge              | There are plenty of objective measures that would help address real problems like risk of reversal and non-additionality. These include, for example: requiring more spatially explicit dynamic baselines; requiring projects to issue truly ex-post credits at the end of the project period rather than at the beginning; or requiring more scientific rigor in deductions for buffer pools to meet a more realistic level of risk of non-delivery risk. If a methodology is able to robustly and consistently demonstrate impact, it should not have to meet each one of the extensive collection of draft criteria.                                                                                                                                                    | 0               |

| 547 | Spencer Meyer        | QUESTIONS           | ge              | Finally, we recommend that IC-VCM put a greater emphasis on scalability. To meet the climate emergency we need a radically increased magnitude of carbon storage. But current methodologies and certification processes have very limited uptake in the market. For example, even after 16 years of deployment, there are only 6,316,922 acres of forestland enrolled in improved forest management projects in the U.S (acreage calculated from project documentation for IFM projects from 2005-2021, Berkeley Voluntary Registry Offsets Database; <a href="https://bit.ly/3yKWp6T">https://bit.ly/3yKWp6T</a> ). This is just 2% of all private forestland ( <a href="https://www.fs.usda.gov/nrs/pubs/gtr/gtr_nrs199.pdf">https://www.fs.usda.gov/nrs/pubs/gtr/gtr_nrs199.pdf</a> ), leaving potentially hundreds of millions of acres on which landowners could be incentivized to sequester additional carbon. Simply put, the current methodologies have not been attractive to forest landowners, therefore making this category of NBS nearly irrelevant at a scale commensurate with the climate problem. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 547 | Spencer Meyer        | QUESTIONS           | ge              | We need an assessment system that incentivizes and rewards methodologies that can: 1) increase accessibility for new innovative programs while holding them accountable for results; 2) increase overall carbon storage in the near-term when it is most critical (Univ. of Oxford 2020, <a href="https://bit.ly/3xYxN3w">https://bit.ly/3xYxN3w</a> ; Lenton et al. 2019, <a href="https://www.nature.com/articles/d41586-019-03595-0">https://www.nature.com/articles/d41586-019-03595-0</a> ); and 3) reduce liability for developers and buyers of NBS, so we know that net-zero claims being made today will be substantiated later on (UNEP 2021, <a href="https://bit.ly/3Re28Sh">https://bit.ly/3Re28Sh</a> ).                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 547 | Spencer Meyer        | QUESTIONS           | ge              | As currently written, this Assessment Framework threatens to codify many of the serious problems that already exist in the VCM:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 547 | Spencer Meyer        | QUESTIONS           | ge              | · Risks of non-delivery created by up-front or “ex-ante” crediting, insufficient buffer pools, and long commitment periods                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 547 | Spencer Meyer        | QUESTIONS           | ge              | · Inaccessibility and lack of scalability                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 547 | Spencer Meyer        | QUESTIONS           | ge              | · Ability of participants to “game” subjective assessments like additionality requirements                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 547 | Spencer Meyer        | QUESTIONS           | ge              | · Lack of pathway for innovation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 547 | Spencer Meyer        | QUESTIONS           | ge              | IC-VCM’s purpose should be to help the VCM scale while improving the integrity of credits, in time to meet the needs of the next decade of climate action. This Framework can move us towards that reality, but only if it starts evaluating credits on the basis of real, objective outcomes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 548 | Barbara Haya         | QUESTIONS           | te              | Transparency should be added as a requirement by project types to receive the CCP stamp. Project documents should be made publicly available in full, including monitoring reports, shape files, and calculation spreadsheets, allowing emissions calculations to be recreated and quality to be assessed by credit buyers and researchers. Specific information can be redacted, but the default should be release unless there is a redaction request.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Transparency should be added as a requirement by project types to receive the CCP stamp. | 549 | Anonymous            | QUESTIONS           | ge              | Predictability in the VCM is critical and having insight on future stringency is important. However, future stringency requirements can also significantly impact near term development and gain some of the societal requirements like quantitatively assessing net benefits and stakeholder engagement (at the level suggested) will significantly increase development costs and skew project developers to those projects that do not have those requirements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Nevertheless, a phased approach to certain requirements such as alignment with the Paris Agreement, which are still evolving under the UNFCCC seems reasonable. However, the timing of such transitions should be based on discussions                                                                                                                                                                                                                   |
| 549 | Anonymous            | QUESTIONS           | ge              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | with market stakeholders to evaluate the feasibility of implementing certain provisions. The timing for implementation will also depend on the future governance structure of the ICVCM. Will this body be in place for the long-term or will governance transition to existing organizations for implementation?                                                                                                                                        |
| 551 | Anonymous            | QUESTIONS           | te              | ICVCM will have large workload to only analyze types of credits and project sectors (e.g. AFOLU) and types of standards. A review of methodologies would take even longer, meaning carbon credit programs would be left in limbo for considerable time, leading to DELAYS instead of SCALING UP carbon finance. Therefore ICVCM should analyze only credit types and carbon standards and give a time for adjustment of at least 3 years.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | The review of standards and credit types shall be completed within 1 year and another 2 years given to standards and projects to align before becoming not endorsed by ICVCM.                                                                                                                                                                                                                                                                            |
| 552 | Calvin Tran          | QUESTIONS           | ge              | It is difficult to determine per CCP, as each CCP possesses differing amounts of full and initial criteria. For example, for CCP#9, Sustainable Development, Criteria 7.1, 7.2, 7.3, 7.4, 7.5, 7.6, 7.7, 7.8, 7.9, and 7.11 of the Assessment Framework are required both at the initial and full threshold. Only 7.10 has a distinction between its full and initial thresholds.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Speaking from a project developer/mitigation activity proponent’s perspective, it is difficult to determine what is needed of us from the carbon-crediting programs. A clearer order of operations and guidebook would be greatly helpful for both carbon-crediting programs and mitigation activity proponents as they come to understand the CCPs and Assessment Framework and begin to gather the documents required for their application.           |

| 552 | Calvin Tran            | QUESTIONS           | ge              | In regards to timeline, our initial estimate would be between 3-5 years. However, because the Assessment Framework requires normative program documents and supporting information at both the initial and full thresholds depending specifically on the particular criterion in concern, it is difficult to foresee and interpret a timeline for when carbon-crediting programs can realistically achieve the initial threshold.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 553 | Arnold Hui             | QUESTIONS           | te              | the timeframe should strike the balance between i) stringency required to ensure integrity and ii) urgency to scale up the VCM markets. Some flexibility should be considered (e.g. sandbox approach see proposed changes)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Certain flexibility can be built for the timeframe. The sandbox approach can be adopted to allow innovators to i) trial their projects with a discounted offset or some clawback clauses (i.e. retrieve part of the funding if no up to the standard) and to ii) confirm their compliance with the principles before implementing them in a larger scale.                                                                                                                                                                |
| 555 | Anonymous              | QUESTIONS           | ge              | We are concerned over the practical application of criteria and requirements as laid out by the Assessment Framework (AF) and Assessment Procedure. There is a danger that, as proposed, the AF will have the counter impact on the market to that intended by the IC-VCM. In particular, we recommend creating an initial threshold standard that can be seamlessly applied today, in order to create confidence in the market without further delay. This threshold shall be immediately achievable by the most well-established programme. This should be followed by a mechanism to enhance the requirements over time backed by science and the experience gained with the practical application of the threshold standard.                                                                                                                                                                                                                                                                                                                                                                                   | None                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 555 | Anonymous              | QUESTIONS           | ge              | Moreover, as it stands, many of the provisions in the Assessment Framework, particularly with regard to additionality and permanence, would not be attainable for NCS projects, not because NCS credits lack integrity, but because there are data and capacity constraints for even the highest quality projects that would not be able to satisfy the prescriptive requirements under the CCPs. As a consequence, CCP eligible credits would in all likelihood not include credits from natural carbon sinks. This is clear in contrast with recommendations coming from relevant international organizations, including the IPCC, that consider both avoidance and removal NCS as absolutely necessary activities, in the context of a net zero emissions target. NCS represents the largest source of credits in voluntary markets today and they have the potential to provide a third of the reductions and removals needed to meet Paris targets. The nature of these mitigation activities and community implications requires special consideration in the criteria laid out by the Assessment Framework. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 556 | Anonymous              | QUESTIONS           | ge              | To assure widespread adoption, it is essential that the initial criteria are achievable within a reasonable timeframe. 1) A grace period needs to be set to allow the standards to come in line with the CCPs and then 2) an additional grace period to allow for project developers to adopt them for project validation/verification This needs to be at minimum multi-year given the project pipeline already in existence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | N/A                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 556 | Anonymous              | QUESTIONS           | ge              | A mechanism to ratchet up the requirements over time backed by science and experience is appropriate, possibly more appropriate than a second predefined threshold as it will allow for flexibility. Safeguards to ensure increased ambition should however be implemented.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 557 | Anonymous              | QUESTIONS           | ge              | We do not support the introduction of initial and full stringency thresholds at this stage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Please see comment in our overarching responses submitted upfront                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

This can be very helpful in calculating carbon sinks for many of the projects at the initial stage and thereafter for point-in-time verifications. The historical data sets or imagery will also vastly help in verification and cutting down the time to bring the carbon credits quickly to market without dependency on large-scale human verifications.              |

| 560 | Anonymous            | QUESTIONS           | te              | Integrity of the VCM can only be achieved if, on the buyer's side, the price of carbon is sufficient to incentivize deep decarbonization of value chains, rather than cheap offsetting. From the seller's perspective, integrity of the VCM can only be achieved by unlocking new –and previously unavailable– mitigation and/or adaptation potential. Further, a fair price of carbon may also foster investment beyond climate change mitigation, to help address societal challenges and support sustainable development. In relation to demand, recent research (McKinsey, 2021) has shown that to be in line with the Paris Agreement goals, the ton of carbon should be paid at \$40-80 in 2020, and \$80-100 by 2030. Current pricing in the VCM falls extremely short at \$4 per ton for 2021 (Forest Trends, 2021). Despite these estimates, we believe that the price of carbon should be assessed in light of the abatement cost required to unlock new levels of mitigation, and this will be ecosystem- and site-specific. The CCPs are meant to be “based on solid science” (p. 2), and thus, we stress the urgency of matching current science and price estimates to avoid cheap “green-washing” and to deliver the full potential of the VCM by helping unlock new levels of mitigation previously not available. | We propose to include a new CCP requiring carbon-crediting programs to demonstrate how the price of carbon is fair, i.e. how it helps achieve previously unavailable mitigation levels, especially in key ecosystems and communities –without locking in levels of emissions, technologies, or carbon-intensive practices– with the aim to accelerate climate action in line with the Paris Agreement. To ensure transparency, the CCP should require carbon-crediting programs to have in place a protocol for assessing additionality and transparent carbon pricing, all of this to overcome current barriers for quick and transparent climate action. A fair carbon price not only includes the cost of implementation, but also the cost related to capacity building, accounting and transparency frameworks, gender considerations, stakeholder engagement, to grant environmental and social integrity to CCP-approved credits. Further, an appropriate price of carbon would not only cover the cost of implementing projects but also generate sufficient revenue to invest in additional mitigation and adaptation measures, promoting self-sustaining investments with the aim of accelerating climate action. |

| 561 | Anonymous            | QUESTIONS           | ge              | Predictability in the VCM is critical and having insight on future stringency is important. However, future stringency requirements can also significantly impact near term development and again some of the societal requirements like quantitatively assessing net benefits and stakeholder engagement (at the level suggested) will significantly increase development costs and skew project developers to those projects that do not have those requirements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 561 | Anonymous            | QUESTIONS           | ge              | Nevertheless, a phased approach to certain requirements such as alignment with the Paris Agreement, which are still evolving under the UNFCCC seems reasonable. However, the timing of such transitions should be based on discussions with market stakeholders to evaluate the feasibility of implementing certain provisions. The timing for implementation will also depend on the future governance structure of the ICVCM. Will this body be in place for the long-term or will governance transition to existing organizations for implementation?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| 561 | Anonymous            | QUESTIONS           | ge              | The initial framework should be in place until the CCPs are fully implemented across the registries. It is difficult to ascertain how long that will take. Further, protocol crediting periods should be allowed to continue to provide financial certainty for project development.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| 561 | Anonymous            | QUESTIONS           | ge              | Certifying registries and creating key quality criteria rather than assessing protocols and establishing requirements that will take years to implement, would be more straight forward and better for the carbon market. We recommend an approach similar to ICAO's CORSIA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 562 | Emma van de Ven      | QUESTIONS           | ge              | This question of timing can't be answered for all credit types. If all credit types are grouped under one umbrella without regard for the ramp-up phase needed for NBS credits, specifically the removals, then the CCPs will defeat its purpose and discourage investments in carbon projects significantly.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | The current approach doesn't distinguish between different credit types, this should be done before the time span of the implementation phases is allocated.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 563 | Anonymous            | QUESTIONS           | ge              | · As of now, most carbon-crediting programs are not aligned with some of the initial stringency thresholds. We believe that they should be introduced within an acceptable timeframe. We would welcome a phased approach, which could also provide visibility on when the full criteria and requirement will be implemented to project developers and credit users. We emphasize the importance of relief support for credits (projects) that have been registered before the CCPs were accepted by the carbon-crediting programs, as their trading price might suffer because they are older.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 563 | Anonymous            | QUESTIONS           | ge              | · Our concern is that if the requirements are too stringent, the assessment would take time and might stop the development of the projects. Since the voluntary carbon-credit market is still small, we do not want the market to shrink/not grow due to stringent requirements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| 563 | Anonymous                      | QUESTIONS           | ge              | · In order for potential buyers of credits and other market participants to assess the compliance of different carbon-crediting programs and credit types against the CCP criteria, and what areas may need improvement to meet both the initial threshold and full stringency threshold, the IC-VCM should make public its assessment of the relative compliance/alignment of existing programs and credit types in relation to the CCPs. This would serve to increase the transparency of IC-VCM's validation/assessment procedures and incentivise existing programs to continually improve internal processes/credit methodologies to meet the quality standards proposed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 564 | Anonymous                      | QUESTIONS           | ed              | Well designed carbon market projects can be a tool to address climate at both the global and local levels. They have not always performed to their potential. While carbon markets do face some level of a crisis of confidence, the source of this crisis is not only caused by gaps in governance that lead to examples of low quality or integrity projects or credits, but also by media and increased stakeholder attention, often without important context. It is clear that there are gaps that have approved projects and credits that should not be eligible for offsetting. But behind the headlines critical of carbon markets, around the world, carbon projects have provided a means to get corporate and other climate finance onto the climate change frontlines, supporting communities in their efforts to create a sustainable future for themselves, adapting to the impacts of climate change, and reducing and avoiding emissions, increasing carbon storage in forests and soils, and initiating new ways of managing resources and climate risks. The ICVCM should be careful in its work and messaging to reflect this, as well as consider the impacts of its public-facing work on the markets it seeks to scale. | We do not support the proposed staging of implementation of the AF. Rather than set up a two-stage process of implementing the guidance with two levels of stringency, we support the publication of what the ICVCM determines is possible now, and leave the following stage to a revision of the guidance after lessons can be learned from experience with it. Setting up two phases from the beginning with completed guidance sends mixed messages on quality as well as leaving less room for learning and adaptive management. |
| 564 | Anonymous                      | QUESTIONS           | ed              | As with any new broad governance effort, it is certain that the ICVCM will get some things wrong, and that it may impact markets in some unforeseen and unintended ways. There are projects that will perform very well on all of the criteria. There are projects that clearly do not meet them and should not be available in the market. But the majority is likely a gray area where there are questions on some of the criteria. It is this gray area that will be most vital in determining ICVCM impacts on mitigation scale. This is where the standards themselves are best placed to work, and centralized granular control will only serve as a detriment to the goals of the ICVCM.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 565 | Eftimiya Salo                  | QUESTIONS           | ge              | The requirements are appropriately balanced and most crediting programmes and projects would easily pass the Initial threshold. In the current draft in order to be CCP-eligible in the immediate term, carbon crediting programs and credit types will have to meet the initial threshold and commit to meet the more stringent requirements in a timely manner. However, CCP-eligibility for carbon projects that only comply with the initial threshold criteria, but not the stringent requirements could mislead corporate buyers into thinking that the project has complied also with the stringent requirements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Only projects which apply to the stringent requirements should be CCP-labeled. There should be a separate label for projects which only apply to the threshold criteria and have committed to achieve the stringent requirements as well, but have not yet done so. This will enhance transparency and avoid confusion for the buyers of the carbon credits.                                                                                                                                                                          |
| 565 | Eftimiya Salo                  | QUESTIONS           | ge              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | The suitable timeframe for the initial threshold being implemented could be 2-3 months, as most crediting programmes and projects would easily pass it.                                                                                                                                                                                                                                                                                                                                                                               |
| 566 | Individual/employee, Finnwatch | QUESTIONS           | ge              | We consider three years sufficient timeframe to adapt to full requirements to applicable for crediting programs and for registration of new projects. After this, existing and on-going projects should be brought in line with full requirements as crediting periods are renewed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 567 | Individual/employee, BBVA      | QUESTIONS           | ge              | The difference between initial and full stringency thresholds should not be related to good vs. best practices. Only completely new requirements should be delayed to the full stringency threshold.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 567 | Individual/employee, BBVA      | QUESTIONS           | ge              | Having different time frames across thresholds ( i.e. each requirement / group of requirements having its own deadline) would ensure that requirements can be implemented as soon as possible (under a phase-in approach). Otherwise, the last requirement would set the deadline, delaying those that could be ready sooner.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 568 | Anonymous                      | QUESTIONS           | ge              | The Assessment Framework applies an almost uniform set of standards for Natural Climate Solutions (NCS) and mitigation activities that are not nature-based, such that it disadvantages the former. XXXX believes that the IC VCM should acknowledge the differential needs of NCS activities vis-à-vis other mitigation activities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Our response includes specific suggestions in this regard in the areas of permanence, additionality, and social and environmental safeguards and impacts, and we urge the IC VCM to consider these suggestions.                                                                                                                                                                                                                                                                                                                       |

| 569 | Anonymous                                                            | QUESTIONS           | ge              | XXXX generally supports the ambition of the Assessment Framework with regard to social and economic impacts, but we strongly encourage the IC VCM to take cognizance of the differentiated requirements of NCS activities since they do not operate in the same way as other carbon projects. We believe that many of the criteria requirements are appropriate for renewable energy projects or technological solutions, but are unintentionally biased against NCS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | We have detailed our comments below on Additionality, Permanence and Socio-economic impacts and safeguards.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 570 | Individual/employee, CLA                                             | QUESTIONS           | ge              | There is a risk that the assessment framework is too complex and difficult and adds time and expense for projects looking to comply with a carbon programme. This potentially inhibits participation – particularly from proposers of smaller projects – and growth in the Voluntary Carbon Market (VCM). For high-integrity markets for nature-based environmental services, such as carbon sequestration, to become a driver of nature recovery and climate action across the UK, prices must reward farmers, land managers and other sectors for integrating nature with agriculture, forestry, and infrastructure. If compliance with the CCPs increases transaction costs of planning and delivering nature-based solutions, growth in the nature-based VCM in the UK will be inhibited. This risks the ability of the UK to meet broader environmental targets e.g. for peatland restoration and tree planting. The transaction costs of the UK Woodland Carbon Code are already a barrier to credit creation on woodland less than 5-10 hectares in size therefore it is important they do not increase further. | As above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 571 | Phil Cryle                                                           | QUESTIONS           | te              | Given the challenge of setting a specific date for all carbon crediting programs to fully comply with the CCPs yet the desire to see crediting programs comply with both the initial and full thresholds as soon as possible, the timing for the initial / full threshold could be left to the market. Under this approach, the IC-VCM would issue a series of CCP approved labels / endorsements such as:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Given the challenge of setting a specific date for all carbon crediting programs to fully comply with the CCPs yet the desire to see crediting programs comply with both the initial and full thresholds as soon as possible, the timing for the initial / full threshold could be left to the market. | 572 | Phil Cryle                                                           | QUESTIONS           | te              | The proposed approach to having both an initial and full threshold is sensible as it will enable conformity with the CCPs, whilst providing for an increase in standards over time. Consideration should also be given to how the CCPs can support long-term improvements in integrity beyond the full threshold, for example: (i) the further ratcheting up of standards over time, particularly for the assessment of environmental, social, cultural and economic co-benefits; and (ii) going beyond the use of categorical labels (e.g., nature-based vs engineered; removal vs reduction) to provide in-depth information to the market on the equivalent performance of offsets across the spectrum of offset quality attributes such as additionality, permanence etc., which could be achieved with a standardised scoring system.                                                                                                                                                                                                                                                                              | The proposed approach to having both an initial and full threshold is sensible as it will enable conformity with the CCPs, whilst providing for an increase in standards over time. | 573 | Individual/employee, Pavilion Energy Singapore                       | QUESTIONS           | ge              | Initial and full stringency thresholds is good option during the transition period in achieving market acknowledgement and consensus. However, one of the concerns initial requirements might be abused to achieve competitive advantages, if the penalty/compensation is not serious enough for trade off.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | as above                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| 574 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | QUESTIONS           | ge              | No, the requirements are not appropriately balanced between the initial and full stringency thresholds. It is not possible to predict what will be needed in the future; thresholds should be based on growing capability, rather than pre-defined measures. There should be a minimum threshold in order to weed out low-quality credits; there should not be a ratchet. We recommend reassessing requirements over time so that requirements can reflect changes in the market.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| 575 | Individual/employee, Drax                   | QUESTIONS           | ge              | We agree with the approach of starting with an initial threshold level and then moving to the full stringency level over time. The need to regularly review standards needs to be balanced with the need for developers to know the ground rules will remain the same for the core duration of projects. We hence believe the transition to full stringency will need at least a decade.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | N/A                                                                                                                                                                                                               |
| 576 | Anonymous                                   | QUESTIONS           | ge              | XXXX and XXX would both need at least 1 year to make changes to the standards and/or documentation. Issues related to e.g. legal contracts, could take longer to put in place.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | See Comment Above                                                                                                                                                                                                 |
| 577 | Anonymous                                   | QUESTIONS           | te              | We like the idea of phasing implementation to Phase 1(initial) and Phase2 (full). Some things related to alternative non-offset claims, social and biodiversity benefits could be pushed for phase 2 (full), and clearly focus in phase 1 (initial) on climate impact and offset claims in phase 1 (initial). Carbon crediting programs need to develop their competences in carbon accounting. We recommend ICVCM phase 1 to focus on climate impact crediting (SDG13). The quantification of SDGs could be done in Phase 2.                                                                                                                                                                                                                                                                                                                                                                        | Some things related to alternative claims, social and biodiversity benefits could be pushed for phase 2 (full), and clearly focus carbon accounting and fossil emission compensation claims in phase 1 (initial). |
| 577 | Anonymous                                   | QUESTIONS           | te              | We would recommend 3 years timeframe for initial threshold to revise standard and implement the changes in programs and projects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                 |
| 578 | Individual/employee, The Nature Conservancy | QUESTIONS           | ge              | Phase-In Requirements: It would be useful to understand how long each of these phase-in requirements will last, and whether each of these requirements has an arbitrary date for compliance or whether subsequent phases will trigger once certain criteria or milestones have been met in the market. The timing needs to be clearly described; it is difficult to evaluate the reasonableness of the phases without knowing their length. Different length phases may be needed for different categories of requirements. The phase length for additionality, permanence, etc. should be a fixed phase, typically of five years. However, for legal additionality, the 7 year requirement for unenforced regulations seems arbitrary and should instead be triggered by milestones. For example, if/once countries are considered middle-income, then phase two for compliance would be triggered. | IC-VCM should propose a length of time for the initial versus full requirements; we would like to provide public comments on the proposed timeline, which is not yet defined.                                     |
| 579 | Sadie Frank                                 | QUESTIONS           | te              | Are the requirements appropriately balanced between the initial and full stringency thresholds to address outstanding integrity concerns affecting the trust in the voluntary carbon market?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | See our comment.                                                                                                                                                                                                  |
| 579 | Sadie Frank                                 | QUESTIONS           | te              | We think the Integrity Council should set robust, objective quality standards. If the gap between current market practice and reasonable standards is too large to close overnight, then pragmatism counsels adopting interim targets to push the industry forward (as the draft CCPs provide).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                 |
| 579 | Sadie Frank                                 | QUESTIONS           | te              | The core challenge we see in this approach is that making initial standards workable for the majority of the market is in direct tension with IC-VCM's goal of clearly identifying quality credits. It is not possible to achieve both goals at the same time, and it will be important to be clear about which direction is being prioritized.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                 |
| 579 | Sadie Frank                                 | QUESTIONS           | te              | We are concerned that early feedback from large stakeholders is putting pressure on the Integrity Council to set a single threshold, rather than a graduate pair of initial and full thresholds, in the face of a significant gap between current market practices and objective quality standards. This direction would presumably put pressure on the Integrity Council to lower the standards, further emphasizing the feasibility of compliance over the achievement of meaningful improvements in market quality.                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                 |
| 579 | Sadie Frank                                 | QUESTIONS           | te              | What timeframe would you recommend for the duration of the initial threshold, taking into account the time needed for carbon-crediting programs to revise standards, processes and procedures; carbon-crediting periods; issues related to legal contracts Etc.?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                 |
| 579 | Sadie Frank                                 | QUESTIONS           | te              | We are open to this being a flexible design parameter if it enables the codification of high-quality standards in the long run. Nevertheless, we think it would be problematic if large segments of the current market qualify for artificially low and/or extended initial standards, which would tend to indicate that the Integrity Council's process is not adequate to address current market challenges.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                 |
| 579 | Sadie Frank                                 | QUESTIONS           | te              | Is this different for different areas of the draft Assessment Framework?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                 |
| 579 | Sadie Frank                                 | QUESTIONS           | te              | Although we have expressed a willingness to see compromise on the sequencing of initial and full standards, we think there should be an accelerated timeline for the imposition of full standards for program governance requirements. We think the governance standards should emphasize transparency, accountability, auditability, and grievance resolution processes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                 |

| 579 | Sadie Frank                        | QUESTIONS           | te              | To the extent there is an argument that market activity can only adapt to higher standards over a period of years, there should be no comparable barrier to the practical adoption of governance requirements — other than a reasonable timeframe for non-compliant registries to develop such processes, which should not take more than two years.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 579 | Sadie Frank                        | QUESTIONS           | te              | Are there other key considerations that should be explored?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 579 | Sadie Frank                        | QUESTIONS           | te              | Implementing the CCPs through the Assessment Framework and Assessment Procedure as the IC-VCM lays out in its consultation — and as will be necessary to meaningfully screen the market for quality — will require substantial administrative effort. We urge the IC-VCM to identify and secure the appropriately robust level of capacity support, including personnel and funding, that will be required to implement the CCPs in a timely and effective manner.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 580 | Individual/employee, EarthXCG GmbH | QUESTIONS           | ge              | It is our opinion at EarthXCG that the Integrity Counsel finds a balance that incentivizes both a realistic move to adherence to new standards coupled with an aggressive push for emissions removal projects to embrace information technology based scalable solutions. This will ensure that the current industry participants have a chance to adapt, and that new industry participants can accelerate the integrity improvements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | It is our opinion at EarthXCG that the Integrity Counsel finds a balance that incentivizes both a realistic move to adherence to new standards coupled with an aggressive push for emissions removal projects to embrace information technology based scalable solutions. This will ensure that the current industry participants have a chance to adapt, and that new industry participants can accelerate the integrity improvements. |
| 581 | Anonymous                          | QUESTIONS           | ge              | The proposed thresholds are not workable. Instead, the Assessment Framework criteria and proposals should be ranked and prioritized, then once there is consensus on the priority issues, each priority can be addressed in a reasonable time line that is agreed up in consultation with Standards.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | see comment                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 582 | Anonymous                          | QUESTIONS           | ge              | We suggest ensuring that criteria are workable, are based on significant stakeholder input, are tested on real projects, and are applying the most up-to-date approaches. To do this, it might take time, and require more interaction with offset and market stakeholders. The magnitude and significance of some of the proposed changes in the CCPs should be supported by evidence demonstrating that these requirements have been tested and can be applied in a practical manner. It is critical that the proposed changes are analyzed for their applicability, cost to implement, verifiability, and the potential impact on supply and climate action. It is critically important to ensure that changes consider the practical realities of offset project (and program) development on the ground. This dissonance, in our view, could result in intractability, and a potential failure of the IC VCM. Further, we strongly encourage the IC VCM to focus on the genuine risks to offset integrity such as newly emerging "standards" and programs that are issuing millions of 'credits' without third party verification, use of a credible Standard, or any mention of additionality, permanence, leakage, accuracy or fungibility. | see comment                                                                                                                                                                                                                                                                                                                                                                                                                             |

| 584 | Anonymous                          | QUESTIONS           | ge              | Considering that the initiative must establish a new layer of quality and integrity verification, there could be a cost increase for the process and some risk of non-adherence by project developers to the initiative?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | take into consideration                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 585 | Ronan Carr                         | QUESTIONS           | ge              | Although enhancing the VCM's integrity is of high importance, the full stringency threshold must be balanced with the reality that very few projects in the market today would meet the full CCPs. Therefore, it is important that standards are raised over time in line with evolving best practice, but without creating too many cliff edges.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | na                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 585 | Ronan Carr                         | QUESTIONS           | ge              | In order to strike the right balance raising standards and allowing stakeholders to update their processes, BeZero suggests that the CCPs include a roadmap that pertains to better reporting, disclosure and availability of information. This should include dates by which various aspects of the CCPs are achieved in line with the goals of the Paris Agreement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 586 | Anonymous                          | QUESTIONS           | ge              | XXXX, along with XXX, developed and published the Criteria for high-quality carbon dioxide removal. The criteria included "must" requirements for minimum viable project characteristics and "should" requirements for ideal project characteristics. We believe this helps to create a quality floor for carbon removal projects and a direction for continuous improvement on quality. These criteria were categorized into essential principles, applicable to all types of carbon removal projects, and specific principles applicable to specific carbon removal solutions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 1. Have a limited duration for a project that meets CCP Initial threshold, maximum 3 years, which would be a transition period to meet minimal acceptable high integrity and quality required for confidence in VCM during an early period of scientific and technical uncertainties.                                                                                                                                                   |
| 586 | Anonymous                          | QUESTIONS           | ge              | The Integrity Council's proposed CCPs frame all requirements as "shall" (same as must) requirements and divide them into requirements for an initial and a full threshold, reflecting good practices and high integrity. CCP suggests a (not defined) limited duration for initial threshold.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | o Credits proposed during this initial period would not be issued until after three years, or would issue only ½ of the credits due to near-term uncertainty.                                                                                                                                                                                                                                                                           |

Include “should” requirements in the CCP set up in addition to “shall”/“must” (both for initial and full) to foster a continuous improvement/competition culture. With the option to re-establish minimal quality levels once the majority of the industry has embraced these “should” requirements. |
| 587 | Vega Tapia                                     | QUESTIONS           | ge              | We support an initial Threshold based on current best practice in the market so that the CCP assessment can be implemented as soon as possible.                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | n/a                                                                                                                                                                                                                                                                                                     |
| 587 | Vega Tapia                                     | QUESTIONS           | ge              | And complemented with a mechanism to review and adjust the requirements over time which is backed by science, experience gained with the practical application of the quality threshold, and in alignment with the governance processes of the existing crediting programmes.                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                       |
| 588 | Individual/employee, Intercontinental Exchange | QUESTIONS           | ge              | ICE does not necessarily agree with the broad statement that the carbon market is fraught with outstanding integrity concerns. Today, there are carbon-crediting programs in existence which result in the issuance of high-quality carbon credits that are used by corporates to perform their mitigation activities.                                                                                                                                                                                                                                                                                                    | See above.                                                                                                                                                                                                                                                                                              |
| 588 | Individual/employee, Intercontinental Exchange | QUESTIONS           | ge              | ICE supports the concept of an initial threshold requirement that reflects current best practice in the market. This threshold with which high quality carbon credit programmes can comply with from the start will have an immediate impact in the markets, thereby further enhancing the integrity of carbon markets and encouraging the development of projects.                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                       |
| 588 | Individual/employee, Intercontinental Exchange | QUESTIONS           | ge              | However, we think it is problematic that applicants of the initial threshold under the IC-VCM framework are required to commit to take all reasonable steps to meet the more stringent requirements of the assessment framework in a timely manner.                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                       |
| 588 | Individual/employee, Intercontinental Exchange | QUESTIONS           | ge              | The requirements of the initial threshold will already be challenging for carbon credit programmes to meet. It will also be difficult for programmes/credit types to commit to the full threshold from the outset as future steps needed may not be foreseen yet. Those steps might even be outside of the control of applicants, which impairs applicants ability to make a serious commitment. Accordingly, to require carbon credit programmes to make a commitment to take all necessary steps to comply with the full stringency threshold would, in our view, overburden such programmes and discourage applicants. | 0                                                                                                                                                                                                                                                                                                       |
| 588 | Individual/employee, Intercontinental Exchange | QUESTIONS           | ge              | We thus recommend that applicants be allowed a limited timeframe to apply for the initial threshold. After expiry of the initial threshold, only applications for the full stringency threshold would be allowed, whilst at the same time programmes having been assessed before expiry would be grandfathered in.                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                       |
| 589 | Polly Thompson                                 | QUESTIONS           | ge              | No. We suggest a more staggered approach than just a two stage implementation, with initial standards aligned with current understanding of best practice and a gradual ramping over time. Currently, the fact that so few or even no credits in the market risks damaging confidence in the market, in opposition to the initial aims of the IC-VCM.                                                                                                                                                                                                                                                                     | See above                                                                                                                                                                                                                                                                                               |
| 590 | Anonymous                                      | QUESTIONS           | te              | We do not support the introduction of “initial” and “full” stringency thresholds at this stage. We believe such thresholds are inappropriate, unworkable, and counterproductive. It would be far preferable to introduce one clear, high-level set of requirements that can be met immediately by existing high-quality programs and update them over time. This would avoid market disruption and the perception that the VCM as a whole is untrustworthy, which will be the inevitable result if the ICVCM sets standards that cannot be met right now.                                                                 | Reconsider the ICVCM's role and focus on assessing programs and governance, not projects and methodologies.                                                                                                                                                                                             |
| 590 | Anonymous                                      | QUESTIONS           | te              | It is also key to fully consider the role of NCS projects. We are deeply concerned that these projects, which are critical to achieving a livable future and often provide very important co-benefits, appear to have no place in the Core Carbon Principles as currently written. Additionality, permanence, and SDG requirements as currently laid out are very onerous, go well beyond current requirements, often show a lack of understanding of this market from the IC, and cannot be met by even extremely high-quality projects.                                                                                 | 0                                                                                                                                                                                                                                                                                                       |
| 590 | Anonymous                                      | QUESTIONS           | te              | We further do not believe the ICVCM has adequately accounted for the time it will take it to review various project methodologies, or that it has properly considered the risks that this bottleneck will pose to the market. We continue to advocate for a scaling up of its mandate to a role assessing programs and governance, not projects and methodologies.                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                       |

| 591 | Spencer Meyer        | QUESTIONS           | ge              | Another consideration to be explored: please consider including a special innovation category or provisional approval pathway.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Please see above. |
| 591 | Spencer Meyer        | QUESTIONS           | ge              | The Expert Panel and other IC-VCM representatives have stressed the importance of fostering continual improvement and learning from mistakes as the market continues to grow and change. To do this, IC-VCM will need to evaluate emerging or innovative methods that do not fit within the current Framework, and to incorporate learnings into its criteria.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                 |
| 591 | Spencer Meyer        | QUESTIONS           | ge              | IC-VCM should consider creating a distinct new pathway for innovative approaches, and a corresponding provisional approval status for innovative approaches that show promise but are still being tested. The pharmaceutical industry is one precedent for this type of process - for instance the FDA's option for "Fast Track Approval" ( <a href="https://www.fda.gov/patients/fast-track-breakthrough-therapy-accelerated-approval-priority-review/fast-track">https://www.fda.gov/patients/fast-track-breakthrough-therapy-accelerated-approval-priority-review/fast-track</a> ) . Through an innovation-specific process, IC-VCM could excuse emerging project types or new methodologies from some criteria laid out in the Assessment Framework, but also hold them to a higher standard of empirical evidence, expert input, and testing. The Expert Panel would then also be able to observe and report on the results of these new project types for some period of time—perhaps two or three years. This might be a parallel and simultaneous pathway to the "initial" threshold, or a separate process altogether. | 0                 |
| 591 | Spencer Meyer        | QUESTIONS           | ge              | At the end of such a process, IC-VCM could then update its Assessment Framework to accommodate new methods for establishing carbon credit quality, as well as to include any scientific findings. We hope that IC-VCM is able to work to update and expand its Assessment Framework as new science and data emerge.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                 |
| 591 | Spencer Meyer        | QUESTIONS           | ge              | In addition to any innovation-specific pathway, IC-VCM should continue to provide multiple options for programs and methodologies to meet its criteria, as it does in the Permanence, Additionality, and Quantification sections of the Assessment Framework. Going forward, it should add explicit alternatives for evidence-based approaches, for instance in the positive lists section (8.6.d).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                 |
| 592 | Spencer Meyer        | QUESTIONS           | ge              | NCX (the Natural Capital Exchange) recommends that IC-VCM consider including a special innovation category or provisional approval pathway as well as the initial/full thresholds.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Please see above. |
| 592 | Spencer Meyer        | QUESTIONS           | ge              | The Expert Panel and other IC-VCM representatives have stressed the importance of fostering continual improvement and learning from mistakes as the market continues to grow and change. To do this, IC-VCM will need to evaluate emerging or innovative methods that do not fit within the current Framework, and to incorporate learnings into its criteria.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                 |
| 592 | Spencer Meyer        | QUESTIONS           | ge              | IC-VCM should consider creating a distinct new pathway for innovative approaches, and a corresponding provisional approval status for innovative approaches that show promise but are still being tested. Going forward, it should add explicit alternatives for evidence-based approaches, for instance in the positive lists section (8.6.d).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                 |
| 593 | Spencer Meyer        | QUESTIONS           | ge              | NCX (the Natural Capital Exchange) recommends that IC-VCM consider including a special innovation category or provisional approval pathway as well as the initial/full thresholds.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Please see above. |

| 593 | Spencer Meyer        | QUESTIONS           | ge              | The Expert Panel and other IC-VCM representatives have stressed the importance of fostering continual improvement and learning from mistakes as the market continues to grow and change. To do this, IC-VCM will need to evaluate emerging or innovative methods that do not fit within the current Framework, and to incorporate learnings into its criteria.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                              |
| 593 | Spencer Meyer        | QUESTIONS           | ge              | IC-VCM should consider creating a distinct new pathway for innovative approaches, and a corresponding provisional approval status for innovative approaches that show promise but are still being tested. The pharmaceutical industry is one precedent for this type of process - for instance the FDA's option for "Fast Track Approval" ( <a href="https://www.fda.gov/patients/fast-track-breakthrough-therapy-accelerated-approval-priority-review/fast-track">https://www.fda.gov/patients/fast-track-breakthrough-therapy-accelerated-approval-priority-review/fast-track</a> ) . Through an innovation-specific process, IC-VCM could excuse emerging project types or new methodologies from some criteria laid out in the Assessment Framework, but also hold them to a higher standard of empirical evidence, expert input, and testing. The Expert Panel would then also be able to observe and report on the results of these new project types for some period of time—perhaps two or three years. This might be a parallel and simultaneous pathway to the "initial" threshold, or a separate process altogether. | 0                                                                                                              |
| 593 | Spencer Meyer        | QUESTIONS           | ge              | At the end of such a process, IC-VCM could then update its Assessment Framework to accommodate new methods for establishing carbon credit quality, as well as to include any scientific findings. We hope that IC-VCM is able to work to update and expand its Assessment Framework as new science and data emerge.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                              |
| 593 | Spencer Meyer        | QUESTIONS           | ge              | In addition to any innovation-specific pathway, IC-VCM should continue to provide multiple options for programs and methodologies to meet its criteria, as it does in the Permanence, Additionality, and Quantification sections of the Assessment Framework. Going forward, it should add explicit alternatives for evidence-based approaches, for instance in the positive lists section (8.6.d).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                              |
| 594 | Richard Tipper       | QUESTIONS           | ge              | The fact that CORSIA have approved the ART TREES framework for carbon crediting calls into question their suitability as a source of technical guidance on certain issues - particularly on additionality and baseline setting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Qualified input from CORSIA noting that they do not currently conform to the proposed additionality framework. |
| 595 | Anonymous            | QUESTIONS           | ge              | If the technical assessment will be verified by the CORSIA, CCP can draw a focus on this market, too. However, if the CORSIA is adapting another standard to define the best available VCs, this Framework should focus on the general market and other types of VCs which still have a huge context. However, this also should be noted that as much as the number of standards are increasing, the companies are becoming more confused with the new rules and greenwashing is becoming more possible. For this reason, this decision has to be made by considering the short and long future, if there will be too many standards because the CCP excluded some credit types.                                                                                                                                                                                                                                                                                                                                                                                                                                                | -                                                                                                              |

| 601 | Anonymous                                             | QUESTIONS           | te              | Need to clarify that companies vertically integrated in scope 3 can each claim a climate benefit and pass this on as part of their de-carbonization of product/service footprint and value chains. This is already agreed in SBTi.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Vertically integrated in scope 3 can each claim a climate benefit and pass this on as part of their de-carbonization of product/service footprint and value chains.                                                                                                                                                                                                   |
| 602 | Anonymous                                             | QUESTIONS           | te              | C. Companies are not regulated by the UNFCCC as they are no parties of the COP. A voluntary offset does not (!) reduce the host country emissions of the buying company. Hence, there is no double counting between the parallel system of NDCs and private company GHG inventories.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Carbon credits from a sector covered in the NDC of host country without a Corresponding Adjustment could be used for buyers to claim "climate action and supporting host country NDC" without transfer of ownership of climate benefit. Hence generating triple win for host country, local business in scope 3 and multinational company financing de-carbonization. |
| 602 | Anonymous                                             | QUESTIONS           | te              | In any case, as in previous comments, claim "climate action and supporting host country NDC" without transfer of ownership of climate benefit, should always be possible even under strictest UNFCCC interpretation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                     |
| 603 | Calvin Tran                                           | QUESTIONS           | ge              | Yes, please look to CORSIA for lessons learned. Furthermore, looking to the July 2022 Discussion Paper drafted by Perspectives Climate Research (PCR) with input from the Carbon Market Mechanisms Working Group (CMM-WG), it is recommended that the Integrity Council consider the past assessment work, successes, failures, and learnings completed under the Clean Development Mechanism (CDM). As stated in the Discussion Paper, "Under the CDM, over 250 baseline methodologies were approved over the span of 15 years, covering a variety of mitigation activity types. Each of these methodologies generated costs of 0.1-0.2 million USD and its development could take up to two years. Throwing away this wealth of knowledge would be counterproductive as creating new stand-alone methodologies from scratch would result in a waste of resources and slow down the proliferation of new mitigation activities. This, in turn, would create a domino effect wherein achievement of NDCs will be impaired, causing no increase in ambition to achieve long-term mitigation targets." | -                                                                                                                                                                                                                                                                                                                                                                     |
| 604 | Individual/employee, Coalition for Rainforest Nations | QUESTIONS           | ge              | We are concerned that by relying heavily on CORSIA the ICVCM is missing the opportunity to help the evolution of the market beyond its current project focus.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Look beyond CORSIA                                                                                                                                                                                                                                                                                                                                                    |
| 606 | Anonymous                                             | QUESTIONS           | ge              | Previous assessment should only be considered where the requirements of other bodies are comparable. Previous assessment via other bodies may otherwise hollow out the integrity of the CCPs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | N/A                                                                                                                                                                                                                                                                                                                                                                   |
| 607 | Anonymous                                             | QUESTIONS           | ge              | We strongly support the suggestion that there is closer alignment with CORSIA and other comparable bodies, to reduce transaction costs. We recognise that there may be some additional principles, criteria and requirements required of ICVCM over and above CORSIA, however it would be likely that all of the previous assessments would be relevant (endorsed).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Please see our comment on this matter in our overarching responses                                                                                                                                                                                                                                                                                                    |

| 609 | Max DuBuisson                                         | QUESTIONS           | ge              | Yes. As currently designed, the CCP/AF process is duplicative with the assessments already conducted by ICAO TAB for CORSIA. The programme and emissions unit criteria for CORSIA are comprehensive, and yet are still clear and concise. The TAB conducted incredibly deep due diligence, with the majority of applicants being screened out through the process.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Use the assessment of programmes for CORSIA as a starting point for the IC-VCM.                                                                                                                                                                                                                                                                                       |
| 610 | Anonymous                                             | QUESTIONS           | ge              | We consider including not only CORSIA but also offset ratings specialists to understand the variance/comparability of offsets from the same sector. Also, in order to ensure the appropriateness and scientific rigour of methodologies utilized for specific project types, the IC-VCM should draw on outside experts with subject matter expertise where required to identify particular issues with regards to permanence and robust quantification when there may be uncertainty or lack of consensus on the methodologies employed for accreditation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | n/a                                                                                                                                                                                                                                                                                                                                                                   |

| 610 | Anonymous                                                            | QUESTIONS           | ge              | The IC-VCM should act as a central source of standards for buyers to assess credibility (for REDD+, JREDD in particular).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 611 | Anonymous                                                            | QUESTIONS           | ed              | ICVCM should look to lessons learned and technical review from CORSIA, but there are gaps and weaknesses in it that should not be carried over. In particular, it has restricted some AFOLU project types that have potential to offer high-quality emissions and removals.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | These decisions should be carefully reviewed and improvements made to avoid reducing rather than facilitating quality scale potential and project types that offer significant positive local impacts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 612 | Eftimiya Salo                                                        | QUESTIONS           | ge              | No, because the current standards are not enough to guarantee the quality of carbon offsets on the market. This is why the ICVCM exists.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Instead of substituting parts of the Assessment, the Integrity Council should conduct an independent evaluation against its strict criteria.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 613 | Individual/employee, Finnwatch                                       | QUESTIONS           | ge              | The IC-VCM should establish its own criteria and do its assessments based on them as opposed to using other frameworks, such as CORSIA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 614 | Molly Brown                                                          | QUESTIONS           | ge              | The main added value of the ICVCM is to regulate carbon registries ("carbon crediting programmes"), rather than re-assess every credit type.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 614 | Molly Brown                                                          | QUESTIONS           | ge              | We also want to highlight that currently there is an ISO standard on climate neutrality under development where global experts authorized by their national ISO committees are clarifying in a well-defined process what appropriate carbon credits might be. The ISO process makes sure that all relevant stakeholders are represented such as business, environmental NGO, science and governments. The new ISO14068 is actually in a committee draft stage and we recommend not to re-invent the wheel but wait for the finalisation of this piece of work which is planned for next year already. We expect a well-balanced international standard who will define what climate neutrality means and which criteria carbon credits should fulfil. This would avoid a lot of double work that is currently under way.                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 614 | Molly Brown                                                          | QUESTIONS           | ge              | To reduce duplication, the IC should consider the input of all relevant GHG programmes to gain the required acceptance, not only CORSIA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 615 | Anonymous                                                            | QUESTIONS           | ge              | XXXX appreciates the work of the Expert Panel in developing these standards. However, we feel that in setting the initial threshold, the Assessment Framework has not taken cognizance of relevant standards that set current best practice in the market. While there is reference to the IFC Performance Standard, we believe that a more appropriate source of inspiration would be the Climate, Community and Biodiversity Standard (CCB) which represents a comprehensive set of criteria and indicators for high-integrity projects and programs (See: <a href="https://verra.org/wp-content/uploads/2017/12/CCB-Standards-v3.1_ENG.pdf">https://verra.org/wp-content/uploads/2017/12/CCB-Standards-v3.1_ENG.pdf</a> )                                                                                                                                                                                                                                                  | We urge the IC VCM to take inspiration from the CCB standards on setting a workable, yet high ambition standard for both nature and for communities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 616 | Individual/employee, Conservation International                      | QUESTIONS           | te              | Question refers to consulting CORSIA Technical Advisory Body. This is not recommended as it favors a specific standard, Also CORSIA arbitrarily determines quality of projects by vintage (pre and post 2016 as well as 2021). Just because a project was established before a certain year does not automatically make it a low-quality project. While the CDM concerns are understood, a more accurate approach is to assess projects based on their own quality. There is no certainty that projects will automatically be better quality for later vintages after a particular date. Projects are contextual and must be assessed within that context, regardless of vintage. Vintage as a determinant of quality is a potential red herring. Also, one does not know the quality of assessments done by others and whether they are comparable.                                                                                                                          | Recommend not using CORSIA or Technical Advisory Body or other assessments definitively. They could potentially be used as inputs, would require independent knowledgeable review and decision-making by IC-VCM.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 617 | Phil Cryle                                                           | QUESTIONS           | te              | In order to ensure the proper and consistent implementation of the CCPs, the Integrity Council should only use existing assessments of carbon-crediting programs and carbon credits from other bodies where the alignment with the criteria set out in the CCP Assessment Framework can be assured with certainty. This will mean the assessments from other bodies would need to be reviewed by the Integrity Council with a high degree of scrutiny against the CCPs to uphold the integrity of the principles and the Assessment Framework / procedure. Where existing assessments are known to be robust, then the review of consistency against the CCPs can be lighter-touch, thereby saving time / resources. Efforts to promote consistency across standard setting bodies by using the same criteria / requirements and reduce transaction costs are welcome so long as the integrity of assessments and quality of credits being endorsed under the CCPs is upheld. | In order to ensure the proper and consistent implementation of the CCPs, the Integrity Council should only use existing assessments of carbon-crediting programs and carbon credits from other bodies where the alignment with the criteria set out in the CCP Assessment Framework can be assured with certainty. | 619 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | QUESTIONS           | ge              | Yes, we recommend that the Integrity Council draw on assessments conducted by other bodies when conducting their own assessments of carbon crediting programmes. The work carried out by other groups, such as ICAO's Technical Advisory Body and ICROA Standards Assessment Procedure, has been very extensive, represent best practice in the market, and in many cases will be duplicative of the assessments that the Integrity Council will undertake. Given the large workload that will be required at the outset to assess programmes and credit types, and the limited resources available, we recommend the Integrity Council draw on these other assessments to fullest extent possible in order to expedite their work programme in this start-up phase. Work could possibly be undertaken by these parties to seek greater alignment and standardization of their assessment criteria. | 0                                                                                                                    |
| 620 | Individual/employee, Drax                                            | QUESTIONS           | ge              | We believe the IC-VCM should learn from these previous efforts but develop its own fully independent perspective on carbon credit quality, as these previous efforts, while helpful, have not succeeded in creating a mark of sufficient quality which this market needs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | N/A                                                                                                                  |
| 621 | Anonymous                                                            | QUESTIONS           | ge              | Both ICROA and CORSIA are already making assessments of carbon crediting programmes. Processes for assessment across crediting programmes should be harmonised so that there is a consistent assessment of programmes. It would provide confusion in the market if a programme was endorsed e.g. by ICROA but not by ICVCM.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | See Comment Above                                                                                                    |
| 621 | Anonymous                                                            | QUESTIONS           | ge              | Deciding which criteria or requirements from CORSIA and ICROA would require a comparison of the assessment process for all three organisations, to understand which criteria of ICVCM have already been suitably assessed by ICROA or CORSIA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                    |
| 622 | Anonymous                                                            | QUESTIONS           | ge              | We think you should no use previous assessments that were done from other principles, for other market needs and objectives. It is critical to own the criteria and the verification at this critical time when so much transformation is happening the the voluntary carbon market. CORSIA receives its share of critic and many credit buyers do not find that quality adequate or balanced.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | None                                                                                                                 |
| 623 | Sadie Frank                                                          | QUESTIONS           | te              | We strongly urge the Integrity Council to not draw on the Technical Advisory Body under CORSIA or a comparable body. To our knowledge, no existing screening criteria to date have resulted in a substantial improvement in market integrity. This reality motivated the formation of the Integrity Council in the first place. CORSIA, in particular, has failed to ensure quality and allows the continued use of low-quality, obviously non-additional renewable energy offset projects. (see: <a href="https://www.wsj.com/articles/renewables-carbon-credits-do-not-cut-emissions-united-nations-verra-gold-standard-11662644900">https://www.wsj.com/articles/renewables-carbon-credits-do-not-cut-emissions-united-nations-verra-gold-standard-11662644900</a> )                                                                                                                             | See our comment.                                                                                                     |
| 624 | Anonymous                                                            | QUESTIONS           | ge              | Yes, we recommend that the IC use the CORSIA TAB assessments as a starting point for determining the minimum requirements for quality. Standards have already spent a great deal of time submitting applications to the TAB, and most Standards have made changes to their programs to conform with the Emissions Unit Criteria of CORSIA. Using this approach would avoid excessive impact on the market, allowing market participants to focus on scaling investments in critically important climate change mitigation activities. In particular, we suggest that the CORSIA eligibility could be used to automatically accept programs in areas related to governance, double counting and registry requirements.                                                                                                                                                                               | see comment                                                                                                          |
| 625 | Darcy Jones                                                          | QUESTIONS           | ge              | 1. As a partner in the Carbon Credit Quality Initiative (CCQI), EDF recommends drawing on CCQI's assessments to better understand and identify what traits enable carbon credits to deliver higher climate mitigation impact and offer greater social and environmental benefits. CORSIA requirements on programmes can only be a starting point, but the overall quality assessment of CORSIA cannot be replicated, as there are serious concerns with some of its outcomes.                                                                                                                                                                                                                                                                                                                                                                                                                       | N/A                                                                                                                  |
| 625 | Darcy Jones                                                          | QUESTIONS           | ge              | 2. Because the CCPs closely mirror the quality objectives identified in CCQI's methodology, CCQI's assessments are highly relevant and should be considered during the Integrity Council's assessments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                    |
| 626 | Individual/employee, ANSI National Accreditation Board               | QUESTIONS           | ge              | Previous assessment should only be considered where the requirements of other bodies are transparent and comparable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Previous assessment should only be considered where the requirements of other bodies are transparent and comparable. |

| 629 | John Holler                                    | QUESTIONS           | ge              | No. The IC should be allowed to draw upon the publicly available documentation provided by the crediting programs in their applications under the ICAO CORSIA. This includes the applications themselves, as well as supporting documentation. It would not be appropriate for the IC to draw upon the assessments of such documentation by the TAB, or otherwise defer to the TAB as part of the IC's assessment, for several reasons, including: 1) The TAB as an entity does not have the same level of transparency and accountability as would be expected of the IC. 2) As a political body, the TAB is not assured the same level of expertise within its membership as the IC. 3) The TAB has not strictly adhered to the assessment criteria set out under the ICAO CORSIA in its conclusions, for example its approval of the CDM as an eligible crediting program without the submission of an application. | N/A                                                       |
| 630 | Anonymous                                      | QUESTIONS           | te              | Given its relevance and magnitude in terms of crediting activities that involved, any assessment concerning the Kyoto Protocol's Clean Development Mechanism may result helpful for the Integrity Council. This should pay the necessary attention to the multi-annual CDM experience, analysing both its achievements and its failures.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | N/A                                                       |
| 631 | Individual/employee, Intercontinental Exchange | QUESTIONS           | ge              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | See above.                                                |
| 631 | Individual/employee, Intercontinental Exchange | QUESTIONS           | ge              | As explained above, we believe that the Integrity Council should not conduct its own assessment for every programme type but rather focus on standards and processes established at the program level. At the same time, ICE recommends the Integrity Council draw on assessments conducted by other well respected bodies. The assessment framework of the IC-VCM is quite comprehensive. Synergies should hence be pursued in order to avoid duplicative or even replicative work. This applies in particular to the work of ICAO's Technical Advisory Body, ICROA Standards Assessment Procedure and the California Air Resources Board Offset Protocols. In addition, standardization of assessment criteria across the different bodies would not only help the IC-VCM, but also applying credit programmes.                                                                                                      | 0                                                         |
| 632 | Polly Thompson                                 | QUESTIONS           | ge              | It is important that the IC-VCM considers the work of other players in the VCM ecosystem. However, rather than adopting wholesale the approaches from other bodies, it may be more effective for the IC-VCM to develop a more specific niche for itself in order to effectively address a specific problem limiting integrity in the market. There is a danger the Integrity Council is currently trying to play too many roles, some of which are already being done well by, for example, ICROA, CORSIA, CCQI, standards and registries, and carbon credit ratings agencies. This would also help address the capacity constraints of the Integrity Council.                                                                                                                                                                                                                                                         | see above                                                 |
| 633 | Anonymous                                      | QUESTIONS           | te              | Without reference to CORSIA or any particular body or process, we strongly support the ICVCM aligning with the work of other organizations where appropriate. The ICVCM should, as a general principle, attempt to reduce transition and transaction costs at all times.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | We support Option 1.                                      |
| 634 | Anonymous                                      | QUESTIONS           | ge              | It is important that ICVCM considers the work and remit of other quality benchmarking initiatives such as CORSIA, CCQI, ICROA and differentiates itself as the consensus body for supply-side quality benchmarks for the VCM. There is also a purpose driven role for the ICVCM to provide market signals to support methodologies that can catalyse new supply of quality credits. The AF needs to be efficient in its assessment procedures to address current backlog in approving new methodologies and projects by the standards. There is also a policy imperative for ICVCM to provide high level guidance on innovations, eg blockchain and tokenization.                                                                                                                                                                                                                                                      | -                                                         |
| 635 | Anonymous                                      | QUESTIONS           | te              | On double-counting, ICVCM should set a clear position on the relationship between VCM and NDCs, that carbon accounting at corporate level for scope 1-3 emissions are already embedded within countries and sectoral (intl aviation/ maritime) GHG inventories/ carbon footprint. The application of CA for voluntary corporate claims is a flawed principle from an accounting perspectives. CA is intended to avoid two countries/ ICAO/ IMO meeting their targets but double claiming reductions that result in a net increase in GHG emissions. This is not the case for voluntary claims as the credits are not used towards national or international sectoral targets. This distinction needs to be made.                                                                                                                                                                                                       | Clarity on ICVCM's position on corresponding adjustments. |
| 636 | Anonymous                                      | QUESTIONS           | ge              | CORSIA has a robust quality assessment but its purpose is very different from ICVCM, which positions itself as the VCM supply-side authority. CORSIA serves an international compliance mechanism. There is a fine balance between setting up an assessment framework that in complementary vs one that is duplicative.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | -                                                         |

| 637 | Barbara Haya         | QUESTIONS           | te              | It will be important for the ICVCM to perform its own assessments. CORSIA accepted many project types that research has found to be of poor quality and so CORSIA should not be viewed as an authoritative assessor of offset quality.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | It will be important for the ICVCM to perform its own assessments. CORSIA accepted many project types that research has found to be of poor quality and so CORSIA should not be viewed as an authoritative assessor of offset quality.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 638 | Anonymous            | QUESTIONS           | ge              | We believe the requirements in the ICVCM AF are excessive and impractical. While we firmly believe that environmental and social safeguards are indeed important to high quality carbon offsets. However, we have many concerns with the proposed framework: 1. There should be acknowledgement that the safeguards apply only to the mitigation activities in the locations where they occur and that cited safeguards requirements may appropriately and justifiably not be applicable to some mitigation activities and/or some projects or programs due to the circumstances of the project or program. 2. Rather than ICVCM attempting to define all possible permutations and approaches that could be used and where they do and do not                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 6. There are inconsistencies in the safeguards as presented. For example, involuntary relocations simply requires consultation in 13.1.4 but requires full consent if related to Indigenous Peoples as stated in 13.1.6. Many of the criteria go in to great, prescriptive detail whereas Cancun Safeguard B which traditionally encompasses access to information, anti-corruption and other key safeguards is simply relegated to a single criterion. Environmental and social safeguards should be included in all crediting frameworks; however, the implementation will depend on geography and                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 638 | Anonymous            | QUESTIONS           | ge              | 9 apply to activities, we would suggest that the ICVCM consider a simplified list of topic-based criteria which each Standard could include in the manner that best suits the nature of their programs. This provides the underlying rigor sought while providing flexibility for the differences in scale, type of activity and location of the activities occurring. 3. There should be a clear link between the legal framework and requirements of the host country or jurisdiction and the safeguards requirements. Projects and programs should (as required in other CCPs) be operating legally within their location and should ensure that national, regional, and local laws and requirements are followed. 4. We recommend the ICVCM consult forest countries, Standards and program developers regarding the possibility and legality of implementing many of the safeguards. For example, in Criterion 13.1.6, several indicators state that Standards must require certain activities by projects and programs "regardless of whether the Indigenous People are recognized as such..." or where Indigenous Peoples claim lands but have no recognized rights to the lands. From a practical standpoint, this would be impossible to implement as a Standard would need to among other things, define Indigenous Peoples under its program, define which should be recognized under its programs and what rights are afforded to them, and determine how land claims should be evaluated. Given the diversity of Indigenous Peoples and customary land tenure rights throughout the world, it is not appropriate for each Standard to individually provide a single definition for use across the globe. At a minimum, this will lead to large differences between Standards and significant confusion in the marketplace. Similarly, the legality and ability of Standards to require and projects and programs to | 11 sector. As proposed by ICVCM the safeguards are too prescriptive to be broadly applied, VBBs are not currently accredited for these scopes (and it may be beyond current competencies), and thus this is an over-reach for the CCPs and AF. We suggest a more generic framework that includes assurances that applicable environmental and social safeguards have been addressed. We also do not agree with the requirements for MRV of Sustainable Development impacts. There are many industrial project types (high GWP refrigerant destruction, methane capture) that have HUGE mitigation value, are clearly incentivized by the VCM, but do not have the same SDG impact as some other project types. We are trying to solve the climate crisis, so that should be the focus in addition to assuring no harm by projects, compliance with all national and international laws, regulations, and requirements for participatory processes. Contributions to SDGs is highly desirable, but MRV will not be simple to implement in a standardized manner across geographies and sectors. Detailed requirements as currently outlined in the ICVCM could result in fewer of the most socially beneficial projects being developed because the proposed significantly higher MRV cost. |
| 638 | Anonymous            | QUESTIONS           | ge              | 10 Implement all the safeguards should be considered in consultation with a wide array of stakeholders. A Standard does not have the sovereignty to assign carbon rights or land tenure rights to any stakeholder or to force programs and projects to do things where in conflict with national or local laws. 5. The scope of these safeguards which combines aspects of multiple programs and safeguards definitions each designed for individual purposes presents will require a tremendous effort by Standards and projects and programs to implement. Small scale projects will be able to address them more quickly as many will not be applicable. However, larger projects and jurisdictional programs will require years to fully develop and implement these with a significant cost. We recommend the Expert Panel consult with Standards and program developers as to the possible implementation timeline and likelihood that programs or large projects may simply decide not to participate. It would be a travesty if the ICVCM CCPs and AF were designed in a way that only small-scale projects could meet the requirements as this would miss the opportunity for significant climate change mitigation opportunities to occur.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| 640 | Guy Pinjuv           | QUESTIONS           | ge              | Do you anticipate that there will be challenges in meeting the Sustainable Development requirements in the Draft Assessment Framework under the initial threshold? If you do, could you provide information on those challenges.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 640 | Guy Pinjuv           | QUESTIONS           | ge              | We, as project developers, do not anticipate there will be challenges internally meeting the Sustainable Development requirements in the Draft Assessment Framework under the initial threshold. We do however have team members with experience confirming these safeguards are met, and that can be difficult without clear criteria and thresholds for reporting progress against these requirements (e.g., what type of biodiversity data is required for reporting, when is it clear that gender equity requirements have not been met, considering the context of different cultural norms). At the same time, at the standards level this will be difficult to implement unless the IC-VCM provides clear guidance and examples of what is expected to meet these requirements. Most existing standards have high level language for “no net harm”, that is difficult in practice to implement or enforce without clear guidelines.                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 640 | Guy Pinjuv           | QUESTIONS           | ge              | FPIC can be demonstrated by evidence that IPLC members have complete knowledge of their responsibilities in mitigation activities (e.g., what is required of them, for how long, are they aware of consequences of not ensuring these activities result in permanence etc.) Evidence can be in the form of a random interview by third party auditors with IPLC members, as well as evidence of contracts presented in a local dialect, or even training with community members). Again, we believe that carbon crediting programs should provide clear criteria and thresholds for reporting progress against these requirements to ensure that relationships with IPLCs are based on informed consultation. It is notable that this guidance from the IC-VCM does not specify what that looks like in most places other than stating that “mechanisms and procedures must be in place”. We suggest that these mechanisms and procedures should be defined or examples given to standards. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 640 | Guy Pinjuv           | QUESTIONS           | ge              | Or                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 640 | Guy Pinjuv           | QUESTIONS           | ge              | Should mitigation activities created and managed by Indigenous People and Local Communities (IPLC’s) be subject to different safeguard requirements? If so, how would you recommend that Free Prior, Informed Consent (FPIC) is addressed in carbon crediting program guidance and mechanisms to ensure that relationships with IPLC’s are based on informed consultation?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 641 | Aya Yamazaki         | QUESTIONS           | ge              | Basically, alignment with national regulatory framework is enough. The role of IFC risk categorization should be kept just referential. Excessive burden should not be imposed on VC generators in checking the compliance, the categorizaion being too much in detail.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Option 2) is my response.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 643 | Anonymous            | QUESTIONS           | ge              | Rangeland Afforestation is not a Viable Climate Change Mitigation Strategy                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Mitigation activities created and managed by pastoralists, and other IPLCs, should be differentiated, because of the very high risk to them from the wrong activities. Those projects that involve community/common lands should be differentiated from those involving privately held land, and adequate safeguards put into place for the entire community. Those projects that involve grasslands and other rangelands, should also be differentiated from forests because currently there are insufficient standards and protocols in place that address the specificities of these "open" ecosystems. Applying standards developed for forests will only lead to environmental loss and damage. |
| 643 | Anonymous            | QUESTIONS           | ge              | Carbon markets, whether voluntary or not, are increasingly looking at afforestation and reforestation for green carbon capture. Decades of tree plantation experience have shown how to do it right – and where tree planting can cause more harm than benefit. Grasslands, savannas and other rangeland ecosystems appear “open” and “bare” – but this does not mean that they have no value. On the contrary, they have immense intrinsic value and are not appropriate for afforestation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 643 | Anonymous            | QUESTIONS           | ge              | The vast majority of rangelands targeted for tree planting have not previously been forested. Planting large areas of trees in these systems constitutes afforestation, which is not a natural ecological process, unlike reforestation or forest restoration [1]. Nearly 40% of the global land area considered suitable for tree planting is unable to provide sufficient water for tree growth from precipitation alone [2]. Tree planting in these regions has resulted in extensive planting failures and ineffective resource investments [3].                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| 643 | Anonymous            | QUESTIONS           | ge              | Investment guidelines for the voluntary carbon market need to recognize rangelands—grassland, shrub-steppe, savanna, shrubland, and woodland ecosystems that cover approximately one-half of the Earth’s land area—for the critically important ecosystem services that they provide at local, regional and global scales [4]. Locally, rangelands provide food and habitat for wild and domestic herbivores, support pastoral livelihoods and hold immense cultural and economic value for the diverse groups of people, including IPLCs, who live in and manage them.                                                                                                                                                                                                                                     | 0               |
| 643 | Anonymous            | QUESTIONS           | ge              | Healthy rangelands have high infiltration and low evapotranspiration rates, which makes them important for streamflow and hence water provision downstream. They also store carbon and harbor biodiversity above and below ground, and regulate climate through their high albedo (being lighter in color than forest, rangeland vegetation reflects rather than absorbs heat radiation, thus contributing to global cooling).                                                                                                                                                                                                                                                                                                                                                                              | 0               |
| 643 | Anonymous            | QUESTIONS           | ge              | Rangelands represent a massive carbon pool that accounts for approximately 30% of total terrestrial carbon storage [5]. The carbon sequestration potential of rangeland afforestation has been greatly overstated because existing rangeland carbon storage is often excluded [6]. A large proportion of rangeland carbon storage occurs belowground in roots and soils, where it is stable and resilient to fire and grazing, but very sensitive to soil disturbance [7]. Grass biomass lost in a fire recovers rapidly during subsequent growing seasons. In contrast, tree plantations store most carbon above ground, where it is vulnerable to catastrophic loss by wildfires, pathogens and drought - disturbances that are becoming increasingly frequent and widespread under climate change [8,9]. | 0               |
| 643 | Anonymous            | QUESTIONS           | ge              | Rangeland afforestation is not a viable strategy for climate change mitigation because it sequesters little additional carbon and may even lead to a net loss of carbon [10], while it degrades valuable rangeland biodiversity and ecosystem services such as forage provision. Commercial tree plantations in particular sequester far less carbon than native forests and hold little more carbon, on average, than the land cleared to plant them [11]. When plantations replace rangelands, they decrease biodiversity (fauna and flora), streamflow and albedo, and increase wildfire risk, while adversely affecting the livelihoods of people depending on livestock and wildlife [12,13].                                                                                                          | 0               |
| 643 | Anonymous            | QUESTIONS           | ge              | Rangelands support the livelihoods of many millions of pastoralists and agropastoralists, and provide a critical source of food security and sovereignty through the production of animal products. Benefits and costs of rangeland afforestation to local communities are seldom accurately evaluated because projects primarily emphasize the technical goals of numbers of trees planted, hectares restored, and people trained [14].                                                                                                                                                                                                                                                                                                                                                                    | 0               |
| 643 | Anonymous            | QUESTIONS           | ge              | The greatest climate change mitigation potential for rangelands resides in the conservation of existing carbon stores and biodiversity, judicious management of rangelands based on the natural disturbance regimes of grazing and fire, and restoration of degraded rangelands with grasses, forbs, shrubs and scattered trees [15] while also stabilizing the soils. This will also allow rangelands to generate multiple ecosystem services while retaining their potential for adaptation and resilience to global change, especially where this results in more variable and less productive climates that make forestry and crop production more marginal and risky.                                                                                                                                  | 0               |
| 643 | Anonymous            | QUESTIONS           | ge              | We call on the IC-VCM to adopt a reasoned and science-based approach and methodology to carbon capture in rangelands.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0               |

| 645 | Anonymous                    | QUESTIONS           | te              | CCB has good requirements regarding FPIC and Benefit Sharing with IPLCs. So does Plan Vivo. Those should be assessed on standard level.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | N/A                                                                                                                                                                                                                                                      |
| 646 | Calvin Tran                  | QUESTIONS           | ge              | Under the initial threshold, the challenge I foresee is; beyond an empirical “yes” or “no”, how can programs demonstrate categorical proof of net positive impact without quantifying SDG impacts? Furthermore, I foresee a large challenge in figuring out “who does what”. Should the Expert Panel hold the burden of assessing various carbon-crediting programs’ normative documents and supporting information, that places the burden on carbon-crediting programs to assess through the individual approved projects and methodologies of mitigation activity proponents within their programs for Sustainable Development compliance within the CCPs. It is unclear how the carbon-crediting programs plan to follow up and work within their registries with their mitigation activity proponents to achieve this.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | -                                                                                                                                                                                                                                                        |
| 647 | Arnold Hui                   | QUESTIONS           | ge              | Option 2 is more pragmatic and reasonable. Setting too ambitious goal (i.e. option 1 and option 3) will result in pro-longed assessment period and controversy in relation to qualitative assessment on different safeguards                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Option 2 should be the baseline.                                                                                                                                                                                                                         |
| 650 | Anonymous                    | QUESTIONS           | ge              | It is essential that small scale projects and projects managed by IPLCs are not hindered by the strict criteria of the CCPs. Positive lists and simplified criteria may be suitable methods to assure strict project requirements do not hinder the implementation of such projects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | N/A                                                                                                                                                                                                                                                      |
| 651 | Anonymous                    | QUESTIONS           | ge              | We support Option 3 which provides additional flexibility for assessing risk. As per our comments in the Assessment Framework, we consider it critical that the compliance burden does not become overly onerous. As it stands, compliance with the full SD requirements is onerous, and assessment is required even if considerations are not relevant to a project. This could pose a significant barrier to entry for certain projects. Please see our proposal for a self assessment mechanism to determine which issues are material before requiring a detailed assessment to be done (endorsed)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Retain Option 3, and introduce self assessment mechanism                                                                                                                                                                                                 |
| 652 | Individual/employee, Radicle | QUESTIONS           | ge              | We feel sustainable development impact are very difficult to actually quantify and report on. We do not believe this should be part of the core principles, but can be an optional tagging (attributes). Similar to how CCB and others provide additional value add.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | See above.                                                                                                                                                                                                                                               |
| 653 | Josiah McClellan             | QUESTIONS           | te              | The IFC risk categorization should not be the only approach to addressing safeguards. Many mitigation activity proponents will utilize ISSB, TCFD or TNFD frameworks to support their risk categorization at an entity level. ISSB and GRI both provide sector specific frameworks for identifying risks and opportunities, which could prove more useful when a mitigation activity is of a specific type.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | The ICVCM should allow flexibility in the framework used, and not create additional work for mitigation activity proponents by mandating a risk categorization framework that does not align with the myriad disclosure standards in place today.        |
| 654 | Anonymous                    | QUESTIONS           | ge              | Requiring all projects across all geographies to meet the entire list of requirements proposed under the Sustainable Development Impact and Safeguards principle will shut down the market. Quantifying SDGs accurately is a significant undertaking and may not make sense for all projects (for example, an industrial project based in the US). Furthermore, the mechanisms and quantification methodologies to ‘net’ SDGs across different categories does not yet exist today – making this an impossible task.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | We believe that the majority of the requirements and criteria proposed in the Sustainable Development Impact and Safeguards section are better structured as optional attributes toward which a project can strive, if and where it makes sense to do so |

| 655 | Anonymous            | QUESTIONS           | ge              | We believe the requirements in the ICVCM AF are excessive and impractical.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0               |
| 655 | Anonymous            | QUESTIONS           | ge              | While we firmly believe that environmental and social safeguards are indeed important to high quality carbon offsets. However, we have many concerns with the proposed framework:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0               |
| 655 | Anonymous            | QUESTIONS           | ge              | 1. There should be acknowledgement that the safeguards apply only to the mitigation activities in the locations where they occur and that cited safeguards requirements may appropriately and justifiably not be applicable to some mitigation activities and/or some projects or programs due to the circumstances of the project or program.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0               |
| 655 | Anonymous            | QUESTIONS           | ge              | 2. Rather than ICVCM attempting to define all possible permutations and approaches that could be used and where they do and do not apply to activities, we would suggest that the ICVCM consider a simplified list of topic-based criteria which each Standard could include in the manner that best suits the nature of their programs. This provides the underlying rigor sought while providing flexibility for the differences in scale, type of activity and location of the activities occurring.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0               |
| 655 | Anonymous            | QUESTIONS           | ge              | 3. There should be a clear link between the legal framework and requirements of the host country or jurisdiction and the safeguards requirements. Projects and programs should (as required in other CCPs) be operating legally within their location and should ensure that national, regional, and local laws and requirements are followed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0               |
| 655 | Anonymous            | QUESTIONS           | ge              | 4. We recommend the ICVCM consult forest countries, Standards and program developers regarding the possibility and legality of implementing many of the safeguards. For example, in Criterion 13.1.6, several indicators state that Standards must require certain activities by projects and programs "regardless of whether the Indigenous People are recognized as such..." or where Indigenous Peoples claim lands but have no recognized rights to the lands. From a practical standpoint, this would be impossible to implement as a Standard would need to among other things, define Indigenous Peoples under its program, define which should be recognized under its programs and what rights are afforded to them, and determine how land claims should be evaluated. Given the diversity of Indigenous Peoples and customary land tenure rights throughout the world, it is not appropriate for each Standard to individually provide a single definition for use across the globe. At a minimum, this will lead to large differences between Standards and significant confusion in the marketplace. | 0               |
| 655 | Anonymous            | QUESTIONS           | ge              | Similarly, the legality and ability of Standards to require and projects and programs to implement all the safeguards should be considered in consultation with a wide array of stakeholders. A Standard does not have the sovereignty to assign carbon rights or land tenure rights to any stakeholder or to force programs and projects to do things where in conflict with national or local laws.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0               |
| 655 | Anonymous            | QUESTIONS           | ge              | 1. The scope of these safeguards which combines aspects of multiple programs and safeguards definitions each designed for individual purposes presents will require a tremendous effort by Standards and projects and programs to implement. Small scale projects will be able to address them more quickly as many will not be applicable. However, larger projects and jurisdictional programs will require years to fully develop and implement these with a significant cost. We recommend the Expert Panel consult with Standards and program developers as to the possible implementation timeline and likelihood that programs or large projects may simply decide not to participate. It would be a travesty if the ICVCM CCPs and AF were designed in a way that only small-scale projects could meet the requirements as this would miss the opportunity for significant climate change mitigation opportunities to occur.                                                                                                                                                                              | 0               |
| 655 | Anonymous            | QUESTIONS           | ge              | 2. There are inconsistencies in the safeguards as presented. For example, involuntary relocation simply requires consultation in 13.1.4 but requires full consent if related to Indigenous Peoples as stated in 13.1.6. Many of the criterion go into great, prescriptive detail whereas Cancun Safeguard B which traditionally encompasses access to information, anti-corruption and other key safeguards is simply relegated to a single criterion.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0               |
| 655 | Anonymous            | QUESTIONS           | ge              | Environmental and social safeguards should be included in all crediting frameworks; however, the implementation will depend on geography and sector. As proposed by ICVCM the safeguards are too prescriptive to be broadly applied, VBBS are not currently accredited for these scopes (and it may be beyond current competencies), and thus this is an over-reach for the CCPs and AF.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0               |

| 655 | Anonymous                      | QUESTIONS           | ge              | We suggest a more generic framework that includes assurances that applicable environmental and social safeguards have been addressed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                                                                            |
| 655 | Anonymous                      | QUESTIONS           | ge              | We also do not agree with the requirements for MRV of Sustainable Development impacts. There are many industrial project types (high GWP refrigerant destruction, methane capture) that have HUGE mitigation value, are clearly incentivized by the VCM, but do not have the same SDG impact as some other project types. We are trying to solve the climate crisis, so that should be the focus in addition to assuring no harm by projects, compliance with all national and international laws, regulations, and requirements for participatory processes. Contributions to SDGs is highly desirable, but MRV will not be simple to implement in a standardized manner across geographies and sectors. | 0                                                                                                                                                                                                                                                                                                                                                                            |
| 655 | Anonymous                      | QUESTIONS           | ge              | Detailed requirements as currently outlined in the ICVCM could result in fewer of the most socially beneficial projects being developed because the proposed significantly higher MRV cost.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                            |
| 656 | Max DuBuisson                  | QUESTIONS           | ge              | While the full requirements of this section are laudable as goals for the carbon market, they are overly aggressive when setting the minimum threshold for what is considered to be high integrity. A credit which delivers positive climate benefits should have the opportunity to be considered "high integrity." A similar high integrity credit which ALSO delivers net sustainable development benefits should fetch a correspondingly higher price in the market to reflect this additional benefits. Both credits should have the opportunity to be considered high integrity based on the merits of their climate impacts.                                                                       | Remove requirements for net positive sustainable development benefits beyond those linked to climate impacts. Encourage additional benefits through attributes and pricing mechanisms.                                                                                                                                                                                       |
| 657 | Emma van de Ven                | QUESTIONS           | ge              | This proposed relationship with IPLCs still puts them in a less powerful position. If the mitigation activity depends on IPLCs to be successful, they should be the main beneficiaries. If ACORN can pay out 80% of the carbon credit revenue (not profit) to smallholder farmers, and give them a seat at the table, then other programmes can do the same.                                                                                                                                                                                                                                                                                                                                              | 1. Make the entire business case for a programme transparent                                                                                                                                                                                                                                                                                                                 |
| 657 | Emma van de Ven                | QUESTIONS           | ge              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 2. Don't treat IPLCs as charities, but as key stakeholders.                                                                                                                                                                                                                                                                                                                  |
| 657 | Emma van de Ven                | QUESTIONS           | ge              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 3. Any carbon credit programme that neglects to pay the involved communities fairly is at risk of reversal through neglect. Fair payments should be transparent and a key part of the CCPs                                                                                                                                                                                   |
| 657 | Emma van de Ven                | QUESTIONS           | ge              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 4. FPIC is only as valuable as IPLCs understand the alternative monetisation routes for their carbon-related activities. FPIC should therefore include a comparison with other carbon crediting programmes                                                                                                                                                                   |
| 658 | Anonymous                      | QUESTIONS           | ge              | · Noting that the IFC safeguards are widely adopted and of sufficient level of detail to cover the major environmental and social risks associated with carbon credit projects, Option 1 would be preferred in general, while making necessary adjustments based on the level of risk associated with project types and ensuring compliance with best practice standards.                                                                                                                                                                                                                                                                                                                                 | n/a                                                                                                                                                                                                                                                                                                                                                                          |
| 658 | Anonymous                      | QUESTIONS           | ge              | · We also believe that, where applicable, alignment with the national regulatory framework should be sought (Option 3).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                            |
| 659 | Individual/employee, Finnwatch | QUESTIONS           | ge              | Global authoritative standard on business and human rights is UN Guiding Principles on Business and Human Rights (UNGP) that should be mentioned here. Other international guidance that should be mentioned here are OECD Guidelines for Multinational Enterprises and OECD Due Diligence Guidance for Responsible Business Conduct.                                                                                                                                                                                                                                                                                                                                                                     | In addition to mentioning these authoritative international guidances, the whole section on social safeguards should be based on them. We'd like to point out that the European union will be applying UNGPs (and OECD Guidelines building on UNGPs) to its upcoming CSDD Directive. It would be counter productive for IC-VCM not endorse UNGP based human rights approach. |

| 661 | Individual/employee, Conservation International | QUESTIONS           | te              | For First Part: Option 3 would likely be the most effective option. This joint approach provides a reference to widely recognized performance standards [The IFC's Performance Standards have been adopted by the ninety-seven Equator Principles financial institutions and many DFIs, export credit agencies and other financial institutions] for E&S safeguards applicable to private sector investment, but recognizes that many countries have effective national E&S laws that can be relied on as well. A joint approach to CCP safeguards assessment and certification should specify that country or proponent safeguard systems may be used in whole or part provided that this is likely to address the risks and impacts of the project and the proponent (CCP) system's requirements are at least as strong as those of the IFC's Safeguards. Any benchmarking using IFC PS as a reference will avoid undue deference to (weaker) national or proponent systems, within which projects are not likely to manage E&S risks effectively, and consequently, are not likely to yield the intended GHG emission reduction or sustainable development outcomes. | N/A             |
| 661 | Individual/employee, Conservation International | QUESTIONS           | te              | Benchmarking any CCP safeguards to the IFC PS and/or national safeguard standards would need to be undertaken by the IC VCM in a transparent and consultative manner. This approach would likely strengthen and update standards in several areas for the traditional project preparation process under current VCM standards (E&S Risk Categorization; Clear Exclusion List; Community Health, Safety and Security (PS4); Resettlement (PS5); Labor and Working Conditions (PS2); and Independent Accountability Mechanism.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0               |
| 661 | Individual/employee, Conservation International | QUESTIONS           | te              | IFC PS also has observed shortcomings that suggest safeguard areas where other DFIs have adopted higher standards and if adopted without a wider lens could settle for E&S safeguard standards below industry best practice, including some current VCM practices and national safeguard laws such as (Commitment to Human Rights; Social Inclusion; FPIC limitations; Protections against reprisals for aggrieved persons; disclosure during implementation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0               |
| 661 | Individual/employee, Conservation International | QUESTIONS           | te              | Response to next two questions:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0               |
| 661 | Individual/employee, Conservation International | QUESTIONS           | te              | FPIC is a recognized right of Indigenous Peoples, and in addition is good practice when engaging local communities. FPIC should be explicit in CCP policy commitments that govern partnership with Indigenous Peoples. FPIC should be fulfilled in carbon trading by meeting the requirements of UNDRIP. FPIC demonstration and documentation hinges on showing good-faith negotiation of any benefit sharing or economic displacement compensation agreement. FPIC therefore entails a number of process guarantees that ensure the most likely outcome is fair and equitable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0               |
| 661 | Individual/employee, Conservation International | QUESTIONS           | te              | FPIC as good faith negotiation must be sought and documented as the preferential manner in which to reach a benefit sharing plan. Good-faith negotiated agreements with affected individuals and communities are based on transparent, consistent and fair compensation standards and equitable procedures to ensure that those people who enter into negotiated agreements maintain the same or better income and livelihood status. Such agreements should provide access for affected communities and persons to appropriate development benefits from the project, based on disclosure of detailed information about the costs and benefits, risks and opportunities and the roles and responsibilities of each actor associated with the project prior to any decision requiring such consent. This includes information about the potential asset replacement or economic displacement costs, the basis for how these were estimated, for validation by the affected peoples with access to independent technical advice.                                                                                                                                         | 0               |
| 661 | Individual/employee, Conservation International | QUESTIONS           | te              | To ensure consent is based on good-faith negotiation with affected peoples, the development of a Process Framework typically outlines enabling measures which shall ensure:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0               |
| 661 | Individual/employee, Conservation International | QUESTIONS           | te              | a. Community needs with respect to capacity to engage in negotiation, including a sufficient technical understanding of the proposed project,[2]were established and addressed;                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0               |
| 661 | Individual/employee, Conservation International | QUESTIONS           | te              | b. Community access to independent technical advice on impact assessment and benefit sharing alternatives to inform their engagement;                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0               |

Access to a functioning, culturally appropriate grievance redress mechanism that does not restrict access to the judicial system to address unmet obligations in the agreement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 662 | Luzia Bieri                                     | QUESTIONS           | ge              | We anticipate that there will be challenges in meeting the Sustainable Development requirements: From the set of criteria and requirements, it is unclear what needs to be documented, assessed and proofed by evidence. Crediting programs, project developers and validation/verification bodies might be lacking resources and expertise to assess certain requirements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | During the first phase, we recommend labelling positive Sustainable Development Impact on one or more SDGs as an attribute rather than making it a requirement as the necessary metrics are currently not available at scale.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 663 | Phil Cryle                                      | QUESTIONS           | te              | In order to ensure the integrity of the CCPs is upheld, the safeguard requirements should be consistent across all types of projects, irrespective of the party managing the project. We strongly support the requirement for free, prior and informed consent as is outlined in "Table 6 – Requirements for Criterion 1.6: public engagement in decision-making" which states "The carbon-crediting program shall have established procedures to ensure free, prior and informed consent wherever relevant". More specific guidance on FPIC requirements with IPLCs would be useful to provide a clear and consistent approach including issues such as:                                                                                                                                                                                                                                                                                                                                                                                                                                                           | In order to ensure the integrity of the CCPs is upheld, the safeguard requirements should be consistent across all types of projects, irrespective of the party managing the project. | 664 | Phil Cryle                                      | QUESTIONS           | te              | Neither Option 1 nor 2 provides certainty with regard to safeguarding against environmental or social harm. For Option 1, the IFC risk categories are ambiguous insofar as the definition of what constitutes "potential significant", "potential limited" and "minimal or no" adverse environmental or social risks and/or impacts is not precisely specified and does not provide for avenues of risk mitigation under "high risk" categorised projects is also unclear. Also, the process for assessing compliance with those practices (i.e., is this assessed by the crediting program that issues credits or by the IC-VCM?). For Option 2, relying on alignment with national regulatory frameworks to ensure environmental and social integrity assumes that these frameworks adequately address all potential adverse environmental and social risks and/or impacts, which might not be the case. An alternative approach could be to adopt both (i.e., Option 3) plus a requirement for carbon crediting programs to have third party verification of the environmental and social integrity of projects. | Neither Option 1 nor 2 provides certainty with regard to safeguarding against environmental or social harm. For Option 1, the IFC risk categories are ambiguous insofar as the definition of what constitutes "potential significant", "potential limited" and "minimal or no" adverse environmental or social risks and/or impacts is not precisely specified and does not provide for avenues of risk mitigation under "high risk" categorised projects is also unclear. Also, the process for assessing compliance with those practices (i.e., is this assessed by the crediting program that issues credits or by the IC-VCM?). For Option 2, relying on alignment with national regulatory frameworks to ensure environmental and social integrity assumes that these frameworks adequately address all potential adverse environmental and social risks and/or impacts, which might not be the case. An alternative approach could be to adopt both (i.e., Option 3) plus a requirement for carbon crediting programs to have third party verification of the environmental and social integrity of projects. |
| 665 | Phil Cryle                                      | QUESTIONS           | te              | Adherence to a stringent benchmark for these issues from the outset is critical to the actual and perceived integrity of the principles and the carbon market. This should be done in a way that delivers sufficient level of confidence whilst not imposing unnecessary burdens on time/resources.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Adherence to a stringent benchmark for these issues from the outset is critical to the actual and perceived integrity of the principles and the carbon market. | 667 | Individual/employee, Pavilion Energy Singapore                       | QUESTIONS           | ge              | One of the outstanding challenges is that the initial threshold might be intentionally abused to achieve competitive advantages, provided the penalty/compensation is not serious enough for trade off afterwards. Hence, the penalty/remedy solution must be well planned and in place before proposing such initial and full stringency thresholds as phase in process.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 668 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | QUESTIONS           | ge              | This comment is from Emergent, the coordinator of the LEAF Coalition.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | We recommend that ESG safeguards for REDD+ be based on the Cancún Safeguards and their operationalization including building on current reporting to the UNFCCC. Requirements that go beyond this are inappropriate. Furthermore, SDG monitoring and IFC safeguard conformance should be considered as optional attributes rather than as mandatory. This will provide a pathway for inclusion and market differentiation and allow programs to implement on a timeframe that is achievable.                                                                                                                                                              |
| 668 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | QUESTIONS           | ge              | The Assessment Framework has introduced a complex process for ensuring environmental and social safeguards that is based on the IFC Performance Standards (eight lengthy and highly technical documents) and goes far beyond what is reasonable and necessary to ensure ESG safeguards. Safeguards should be designed as fit for purpose based on the sector and geography and should identify and mitigate risks. Defining appropriate safeguards for jurisdictional REDD+ activities has been a focus of UNFCCC work for two decades. The Cancun Safeguards are the result of a collaborative, international process that included supply countries as well as key stakeholders such as Indigenous Peoples. It is not appropriate for the CCPs to undermine this work and add conformance with IFC Performance Standards and other safeguards, which will increase the burden significantly and, in many instances, may not be appropriate at a jurisdictional scale. To be clear, this is not about lowering the bar on integrity for jurisdictional REDD+, rather recognizing the inherent differences in the programs and the significant work that has already been done in this space. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| 669 | Anonymous                                                            | QUESTIONS           | ge              | IFC standards ensure consistency between countries, so it should be the base. Since the strength of the legal framework of each country will differ for each IFC performance standard, it is practical that in those countries where regulation and enforcement comply with the IFC-specific standard (for example the Labor Law in Mexico), evidence of alignment should be sufficient. Therefore, Option 3 is preferred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Option 3 is preferred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| 670 | Individual/employee, Drax                                                                          | QUESTIONS           | ge              | We welcome a stringent approach on social and environmental safeguards and believe a combination of a risk-based approach combined with (inter)national regulatory frameworks is the way forward. We believe all forest-based carbon credits should adhere to broader sustainability requirements set by forest management schemes such as FSC and PEFC. On the (inter)national level we believe the IC-VCM should require sustainability standards on par with the UK Renewables Obligation and EU Renewable Energy Directive                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | N/A                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 670 | Individual/employee, Drax                                                                          | QUESTIONS           | ge              | Furthermore sustainability impacts of upstream supply chains of reductions/removals need to be carefully considered in both absolute (i.e. current state) and consequential terms (i.e. change in state). The former ensures demand for supply chains currently meeting high standards while the latter encourages improvement in performance, regardless of the existing standard. While consequential impacts are more representative of project benefits, they are inherently more uncertain, more difficult to evaluate and bring greater risk (e.g. by allowing supply chains of low standards to be accessed), especially in upstream components of a project. Evaluating consequential impacts will be important for evaluating sustainable development impacts but will require stringent verification and likely an evolution of existing sustainability certification schemes to consider baseline comparisons/additional impacts related to certification (i.e. what has been done by the entity that would not otherwise have been done in the absence of certification). | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 671 | Individual/employee, Grantham Research Institute, London School of Economics and Political Science | QUESTIONS           | ge              | The Assessment Framework outlines that the IFC risk categorisation approach is the default for the criteria for programs related to Environmental and Social (E&S) safeguards. This is appropriate: a generic approach that includes requirements ensuring consistency with national laws and regulations is superior to one that relies solely on national frameworks. This is in recognition of a track record of environmental and social infringements and inconsistent application and enforcement of laws in some countries. Furthermore, to succeed in its goals, the VCM needs to exhibit quality and integrity that is at least as high as can be provided by carbon markets under the Paris Agreement's own mechanisms.                                                                                                                                                                                                                                                                                                                                                     | N/A                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 672 | Individual/employee, Grantham Research Institute, London School of Economics and Political Science | QUESTIONS           | ge              | E&S criteria are especially important for the benchmark set by the Integrity Council because they go significantly beyond the provisions that several leading carbon crediting programs already have in place (for reference, see the Carbon Credit Quality Initiative scoring results). Improvement in this area would address some of the central objections to the VCM levelled by critics and would set a much higher bar for integrity. Even if some of the provisions in the Assessment Framework were trimmed back (e.g., those relating to other aspects of program governance or carbon measurement), E&S criteria for safeguards and transparent measurement and disclosure of impacts should be retained.                                                                                                                                                                                                                                                                                                                                                                  | However, the Integrity Council should weaken the requirement that projects demonstrate net positive impacts for the Sustainable Development Goals (SDGs), and instead focus mainly on requiring use of methodologies to assess and transparently disclose such impacts. Firstly, this requirement raises difficult and unhelpful questions over how SDGs should be weighed against each other to derive a net overall impact. For example, if a project harms biodiversity but expands energy access, is it IC-VCM eligible? Secondly, most methodologies for measurement are quite new and may still be imperfect – it will take some time for programs to familiarise with them, leading to improvements over time. Finally, with more information, buyers in the market will likely reveal a preference for projects with stronger positive SDG impacts, providing incentives for project developers without the need for a direct mandate from the Integrity Council. |

| 673 | Anonymous            | QUESTIONS           | ge              | A consistent approach is needed across all countries but, where existing legislation and regulations do not provide safeguards, programmes should provide evidence that projects in their programme meet the required standards                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                |
| 674 | Anonymous            | QUESTIONS           | te              | Option 2 “evidence of alignment with national regulatory framework” should be the main requirement here. Now that all countries have the obligation to reduce emissions, carbon credit projects do take place in developing as well as high-income countries. Most countries have their regulation adjusted to the local conditions and behaviour.                                                                                                                                                                                                                                                                                                                                | Option 2 as main requirement     |
| 674 | Anonymous            | QUESTIONS           | te              | Carbon crediting programs do not have the power or the role of sovereign governments in making and enforcing laws.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                |
| 674 | Anonymous            | QUESTIONS           | te              | The fall-back option (option 3) for vulnerable countries, with underdeveloped enforcement or lacking local regulative frameworks could be based on collegiate work with or by IFC. IFC have basically unlimited resources and could support the countries where support is needed. The IFC work should assess the risks but also build capacity in the country and in the sovereign government to take the role of setting safeguards in regulation. That would be a non-temporary and long lasting solution.                                                                                                                                                                     | 0                                |
| 675 | Sadie Frank          | QUESTIONS           | te              | Do you anticipate that there will be challenges in meeting the Sustainable Development requirements in the draft Assessment Framework under the initial threshold? If you do, could you provide information on those challenges.                                                                                                                                                                                                                                                                                                                                                                                                                                                  | See our comment.                 |
| 675 | Sadie Frank          | QUESTIONS           | te              | We do not have an informed opinion on this question.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                |
| 675 | Sadie Frank          | QUESTIONS           | te              | Should mitigation activities created and managed by IPLCs be subject to differentiated safeguards requirements? If so, how would you recommend that the application of free, prior and informed consent (FPIC) is addressed in carbon crediting program guidance and mechanisms to ensure that relationships with IPLCs are based on informed consultation?                                                                                                                                                                                                                                                                                                                       | 0                                |
| 675 | Sadie Frank          | QUESTIONS           | te              | We believe that free, prior, and informed consent is critically important and that carbon credit projects should be subject to meaningful safeguards, but do not have an informed opinion about how to achieve that outcome.                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                |
| 676 | Ivan VALENCIA        | QUESTIONS           | ge              | Safeguards and additionality – The CCPs are very detailed in these topics and probably and the distinctions between the Initial and Full thresholds are reduced. These are areas where complexity must be reduced particularly for the Initial threshold, otherwise they become a big deterrent for programs to seek CCP certification. GGGI holds the highest standards of environmental integrity but at the same time accompanies developing country governments to initiate projects and reach trades but we are always wary of new badges coming into the market that will then be used as a minimum standards by buyers, being likely very onerous for the sellers to meet. | Refer to comment on this section |
| 677 | Anonymous            | QUESTIONS           | ge              | We do not recommend using the IFC risk categories, or including any IFC references in the Assessment Framework at this time. Since this framework was not designed for application to carbon projects, it is lacking clear criteria to enable monitoring and verification. Until such details were developed, it would not be a workable standard to reference in the AF. It is also unclear if adding requirements specified in the IFC standards would fill a critical gap in the market, and this would need to be confirmed before imposing such onerous additional requirements.                                                                                             | see comment                      |
| 678 | Darcy Jones          | QUESTIONS           | ge              | Please see full comments provided on the Assessment Framework.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | N/A                              |
| 678 | Darcy Jones          | QUESTIONS           | ge              | 1. Most of the safeguards in the document have a risk-focus approach that pursues the reduction and mitigation of risk. Instead, the AF should include a rights-focused approach that empowers IPLCs and facilitates fair conditions in the decision-making processes or benefit-sharing schemes. Although the AF adopts safeguards based on the best-in-class standards, the AF should consider that there needs to be room for adopting good practices promoted by national legislations or coming from customary systems.                                                                                                                                                      | 0                                |
| 678 | Darcy Jones          | QUESTIONS           | ge              | 2. Emissions reductions initiatives that affect IPLCs in any sense need to 1) ensure FPIC across the board (without “where appropriate” caveats); and 2) where IPLCs wish to engage, guarantee their effective participation (that is, partnership in design and implementation of programs and equitable benefit sharing).                                                                                                                                                                                                                                                                                                                                                       | 0                                |

| 678 | Darcy Jones          | QUESTIONS           | ge              | No initiatives that negatively affect IPLCs should be eligible for carbon crediting of any description. This implies, inter alia, that jurisdictions inhabited by IPLCs where emissions reductions are generated, whether on a project or jurisdictional scale, must guarantee IPLCs land rights (to the standard of ILO 169), their resource rights and recognize them as legitimate providers of environmental services, including reduction of deforestation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 678 | Darcy Jones          | QUESTIONS           | ge              | While there is a specific safeguard (Criterion 7.6) focused on IPLCs, the case of IPLCs is a cross-cutting topic that should be reflected as such throughout the AF. The AF assumes a do-no-harm approach for social and environmental safeguards. That means that rather than focusing on avoiding/preventing the occurrence of risks, promoting good practices, or moving toward a transformative approach that challenges the barriers that make it difficult IPLCs to be considered effective partners with voice and vote, the AF adopts a business-as-usual approach.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 678 | Darcy Jones          | QUESTIONS           | ge              | Additionally, while the AF adopts some best-in-class standards, the language to promote effective participation of IPLCs in the Assessment Framework is still vague. It would be helpful for the AF and CCPs to define effective participation more clearly; this would be useful for the application of FPIC.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 679 | Vega Tapia           | QUESTIONS           | ge              | This requirements may be too onerous and can't be achieved globally immediately, therefore putting the final objective at risk.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | We suggest to consider a risk-based approach and/or a gradual implementation.                                                                                                                                                                                                                                                                                                                                                                     |
| 680 | Oda Almas            | QUESTIONS           | te              | In relation to the first part of this question:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | In addition to the above observations we suggest a specific change in language on page 30 from "when relevant to circumstances, ensure the application of free, prior and informed consent (FPIC)" to "when relevant to circumstances, ensure they seek the free, prior and informed consent (FPIC) of rights-holders whose rights could be affected by the proposed mitigation activity and only proceed if and when FPIC has been granted"      |
| 680 | Oda Almas            | QUESTIONS           | te              | We strongly advise against option 2. Alignment with national regulatory frameworks will in a majority of countries not equate to the protection of the human rights of indigenous peoples and other communities with customary tenure systems, as much of these peoples' and communities' customary lands is not recognised as such by the states. Protection of human rights (including tenure rights) is best sought through alignment with international human rights standards (which a majority of states have ratified and endorsed). If the IFC risk categorisation is used, it is key to ensure the impartiality of those who carry out the risk evaluation. There must be no vested interests on the part of the evaluators to categorise a project/programme as "low risk" (which has been seen with IFC project risk categorisation) for example because of an expectation to save costs, staff time, or to "approve" crediting programmes as aligned with the CCP.                                                                                                                                                                                                                                                                 | Also, on page 31, we suggest a clarification in or before this sentence: "Benefit-sharing is essential for the sustainable implementation of mitigation activities". It must be clearly recognised in the text that when it comes to benefit-sharing and IPs and LCs with customary land and resource rights, ensuring benefits is not an act of charity by a project developer, but rather a central part of respecting these underlying rights. |
| 680 | Oda Almas            | QUESTIONS           | te              | In relation to the question about mitigation activities created by IPLCs: Since IPs or LCs already face great obstacles when it comes to access to climate finance (e.g. from bilateral, multilateral and philanthropic donors), it is advisable that funding that could reach IPs and LCs through carbon markets (if they do decide that they would like to participate in these) do not mirror historic bureaucratic hurdles of public finance, but rather mirrors the movement now existing to make finance more accessible to communities on the ground. If mitigation activities are proposed under a carbon-crediting program by the legitimate chosen representative of an IP/LC (and that the land on which the activity is proposed is customarily owned by the group), then FPIC does not need to separately be demonstrated; and the carbon-crediting program can work with the IP/LC to determine how they will meet the safeguard requirements in a way that is not overly onerous on the IP/LC. Where the activity is proposed by one IP/LC group but includes other IP/LC groups or will affect other IP/LC groups, the proponent should be able to demonstrate that the others have given their FPIC to the proposed activity. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 681 | Anonymous            | QUESTIONS           | ge              | Scaling of SDGs is an important ambition, but the priority of GHG projects should be the GHG outcome. Carbon project developers are not necessarily the best entities to be addressing several of the issues addressed under sustainable development goals. We suggest that SDGs be reporting as additional market differentiators, not primary desired outcomes of carbon projects, since SDGs fall outside the scope of GHG mitigation activities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 682 | John Holler          | QUESTIONS           | ge              | Should mitigation activities created and managed by IPLCs be subject to differentiated safeguards requirements?: Not just mitigation activities created and managed by IPLCs, but rather any mitigation activities that affect IPLCs (eg. within their territory, that could affect their livelihoods).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | N/A                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| 682 | John Holler                                     | QUESTIONS           | ge              | If so, how would you recommend that the application of free, prior and informed consent (FPIC) is addressed in carbon-crediting program guidance and mechanisms to ensure that relationships with IPLCs are based on informed consultation?: 1) Require project/program developer (whether it's a private entity or a govt entity) to apply FPIC by ensuring IPLCs are granted full consultation and participation in decision-making processes ie. collective decision-making related to mitigation activities affecting them and their territories. 2) Require inclusion mechanisms in activity design--information-sharing systems, systems designed for and with IPLCs that value and incorporate traditional/ancestral knowledge. | 0                                                                                                                         |
| 683 | Individual/employee, Intercontinental Exchange  | QUESTIONS           | ge              | ICE is concerned that including in the Assessment Framework's requirements all the Sustainable Development Goals (SDGs) would prove challenging for many credit programmes. Our concern is heightened because IC-VCM proposes to apply almost all the criteria in the initial threshold (only the criterion "ensuring net positive SDG impacts" distinguishes between initial and full threshold requirements). We are concerned that not all these requirements can be achieved immediately, which would hamper mitigation activities.                                                                                                                                                                                                | See above.                                                                                                                |
| 683 | Individual/employee, Intercontinental Exchange  | QUESTIONS           | ge              | We therefore suggest that the IC-VCM apply a risk-based approach, which would cater to the specific circumstances of a carbon credit programme, instead of applying a "one size fits all" approach, whereby all the requirements need to be met in all circumstances.                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                         |
| 683 | Individual/employee, Intercontinental Exchange  | QUESTIONS           | ge              | Alternatively, a gradual implementation could be pursued instead of applying all requirements at the initial threshold. In this context, transition periods should be granted. Such an approach would avoid the potential that no single credit programme in the market is eligible until programs fully comply.                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                         |
| 683 | Individual/employee, Intercontinental Exchange  | QUESTIONS           | ge              | We also suggest removing proposed requirements regarding regulatory requirements that fall outside of the scope of mitigation activities, or that are covered by existing regulatory compliance requirements in Standards (e.g., pollution laws, labor laws). All credible project standards require compliance with existing applicable regulations and laws. Imposing regulatory requirements that exceed local regulations and that are in many cases not related to the underlying carbon mitigation activity, falls well outside of the remit and scope of a carbon crediting programme.                                                                                                                                          | 0                                                                                                                         |
| 683 | Individual/employee, Intercontinental Exchange  | QUESTIONS           | ge              | Lastly, we find it very challenging for carbon credit programmes to incorporate guidance and provisions on using standardised tools and methods to assess the SDG impacts of mitigation actions and ensure a net positive Sustainable Development Goals (SDG) impact. The SDG regime was not designed to measure net positive impacts. A more sensitive and realistic approach would be to require that the activity not cause significant harm (see also e.g. EU taxonomy). Moreover, it is not clear whether the requirement applies to various SDGs or is only limited to the most relevant one.                                                                                                                                    | 0                                                                                                                         |
| 684 | Individual/employee, Rights and Resources Group | QUESTIONS           | ge              | Countries with adequate legal and regulatory frameworks for the protection of indigenous and community land, resource and livelihood rights are practically non-existent. Reliance on national regulatory frameworks as a sufficient criteria for meeting high integrity carbon credits should both be avoided and proscribed.                                                                                                                                                                                                                                                                                                                                                                                                         | Option 2 should reference alignment with international human rights laws, instruments and conventions, not national laws. |
| 685 | Polly Thompson                                  | QUESTIONS           | ge              | Careful consideration should be given to co-benefits. Currently the criteria for principle 9, Sustainable development impacts and safeguards, are too stringent and exclusionary. We agree that at a bare minimum projects should do no harm, but beyond this the IC-VCM should look at current best practice to guide realistic criteria to apply this principle now, with the potential to ramp up in future. The IC-VCM should consider carefully what should be considered essential for high integrity projects, versus what is considered desirable to many project buyers and could differentiate the highest quality credits.                                                                                                  | See above                                                                                                                 |
| 686 | Anonymous                                       | QUESTIONS           | te              | We support the most flexible and efficient approach, which in this case is Option 1. A risk-based assessment allows for a lighter burden on IPLC and permits elimination of non-applicable considerations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | We support Option 1.                                                                                                      |

| 687 | Richard Tipper       | QUESTIONS           | te              | First, in relation to the introductory text; this is somewhat rambling and saying that something is complex does not really help. (Putting a satellite into orbit is complex, as is building a cellphone). What is needed here is a section setting out the recommended approaches to standardising, within acceptable ranges, the decision process to produce an additionality determination for a given project type.                                         | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 687 | Richard Tipper       | QUESTIONS           | te              | Second, it seems strange to have the JREDD project category listed as a specific project type but not other categories - such as waste to energy, carbon removals, etc.                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 687 | Richard Tipper       | QUESTIONS           | te              | Third, many of the statements in the text are very woolly and not helpful - for example "overwhelmingly profitable" is a completely unclear description. Repetition of the words "rigour" and "thorough" are unnecessary and unhelpful as they are also subjective.                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 687 | Richard Tipper       | QUESTIONS           | te              | Fourth, on the specific subject of JREDD, "whether there is prior expectation of carbon credits..." is very unclear both in terms of how this could be judged and what it means. Many proponents of carbon offset projects have raised expectations of carbon credits in many fora. Many of these expectations have been unrealistic and sometimes unhelpful. Objectively and retrospectively judging expectations seems to be a fundamentally flawed exercise. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 688 | Anonymous            | QUESTIONS           | ge              | The issue of permanence and additionality is also very sensitive, vague and confusing. How do you classify existing Forest, Mangroves which are flourishing for now but have no guarantee of that remaining in the absence of a custodian, carbon financing to fund and maintain, protect and enhance biodiversity and patrol against illegal harvesting of natural resources.                                                                                  | Ensure that the definition of permanence and additionality allows for the protection of existing Forest, Mangroves which are flourishing for now but have no guarantee of that remaining in the absence of a custodian, carbon financing to fund and maintain, protect and enhance biodiversity and patrol against illegal harvesting of natural resources.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 688 | Anonymous            | QUESTIONS           | ge              | For example, taking custody and protection of a Forest, Mangrove, Grasslands, etc are critical and natural carbon buffers, like forests, mangroves which are under threat and the VCM is a vital lifeline to finance sustainable transition that protects and supports biodiversity and creates opportunities for some of the world's poorest communities to improve their livelihoods.                                                                         | For example, taking custody and protection of a Forest, Mangrove, Grasslands, etc are critical and natural carbon buffers, like forests, mangroves which are under threat and the VCM is a vital lifeline to finance sustainable transition that protects and supports biodiversity and creates opportunities for some of the world's poorest communities to improve their livelihoods.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 689 | Anonymous            | QUESTIONS           | ge              | ICVCM includes financial analysis, barrier analysis, market penetration (common practice) analysis, legal requirements, and positive lists established by registries. We do not agree with the proposed structure for assessing additionality, which would impose new requirements on crediting bodies and on project developers. It is unclear what problem these new requirements are solving, how they were                                                  | Specifically with regard to financial additionality, the IRR test has multiple challenges including the inability to standardize an approach across sectors, geographies and financing structures; the inability to obtain benchmark IRR in certain sectors (such as forestry); the need to disclose confidential financial information on project returns and internal hurdles; the ability to easily game the numbers and the difficulty in verifying the results. Furthermore, we disagree with the sentiment that the investment analysis must show that carbon revenues must specifically raise the financial feasibility above a yet to be defined financial benchmark. The sensitivity analysis even further complicates the approach. Such complexities require significant amounts of research and time to even determine whether a project is eligible, which ultimately could narrow participation to all but the largest carbon offset developers. The barrier analysis and market penetration analysis provide a good alternative to the financial analysis, but we disagree that the market penetration assessment must be combined with one of the other viability assessments rather than stand-alone and disagree with the subjective nature of applying "medium", "high", or "relatively low" assessment categories. Similarly, we agree that positive lists should be justified and periodically updated but disagree they must conform to the criteria for investment analysis. In summary, over two decades of analysis and consideration of additionality testing has resulted in a variety of new approaches to assess additionality that are currently applied across the market. This includes performance standards that are used in combination with legal/regulatory additionality tests, such as employed by ACR (and the California Air Resources Board) as well as |
| 689 | Anonymous            | QUESTIONS           | ge              | developed, if/how they will add value and if they are even practical in terms of implementation and verifiability.                                                                                                                                                                                                                                                                                                                                              | 13 requirements for regulatory additionality combined with a barriers test. In our view, these do not need to be replaced, and we therefore recommend that the Expert Panel and ICVCM Board carefully analyze commonly applied approaches to additionality. If necessary, specific suggestions can be considered from the ICVCM to identify ways to improve existing approaches, rather than imposing a new set of requirements that are impractical and do not improve the additionality assessment outcome.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| #   | Comment submitted by | Para/Fig/Table/Note | Type of comment | Submitted comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Proposed change                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| 690 | Anonymous            | QUESTIONS           | ge              | This seems to substitute the Expert Panel's judgement for the registries peer review process. How does the ICVCM intend to be an expert on all of the various types of projects in existence? This is likely an unreasonable expectation. In cases where the ICVCM determines an "insufficient likelihood" of additionality at the conclusion of the Step 1 assessment, it now recommends that ICVCM allow the registries that have approved the project type to respond to ICVCM and make a case for additionality before CCP eligibility is determined. We are concerned with the proposed requirement to conduct a financial attractiveness assessment on every project. In our experience, financial assessments are not always a robust approach for determining additionality, in particular when comparing the project scenario with and without carbon revenue. This is because this type of analysis is inherently subjective, due to variability in the cost of capital and pricing. The use of IRR alone is an insufficient measure of project viability since it ignores the cost of capital, which varies widely amongst project owners. For example, each company or project owner will have different                                                                                                                                                                                                                                                                                                                                                                                               | We also note that the subjectivity and variability of these analyses make them virtually impossible to verify with reasonable assurance, and verification bodies often lack the expertise to assess such subjective assumptions. It is equally difficult to secure qualified subcontractors to assist verifiers with this assessment, and the hired 'experts' often lack the relevant industry knowledge. Forcing verifiers to make these assessments will result in inconsistency across project verifications.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 690 | Anonymous            | QUESTIONS           | ge              | 14 access to and reliance on equity and debt, and this varies depending on the type of organization (e.g., for profit vs non-profit). Then, different project owners will select different capital structures based on access and cost, which influences the project weighted average cost of capital (WACC), and the cost of capital will vary over time due to changes in macro and market conditions. Further, there is no consistent, industry accepted approach to underwriting investments in carbon projects with respect to future timber prices and carbon prices, but also related to other revenue streams (e.g., agricultural products, hunting and recreation leases). Deferring to the traditionally recognized financiers of timberland investments and agricultural activities, such as pension funds, would not provide the necessary benchmark information. There is no standard benchmark for land-based carbon offset investments and these would vary greatly by geography and project type (wetland restoration would be different than IFM on small private timberlands or from agricultural practices). Therefore, it would be very difficult to rely on sample data or literature, and, in our view, experts would be unable to provide a valid assessment of the indicators. Finally, because of this wide variability of financial inputs it could easily result in cases where projects that are deemed viable do not secure financing, while other projects that are deemed unviable do secure financing, somewhat weakening the use of this test to determine project additionality. | 15 As a critical input to these analyses, carbon credit price and transaction costs are highly variable and subject to change over time. Carbon projects can take years to develop. The speculative nature of this attribute in the financial analysis has real-world, HUGE implications as to whether a project would be considered additional and pursued. In the absence of better, more specific guidance on how this must be implemented, this requirement could adversely affect project implementation with little actual basis. As a specific example, forests are an asset with multiple potential revenue streams and management outcomes. IRR maximization is a motivator in considering multiple management pathways. However, it is not an exclusive motivator and amenity value is often equally or more important. IRR should be used as it is intended - as one attribute of a fuller decision framework for evaluating a management pathway. Requiring either "no income, cost savings or benefits other than carbon credit revenues" or "relatively poor financial attractiveness without carbon credit revenues" AND "carbon credit revenues significantly impact financial feasibility" AND "achievement of financial attractiveness with carbon credit revenues" sets an unrealistic bar for determining financial additionality. We suggest a more realistic approach which assesses whether carbon credits incentivize project action, rather than specifically or exclusively fund it. |
| 691 | Anonymous            | QUESTIONS           | ge              | Additionality is one of the most significant elements of voluntary carbon credits and needs to be prepared very carefully. For this reason, the scope should indicate that what happens next when the additionality is "insufficient". Will the project be labeled as non-qualified automatically or will there be another chance for project developers to revise their project scoping? Will it create an extra effort and timing problems if the second chance will be given?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | The Framework should explain the importance of additionality and indicate the result of being "insufficient." Since the Body will be assessing too many elements to decide additionality in one time, the methodology has to be published publicly not to create significant question marks in the head of project developers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 692 | Paul Renaud          | QUESTIONS           | te              | The major missing element missing surrounding Additionality is recognizing the importance in protecting against changes in land use. The IPCC warns that changes in land use is the greatest threat to achieving the requisite level of climate mitigation. So it is reasonable that a set of initiatives that protects against loss of natural sequestration, or previously attained additional levels of sequestration, should be permitted for credit - especially where it can be reasonably expected that loss of sequestration will occur if nothing is done. Hence the notion of risk analysis must encompass not only the risk of reversability, but also the risk of erosion if the proposed activities do not happen.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Additionality encompasses necessary activities to protect of existing sequestration in circumstances where the risk of loss of existing sequestration can reasonably be established. The effectiveness in preventing losses shall be monitored accordingly.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 692 | Paul Renaud          | QUESTIONS           | te              | This concept is already established when permitting credits for harvesting a forest less frequently. The risk of lost sequestration due to the baseline level of planned harvesting is quantified and permitted as a credit. In this case the change of intent for the land use, is a form of protection for a limited period of time.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 692 | Paul Renaud          | QUESTIONS           | te              | It is reasonable to extend this concept to encompass other forms of protection to prevent loss in sequestration due to other economic activities (e.g. competing uses for the land) as well as vulnerability to natural loss due to the long term effects of climate change (e.g. disease, invasive species, natural disaster).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 692 | Paul Renaud          | QUESTIONS           | te              | Hence Additionality should not be understood in absolute terms. Protecting against loss of natural resources is probably more important than adding to them as prevention of a problem is inevitably more effective than curing it. Both prevention and cures are needed realistically.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| 692 | Paul Renaud          | QUESTIONS           | te              | Perhaps this leads to a new category of credit? If so it is important that the economic advantage in prevention is sufficient to enable the preventative activities. For example, a woodlot owner can choose to cut a maple tree or tap it for syrup production. If the landowner taps it for syrup, the tree continues to live and sequester carbon (it has already sequestered a metric ton of carbon to get to the size where it can be tapped). However tapping the tree results in the permanent loss of opportunity for harvesting a veneer grade log from it (which occurs only near the base of the tree which is in the zone wounded when tapping the tree). Economically, the tap will generate \$15 per litre per year (less costs to produce the syrup), a veneer log will generate a one-time value of \$150 per log and a timber log will generate \$8 per log. The economic return from killing the tree is better within one to two decades compared to keeping it for syrup production. A credit methodology that changes that economic model to favour protection could tilt the outcome, but would not qualify as additional under the current definition. | 0                                                                                                                              |
| 693 | Guy Pinjuv           | QUESTIONS           | te              | Are there alternative approaches to additionality that should be considered and that are not covered under the current draft Assessment Framework?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                              |
| 693 | Guy Pinjuv           | QUESTIONS           | te              | Yes, a dynamic observed baseline. See: <a href="https://pachama.com/blog/4-ways-dynamic-baselines-can-transform-carbon-crediting/">https://pachama.com/blog/4-ways-dynamic-baselines-can-transform-carbon-crediting/</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | See general comment above:                                                                                                     |
| 693 | Guy Pinjuv           | QUESTIONS           | te              | This approach can be used as a type of dynamic performance benchmark (see VCS Standard), where additionality is determined as well as the crediting baseline. While a form of performance benchmark is allowed in some standards such as VCS, a fully dynamic observed baseline, that is not dependent on future projections from historical data, is not currently used.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 1) A dynamic observed baseline should be used to determine additionality and crediting.                                        |
| 693 | Guy Pinjuv           | QUESTIONS           | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 2) financial feasibility should not apply to all project types (e.g., Agriculture)                                             |
| 693 | Guy Pinjuv           | QUESTIONS           | te              | Are there any specific criteria which the draft Assessment Framework should take into account in its guidance on additionality?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 3) Additionality criteria should be clearly defined, and assessed on a project by project (implementation and outcomes) basis. |
| 693 | Guy Pinjuv           | QUESTIONS           | te              | Yes, the additionality criteria such as financial feasibility does not apply to all project types (e.g., Agricultural sector). See VM0042 and Climate Action Reserve Soil Enrichment Protocol for full descriptions. Financial considerations are not the main drivers of farmer behavior as risk aversion and uncertainty (climate, markets trends, incomplete information) tends to be more important.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 4) Some form of dynamic performance benchmark should be used to assess additionality.                                          |
| 693 | Guy Pinjuv           | QUESTIONS           | te              | The Integrity Council proposes in its draft Assessment Framework a risk-based assessment of additionality, to be conducted by the Expert Panel by project type, as a first step in the overall assessment of additionality for CCP.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                              |
| 693 | Guy Pinjuv           | QUESTIONS           | te              | a) Please provide comment as to the feasibility and desirability of this additional level of risk-based analysis by project type.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                              |
| 693 | Guy Pinjuv           | QUESTIONS           | te              | These criteria for additionality should be clearly defined and not left up to "an expert panel for review". We believe that additionality should be assessed on a project by project basis where possible, and not merely at a project type level as two projects under that same category can have vastly different additionality outcomes based on project implementation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                              |
| 693 | Guy Pinjuv           | QUESTIONS           | te              | b) In this assessment, the Integrity Council proposes to use as one data point analysis of carbon prices. Please provide comments as to the feasibility of use of this indicator, and on the alternative use of marginal abatement costs for this purpose.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                              |

| 693 | Guy Pinjuv           | QUESTIONS           | te              | Should credit issuance by REDD+ projects be limited by the performance of the jurisdiction?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 693 | Guy Pinjuv           | QUESTIONS           | te              | In some way, yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 694 | Aya Yamazaki         | QUESTIONS           | ge              | Flexible application of this principle is requested. Unless their emissions reduction effect is totally false, reduction programs/projects merit to be undertaken.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Text to be modified, if necessary, taking account of my comments above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 695 | Anonymous            | QUESTIONS           | te              | Reviewing on standard-level the application of Additionality demonstrations such as Financial, Barrier and Common Practice Analysis is good.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Include possibility for white label or reduced additionality requirements for some community-based small scale projects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 695 | Anonymous            | QUESTIONS           | te              | Some small-scale community based project types with high costs (e.g. ARR <50,000 tCO2e/yr) should have something like a white-labelled additionality as it is often demonstrated how hard and costly it is.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Embed AUDD baselines in jurisdictional baselines/activity data. Have robust leakage assessments. But do not deduct project performance for bad jurisdictional performance that is no leakage. APD REDD has no relationship to jurisdictional baseline or performance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 695 | Anonymous            | QUESTIONS           | te              | REDD+ projects are not all the same. An Avoided Planned Deforestation project is primarily about financial additionality, but bears no relation to a jurisdictional performance around it. An Avoided Unplanned Deforestation Project should have a baseline nested into jurisdictional baseline or activity data (as update being proposed by Verra). However it would be unfair to IPLCs when their good performance gets diminished by bad jurisdictional performance. This is already being addressed in the deductions for Leakage under Verra. But deforestation in the jurisdiction that is no leakage from the project area should not lead to deduction of AUDD crediting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 696 | Calvin Tran          | QUESTIONS           | te              | We are very concerned about the lack of a counterfactual-based method to meet additionality requirements. We are surprised by the omission of stricter, empirical methods of assessing additionality that compare project performance to a counterfactual in absence of a carbon crediting process (i.e. a comparison between project outcomes and a dynamic, empirically-measured, rather than modeled baseline). While a "performance benchmark" is mentioned in Criterion 8.6d, we ask that a dynamic performance benchmark methodology, utilizing a control group approach, be explicitly endorsed as a criterion for additionality. In such methodologies, project areas are statistically matched to areas outside of the project area. Then, over the course of the project timeline, carbon in the project area is compared to carbon in the statistically-equivalent non-project units, and only the carbon in excess of the "actually measured baseline" is credited. Rather than basing the claim of additional carbon on ex ante modeling of an invented baseline, this allows project proponents to highly accurately determine the effect of their project, specifically, on the carbon stored. Projects that use an empirically-determined performance benchmark are more robust than projects that only provide justification for a barrier, rather than quasi-experimental assessment of the truly additional carbon. The lack of an explicit mention of (and qualification by) counterfactual analysis is one of our most significant concerns with the CCP draft as it stands. | Referencing 3.4.1 and 3.4.4 of the Assessment Procedure, speaking as a project developer/mitigation activity proponent, we are concerned that the failure of an unrelated project belonging to the same credit type as ours could potentially fail to report a material change to the carbon-crediting program in the 2-week time period allowed in 3.4.1, causing all mitigation activity proponents that fall under that credit type under that carbon-crediting program to suspend credit generation until the unrelated project can remedy their situation. 3.4.4 states that "in the event of a suspension of the CCP-eligibility of a credit-type, no new activities may have credits awarded CCP-eligibility under that credit type until the suspension is revoked". We recommend taking a position that allows carbon-crediting programs to localize and minimize the cascading effects that this would have on other mitigation activity proponents that do meet CCP and AF compliance. |
| 696 | Calvin Tran          | QUESTIONS           | te              | In regards to the feasibility and desirability of risk-based analysis by project type, it makes sense to consider, but care must be taken to ensure that the additional level of analysis is not overly complex. Should a certain project type have seemingly more stringent requirements for additionality, it may add costs and deter interest in developing those project types compared to others. In an interest to preserve the pace of innovation and market demand across all project types, equity and fairness in additionality assessment must be considered.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Furthermore, procedurally speaking, the capacities of the Expert Panel should be considered so as to not become overly burdened with an infeasible volume of assessments to look over. Should this be the case, strategies and processes to scale the pace of assessment should be explored.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 696 | Calvin Tran          | QUESTIONS           | te              | We do not have comments regarding the feasibility of including carbon prices in additionality assessments. As we use quasi-experimental, counterfactual-based methods to determine the additionality of projects, we do not need carbon prices/financial additionality to feel confident that our projects create additional carbon. Financial additionality assessments rely heavily on assumptions of landowner behavior under a certain set of financial conditions, while counterfactual based methods like our dynamic baseline approach "actually determine behavior of landowners outside of our project" and compare our carbon outcomes to those of statistically-matched non-participants (a control group). Additionality is thus empirically determined. As a result, we do not have comments on the feasibility of including carbon prices in additionality assessments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| 698 | Individual/employee, Coalition for Rainforest Nations                                       | QUESTIONS           | ge              | On Additionality: For national programs, such as UNFCCC REDD+, additionality can be proven if emissions from deforestation are below a baseline that was calculated on historical emissions. The baselines must be updated every 5 years to ensure that deforestation and degradation ends. Attempting to analyze "why" emissions have gone down and apply strict rules is counter productive and ignores the unique political, legal and social structures in each country                                                                                                                                                                                                                  | Change the entire construct on additionality for national programs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 700 | Anonymous                                                                                   | QUESTIONS           | ge              | While it is essential to ensure additionality of projects, it may be necessary to allow for a more flexible assessment of additionality due to the large variability of projects. This may be necessary to avoid automatically labelling certain types of projects as not additional due to too rigid criteria, and thus excluding highly beneficial and additional projects from the market. While financial additionality is one good way of assessing additionality, it does not consider human factors of implementation. Other methods such as common practice analysis and barrier analysis may be more effective in considering these aspects.                                        | N/A                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| 703 | Anonymous                                                                                   | QUESTIONS           | ge              | We consider the additionality approaches to be robust if potentially onerous to some project types, given one size fits all approach. In this regard we are not supportive of the two stage approach proposed (endorsed)                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | See our comment on the framework with respect to additionality.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 704 | Individual/employee, Zero Emissions Platform and the Carbon Capture and Storage Association | QUESTIONS           | ge              | It is possible that compliance with additionality is harder to justify for projects receiving support from national or regional programmes (e.g., grant funding, business models), since they can be less dependent on revenues from carbon credit sales. For instance, it is not clear at the moment how Government supported capture on Energy from Waste projects, which contain both fossil and biogenic components, would be robustly viewed through the approach of the ICVCM, especially when considering the proposed additionality criteria.                                                                                                                                        | See above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 704 | Individual/employee, Zero Emissions Platform and the Carbon Capture and Storage Association | QUESTIONS           | ge              | Criterion 8.2 "Barriers to implementation" lists a set of questions to be answered by the Expert Panel to determine if the implementation of mitigations activities is prevented by non-financial obstacles. CCSA and ZEP would like to highlight that the answers to the questions are likely to be very context specific, especially given the wide range of different technologies involved. Finally, the resulting expert judgement – which applies a quantitative scoring to considerations which appear to be more qualitative – would benefit from additional clarity regarding how the qualitative assessment is translated into quantitative values (e.g., through a scoring card). | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 705 | Individual/employee, Radicle                                                                | QUESTIONS           | ge              | We feel there is a large emphasis on expert judgement. How are registries expected to assess their performance against the Assessment Framework with certainty and if the expert panel is reformed in future with new members, how can the same standards be maintained over time?                                                                                                                                                                                                                                                                                                                                                                                                           | One approach to additionality we believe should be considered in the Assessment Framework is that of performance standards. We believe performance standards – when determined conservatively and boundried to a specific geography – provide a clear and robust additionality assessment that creates a standardized approach across projects in a specific jurisdiction. Performance standards are typically also linked to the project baseline which systematically standardizes the credit quantification process. Performance benchmarks are commonly used in the VCM to determine additionality across a project type. This is currently considered a best practice within the space . |
| 705 | Individual/employee, Radicle                                                                | QUESTIONS           | ge              | Including elements of assessment that no registries are currently performing will pose major execution delays for the implementation of this framework as well as major costs to PDs and standards. Suggest that functional equivalency to the current framework should be strongly considered.                                                                                                                                                                                                                                                                                                                                                                                              | If there is no performance standard then the IC-VCM will be leaving several methodologies with very rigorous methods for determining additionality on the table and not eligible. Such as the Family Forest Carbon Methodology and the new ARR methodology                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| 705 | Individual/employee, Radicle             | QUESTIONS           | ge              | We do not support the inclusion of carbon credit prices as a component of the financial assessment of additionality because the VCM is too illiquid and opaque to determine what a fair market price for a given product is. Pricing is dependent on project jurisdiction, vintage, project type, volume, among many other factors so we wonder how this heterogeneity will be utilized. A buyer in one region may be willing to pay a different price than a buyer in another region. Credits are often traded bilaterally, so we wonder where the "carbon credit price" data as used by the Expert Panel will come from. Given the Assessment Framework is specific and detailed, this seems like a component that inherently cannot be specific and detailed and we fear blanket pricing could lead to erroneous judgments. | Additionally, we suggest some inclusion/assessment of financial additionality beyond profitability. Consider inclusion of measure for increase of adoption rates. Will the project accelerate the rate of adoption of x technology? How does the activity contribute to an increased rate of decarbonization due to this increased rate of adoption by others?                                                                                                                                                                                                                                                                      |

| 705 | Individual/employee, Radicle             | QUESTIONS           | ge              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | We believe that each jurisdiction needs its own assessment, based on standardized methods. However, attempts to create performance indicators are very complex and the big question is whether the ICVCM have capacity for that? There is already some structure built within ART-Trees for example and that would be a prudent starting point for the IC-VCM to look at. We believe that unplanned deforestation projects should align with jurisdictional REDD, as they usually focus on the same drivers of deforestation and planned deforestation approaches should be regionally studied to try to limit deforestation rates. |
| 706 | Individual/employee, NBS Brazil Alliance | QUESTIONS           | ge              | The NBS Alliance is supportive of a strong foundation of additionality assessment, although there might be some issues with the framework as per the initial draft that is presented to stakeholders for public comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | See above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 706 | Individual/employee, NBS Brazil Alliance | QUESTIONS           | ge              | Firstly, it's especially troublesome that Natural Climate Solutions (NCS) are not expressly mentioned on a project-level, which compose most of the carbon credits available for NCS in the voluntary carbon markets at this point.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 706 | Individual/employee, NBS Brazil Alliance | QUESTIONS           | ge              | For example, the only moment the CCP assessment framework offers a direct recognition and differentiation for NCS is when it mentions Jurisdictional REDD+ activities, which in the majority of countries, and especially Brazil, is not the case for such activities. This might cause great confusion with the orientation on how to apply additionality tools and "fine-tune" additionality application for project-level activities.                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 706 | Individual/employee, NBS Brazil Alliance | QUESTIONS           | ge              | Jurisdictional REDD+ activities in Brazil are still in their embryonic stages, with no viable nesting options for project-level activities. This means that the relevance of addressing directly project-level REDD+ activities is about contemplating projects that actually exist and are deploying mitigation activities in the country, as opposed to a "wishful-thinking mentality" of a medium to long term future in which Jurisdictional REDD+ frameworks would actually become viable and operational.                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 706 | Individual/employee, NBS Brazil Alliance | QUESTIONS           | ge              | Furthermore, as per Criterion 8.4, "Considerations of Legal Requirements", the NBS Alliance would like to emphasize that the non-enforcement of legal requirements is a major additionality pillar for NCS projects in Brazil.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 706 | Individual/employee, NBS Brazil Alliance | QUESTIONS           | ge              | Also, it needs to be made clear throughout the consultation document that mitigation activities can be considered additional when legal requirements are not enforced (there are many other places in the document where this was not made clear).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 706 | Individual/employee, NBS Brazil Alliance | QUESTIONS           | ge              | We think the requirements in Table 38 (credible and recent evidence to show that legal requirements are not enforced) are a suitable way of showing that a mitigation activity is still additional.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 706 | Individual/employee, NBS Brazil Alliance | QUESTIONS           | ge              | To illustrate the importance of this caveat to additionality, we refer to the business-as-usual scenario in Brazil, as follows:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 706 | Individual/employee, NBS Brazil Alliance | QUESTIONS           | ge              | Non-compliance with legal reserve requirements established by the Brazil Forest Code                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 706 | Individual/employee, NBS Brazil Alliance | QUESTIONS           | ge              | The Brazil Forest Code requires that all rural properties in the country maintain a certain amount of land under native vegetation (called "Forest Legal Reserves"). In the Amazon biome, the Forest Legal Reserve required corresponds to 80% of the area. In addition, all rural landholdings must maintain natural vegetation along water courses and steep slopes to protect water resources and prevent erosion (Permanent Protection Areas or 'APPs').                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 706 | Individual/employee, NBS Brazil Alliance | QUESTIONS           | ge              | Areas exceeding the legal reserve (ELR) requirements may be deforested pending authorization, provided they respect the requirements of maintaining Forest Legal Reserves and APPs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| 706 | Individual/employee, NBS Brazil Alliance | QUESTIONS           | ge              | The reality is different, and deforestation in the Amazon region commonly goes beyond the ELR limit. Once landowners start clearing their land, it is common practice that they do not respect the limits established by the law, and clear areas of Legal Reserve and APPs. A recent study has shown that in 92% of cases, deforestation goes beyond the areas of ELR (Trase, ICV, Imaflora 2022).                                                                                                                                                                                                                                                                                                                     | 0               |
| 706 | Individual/employee, NBS Brazil Alliance | QUESTIONS           | ge              | The result of historic and uncontrolled deforestation results in vast areas that do not have sufficient forest legal reserve and could be restored. According to IBGE (Brazilian Institute of Geography), there are more than 6 million rural properties in Brazil, of which ca. 4 million properties covering ca. 250 million hectares don't have sufficient area of Legal Reserve.                                                                                                                                                                                                                                                                                                                                    | 0               |
| 706 | Individual/employee, NBS Brazil Alliance | QUESTIONS           | ge              | While rampant illegal deforestation (and little forest restoration) has been observed, environmental agencies have been historically unprepared to monitor, verify and enforce the legislation. While modern remote sensing technology has made this job easier, a systematic dismantling of the capacity of environmental agencies have been observed in recent years. In the first year of the current government (2018), the budget of the Federal Environmental Agency, IBAMA, was reduced by 51%. Declarations from the Minister of Environment at the time incited landowners to clear land for agricultural production and resulted in a significant increase in deforestation rates compared to previous years. | 0               |
| 706 | Individual/employee, NBS Brazil Alliance | QUESTIONS           | ge              | The result of these actions is that there is no capacity and no political willingness to monitor, verify and enforce the law – only 1.2% of the illegal deforestation alerts raised in 2020 resulted in infraction notices (MapBiomias 2021). Another study MapBiomias shows that in the state of Pará, for instance, there were there were 60,857 deforestation alerts from 2019 to end of 2021; 59,774 of these had indication of illegalities but no enforcement action was taken.                                                                                                                                                                                                                                   | 0               |
| 706 | Individual/employee, NBS Brazil Alliance | QUESTIONS           | ge              | Even though the justifications may vary, the overall conclusion is the same: the common practice observed in the Amazon region is the non-compliance with the regulatory framework defined by the Brazilian Forest Code. Combined with blatant lack of enforcement, these factors result in continuous and increasing loss of native vegetation in the Amazon region.                                                                                                                                                                                                                                                                                                                                                   | 0               |
| 706 | Individual/employee, NBS Brazil Alliance | QUESTIONS           | ge              | In summary, if mitigation activities required by legal requirements are not considered additional (even if those legal requirements are not enforced), no carbon finance can be used to counter these trends, and vast areas of native vegetation with high carbon stocks will continue to be at risk of deforestation and the VCM will not have any role to play in the NBS sector in Brazil.                                                                                                                                                                                                                                                                                                                          | 0               |
| 707 | Anonymous                                | QUESTIONS           | te              | Within the decision tree of additionality assessments, financial additionality is listed as the first step. Financial additionality tests are highly flawed. They work best where industries are established and have a benchmark IRR. However, this is counter-intuitive for the most additional projects, where new technologies, sectors and activities do not have such data. Nor does this make sense when looking at sectoral programs- from avoided deforestation to the performance of activities across a jurisdiction or sector.                                                                                                                                                                              | see above       |
| 707 | Anonymous                                | QUESTIONS           | te              | The VCM has also established significantly improved additionality approaches based on performance benchmarks. These establish the market penetration and performance across an industry, and credit only action that goes beyond this. The additionality provisions included in the IC-VCM draft would NOT improve quality, they would take the sector backwards. It would also lead to major challenges for new industries like CCS+, where no benchmark IRR data exist.                                                                                                                                                                                                                                               | 0               |
| 707 | Anonymous                                | QUESTIONS           | te              | It is not clear how the assessments proposed would apply at the level of project types or programmes. Many of these tests are highly project and location specific. Rather than focusing on an up-front risk-based approach for project types, ICVCM should screen the program's approaches to ensuring additionality first. Where these are found to be insufficient, the recommendation should be for the programme to update its additionality rules. No sector-specific assessment by IC-VCM makes sense- there are no useful international IRR benchmarks that make sense, especially not for new sectors.                                                                                                         | 0               |

| 708 | Anonymous            | QUESTIONS           | ge              | I am a PhD student at University of California, Merced. I have been studying Acre's jurisdictional REDD+ program since 2019. I do not think credit issuance by REDD+ projects should be limited by the performance of the jurisdiction. Although REDD+ payments are framed as an investment in more sustainable land uses, the performance-based logic requires previous local expenditures to reduce deforestation rates. Deforestation, however, is not an isolated phenomenon but an outcome of our global political economy, which also involves REDD+ payers in the Global North (Cardoso 2017). The Global South is not an homogenous region. For some countries or provinces, the necessary previous investments in deforestation reduction are simply not feasible without external funds, especially for high short-term opportunity costs that those investments entail in terms of development (Hein 2019). Rural areas of the Global South often face socio-economic challenges and have the least responsibility for the climate crisis, which are mainly caused by historic greenhouse gas emissions from fossil fuel burning in the Global North (Irfany and Klasen 2015). | The idea of limiting credit issuance by REDD+ projects based on the performance of the jurisdiction is not only unfair, but might also encourage the interruption of REDD+ projects in those areas to the benefit of business-as-usual land uses.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

Even if a project is financially viable it may still require technical expertise that a land manager lacks. Barrier analysis, and specifically technical or knowledge barriers, should be considered alongside financial approaches to additionality.                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 710 | Josiah McClellan     | QUESTIONS           | te              | G, question a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Risk-based analysis by project type is not feasible for NBS. These projects vary in financial and other barriers based on location, and projects are location specific. The ICVCM is best positioned to assess whether a carbon crediting program has the rigor and processes in place to effectively evaluate the additionality of mitigation activities (step 2). Attempting to assess additionality of project types will be consistently and successfully challenged because of the variation in additionality within single project types. As written, the guidance serves as a disincentive to specific mitigation activities rather than a true protection against non-additionality. Step 1 should be removed from the guidance and Step 2 maintained. |
| 711 | Max DuBuisson        | QUESTIONS           | ge              | Both the marginal abatement costs and the carbon prices are moving targets, especially for nature based solutions. This approach to additionality continues a decades-old mindset borne from industrial and energy-related mitigation projects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Reduce reliance on subjective financial additionality tests and acknowledge the complexity of systems such as agriculture where management activities are highly variable and subject to myriad different forces, financial, meteorological, biological, and cultural.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 712 | Emma van de Ven      | QUESTIONS           | ge              | Financial additionality for carbon farming-related activities is inadequate because ex post requires farmers to finance the transition themselves (i.e. carbon finance is only ramping up after the growth of agroforestry generates significant results) and so they need to make the investment case work in another way.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Don't make finance-based additionality the key benchmark. This will force projects (and IPCLs specifically due to their limited access to finance and low bargaining power) to accept investors who pay them nothing or the bare minimum for their future carbon credits, in many cases also expecting a loan repayment on top of claiming all carbon credits. This isn't a healthy system because hardly any of the upsides end up with the communities who execute the project in practice.                                                                                                                                                                                                                                                                  |
| 713 | Anonymous            | QUESTIONS           | ge              | · While we welcome the introduction of a risk-based analysis, we are unsure of how it will be applied. Risks are country and activity specific, and we are not sure that carbon-crediting programs are equipped to assess risk at this level given their pipeline of projects. At this stage, the definition of risk is either too restrictive or too broad, giving way to interpretation and discretion. We would recommend adopting a more flexible approach, where additionality would have to be justified project by project, according to general principles.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 713 | Anonymous            | QUESTIONS           | ge              | · Our concern is that if "no income, cost savings or benefits other than carbon credit revenues" or "very poor financial attractiveness" results in an assessment of "Very high", it might be difficult for investors to invest in projects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 713 | Anonymous            | QUESTIONS           | ge              | · For REDD+ activities, the existing methodology for measuring baseline leakage for VCS REDD+ project-level should be included as a minimum, while additional requirements should be carefully evaluated and verified by each project developer and third-party verification and validation body (VVB) due to the higher levels of uncertainty related to approaches for setting baselines.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| 714 | Anonymous                                  | QUESTIONS           | te              | Additionality is a source of some of the most egregious examples of projects passing validation and verification that lack the standard for integrity needed in the market. We believe there is an important role for the ICVCM in this area, to shore up the weaknesses in current programs and methodologies that leave too much responsibility to the buyer to assess additionality after a project has been validated and verified.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Therefore, we recommend that even under the low likelihood category, there is not a blanket rejection of these activities, but rather additional steps required to demonstrate additionality. In addition, we recommend an approach that leaves room for reconsideration of decisions as conditions change.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 714 | Anonymous                                  | QUESTIONS           | te              | We agree with a risk-based approach to assessing additionality and with the ICVCM's intent to assess additionality at the activity level as a starting point. However, as methods and activities begin to diversify, for example in agriculture and soils sector, it may be difficult to understand additionality at the activity level, and this factor may change over time, with geography, with changing climatic conditions, and with specific combination of practices.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Additionally, the role laid out by the ICVCM for itself in the AF for ensuring additionality beyond the initial stage takes on too much of the role that is best implemented by the standards themselves. Expert judgment by the Expert Panel should not have a broad mandate to override the expertise and experience within the market, nor to assume responsibility for judgment calls that must take into account specific conditions of geography, market shifts, or changes in approaches/combinations of approaches. Rather, the ICVCM should work with the standards and a broader range of experts to identify the gaps in current approaches to additionality below the program level that are permitting clearly non-additional projects or credits to be verified, coordinate across standards so that these gaps are addressed by the standards at the program and methodology level using approaches that ensure transparency and comparability across standards. The ICVCM should set the threshold and the standards should do the work of determining the best approaches for assessing it and implementing it below the program level. |
| 715 | Eftimiya Salo                              | QUESTIONS           | te              | In the current draft, projects with "medium additionality" are CCP-eligible and they can pass the additionality test by demonstrating low availability of a project activity in a given area and that there are barriers for the project implementation which can be overcome by carbon credit revenues. However, this will only encourage project developers to select the "best" area where there are no similar activities to pass the low availability requirement. Choosing the project location based on commercial interests will have negative impacts on equality, leaving certain regions and their residents at a disadvantage. Similarly, barriers are easy to fudge and difficult to verify especially if VVB bodies don't have local knowledge. This is too low a threshold which almost any project can pass. When non-additional credits that don't go beyond business as usual are used as offsets, the result is net positive emissions as the compensated emissions are not actually counterbalanced by additional removals or emission avoidance. | Only projects with high-likelihood of additionality should be CCP-eligible. The "medium" additionality likelihood is set too low and will allow projects with very questionable additionality to be CCP-eligible.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 715 | Eftimiya Salo                              | QUESTIONS           | te              | Carbon prices are expected to increase, making carbon projects more profitable. Using carbon prices for the additionality assessment is a good idea, as this will direct finance to projects which have a clear case for additionality (high likelihood) and differentiate them from projects which have weak additionality (already financially profitable e.g. timber plantations) which will become even more profitable with carbon credit revenues.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Investment analysis, barrier analysis and market penetration analysis should always be conducted together not either/or. Market penetration assessment should be conducted regularly to reflect changes in the market uptake of the climate change mitigation method. Requiring only investment analysis could provide perverse incentives for potential project developers to demonstrate negative profitability which could just be the result of a bad business model e.g. commercial timber plantations in Uruguay are already a common practice as this is a profitable business, yet there are many carbon projects issuing credits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 715 | Eftimiya Salo                              | QUESTIONS           | te              | There should not be a requirement to nest project-based REDD+ baseline as the deforestation drivers, access to roads, population density etc. in a the project area are different than the average national deforestation rates (incl. logging concessions). In relation to jurisdictional REDD+, only additional mitigation activities should be credited which go beyond the baseline (incl. NDC and national targets).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | If assessing additionality in the final version is kept in the way it is in the draft - high likelihood and medium likelihood, this should be transparently communicated and visible as one of the attributes, so buyers could filter only projects with high likelihood of additionality. In order to avoid greenwashing, companies should reflect the likelihood of additionality in their corporate climate claims and communication, for instance being "carbon neutral with medium likelihood".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 716 | Individual/employee, KOKO Networks Limited | QUESTIONS           | te              | Risk based approach and sector level additionality analysis is a welcome move. This will improve the additionality assessment of the projects and weed out many non-additional projects which claim additionality based on project specific circumstances. However, VCM should try to simplify the additionality tool to avoid long development and validation project cycles.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| 718 | Individual/employee, Finnwatch             | QUESTIONS           | ge              | Using market carbon prices as a data point for additionality assessment is recommendable. As the prices are expected to rise in the future, such a benchmark will help to make a difference between additional and non-additional projects in financial analysis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| 718 | Individual/employee, Finnwatch | QUESTIONS           | ge              | As additionality is the core requirement of any carbon credit, it is worrying that the IC-VCM framework for assessing additionality will accept projects with medium likelihood and will accept such credits even without a financial additionality test. If this is not fixed in the final version, the credits with "medium" additionality should be flagged separately from the units that have "very high" additionality. Additionality of the projects should be regularly checked and verified, especially in program type projects, where initial investment is smaller and financial feasibility can be achieved rapidly, when market conditions change.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                               |
| 719 | Molly Brown                    | QUESTIONS           | ge              | Additionality is a very broad and contentious concept and we see it as extremely difficult to re-assess the additionality tools developed over long time under the CDM and widely used by the most common standards. The additionality assessment seems to be double work that will not lead to an acceptance of the principles.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | .                                                                                                                                                                                                                                                                                               |
| 719 | Molly Brown                    | QUESTIONS           | ge              | We are also concerned about the loose definition of "credit type" in the Assessment Framework. For accreditation to be meaningful, the ICVCM will need to create multiple subdivisions. For example, in cookstoves, additionality varies by distribution method, fuel type, stove efficiency, household income, and project location (urban vs peri-urban vs rural). In addition, the inclusion of legal requirements in 8.4 means that there may be need for differentiation of credit type by nation and region.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                               |
| 719 | Molly Brown                    | QUESTIONS           | ge              | The many sub-divisions of credit type will extend the length of time it takes to approve every credit type. What happens to credit types which are pending approval, while other types have been approved? To us it is unacceptable, that some credits will be potentially able to command higher prices in the market while others are awaiting approval.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                               |
| 719 | Molly Brown                    | QUESTIONS           | ge              | To your specific questions:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                               |
| 719 | Molly Brown                    | QUESTIONS           | ge              | 1. We are concerned about the inclusion of grant financing in the barriers risk assessment. In theory, grant funding could be used for ALL types of carbon project, from mangrove conservation to solar farm development. In practice, grants are hard to secure, and insufficient to meet the global demand.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                                               |
| 719 | Molly Brown                    | QUESTIONS           | ge              | 2. The use of carbon prices (question b) is not feasible at all as the prices are not available in a broad and transparent manner and are highly volatile                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                               |

Requirement to nest baselines of REDD+ projects on avoided deforestation                                                                                                                                                                                                                     |
| 720 | Anonymous                      | QUESTIONS           | ge              | XXXX strongly supports the nesting of REDD+ project baselines and specifically spatial allocation of baselines to accurately account for risk and performance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | We support the addition of a provision in the Assessment Framework to encourage nesting of project baselines and spatial allocation of reference levels to incentivize and recognize performance, while scaling efforts at forest conservation.                                                 |
| 720 | Anonymous                      | QUESTIONS           | ge              | B. Should credit issuance by REDD+ projects be limited by the performance of the jurisdiction?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | B. Should credit issuance by REDD+ projects be limited by the performance of the jurisdiction?                                                                                                                                                                                                  |
| 720 | Anonymous                      | QUESTIONS           | ge              | We strongly oppose this option and encourage recognition of performance at the project level regardless of jurisdictional performance. It would be unfair and wholly detrimental to our vision if effective project performance is not recognized and rewarded at the IPLC/project level. It would also disincentivize project participation in J-REDD and hinder the development of jurisdictional scale conservation efforts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | We strongly oppose limiting project performance within J REDD. We support recognition of performance at different scales to encourage efforts at forest conservation, to adequately compensate IPLCs efforts in conservation, and to incentivize projects to nest into jurisdictional programs. |
| 721 | Individual/employee, CLA       | QUESTIONS           | te              | Yes. Baseline environmental and legal additionality tests should be used for nature-based projects rather than financial additionality. So long as there is no legal requirement for the project to be delivered (e.g. legal requirement for woodland to be planted), and the environmental baseline shows that the project was not there already (e.g. no woodland where the trees are to be planted), the nature-based project should be determined to be additional and all the environmental services it provides should be additional. Financial additionality tests disincentivise investment in environmental markets as they inhibit stacking and bundling. It is our understanding that when a carbon credit is sold, only the carbon benefit is sold unless otherwise stated, and that should be negotiated early in the contract development. The CCPs must not inhibit the ability for multiple environmental benefits to be stacked or bundled at sale; it needs to allow for multiple buyers for different ecosystem services and opportunities for blended finance. This will ensure multiple benefits are achieved (carbon, nature and water), and avoid trade-offs resulting from a 'carbon only' focus. It will also ensure environmental markets are a commercially viable and attractive option. This is necessary for nature-based environmental markets to scale, because these projects often require permanent land-use change and therefore there must be sufficient income from using the land in this way. | As above.                                                                                                                                                                                                                                                                                       |

| 721 | Individual/employee, CLA | QUESTIONS           | te              | 'Schemes that require permanent land-use change without allowing landholders to obtain sufficient funding for future land use and maintenance, can have the effect of converting land from a productive asset into a future liability. The risk of negative land values is a fundamental barrier to investment.' – Broadway Initiative, Financing UK Nature Recovery Report, 2021                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 722 | Individual/employee, CLA | QUESTIONS           | te              | Are there any specific criteria which the draft Assessment Framework should take into account in its guidance on additionality?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | As above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 722 | Individual/employee, CLA | QUESTIONS           | te              | Yes. Baseline environmental and legal additionality tests should be used for nature-based projects rather than financial additionality. Assessing additionality using baseline environmental and legal tests will ensure projects deliver genuine additional environmental benefits while being commercially attractive, thereby enabling private finance in environmental markets to scale, and delivery of multiple benefits.                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 723 | Individual/employee, CLA | QUESTIONS           | te              | a) Please provide comment as to the feasibility and desirability of this additional level of risk-based analysis by project type.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | As above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 723 | Individual/employee, CLA | QUESTIONS           | te              | b) In this assessment, the Integrity Council proposes to use as one data point analysis of carbon prices. Please provide comments as to the feasibility of use of this indicator, and on the alternative use of marginal abatement costs for this purpose.                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 723 | Individual/employee, CLA | QUESTIONS           | te              | c) Please provide recommendations on additional means of assessing the additionality tests carbon crediting Standards currently employ.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 723 | Individual/employee, CLA | QUESTIONS           | te              | The proposed approach to additionality is too complex and disincentivises nature-based carbon projects, as it is not suitable for nature-based solutions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 723 | Individual/employee, CLA | QUESTIONS           | te              | The current definition of additionality included in the CCP document that 'a carbon credit must result from a mitigation activity's emission reductions or removals that would not have taken place except for incentives associated with the carbon price' is too narrow. It should not be focussed on the financial incentives as the market itself has a role in establishing efficient prices for nature-based projects. Instead, nature-based projects should meet core environmental and legal additionality tests. Environmental additionality should be applied at the project level.                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 724 | Luzia Bieri              | QUESTIONS           | ge              | a) According to step 1 (assessment of the overall likelihood of additionality of the mitigation activity), mitigation activity types with an "insufficient likelihood of additionality" will not be CCP-eligible. The first step of the assessment should not lead to an automatic exclusion of mitigation activities but rather to a positive list of mitigation activity types with a "very high likelihood of additionality".                                                                                                                                                                                                                                           | a) The first step of the assessment should not lead to an automatic exclusion of mitigation activities but rather to a positive list of mitigation activity types with a "very high likelihood of additionality".                                                                                                                                                                                                                                                                                       |
| 724 | Luzia Bieri              | QUESTIONS           | ge              | b) For the assessment of the overall likelihood that the type of mitigation activity is additional (step 1), carbon credit prices would be used to assess the change in financial attractiveness if carbon credits are considered. In criterion 8.1 (b-c and iii), it says: "The carbon credit price shall reflect the expected prices over time for the relevant type of carbon credit" and be "sourced from relevant carbon market transaction data, studies, and/or interviews with experts". It will be difficult to use carbon credit prices in step 1 since there are no transparent sources for prices per carbon credit type and it is impossible to predict them. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 725 | Phil Cryle               | QUESTIONS           | te              | Depending on each jurisdiction and program, projects could either be nested or carved out of jurisdictional programs. Either way, the interaction between the two project levels should happen in such a way as to avoid overlaps and double counting/claims.                                                                                                                                                                                                                                                                                                                                                                                                              | Depending on each jurisdiction and program, projects could either be nested or carved out of jurisdictional programs. Either way, the interaction between the two project levels should happen in such a way as to avoid overlaps and double counting/claims.                                                                                                                                                                                                                                           |
| 725 | Phil Cryle               | QUESTIONS           | te              | There should be a way to harmonise between jurisdictional Forest Reference Emission Level (FREL) and project-level baselines considering that the former might not be able to accurately consider specific plots/areas and the latter could have very different values depending on the baselining approach (hence resulting in very contrasting ERs even for similar projects within the jurisdiction).                                                                                                                                                                                                                                                                   | There should be a way to harmonise between jurisdictional Forest Reference Emission Level (FREL) and project-level baselines considering that the former might not be able to accurately consider specific plots/areas and the latter could have very different values depending on the baselining approach (hence resulting in very contrasting ERs even for similar projects within the jurisdiction).                                                                                                |
| 725 | Phil Cryle               | QUESTIONS           | te              | Consideration should be given to having clear requirements that would warrant the limit of REDD+ project credit issuance against jurisdictional performance because, in a nested jurisdictional approach, project-level accounting would already be aligned to the national or sub-national FREL and thus credit issuance would be legitimate and would only need to be adjusted if/when FRELs are adjusted (where jurisdictional performance might be a key factor for adjustment and not limitation).                                                                                                                                                                    | Consideration should be given to having clear requirements that would warrant the limit of REDD+ project credit issuance against jurisdictional performance because, in a nested jurisdictional approach, project-level accounting would already be aligned to the national or sub-national FREL and thus credit issuance would be legitimate and would only need to be adjusted if/when FRELs are adjusted (where jurisdictional performance might be a key factor for adjustment and not limitation). |

| 726 | Phil Cryle                                                           | QUESTIONS           | te              | The use of a carbon price for a given type of project / credit could be informative with regard to additionality if the opportunity cost of the offsetting project is also known. Having both the carbon price and opportunity cost allows the economic attractiveness of an activity to be assessed both with and without revenues from carbon credits. This will facilitate an understanding of whether the revenues from carbon offsets are needed to make the activity economically viable. Any use of carbon prices to inform an additionality assessment should therefore acknowledge the location specificity of opportunity costs (i.e., the profitability of a given land use varies geographically). The use of carbon prices in this way should be undertaken with caution given the volatility in prices and also variation in costs depending on offset source (project origination, spot market etc.). | The use of a carbon price for a given type of project / credit could be informative with regard to additionality if the opportunity cost of the offsetting project is also known. | 726 | Phil Cryle                                                           | QUESTIONS           | te              | The proposed use of marginal abatement costs (MAC) to measure additionality requires further explanation. If the logic is that activities with higher MAC (\$/tonne CO2e) are more likely to be additional because they cost more, then this needs to be undertaken with caution. In particular, consideration should be given to what cost is deemed to be "high" (i.e. cost curve quartiles) and consideration should be given to the specific geographic context in which the activity is occurring. Furthermore, a high MAC can be a misleading indicator of additionality when:                                                                                                                                                                                                                                                                                                                                 | The proposed use of marginal abatement costs (MAC) to measure additionality requires further explanation. This approach has been tested through multiple peer review and public consultation processes and was selected as best suited to the scale and nature of activities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                    |
| 729 | Anonymous                                                            | QUESTIONS           | ge              | Add to the criterion of not having occurred without the incentive, activities that, given present trends, are at high risk of not continuing in the absence of the incentive. For example, support for Protected Areas (PAs) with a very limited budget and with a reducing trend over time can justify additionality for avoided deforestation and carbon sequestration.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | State that the risk-based approach could include a cost-effective and quick quantitative and qualitative analysis of realistic barriers that would require an incentive for change in the short term. There should be flexibility on how to demonstrate additionality, taking into account lessons learned from previous initiatives |
| 730 | Anonymous                                                            | QUESTIONS           | ge              | Benchmarks of current trends and investment comparison can include the lack of implementation of regulated activities, i.e. deforestation in PAs, land use change, and no continuation of PES.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Include all realistic scenarios in benchmark and investment comparison, with a justification that, even if they are regulated, there is no evidence of compliance with those regulations/ or evidence that it will continue the regulation in the absence of the incentive.                                                          |
| 731 | Individual/employee, Drax                                            | QUESTIONS           | ge              | We believe credits arising from engineered carbon removal with permanent geological storage, in contrast to emission reduction credits, are fundamentally additional. This is because there is no incentive for a developer to carry out these activities without the revenues from carbon markets.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | N/A                                                                                                                                                                                                                                                                                                                                  |
| 731 | Individual/employee, Drax                                            | QUESTIONS           | ge              | Both DACS and BECCS benefit from government incentives in many jurisdictions, but these are not sufficient for viability on their own. As such we believe its self-evident that engineered carbon removal with permanent geological storage (i.e., DACS and BECCS) should pass the test for “very high likelihood that the type of mitigation activity is additional”. The option outlined to require no benefits at all for a project type to achieve “high likelihood of additionality” is not workable (as both DACS and BECCS would fail). The more appropriate metric is the option outlined for the mitigation activity to “typically have very poor financial attractiveness without carbon credit revenues and carbon credit revenues significantly impact financial feasibility”.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                    |
| 731 | Individual/employee, Drax                                            | QUESTIONS           | ge              | In addition, detailed project-level financial additionality tests could be highly problematic for project developers, as they would be complex to administer and require the disclosure of sensitive commercial information. Such tests and requirements could pose significant barriers to project developments. The proposed approach could be complemented by transparency on any Government / state support provided to projects. Again, it is abundantly clear that the market penetration of BECCS and DAC is negligible today.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                    |
| 731 | Individual/employee, Drax                                            | QUESTIONS           | ge              | This is a critical issue to get right in order to enable billion-dollar scale investments. If it is not clear at the outset that projects will pass additionality tests, investors will not go ahead                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                    |
| 731 | Individual/employee, Drax                                            | QUESTIONS           | ge              | The market penetration test seems unsuitable for engineered removals with geological storage such as BECCS and DAC. The test defines market penetration as “the recent share in newly pursued mitigation activities (eg newly installed capacity of solar power plants) in relation to all types of activities that provide the same type of product or service (eg total capacity of power plants added in the same time horizon). Clarity is required on what would constitute “activities that provide the same type of product or service” as BECCS and DAC, given the primary activity or service they provide is carbon removal with geological storage, for which they will initially be the whole of the market.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                    |
| 731 | Individual/employee, Drax                                            | QUESTIONS           | ge              | The requirements for evidence showing expectation of carbon credits need to take account of the practicalities of developing carbon removal projects with geological storage. These can be multi-billion dollar investments, taking years to develop. For first of a kind projects, it is likely that some early development activity will have taken place prior to public statements being made about the intention to sell carbon credits. For the avoidance of doubt, Drax expects to rely on revenue from carbon credits for all the BECCS projects that it plans to develop over the next decade and potentially beyond. The requirement that “not more than [1/2/3/x] years may pass between the date of proof of prior consideration of carbon credits and the registration of the mitigation activity” should differentiate between different types of credit activity. Engineered removals with geological storage have long development timelines of up to a decade from early optioneering work, through site selection, engineering studies, development of transportation and storage for the CO2, construction and commissioning. If evidence of expecting revenue from carbon credits is required at an early stage in this process, sufficient time must be allowed for the project to be implemented. | 0                                                                                                                                                                                                                                                                                                                                    |

| 732 | Individual/employee, Conservation International | QUESTIONS           | te              | The siloed approach towards quantification, permanence, and additionality introduces inconsistencies across these parts of the framework and misses the broader picture. These three sections should be considered in tandem. Jurisdictional REDD+ programs (JREDD+), for example, typically have higher uncertainty around calculations but lower permanence and additionality risk. Project-based approaches, on the other hand, are typically more accurate in quantification, but have higher risk of non-additionality.                                                                                                                                                                                                                                                                                                      | The ranking and grading for these three sections - additionality, permanence and quantification - should be reconsidered and realigned or merged to better reflect the linkages and trade-offs across quantification, permanence and additionality.                                                                                                                                                                                                                                                                                                                                                                    |
| 733 | Individual/employee, Conservation International | QUESTIONS           | te              | Permanence, additionality and quantification requirements at odds, effectively nix the possibility for multiple crediting periods for activities with material permanence risks. The additionality and quantification sections require that the volume of flow must grow over time and past levels of flow are ineligible for crediting. This implies that once an activity is implemented, subsequent baselines must include said activity. This would make it impossible to earn credits after the first crediting period, especially at the jurisdictional level. Furthermore, the permanence section carries obligations to continue monitoring for up to 100 years, which means that activities with material permanence risk would have very few options for long-term financing to actually meet the 100-year requirement. | At a minimum, inconsistencies across sections should be corrected. A basic understanding of the difference between stocks and flows should be reflected in the Framework. Focus of permanence should be on addressing the risk of reversals during the crediting period, not on creating infeasible requirements for monitoring past the expected lifetime of any institution, legal entity, or project. Criteria should reflect the scientific understanding of how temporary activities contribute a lasting (i.e. permanent) benefit to the climate system – especially when implemented at a jurisdictional scale. |
| 734 | Anonymous                                       | QUESTIONS           | te              | CCPs should lead to enabling activities, rather than holding credible activities back . We fully agree with the rationale in criterion 8.5 “Requiring evidence that carbon credits were considered prior to the implementation of the mitigation activity adds confidence in the additionality of the mitigation activity”. However, we think criterion 8.5 should not be a stand-alone criterion, be an optional criterion used to complement the other approaches in Criterion 8.6 assessment of viability.                                                                                                                                                                                                                                                                                                                     | Change page 90:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| 734 | Anonymous                                       | QUESTIONS           | te              | Especially for technology-based mitigation activities – but also others – the first purchase is often help or consultation services to assess the viability. The industrial transformation and repurposing projects are often a series of investment decisions, and not easily evidenced. We are often the party making projects realize that they could remove carbon if they rethink their industrial process. It is critical to enable – and not exclude these project, because they can have a big climate impact in the critical next 7 years.                                                                                                                                                                                                                                                                               | a) consideration of legal requirements;                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| 735 | Anonymous            | QUESTIONS           | ge              | It may be useful to have an initial assessment of the likelihood of a project activity, based on legal and financial measures. It is not clear whether this will be conducted globally regardless of programme (e.g. afforestation globally) or whether it will be conducted by country/jurisdiction or by programme (Gold Standard's afforestation). As noted above, it is important that countries/jurisdictions are not treated in a generalised way, whereby certain activities are classed as having a certain likelihood of additionality despite this likelihood varying between sites.                                                                                                                                           | 0                 |

| 735 | Anonymous            | QUESTIONS           | ge              | Any proposals to collect data on carbon prices should have processes in place to do this in a robust and transparent manner. Further discussions may be needed with different standards/programmes on what should be done and what is feasible.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                 |
| 735 | Anonymous            | QUESTIONS           | ge              | c) Other ways to assess additionality:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                 |
| 735 | Anonymous            | QUESTIONS           | ge              | In step 2, it is welcome that legal requirements (8.4) and the evidence of consideration of carbon credits prior to mitigation activity (8.5) are included. It would be useful to understand what 'credible third-party attestation' involves. The UK Woodland Carbon Code and Peatland Code, requires projects to be registered (i.e. listed on the registry) prior to implementation. This provides publicly available evidence of consideration of carbon credits prior to implementation. Projects must be validated within three years of registration/listing on the registry, unless there are exceptional circumstances.                                                                                                         | 0                 |

| 736 | Sadie Frank          | QUESTIONS           | te              | Are there alternative approaches to additionality that should be considered and that are not covered under the current draft Assessment Framework?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | See our comment.  |
| 736 | Sadie Frank          | QUESTIONS           | te              | The IC-VCM proposes to screen for additionality with an assessment of the likelihood of additionality at the credit-type level (see Figure 3, Step 1). Projects that receive a "very high" likelihood score are checked for legal requirements (Criterion 8.4) and evidence showing the expectation of carbon credit revenues (Criterion 8.5). Projects that receive a "medium" likelihood of additionality are subject to an additional set of ex-ante screening techniques (Criterion 8.6). These techniques include investment analysis and barrier analysis, both of which have been shown by independent studies to be highly subjective and subject to manipulation, as well as market penetration assessments and positive lists. | 0                 |
| 736 | Sadie Frank          | QUESTIONS           | te              | Are there any specific criteria which the draft Assessment Framework should take into account in its guidance on additionality?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                 |
| 736 | Sadie Frank          | QUESTIONS           | te              | See our previous response.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                 |
| 736 | Sadie Frank          | QUESTIONS           | te              | The Integrity Council proposes in its draft Assessment Framework a risk-based assessment of additionality, to be conducted by the Expert Panel by project type, as a first step in the overall assessment of additionality for CCP.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                 |
| 736 | Sadie Frank          | QUESTIONS           | te              | a) Please provide comment as to the feasibility and desirability of this additional level of risk-based analysis by project type.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                 |
| 736 | Sadie Frank          | QUESTIONS           | te              | For more complicated areas, such as REDD and Improved Forest Management, it is not clear to us that a reasonable answer can be given at the credit-type level. The answers could depend on individual methodologies and protocols, or even on individual projects. Addressing forest-sector credit integrity issues requires significant capacity and engagement that is not fully specified in the draft documents.                                                                                                                                                                                                                                                                                                                     | 0                 |
| 736 | Sadie Frank          | QUESTIONS           | te              | b) In this assessment, the Integrity Council proposes to use as one data point analysis of carbon prices. Please provide comments as to the feasibility of use of this indicator, and on the alternative use of marginal abatement costs for this purpose.                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                 |
| 736 | Sadie Frank          | QUESTIONS           | te              | This is a useful approach. Very low carbon prices tend to indicate non-additional outcomes, as the claim that a very low price signal can robustly indicate a marginal shift in outcomes is relatively suspect. Similarly, reasonably high carbon prices that exceed the comparable shift in profit margins experienced by projects operating in their legacy business sectors are consistent with a finding of additionality. Price data should not be difficult for the Integrity Council to obtain, so this approach should provide useful information without requiring significant effort.                                                                                                                                          | 0                 |

| 737 | Sadie Frank          | QUESTIONS           | te              | The IC-VCM proposes to screen for additionality with an assessment of the likelihood of additionality at the credit-type level (see Figure 3, Step 1). Projects that receive a “very high” likelihood score are checked for legal requirements (Criterion 8.4) and evidence showing the expectation of carbon credit revenues (Criterion 8.5). Projects that receive a “medium” likelihood of additionality are subject to an additional set of ex-ante screening techniques (Criterion 8.6). These techniques include investment analysis and barrier analysis, both of which have been shown by independent studies to be highly subjective and subject to manipulation, as well as market penetration assessments and positive lists. | 737 | Sadie Frank          | QUESTIONS           | te              | Notably, all of the approaches for implementing Criterion 8.6 are forward-looking. We strongly urge the Integrity Council to include a review of actual experience with credit types and methodologies in Criterion 8.6, including evidence documented by journalists and independent researchers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                          |
| 738 | Ivan VALENCIA        | QUESTIONS           | ge              | Jurisdictional REDD – In several instances, the CCPs introduce further requirements beyond those introduced by the UNFCCC, particularly in terms of additionality. This is likely to make it even more difficult for countries to engage in jurisdictional REDD+ programs despite the efforts being made in more than a decade. We strongly discourage the introduction of these new requirements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Refer to comments on this section                                                                                                                          |
| 739 | Darcy Jones          | QUESTIONS           | ge              | 1. No, although there is a stronger focus on case-specific additionality testing (financial additionality, etc.) and not as much focus on benchmark or performance-based testing, which could yield superior results to case-specific testing and would prevent, if well implemented, many of the ongoing issues of potential gaming and strategic use of baseline data, including for example in financial indicators and tests.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | N/A                                                                                                                                                        |
| 739 | Darcy Jones          | QUESTIONS           | ge              | 2. a) It is difficult to assess the feasibility of the proposed approach, as that will depend on resources applied to the task, for which we have no visibility. As a categorization device, this is a welcome step, as it allows the IC-VCM to focus its attention on programme procedures for additionality testing for classes of projects which may be more problematic. The identification of the “risk level” should be as evidence-based and as public and participated process as possible, with wide engagement from market participants and stakeholders.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                          |
| 739 | Darcy Jones          | QUESTIONS           | ge              | b) Given the additionality definition as dependent on the incentive provided by the carbon price, it is difficult to avoid “carbon price” as an indicator, but guidance should be given as to what kind of carbon price to apply for each class of projects and regions (as a minimum, different classes of projects in existing carbon markets have wide differences in pricing).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                          |

| 740 | Anonymous            | QUESTIONS           | ge              | Are there any specific criteria which the draft Assessment Framework should take into account in its guidance on additionality? Please provide comment as to the feasibility and desirability of this additional level of risk-based analysis by project type.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0               |
| 740 | Anonymous            | QUESTIONS           | ge              | This additional level of risk based analysis by project type should be removed. This assessment risks broadly mis-characterizing entire project categories, and could inadvertently stifle investments into critically important climate mitigation activities that would NOT occur without the carbon finance /investments. This is particularly dangerous given the assessments reliance on subjective judgements such as 'very poor' and 'relatively poor' financial attractiveness. We also note that additionality can vary wildly across projects of the same type--so painting an entire project type with the same brush is overly punitive. Overall we do not believe this assessment will add any rigor to the market, and instead, would only serve to introduce bias and subjectivity.                                                                                                                                                                                                                                                         | 0               |
| 740 | Anonymous            | QUESTIONS           | ge              | the Integrity Council proposes to use as one data point analysis of carbon prices. Please provide comments as to the feasibility of use of this indicator, and on the alternative use of marginal abatement costs for this purpose.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0               |
| 740 | Anonymous            | QUESTIONS           | ge              | Carbon credit pricing is quite variable across project types, vintages and Standards (and other attributes such as removals, NCS/non-NCS, geography, etc), so this is also a source of subjectivity and potential gaming. It is also unclear what transaction costs are required to be deducted, but project costs are also quite variable depending on a multitude of factors, and almost always will be commercially sensitive. Again, this type of additionality testing could lead to gaming, and at the very least, will lead to inaccurate and inconsistent assessments of financial additionality.                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0               |
| 740 | Anonymous            | QUESTIONS           | ge              | How should crediting under project-based REDD+ mitigation activities be considered within the scope of jurisdictional REDD+ programs?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0               |
| 740 | Anonymous            | QUESTIONS           | ge              | This should be left for the jurisdiction to decide. Already this is happening--some countries have decided to require nesting/alignment with J REDD+ accounting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0               |
| 740 | Anonymous            | QUESTIONS           | ge              | Should there be a requirement to nest baselines of REDD+ projects on avoided deforestation?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0               |
| 740 | Anonymous            | QUESTIONS           | ge              | VERRA is already planning to require allocation of AUD REDD project baselines starting in 2025, so it is unclear if IC VCM is seeking to impose nesting requirements beyond what VERRA is proposing? Note that those proposals only apply to AUD, and that there is currently no scientific consensus on how to nest a baseline for an APD REDD project, therefore we do NOT recommend requiring this.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0               |
| 740 | Anonymous            | QUESTIONS           | ge              | Should credit issuance by REDD+ projects be limited by the performance of the jurisdiction?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0               |
| 740 | Anonymous            | QUESTIONS           | ge              | Jurisdictions that are entering the market should decide how they want to handle nesting, and then after 2025 VERRA is requiring it anyway.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0               |
| 741 | Anonymous            | QUESTIONS           | ge              | We do not agree with the proposed structure for assessing additionality, which leans heavily on positive lists and financial analysis. This would impose new requirements on crediting bodies, project developers, and validation/verification bodies. It is unclear what problem these new requirements are solving, how they were developed, if/how they will add value and if they are even practical in terms of implementation and verifiability, and we are concerned they will create additional uncertainty in the market.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | see comment     |
| 741 | Anonymous            | QUESTIONS           | ge              | We echo IETA's comment that performance benchmarks – when determined conservatively and constrained to a specific geography – provide a robust and defensible additionality assessment that standardizes the approach across projects in the identified jurisdiction. Performance benchmarks are typically also linked to the project baseline which systematically standardizes the credit quantification process. Performance benchmarks are commonly used in the VCM to determine additionality across a project type. Performance standards, in combination with legal/regulatory additionality and barrier tests, represent current best practice in the market. This approach is adaptable to a wide range of project activities and can provide both conservativeness and transparency to the baseline development process. We strongly recommend that IC-VCM evaluate the specific approaches applied in both voluntary and compliance markets to consider improving on these approaches, rather than starting from scratch with new requirements. | 0               |
| 741 | Anonymous            | QUESTIONS           | ge              | We echo IETA's comments related to Criteria 8.4 and 8.6.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0               |

| 741 | Anonymous            | QUESTIONS           | ge              | <p>CRITERION 8.4: LEGAL REVIEW We broadly support the proposed approach to legal considerations for additionality. However, Criterion 8.4 also addresses situations where regulations are not enforced and suggests that a programme should include a time limit for additionality in these situations. This places an undue burden on crediting programmes and we suggest reliance on a programme's additionality review process. During its normal review process, programmes should include a review of the enforcement status for relevant regulations. Where regulations continue to not be enforced, projects should remain eligible and not be bound by an artificial period dictated by IC-VCM or the crediting programme. Enforcement failures could also be localised in which case project specific evidence should be sufficient. CRITERION 8.6(C) PENETRATION RATE There are many variables that contribute to how "common practice" is defined. Penetration rate can be a useful component of the overall additionality assessment; however, appropriate thresholds will vary by activity type. Ultimately, these are decisions that should be taken by crediting programmes as part of their methodology development processes.</p> | 0               |
| 741 | Anonymous            | QUESTIONS           | ge              | <p>The Integrity Council proposes in its draft Assessment Framework a risk-based assessment of additionality, to be conducted by the Expert Panel by project type, as a first step in the overall assessment of additionality for CCP. We strongly agree with IC-VCM's objective to ensure that VCM credits are high-quality and truly additional, but this is a highly impractical approach. Registries have developed and been implementing science-based, stakeholder driven processes for approving methodologies. The adoption of a new methodology can take years of input from experts, the public, and peer review processes. Suggesting that the IC-VCM would be able to conduct a risk-based additionality assessment for dozens (if not hundreds) of mitigation activities is absurd. It is imperative that we scale climate action quickly, and this process would inevitably create delays while ignoring the tremendous body of work already accomplished by reputable registries.</p>                                                                                                                                                                                                                                               | 0               |
| 741 | Anonymous            | QUESTIONS           | ge              | <p>A financial additionality test can only be applied at the level of a specific project. It is, after all, an assessment of a specific project's financial characteristics. This same type of financial testing cannot be applied at the level of a "credit type" (as proposed by IC-VCM) to determine the "typical financial viability" (page 44 of CCP part 4) of a particular credit type. The variation across technologies, projects, businesses, regions, countries, etc is far too great to reasonably determine "typical" financial viability.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0               |
| 741 | Anonymous            | QUESTIONS           | ge              | <p>As a specific example, forests are an asset with multiple potential revenue streams and management outcomes. IRR maximization is a motivator in considering multiple management pathways. However, it is not an exclusive motivator and amenity value is often equally or more important, particularly when considering specific landowner classes, like family forest owners. IRR should be used as it is intended - as one attribute of a fuller decision framework for evaluating a management pathway. We suggest a more realistic approach which assesses whether carbon credits incentivize project action, rather than specifically or exclusively fund it, and echo IETA's comment that financial additionality tests should not lead to the automatic exclusion of a credit, but rather as a signal to conduct further analysis.</p>                                                                                                                                                                                                                                                                                                                                                                                                   | 0               |
| 741 | Anonymous            | QUESTIONS           | ge              | <p>Rather than focusing on an up-front risk-based approach for project types, IC-VCM should screen the programme's approaches to additionality setting first. Where these are found to be insufficient, the recommendation should be for the programme to update its additionality rules.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0               |

| 741 | Anonymous            | QUESTIONS           | ge              | We echo IETA's concerns around financial additionality assessments. It will be difficult to use carbon credit prices in the financial additionality assessment due to fast-changing market dynamics, difficulty finding reliable sources, and the impossibility of predicting the future. The current market is not large enough nor liquid enough to provide reliable, transparent pricing of carbon credits. Since the VCM does not have a price ceiling or floor, credit prices change based on buyer geography, buyer purchase schedules, and other uncontrollable factors in the market. Since most credits are traded over the counter and crediting programmes do not require price disclosure, the available estimates for carbon prices are based on anecdotal information from buyers and sellers rather than reported. At best, they provide an overall market average, but not project-specific prices which would be necessary to accurately use this criterion to assess additionality. Similarly, it will be important for the Expert Panel to clearly describe how a market-wide IRR is determined if IRR is to be used in the additionality assessment. IRR will vary project-to-project and is both financing and geography dependent. | 0                                                                                                                            |
| 741 | Anonymous            | QUESTIONS           | ge              | We echo IETA's comment that performance standards should be considered. We believe performance standards – when determined conservatively and constrained to a specific geography – provide a robust and defensible additionality assessment that standardizes the approach across projects in the identified jurisdiction. Performance standards are typically also linked to the project baseline which systematically standardizes the credit quantification process. Performance benchmarks are commonly used in the VCM to determine additionality across a project type. This represents current best practice in the market.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                            |
| 742 | Anonymous            | QUESTIONS           | ge              | Important to consider that Jurisdictional REDD+ programs can be developed under a subnational level (as some State in Brazil, for example) and there is a real risk of leakage if have no clarity about the jurisdiction frame.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | In this logic, could be relevant to have some criteria about leakage in complement to that for permanence and additionality. |
| 743 | Vega Tapia           | QUESTIONS           | ge              | Repsol Foundation agrees on the use of financial additionality tests but this tests should not lead to credits, project types direct exclusion in case of mid-low financial additionality, since this could turn void projects with high additionality/ positive impact on other issues (ex: biodiversity, social additionality, etc..) that are key to face climate change challenges.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | N/a                                                                                                                          |
| 743 | Vega Tapia           | QUESTIONS           | ge              | When using 'benchmark analysis' to assess additionality, we consider it difficult to identify these benchmarks since projects tend to be unique if all their aspects are taken into account (type of project, location, stakeholders, positive impact, local context, etc...)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                            |
| 743 | Vega Tapia           | QUESTIONS           | ge              | To avoid Experts Panel bottlenecks, we suggest to focus on how each programme is assessing Additionality.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                            |
| 744 | Vega Tapia           | QUESTIONS           | ge              | As for the use as one data point analysis of carbon prices, Repsol Foundation believes Using Carbon Price as an indicator could be a good approach should there be a mature, liquid and fully established Market. Unfortunately, this is not the case and we believe that currently there is not a liquid, segmented (removals/reductions, geographies, etc) and transparent sources of credit-carbon pricing (either spot or forward) that can lead to a trustworthy use of carbon price as a reference to assess financial additionality.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | N/a                                                                                                                          |
| 745 | Ronan Carr           | QUESTIONS           | ge              | Additionality                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | na                                                                                                                           |
| 745 | Ronan Carr           | QUESTIONS           | ge              | · BeZero supports new thresholds that drive high-quality credits and agree that financial feasibility is not the only aspect of additionality assessments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                            |
| 745 | Ronan Carr           | QUESTIONS           | ge              | · We suggest greater nuance, particularly as to how a methodology is specifically applied.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                            |
| 745 | Ronan Carr           | QUESTIONS           | ge              | · BeZero also recommends more transparency around references and sources used to determine performance benchmarks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                            |
| 745 | Ronan Carr           | QUESTIONS           | ge              | Additionality is a crucial determinant of carbon credit quality, and BeZero endorses several of the current CCPs' requirements. We welcome new thresholds which drive high-quality credits, but consider that assessment of financial additionality in isolation is not reliable in all cases - it is important to consider other aspects of additionality for any given project (e.g. common practice, barrier analysis). BeZero advocates the view that additionality is a range, and that common practice analysis needs defined thresholds to estimate penetration, geographical boundaries and installation of recent stock. In relation to this and on the note of performance standards, whilst defined thresholds are useful, the context of these thresholds must also be specified. For example, national penetration rates of various technologies may not adequately address the regional barriers they face in their uptake and deployment.                                                                                                                                                                                                                                                                                                 | 0                                                                                                                            |

| 745 | Ronan Carr           | QUESTIONS           | ge              | Regarding financial disclosure, we agree with the CCPs' full threshold which mandates public reporting on total carbon revenues, without relying on third-party sources. This is because pricing transparency in the market is currently limited, and pricing data for key players within the VCM is inconsistent.                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0               |
| 745 | Ronan Carr           | QUESTIONS           | ge              | BeZero has several recommendations regarding additionality. We suggest that the existence of regulation alone should not determine if activities are credited. Effectiveness of regulation, governance trends and public budget all need to be considered. At present, where projects do consider regulatory backdrop, assessments of additionality are qualitative, and lack auditor detail. The CCPs currently only consider governance for developing countries and their approach to this is by setting a fixed time period, however defined project lifetimes already achieve this.                                                                                                                                                                                              | 0               |
| 745 | Ronan Carr           | QUESTIONS           | ge              | BeZero also recommends amending the stipulation that activities which hold insufficient likelihood of additionality are immediately not eligible. This overlooks how a methodology is applied and specific barriers associated with a project's location, and by extension disregards the many nuances around additionality. The current approach creates binary labels which risks removing entire sections of the market from the CCPs' eligibility criteria.                                                                                                                                                                                                                                                                                                                       | 0               |
| 745 | Ronan Carr           | QUESTIONS           | ge              | Additionality for J-REDD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0               |
| 745 | Ronan Carr           | QUESTIONS           | ge              | · BeZero endorses the suggestion of more stringent baselines over subsequent crediting periods.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0               |
| 745 | Ronan Carr           | QUESTIONS           | ge              | · We recommend further guidance beyond additionality, to address issues around leakage and governance of J-REDD.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0               |
| 745 | Ronan Carr           | QUESTIONS           | ge              | BeZero supports the current CCPs' views regarding J-REDD on a number of points. First, we endorse the stance that Cancun safeguards should be a minimum integration and enables permanence and stakeholder engagement. We also agree that, in the case of J-REDD activities, the baseline for second and subsequent crediting periods shall not be higher than the baseline for the previous crediting period. Meanwhile, we endorse the view that evidence demonstrating results-based payments is made available prior to the start of the first crediting period (which would indicate prior reliance on carbon finance).                                                                                                                                                          | 0               |
| 745 | Ronan Carr           | QUESTIONS           | ge              | However, we identify some omissions from the current framework which should be addressed. Specifically, we recommend providing guidance regarding leakage, specifically for market leakage across borders. We also recommend that the CCP endorse disclosure on how leakage is calculated (ie. underlying assumptions provided) and what safeguards are employed. Similarly, we find a lack of guidance for the governance of J-REDD. It is notably unclear how monitoring and reporting will be overseen at a national level, but also at a project level in the case of nested schemes.                                                                                                                                                                                             | 0               |
| 746 | Anonymous            | QUESTIONS           | ge              | I am a PhD student at University of California, Merced. I have been studying Acre's jurisdictional REDD+ for three years. My research included a field research in summer 2019, when I visited rubber tappers communities and interviewed Indigenous leaders who supported or opposed the local jurisdictional program. In addition to my previous comment on this section, I would like to say that the decision if project-based REDD+ mitigation activities should be considered within the scope of jurisdictional REDD+ programs (and how) is up to those who represent the state, Indigenous and (non-Indigenous) community jurisdictions involved. Any global standards will end up arbitrary and incapable of capturing the nuances and contradictions in the local contexts. | See above.      |
| 747 | John Holler          | QUESTIONS           | ge              | a) Please provide comment as to the feasibility and desirability of this additional level of risk-based analysis by project type.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | N/A             |
| 747 | John Holler          | QUESTIONS           | ge              | The terminology of "project type" is unclear here because it is not defined. However, a risk-based assessment of additionality by "credit type" is likely the most objective and useful approach because it is as granular of an assessment available short of assessing individual projects. The assessment at this level would allow the Expert Panel to consider, inter alia, the expected financial attractiveness of an activity under the relevant host country context and scale, or any significant barriers present.                                                                                                                                                                                                                                                         | 0               |
| 747 | John Holler          | QUESTIONS           | ge              | b) In this assessment, the Integrity Council proposes to use as one data point analysis of carbon prices. Please provide comments as to the feasibility of use of this indicator, and on the alternative use of marginal abatement costs for this purpose.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0               |

| 747 | John Holler                                    | QUESTIONS           | ge              | The definition of additionality necessitates the consideration of carbon prices as one data point. Where the argument for additionality relies on carbon credit revenue incentives, the risk that a credit type is not additional should be informed in part by the extent to which financial attractiveness of the mitigation activity is affected or not by carbon revenue (and therefore the price of carbon credits).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0               |
| 747 | John Holler                                    | QUESTIONS           | ge              | How should crediting under project-based REDD+ mitigation activities be considered within the scope of jurisdictional REDD+ programs?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0               |
| 747 | John Holler                                    | QUESTIONS           | ge              | If a JREDD+ program exists in area where project-based REDD+ mitigation activities are taking place, the latter should be required to align their carbon accounting with the jurisdictional program from the start (or nest into that accounting system if the projects preceded the JREDD+) so as to be integrated into the JREDD+ program over time. We need market signals/requirements that move REDD+ towards jurisdictional approaches over time, in line with recommendations listed in line with <a href="https://tfciguide.org/">https://tfciguide.org/</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0               |
| 747 | John Holler                                    | QUESTIONS           | ge              | Should there be a requirement to nest baselines of REDD+ projects on avoided deforestation?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0               |

| 747 | John Holler                                    | QUESTIONS           | ge              | No - this would be an issue in countries with weak jurisdictional capacity for carbon accounting, or those that are still developing their jurisdictional schemes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0               |
| 748 | Thomas Hämmerle                                | QUESTIONS           | ge              | The common goal of all frameworks and regulations regarding carbon dioxide emission reduction and carbon dioxide removal, is to keep planet earths climate in a controllable, human-friendly range. Nevertheless, today we see a failure of the existing frameworks and intergovernmental social contracts of the past decades. We are not on track to reach the goal of the Paris Agreement, worse, we are already experiencing impacts of climate change, which were predicted for later stages. If we fail within the next years to build frameworks to empower the realisation of climate positive solutions, we will not get a second chance. The possibility to limit the biggest threat for humanity, will be unattainable, leading to unimaginable social tensions, massive reduction of basic needs and loss of countless lives. Therefore, we call to focus, at least in terms of removals where our expertise is, on factual basis according to the overall impact to limit climate change and address other SDG's, scalability and market opportunities rather, than classical and may already outdated methods like financial additionality. Within the European Biochar Industry Consortium, we are observing massive scaling of carbon sequestration projects via pyrogenic carbon capturing and storage (alone in Europe 100.000 tons of CO2 will be sequestered within 2022). The main reason for this fast growth was the establishment of carbon sink methodologies as well as a transparent registration system. [TH1] | None            |
| 749 | Individual/employee, Intercontinental Exchange | QUESTIONS           | ge              | ICE agrees with IC-VCM that emission reductions or removals not be deemed additional if those reductions or removals are required under existing law to be implemented. Likewise, emission reductions or removals should no longer be deemed additional if, during crediting periods, the mitigation activity must be implemented due to applicable legal requirements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | See above.      |
| 749 | Individual/employee, Intercontinental Exchange | QUESTIONS           | ge              | As suggested by IC-VCM, carbon-crediting programs should thus have sound assessment procedures in place to ensure that the mitigation activity is not required under legal requirements. Furthermore, ongoing monitoring regarding new legal requirements is necessary to ensure additionality is maintained.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0               |
| 749 | Individual/employee, Intercontinental Exchange | QUESTIONS           | ge              | We also welcome the criterion that non-enforced regulations in developing countries are not considered to prevent a project from being additional. It may however be useful for the IC-VCM to identify a time period for which that project can be considered additional.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0               |
| 749 | Individual/employee, Intercontinental Exchange | QUESTIONS           | ge              | We note that the Integrity Council correctly identifies that "no approach to demonstrating additionality is simple" and therefore our recommendation would be to focus on atmospheric additionality only and dispense with the concept of financial additionality.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0               |
| 749 | Individual/employee, Intercontinental Exchange | QUESTIONS           | ge              | We make this recommendation based on the utility of a carbon credit being an economic tool which values the positive externality of a reduction or removal of a tonne of CO2e. Whether or not a project meets the thresholds of financial additionality should not be a factor in the economic value of the reduction or removal of a tonne of CO2e which is achieved. Rather, the value of the externality should be based on the supply and demand fundamentals of the relevant project type. The externality will always hold some value provided there is demand for it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0               |

| 749 | Individual/employee, Intercontinental Exchange  | QUESTIONS           | ge              | Applying financial additionality to the carbon credit market means that a project with more revenue streams than just a carbon credit is somehow less additional and is neither economically nor atmospherically sound. Nor is it economically sound to dispense with the tool (i.e., the credit) that values the externality once the project is "at the money" or "in the money" using an economic model which doesn't value externalities. The best example of this is carbon credits issued for renewable energy projects which are now not deemed to be financially additional and therefore do not qualify as a carbon credit. Yet the supply demand imbalance of renewable energy is currently significant (circa. 20% of the world's electricity comes from renewable sources, whilst we need to at least double the amount of electricity we produce and produce it from renewable sources). It is not economically sound to remove the value of this externality nor is it economically sound to reduce the profitability of projects which are clearly additional from an atmospheric perspective i.e. renewable electricity does not contribute to the atmospheric carbon budget and therefore this positive externality should attract a value. | 0                                                                                                                                                                                                                                                                         |
| 749 | Individual/employee, Intercontinental Exchange  | QUESTIONS           | ge              | We also believe that the Integrity Council should look closely at the renewable electricity protocol and remove it as a protocol that qualifies under the core carbon principles. The generation of renewable electricity does not emit carbon. There are existing Environmental Attribute Certificate (EAC) protocols which measure the positive externality of renewable electricity using instruments such as a Renewable Electricity Certificates (REC) or Guarantee of Origins (GoO). These are in widespread use across the world. The purpose of an EAC is to represent the environmental attributes of the generation of one megawatt hour (MWh) of energy supplied by renewable sources. Regardless of the solid logic of not turning something that has no carbon footprint in the generation of electricity into a tonne of CO2 it would also solve two issues inherent in the current crediting protocols, as follows:                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                         |
| 749 | Individual/employee, Intercontinental Exchange  | QUESTIONS           | ge              | · Assumptions on carbon intensity baselines of the incumbent grid or electricity asset to generate the CO2 unit would no longer be required.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                         |
| 749 | Individual/employee, Intercontinental Exchange  | QUESTIONS           | ge              | · Consistent with best practices, renewable energy credits should not be used for any other purpose than greening the electricity consumption of a buyer and reducing its gross scope 2 emissions. A unit of credit measured in MWh would not be able to be used to compensate for a gross scope 1 or 2 emissions measured in CO2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                         |
| 749 | Individual/employee, Intercontinental Exchange  | QUESTIONS           | ge              | Addressing legacy structural deficiencies in the carbon credit market such as financial additionality and removing renewable electricity as a qualifying protocol measured in CO2 would be welcome areas of focus for the Integrity Council.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                         |

| 749 | Individual/employee, Intercontinental Exchange  | QUESTIONS           | ge              | On the feasibility and desirability of this additional level of risk-based analysis by project type:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                         |
| 749 | Individual/employee, Intercontinental Exchange  | QUESTIONS           | ge              | ICE in general supports the proposed risk-based analysis that applicants' credits are truly additional and of high quality.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                         |
| 749 | Individual/employee, Intercontinental Exchange  | QUESTIONS           | ge              | On the other hand, the approach risks to be overlooking important features of the project at hand as it focusses on the typical characteristics of such a project type. Each project is however unique and has project-specific elements that need to be looked at.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                         |
| 750 | Individual/employee, Rights and Resources Group | QUESTIONS           | ge              | As a general comment on the additionality principle, the overall approach is both complex and challenging to follow / understand. With regards to IPs and LCs, the proposed scheme does not take into consideration their specific circumstances and the threats they face.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Additionality criteria should factor in the specific threats and challenges that IPs and LCs face, and propose ways of assessing and integrating those risks in the additionality analysis in a way that is simple, clear, and understandable for communities themselves. |
| 751 | Polly Thompson                                  | QUESTIONS           | ge              | The assessment of additionality is too narrowly focussed on financial additionality and does not sufficiently recognise the variability in key additionality considerations between different project types beyond the separation of jurisdictional REDD+ and project-level activities. Universal additionality criteria are hugely problematic and we would support sector-specific guidance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | See above                                                                                                                                                                                                                                                                 |

| 751 | Polly Thompson       | QUESTIONS           | ge              | In the long term the market should move in this direction, once jurisdictional approaches and data are reliable enough for this to be realistic. In the short term, a less formal approach than true nesting should be developed to ensure over-issuance does not occur.                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 752 | Anonymous            | QUESTIONS           | te              | The ICVCM's views on additionality are too restrictive. It is unclear what problem these proposals are trying to solve, or why they would add value to the additionality criteria that already exist across high-quality programs. It is very unlikely that any Expert Panel that can possibly be convened could have the expertise to truly understand all types of credits in all places and judge their additionality, yet their judgments will carry huge weight in the market.                                                                  | This entire approach should be reevaluated.                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 752 | Anonymous            | QUESTIONS           | te              | Moreover, financial additionality is only one criterion. Many NCS programs in particular, including several that are widely considered benchmarks in the space, would not qualify under the IC's definitions. We believe that a broader view of additionality would be more useful at this stage, especially if it allows for the inclusion of avoided emissions.                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 752 | Anonymous            | QUESTIONS           | te              | Carbon prices furthermore are not a useful indicator, due to the immaturity of the market and the opacity and heterogeneity of price data.                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 753 | Anonymous            | QUESTIONS           | te              | Having multiple gateways for additionality is not going to help to increase confidence and trust, as the first determination is made by a small group of experts. Unless the process is transparent enough such that all meetings are broadcast live, and there is a broader consultation process with other experts and stakeholders, then the gateways do not serve their intended purpose.                                                                                                                                                        | -                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 753 | Anonymous            | QUESTIONS           | te              | ICVCM should set out clear parameters and draw from the additionality criteria set out by CORSIA, such that the assessment underpinning CCP labels are justified. Currently, too lopsided on financial additionality, and more can be said about regulatory additionality. This is because some countries are looking to the VCM to accelerate and scale decarbonisation beyond what is legislated under their NDC.                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 754 | Paul Renaud          | QUESTIONS           | te              | The environment is changing dynamically in response to human actions (from both bad and good actions). In many cases, the horizon for those impacts is longer than the horizon for a specific project. Hence natural losses in permanence are to be expected in the short term because, according to the IPCC, that is the trajectory that we are already on.                                                                                                                                                                                        | Remove any discount on permanence due to natural causes. Especially causes due to long term effect of climate change.                                                                                                                                                                                                                                                                                                                                                   |
| 754 | Paul Renaud          | QUESTIONS           | te              | It is a mistake to discount the expected degree of permanence from an activity due to natural causes, because that both discounts and reduces the likelihood of making a difference over a longer term that exceeds a project's horizon.                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 754 | Paul Renaud          | QUESTIONS           | te              | The voluntary markets should not be encouraged to believe that losses due to natural causes have been fully mitigated, because the very mitigation reduces the economic return from attempting to do so, inevitably weeding out projects that cumulatively would help make a long term difference in the frequency of lost benefit due to natural causes. I.E. we need to try but may not always succeed.                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 754 | Paul Renaud          | QUESTIONS           | te              | Reversals due to human activity should continue to be discounted from permanence because they are more controllable (by project design) within the horizon of the benefits delivered by a project.                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 755 | Guy Pinjuv           | QUESTIONS           | ge              | Are there alternative approaches to permanence that should be considered and that are not covered under the draft Assessment Framework?                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 755 | Guy Pinjuv           | QUESTIONS           | ge              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Pachama does not support the use of temporary crediting as a means of addressing permanence.                                                                                                                                                                                                                                                                                                                                                                            |

| 756 | Calvin Tran          | QUESTIONS           | te              | We would like to see more elaboration on Criterion 9.2a "sufficient incentives" beyond a 25+ year contract period. As Option 2 for Criterion 9.2(a) currently reads, "sufficient incentives" is poorly defined and thus could be operationalized and cannibalized in a manner that runs counter to the CCP's intentions for higher quality, deeper clarity and transparency. Option 1 is clearer, and speaking from the perspective of a project developer, we are encouraged by Option 3's flexibility to explore "alternative approaches" as well. | The health of standing buffer pools can be explored further as an indication of reversal risk. There aren't many science-based guidelines for developing robust buffer pools, and this should be represented in the CCPs. Evidence from existing compliance carbon projects and their quickly depleting buffer pools suggests that there is an opportunity for more stringent buffer pool guidelines and thus higher clarity in meeting CCP-eligibility for permanence. |

| 756 | Calvin Tran          | QUESTIONS           | te              | For nature-based solutions, we would like to confirm that “commitment” refers to a project proponent’s commitment to ensure permanence, rather than an individual landowner’s. As a developer of grouped projects, we expect to monitor for and take on the risk of reversal over the 100-year period, and compensate accordingly. An individual landowner may not make this commitment (e.g. permanence under our project is achieved through behavior change mechanisms and smart program design, rather than 100-year contracts) but the project proponent should bear the responsibility for ensuring that their permanence mechanisms are effective, and compensate for reversals if they are not. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 757 | Arnold Hui           | QUESTIONS           | ge              | appreciate the efforts to allow flexibility to projects subject to reversal risk. The proposed framework looks promising. Tighter requirements or threshold shall be set to pre-empt intentional reversals. Accidental reversals should not be penalised but safeguards need to be built to avoid misuse of 'accident claim'                                                                                                                                                                                                                                                                                                                                                                            | Accidental reversals should not be penalised but safeguards need to be built to avoid misuse of 'accident claim'                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 759 | Pietro Carpena       | QUESTIONS           | te              | ICVCM can play a leadership role in advancing the discussion within the different crediting “standards” on the system of permanence and how to address the risk of reversals and impermanence and ensure that atmospheric benefit is maintained across projects and programs over time.                                                                                                                                                                                                                                                                                                                                                                                                                 | To address permanence, ICVCM should initiate a collaboration with existing crediting standards - to assess the feasibility and begin design of a global MRV approach that connects new remote sensing and AI technology to scaled insurance tools, pooled buffer reserves and other approaches.                                                                                                                                                                                                                                                         |
| 760 | Anonymous            | QUESTIONS           | ge              | It should be assured that permanence criteria only apply to projects with a risk of reversal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | N/A                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 760 | Anonymous            | QUESTIONS           | ge              | Permanence requirements should only be applied to project activities where there has been an emissions removal as long as a monitoring is included to ensure no further project emissions have occurred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 761 | Stephanie Sargeant   | QUESTIONS           | ge              | H. Permanence                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | We are concerned about the differentiation proposed for certain type of projects. We do not support the use of temporary credits as it has not been proven effective on the market during the application of the Kyoto Protocol.                                                                                                                                                                                                                                                                                                                        |
| 761 | Stephanie Sargeant   | QUESTIONS           | ge              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Some stakeholders emphasize the risks to land-sector mitigation without acknowledging corresponding risks to other sector mitigation, established approaches to managing land-sector risks, and the most up-to-date science about such risks.                                                                                                                                                                                                                                                                                                           |
| 761 | Stephanie Sargeant   | QUESTIONS           | ge              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Furthermore, resource managers and voluntary standards have long-established techniques and approaches for managing risks to carbon stocks in the land sector. We believe that nature-based solutions (NBS) should not be put in a disadvantaged position compared to projects in other sectors. They should be treated equally as other sectors. Setting stricter rules for NBS contributes to a nirvana fallacy among climate actors by comparing real-world, manageable risks with perfect imaginary solutions .                                     |
| 761 | Stephanie Sargeant   | QUESTIONS           | ge              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Technologies such as CCS (Carbon Capture and Storage) or BECCS (Bio-Energy CCS) are proposed as permanent solutions for removing CO2 from the atmosphere. In reality, the possibility of recovering fossil carbon and storing it in geologic formations is still in an early demonstration phase, with just a few projects in existence. This sample is not sufficient to determine the risk profile of these approaches, nor is it equivalent, as a basis for comparison, to the long experience and billions of acres of land under management today. |
| 761 | Stephanie Sargeant   | QUESTIONS           | ge              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Activities to protect nature may run the risk of not being permanent because of climate change. Yet, to avoid climate change, we need to urgently conserve and restore nature, which requires unlocking of (voluntary) private finance! This needs to be maximally enabled, while risks should be contained to a reasonable extent - while not undermining action.                                                                                                                                                                                      |
| 762 | Stephanie Sargeant   | QUESTIONS           | ge              | Question under Permanence                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | We believe the ICVCM should reflect on best practice in the market, and not necessarily develop an entirely new standard.                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 762 | Stephanie Sargeant   | QUESTIONS           | ge              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | We are concerned with the reversal risk assigned in this document to certain project types, favouring technological project over Nature-Based Solutions projects, and based on this the differentiation proposed.                                                                                                                                                                                                                                                                                                                                       |

| 762 | Stephanie Sargeant   | QUESTIONS           | ge              | 0                                                                                                                                         | Furthermore, resource managers and voluntary standards have long-established techniques and approaches for managing risks to carbon stocks in the land sector. We believe that nature-based solutions (NBS) should not be put in a disadvantaged position compared to projects in other sectors. They should be treated equally as other sectors (the existence of a risk does not mean that the risk will materialize). Setting stricter rules for NBS contributes to a nirvana fallacy among climate actors by comparing real-world, manageable risks with perfect imaginary solutions. Additionally, NBS are linked to multiple co-benefits generated for communities, livelihoods, biodiversity, pollution alleviation and enhancing resilience.                                                                                                                                                                                                      |
| 762 | Stephanie Sargeant   | QUESTIONS           | ge              | 0                                                                                                                                         | Technologies such as CCS (Carbon Capture and Storage) or BECCS (Bio-Energy CCS) are proposed as permanent solutions for removing CO2 from the atmosphere. In reality, the possibility of recovering fossil carbon and storing it in geologic formations is still in an early demonstration phase, with just a few projects in existence. This sample is not sufficient to determine the risk profile of these approaches, nor is it equivalent, as a basis for comparison, to the long experience and billions of acres of land under management today.                                                                                                                                                                                                                                                                                                                                                                                                   |
| 763 | Stephanie Sargeant   | QUESTIONS           | ge              | 'H. Permanence'                                                                                                                           | Please replace with CO2-eq or GHG (everywhere in the document). This is about GHGs in general, not restricted to CO2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 764 | Stephanie Sargeant   | QUESTIONS           | te              | 'H. Permanence'                                                                                                                           | The risk of reversal puts the long-term GHG benefit in doubt, which is one of the arguments given by some to prevent the inclusion of land-use projects in the carbon markets. HOWEVER, if you look at the matter carefully, the problem seems to be confined to sequestration projects. A removal once achieved may risk getting lost in the future and the voluntary standards developed ways to handle this risk, as explained below. Projects that reduce or avoid emissions, by contrast, slow the rate of degradation, which is a permanent contribution to the climate. If one rewets a drained peatland for 10 years, for instance, the area will not release emissions during this time except for a short period at the start, providing greater benefits than letting the peatland degrade (Günther et al. 2020). Even if drainage restarts from year 11, the benefit of an emissions-free decade will continue to weigh in on the atmosphere. |
| 764 | Stephanie Sargeant   | QUESTIONS           | te              | Different activities have varying degrees of reversal risk'                                                                               | The risk of non-permanence does not mean that reversal will materialize, and there are indeed ways to mitigate the risk. Buffer approach is preferred in our view.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 765 | Stephanie Sargeant   | QUESTIONS           | ge              | 'H. Permanence'                                                                                                                           | We do not think this is a good way forward. See our initial comment in this section H. This will disinvest investment in Nature-Based Solutions, which in turn will lead to more emissions from ecosystem degradation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 765 | Stephanie Sargeant   | QUESTIONS           | ge              | Temporary basis...'                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 766 | Stephanie Sargeant   | QUESTIONS           | te              | 'H. Permanence'                                                                                                                           | Note that the permanence of emission reductions is ultimately the same across economic sectors. Installing a filter in an industrial production facility – for example to produce fertilizer, a process that releases a potent GHG, nitrous oxide (N2O) – may generate emission reductions for a number of years (always seen against the baseline of unfiltered production). When emissions go back to baseline at the end of the filter's lifecycle the reductions achieved up to that point are rightly considered permanent, as the benefit of temporary low-carbon production is felt in the atmosphere in continuity.                                                                                                                                                                                                                                                                                                                               |
| 766 | Stephanie Sargeant   | QUESTIONS           | te              | The risk of non-permanence is not the same across different types of project activities.'                                                 | Despite the equivalence between the land sector and other economic sectors, carbon standards have come to treat them differently, i.e. the same as removals. Virtually all standards define the risk of reversal as implicit in all land-use projects which is not correct nor desirable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 767 | Stephanie Sargeant   | QUESTIONS           | te              | 'H. Permanence'                                                                                                                           | But the solar panel has a limited lifetime after which it will no longer work. So this is also not a permanent solution - even though the reductions it creates over a lifespan are permanent.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 767 | Stephanie Sargeant   | QUESTIONS           | te              | Once a solar panel is put up on a rooftop, the emission reductions that it generates over the initial years can be considered permanent.' | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| 769 | Individual/employee, Zero Emissions Platform and the Carbon Capture and Storage Association | QUESTIONS           | ge              | ZEP and CCSA note that the storage of CO2 in geological reservoirs is regulated under the CO2 Storage Directive (CCS Directive1) for European Union Member States, and the 2010 CO2 Storage Regulations in the UK2, which establish a legal framework for the safe geological storage of CO2. Both storage legal frameworks include provisions for site selection and characterisation which are designed to minimise the risk of leakage, conditions for permitting, as well as monitoring and reporting requirements to verify storage, including remediation obligations in case of reversals.                                                                                                                                                                                                                                                                                                                                                          | See comment above. |
| 769 | Individual/employee, Zero Emissions Platform and the Carbon Capture and Storage Association | QUESTIONS           | ge              | According to the EU and UK storage legal frameworks, geological formations shall only be selected as a storage site if, under the proposed conditions of use, there is no significant risk of leakage or of harm to the environment or human health. Both EU and UK frameworks further require operators to carry out monitoring based on an approved monitoring plan which is updated every 5 years “to take account of changes to the assessed risk of leakage, changes to the assessed risks to the environment and human health, new scientific knowledge, and improvements in best available technology”. Operators are also required to report to competent authorities at least once a year.                                                                                                                                                                                                                                                        | 0                  |
| 769 | Individual/employee, Zero Emissions Platform and the Carbon Capture and Storage Association | QUESTIONS           | ge              | Moreover, the conditions for the issuance of permits require operators to have an approved corrective measures plan which must be implemented in case of leakages. Both in the UK and in the EU, operators are required to surrender emission allowances equivalent to the leaked emissions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                  |
| 769 | Individual/employee, Zero Emissions Platform and the Carbon Capture and Storage Association | QUESTIONS           | ge              | Finally, there is a mandatory period of at least 20 years between closure and transfer of responsibility to the national competent authorities, where flexibility is maintained – i.e., a shorter transfer period can be agreed if evidence suggest that the stored CO2 will be completely and permanently contained before the end of that period.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                  |
| 769 | Individual/employee, Zero Emissions Platform and the Carbon Capture and Storage Association | QUESTIONS           | ge              | Given the stringent criteria that storage operators must comply with in the EU and in the UK, the ICVCM should make sure that the high-integrity requirements do not impose further, more stringent, disproportional requirements on operators. Instead, the assessment criteria should strive to be aligned with the regulatory frameworks that can be considered good/best practice, also taking into account that a degree of flexibility must be preserved – as provided by the CO2 Storage Directive – given the limited practical experience in the implementation of CCS projects.                                                                                                                                                                                                                                                                                                                                                                  | 0                  |
| 769 | Individual/employee, Zero Emissions Platform and the Carbon Capture and Storage Association | QUESTIONS           | ge              | In practice, nonalignment between the monitoring requirements and the regulatory frameworks could lead to disparities between the regulations defined by competent authorities and the criteria defined by the carbon crediting organisation. This is particularly challenging as, in most circumstances, the final ‘mixture’ of stored CO2 in a subsurface storage reservoir will comprise of many sources of CO2, including the CO2 for which carbon credits have been allocated. In practice, this could result in a scenario where the storage site will require continual monitoring to satisfy carbon credit schemes (e.g. 50 years post injection, as per option 1 in Criterion 9.2a), past the required period to satisfy the competent authorities. Given that monitoring technologies are costly, and the survey would have to account for the mixed volume of CO2, the economics/project liabilities may not be viable to encourage investment. | 0                  |
| 769 | Individual/employee, Zero Emissions Platform and the Carbon Capture and Storage Association | QUESTIONS           | ge              | Option 3 of the requirements for Criterion 9.2a (“Length of commitment to monitor and compensate for reversals”) appears to allow for regulatory alignment; however, an explicit example would be valuable for wider positive interpretation of the permanence assessment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                  |
| 769 | Individual/employee, Zero Emissions Platform and the Carbon Capture and Storage Association | QUESTIONS           | ge              | Moreover, the assessment of Criterion 9.2b (“Sufficiency of the compensation mechanism”) should also take into account the provisions in the EU and UK CO2 storage legal frameworks, according to which operators must offset reversals (in the EU or UK ETS). The requirement to set up buffer reserves would, in this context, impose extra obligations on EU/UK storage operators, as well as have potentially significant implications on revenue streams. In this context, it is important to introduce an alternative requirement/option - similar to option 3 under criterion 9.2a - that is meant to avoid conflicts with national / regional legislation while keeping the essence of the requirements.                                                                                                                                                                                                                                           | 0                  |

| 770 | Individual/employee, Radicle                                                                | QUESTIONS           | ge              | We further recommend exploring the option of reinsurance for buffer pools, as well as labelling credits with the number of years of permanence that are assured by the relevant programme.                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                       |
| 770 | Individual/employee, Radicle                                                                | QUESTIONS           | ge              | We do not support a 100-year monitoring and compensation commitment as this is much too long and we feel it will hinder the development of new, high quality projects with strong financial backing. 50-years also seems too long. Can the timelines be aligned with the existing commitment periods implemented by carbon standards?                                                                                                                                                                                                                                                                                                             | 0                                                                                                                       |
| 770 | Individual/employee, Radicle                                                                | QUESTIONS           | ge              | Suggest we need to ensure that perfection is not the enemy of the good regarding permanence to ensure that we can achieve rapid decarbonization.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                       |
| 771 | Anonymous                                                                                   | QUESTIONS           | te              | Similarly as with additionality, we recommend that the IC-VCM assessment shift its focus towards assessing the overall approach each programme takes to addressing non-permanence. This will avoid excluding entire sectors based on project type assessments.                                                                                                                                                                                                                                                                                                                                                                                    | see above                                                                                                               |
| 771 | Anonymous                                                                                   | QUESTIONS           | te              | Credible programmes should have provisions in place to assess the risk of non-permanence, a long-term plan on how to manage these risks, as well as mechanisms to replace losses and ensure the long-term health of the permanence mechanism.                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                       |
| 771 | Anonymous                                                                                   | QUESTIONS           | te              | We support the notion of robust buffer pools providing a valid alternative to addressing risk of reversal. We further recommend exploring the option of reinsurance for buffer pools, as well as labelling credits with the number of years of permanence that are assured by the relevant programme.                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                       |
| 771 | Anonymous                                                                                   | QUESTIONS           | te              | Temporary crediting is a complete non-starter and did not work under the CDM, because no one will buy a credit that must be tracked and replaced at an uncertain future cost. This should be eliminated.                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                       |
| 772 | Anonymous                                                                                   | QUESTIONS           | ge              | The current proposals include mention of 25, 50 and 100-year project commitment periods. The 40-year, legally binding, minimum project commitment utilized under the American Carbon Registry program should be explicitly incorporated as a viable option here.                                                                                                                                                                                                                                                                                                                                                                                  | n/a                                                                                                                     |
| 772 | Anonymous                                                                                   | QUESTIONS           | ge              | In order to achieve maximum program uptake and climate impact, it is essential to establish a minimum project length that imposes sufficient emissions reduction durability, while allowing for substantial numbers of project proponents to accept the temporal constraints of the project commitment. The 40-year minimum project term strikes such a balance and is aligned with scientific reports <sup>2</sup> that have assessed the critical role of the AFOLU sector in all 1.5°C-consistent pathways to achieve Paris Agreement targets and reach net zero emissions by mid-century to avoid the catastrophic effects of climate change. | 0                                                                                                                       |
| 773 | Max DuBuisson                                                                               | QUESTIONS           | te              | First, temporary crediting is not desired by carbon buyers, and thus should not be continually put forward in this document as a viable option.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Remove option for temporary crediting and allow for scientifically-defensible implementations of tonne-year accounting. |
| 773 | Max DuBuisson                                                                               | QUESTIONS           | te              | Second, there are high-integrity implementations of tonne-year accounting which should be allowed under the CCP. While there are some radical approaches to TYA which employ subjective discount rates to make project performance seem even more favorable following very short storage terms, there are others which take a conservative approach and should be allowed. In addition, the time value of carbon storage should be factored in to the quantification of reversals, even when credits are issued on a tonne-tonne basis.                                                                                                           | 0                                                                                                                       |

| 774 | Emma van de Ven      | QUESTIONS           | ge              | The link with the latest IPCC report is missing, where a lot more emphasis was on removals, even if they have a temporary permanence. It's unclear why this view wasn't supported by the ICVCM, since there is currently no other scalable incentive for removal activities in place outside the revenue through the VCM. The current approach to permanence under the CCPs devalues the removal projects, while they should be promoted due to their contribution to 1,5 degrees.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 1. Don't punish removals for impermanence                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 774 | Emma van de Ven      | QUESTIONS           | ge              | The permanence period is also too long to include any regenerative carbon farming activities. After 50 years a farm has been sold or handed over to the next generation, yet excluding carbon farming as a whole would be very unwise given the large pressure on agricultural lands' soil health, which could be remedied with regenerative farming. Simultaneously depleted soils push farmers to deforest in search of new and fertile soils when they're not adopting regenerative carbon farming practices.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 2. Shorten the permanence period to 20 years for tree-based carbon farming, which is in the realistic range                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 774 | Emma van de Ven      | QUESTIONS           | ge              | And since previous attempts at temporary credits weren't successful, this time will likely be no different.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 775 | Anonymous            | QUESTIONS           | te              | This is a key issue that will underpin integrity. We agree that approaches to addressing non-permanence that do not require replacement of credits or compensation for reversals should not be CCP-eligible, unless those approaches can demonstrate an alternative approach to addressing potential risks of reversals that result in equivalent protection of atmospheric integrity. We agree on the general scope of the guidance, but are concerned that the impact of these guidelines as written will be less locally-focused climate projects and more technology-focused projects that can deliver on long-term durability but lack local integration, engagement, and impacts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | We support the proposal that the IC VCM could play a central role in designing and implementing a next generation, "pan-standard" global system to address the risk of reversals and impermanence and ensure that atmospheric benefit is maintained across projects and programs over time. To this end, we recommend that IC VCM initiate a year-long work program- in collaboration with the existing crediting standards- to assess the feasibility and begin design of a global MRV and permanence approach that harnesses new remote sensing technology alongside scaled insurance tools, pooled buffer reserves and other approaches to ensure that impermanence and project-level reversals are managed in such a way that the atmospheric benefit is maintained even across any potential individual project reversals. This assessment should include approaches for addressing increasing risk of reversal due to accelerating impacts of climate change without disincentivizing the deployment of carbon market finance to where it is most needed. |
| 775 | Anonymous            | QUESTIONS           | te              | Some key considerations:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 775 | Anonymous            | QUESTIONS           | te              | · Some level of durability can be meaningfully improved in certain categories of projects by finance. Forest and land use projects historically have dealt with a constant downward pressure on price, forcing them to leave out all measures but the minimum to make the project viable. Technological carbon removal credits currently cost hundreds to thousands of dollars per ton, and many do not deliver on local impacts at the level that natural carbon projects can. If similar prices per ton were available for NCS projects, there are certainly measures they could undertake to significantly address risks associated with processes like fire, pests and floods. ICVCM should not bake into the guidance the historical pricing impacts felt by NCS projects. We should consider that there is likely more they can do to reduce the risk of reversal, keeping in mind that many of them have the capacity to deliver significant impacts on SDG's, and not set guidance that limits their ability to continue to scale responsibly while addressing reversal risk with the full range of appropriate tools available, and with flexibility to continue to support innovation in this area. What else can be done to incentivize durability rather than excluding projects that are balancing trade-offs in order to deliver local impacts and are dealing with some level of inherent risk of reversal? | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 775 | Anonymous            | QUESTIONS           | te              | · Given the crucial urgency of the next ten years and following decades, we cannot afford to disincentivize or fail to fully incentivize projects that can deliver mitigation within that time frame because it may be unrealistic in some cases to guarantee this storage for 100 years at the project outset. We need the projects with very low to no risk of reversal such as mineralization, but we also need to increase support for near-term action that we understand and can deploy at scale now.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 775 | Anonymous            | QUESTIONS           | te              | · Given the climate and other threats facing forest and other ecosystems, more climate finance, not less, should be targeting them. We can do more with more finance to save more (though not all) of these climate-threatened systems. Addressing climate change should include targeting climate finance to where it is most needed. Buffer systems may need to be increased in a targeted way to facilitate this, but guidance should be set in ways that increase the flow of finance to these threatened systems where options exist to reduce the risk of their loss. If we limit that support over concerns they will be lost, we increase the likelihood that they will be lost.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| 776 | Individual/employee, BBVA | QUESTIONS           | ge              | Given that nature based solutions are expected to last over long time horizons and have a significant reversal risk, insurance becomes very relevant for guaranteeing mitigation of emissions. In this regard, programs shall ensure traceability of insurance over the whole life of the project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 776 | Individual/employee, BBVA | QUESTIONS           | ge              | Additionally, buffer pools must be adequately quantified and solvent enough to guarantee the program's permanence and avoid reversal risks. Such quantifications should be done at program level globally, to capture geographic diversification benefits which would help to diversify risks and increase permanence guarantee.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 777 | Eftimiya Salo             | QUESTIONS           | te              | Overall, very good requirements for length of commitment period, monitoring responsibility and compensation for reversal. However, in both initial and full threshold, there is "Option 3" - alternative approaches to the length of commitment period that, in combination with stringent requirements on sufficiency of compensation mechanisms and institutional stability, to reach a similar level of assurance of compensation for reversals. Option 3 is too vague and leaves a loophole for projects to be CCP-eligible without adhering to the same level of stringency as required in Options 1 and 2. Leaving Option 3 will also create additional work for the reviewers and slow down the process of assessment.                                                                                                                                                                                                                                  | "Option 3" - alternative approaches to the length of commitment period should be removed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 777 | Eftimiya Salo             | QUESTIONS           | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Suggested length of term is 5-10 years for temporary carbon credits. The lower range of 5 years is too low, 10 years is a good period for soil carbon credits for example. Even in the lower range of 5-10, there should be the same requirement to monitor for reversals and replace credits when reversals occur. One suggestion is to leave in the final draft only the 10-30 years period.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 778 | Individual/employee, CLA  | QUESTIONS           | ge              | 'Temporary crediting' may dampen price signals given that offset credits are bought and retired against a company's emissions and therefore the company would have to purchase more credits for previous emissions every time the temporary credits expired to keep their historic emissions written off.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | As above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 778 | Individual/employee, CLA  | QUESTIONS           | ge              | Buffers are widely used and preferred. However, the periods proposed are not viable for nature-based projects. In the initial threshold the following mechanism is deemed sufficient for the permanence criteria: 'Credits (by vintage) with a commitment to monitor and compensate for a minimum of 50 years', however, this rises to 100 years in the full threshold. For nature-based projects this will be a barrier to investment, unless prices are sufficiently high. Schemes that require permanent land-use change without allowing landholders to obtain sufficient funding for future land use and maintenance, can have the effect of converting land from a productive asset into a future liability. This, in combination with a financial additionality test, will inhibit the development of a UK nature-based VCM.                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 779 | Phil Cryle                | QUESTIONS           | te              | Consideration should be given to how the maintenance of the carbon stock can be achieved on an ongoing basis that will achieve truly permanent reductions in global atmospheric carbon concentrations. The issue with using specific time limits for the monitoring and maintenance of carbon stocks such as 50 or 100 years is that this does not ensure the long-term / permanent locking up of carbon in sinks (i.e., the carbon could be released after 50 or 100 years). Given this issue is mostly relevant for natural-climate solutions that are subject to pressures (i.e., land use change, wildfires etc.), consideration should be given to how technology, such as high resolution Earth Observation data, can support the monitoring of carbon stocks over time (i.e., for vegetation cover) with red flags being raised when losses occur (e.g., due to land use change).                                                                       | Consideration should be given to how the maintenance of the carbon stock can be achieved on an ongoing basis that will achieve truly permanent reductions in global atmospheric carbon concentrations. | 779 | Phil Cryle                | QUESTIONS           | te              | The exact operation and governance arrangements for the use of technology would need to be worked out, but it is likely that this would need to be globally co-ordinated. Advantages to having a globally co-ordinated approach to monitoring permanence include that this would provide consistency in the assessment and the opportunity for cost efficiencies. The costs of acquiring and using such data to ensure permanence could be recovered through levying a small additional cost to each transaction, which would likely be equivalent to or less than requiring ongoing monitoring over 50 to 100 years (i.e., the current CCP requirements). The use of such technology / information could also (potentially) be used to track leakage, although this is harder to do as the connection between carbon offset activities in one geographic location and emitting activities in another location can be challenging to establish with certainty. | The exact operation and governance arrangements for the use of technology would need to be worked out, but it is likely that this would need to be globally co-ordinated. | 779 | Phil Cryle                                     | QUESTIONS           | te              | · Fully agree with the statement in Criterion 9.1. "Measures to address reversal risk shall be tailored to the perceived risk of the mitigation activity" which indicates, while not explicitly, that it would require projects to firstly assess the existence / magnitude of risk and then to embed measures to address the specific risk drivers into a project activity. This is relevant because the risk of reversal (intentional or natural) can be very different between projects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | · Fully agree with the statement in Criterion 9.1. "Measures to address reversal risk shall be tailored to the perceived risk of the mitigation activity" which indicates, while not explicitly, that it would require projects to firstly assess the existence / magnitude of risk and then to embed measures to address the specific risk drivers into a project activity. This is relevant because the risk of reversal (intentional or natural) can be very different between projects. |

| 780 | Individual/employee, Pavilion Energy Singapore | QUESTIONS           | ge              | The criteria applied is best practice so far. The alternative approaches to permanence could be considered in the continuous improvement when the framework does periodical review.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 781 | Anonymous                                      | QUESTIONS           | ge              | Compensation mechanisms will favor technological offsets vs NBS. Community-based REDD+ projects may be affected as not being eligible for CCP. Culturally appropriated and realistic mechanisms should be created to ensure to include that type of project. In community projects, governance and capacities should be assessed. Communities that lack (1) organization, (2) understanding of legal contracts for carbon, or (3) preparation to financially plan the income from carbon credits cannot ensure long-term responsibilities. These three enabling conditions require a pre-investment that buyers should contemplate and could be paid by multi- or bi-lateral funds, which could devise some sort of certification that ensures that communities are ready to have a symmetrical relationship with the buyer. This will increase the probability of a long-term commitment.                                                                                                                                                                                                      | .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 782 | Individual/employee, Drax                      | QUESTIONS           | ge              | We welcome the idea of a risk-based approach in terms of requirements for monitoring and compensation for reversals. We believe the permanence period should be >100 years, as we need to drive enduring climate impact.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | N/A                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 782 | Individual/employee, Drax                      | QUESTIONS           | ge              | However, we believe that the arrangements should work with existing well-established and robust regulatory schemes for managing CO2 liabilities, rather than cutting across them. In particular, where regulatory regimes transfer liability to storage owners / operators and / or governments, these arrangements should be considered sufficient, and no additional liabilities should be placed on capture plants. Across the EU / UK / US there are incredibly stringent requirements on liabilities and remediation responsibilities faced by storage operators in case of CO2 leaks. National / state-level regulatory regimes often specify when / how liability for CO2 storage is transferred from capture projects to storage owners / operators and eventually to national / state Governments. The requirements in the voluntary carbon market should not cut across those national / state-level frameworks. We do not believe there should be any requirement for buffer arrangements in jurisdictions with sufficiently stringent liability rules for storage already in place. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 782 | Individual/employee, Drax                      | QUESTIONS           | ge              | As an addition to the above, in countries with ETS systems in place and CO2 leaks included in these, there should be no necessity for any other recompense to be made in the voluntary carbon market in the event of a future leak from a storage site, since this would be double counting. As these overall ETS markets are capped, if a storage owner is required to purchase ETS allowances in the event of a leak, this will result in emissions being reduced elsewhere, because the volume cap on the ETS scheme will control the total number of emissions. This should be sufficient safeguard for a purchasers of carbon credits, knowing that in the event of a future leak, action will be taken by the storage owner / operator, that will ensure that the effect of the carbon credits purchased remains the same (the leak has been compensated for by emissions being reduced elsewhere, which will have been paid for by the storage owner / operator).                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| 783 | Individual/employee, Oxford Net Zero            | QUESTIONS           | te              | Are there alternative approaches to permanence that should be considered and that are not covered under the draft Assessment Framework?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | · Nature-based solutions can present an option for removal, and are critical to the net zero balance, though they face the issue of impermanence and leakage, especially given that climate change is affecting the resilience of ecosystems. For Nature-based solutions to store carbon long-term they must have strong governance, and long-term institutional and financial support. And research shows they must be implemented with Indigenous peoples and local community groups for better chances of being sustained. Technological solutions like direct air capture offer another long-term storage alternative though they can be expensive and energy intensive. We are likely to need both solutions on the path to net zero, requiring much investment now to scale durable removal capacity across types. |
| 783 | Individual/employee, Oxford Net Zero            | QUESTIONS           | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | ICVCM should endorse the principle of the Carbon Takeback Obligation ,i.e. The responsibility on producers, which means every tonne of fossil carbon extracted by producers from the geosphere is compensated for by permanent restorage of carbon to the geosphere through reinjection of carbon dioxide into sub-surface reservoirs or other forms of permanent carbon burial or remineralisation.                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 784 | Anonymous                                       | QUESTIONS           | ge              | The climate does not care about rules for horizontal or vertical stacking nor the offset claims justification. The climate is less warm if the concentration of CO2 in the atmosphere is lower. The next 7 years are critical for many tipping points.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Disclosure of most likely scientific permanence or guaranteed permanence                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 784 | Anonymous                                       | QUESTIONS           | ge              | Permanence is a policy choice and a judgement call. We prefer disclosure over “failing” and excluding projects from IC-VCM label. Transparency of likely or guaranteed or scientific carbon storage times would take us a long way and the “markets” will factor in the disclosed permanence in credit pricing and purchase priorities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 785 | Individual/employee, Conservation International | QUESTIONS           | te              | Permanence, additionality and quantification requirements at odds, effectively nix the possibility for multiple crediting periods for activities with material permanence risks. The additionality and quantification sections require that the volume of flow must grow over time and past levels of flow are ineligible for crediting. This implies that once an activity is implemented, subsequent baselines must include said activity. This would make it impossible to earn credits after the first crediting period, especially at the jurisdictional level. Furthermore, the permanence section carries obligations to continue monitoring for up to 100 years, which means that activities with material permanence risk would have very few options for long-term financing to actually meet the 100-year requirement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | At a minimum, inconsistencies across sections should be corrected. A basic understanding of the difference between stocks and flows should be reflected in the Framework. Focus of permanence should be on addressing the risk of reversals during the crediting period, not on creating infeasible requirements for monitoring past the expected lifetime of any institution, legal entity, or project. Criteria should reflect the scientific understanding of how temporary activities contribute a lasting (i.e. permanent) benefit to the climate system – especially when implemented at a jurisdictional scale.                                                                                                                                                                                                   |

| 786 | Anonymous                                       | QUESTIONS           | ge              | Assessments of permanence should not be restricted purely to measures (such as buffers) contained within individual carbon codes/standards. Wider legislative and policy measures (that are not specific to carbon markets) can be very important in underpinning permanence. For example, forestry legislation across the UK means that woodland creation is a permanent change in land-use, with strict conditions applied to any subsequent felling, with the condition that such woodlands are restocked. Environmental legislation – including Environmental Impact Regulations – also help to underpin permanence. Such legislation also provides assurance of permanence beyond the contracted crediting period of any individual project. Such legal ‘protection’ is not yet considered in Criteria 9.1-9.4.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 786 | Anonymous                                       | QUESTIONS           | ge              | Requirements under 9.2a - length of commitment period – Option 1 suggestions minimum commitment to monitor for 50 years. Does the Option 2 suggest that if the project length/commitment period is 25 years + that credits are only issued for the length of the commitment period with the possibility of generating further credits if the commitment period is increased? This would seem sensible. In the UK Woodland Carbon Code, afforestation projects which involve timber harvesting can only claim the ‘long-term average’ carbon stock in that woodland. Projects can claim sequestration in the first rotation until that ‘long-term average’ is reached which tends to be 50-70% of the length of the rotation. This could be perhaps 25-35 years. The Woodland Carbon Code currently requires the commitment period to be at least the length of the shortest rotation period where timber is harvested, this could 35- 50 years, or above this. For these projects where credits are generated by year 25-35, commitment to monitor and verify to the end of the first rotation is feasible, but to do so for 100 years could be onerous, however, woodlands in the UK are protected through Environmental Impact (deforestation) and Felling Licencing Regulations. These legal avenues are very important in protecting against losses. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| 786 | Anonymous            | QUESTIONS           | ge              | UK Peatland Code projects have a minimum commitment period of 30 years, but the maximum depends on the peat depth since the emission reductions claimable are linked to how long the peat would have been there if left degrading.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                |
| 786 | Anonymous            | QUESTIONS           | ge              | On 9.2b sufficiency of compensation mechanism, we support the requirement for a buffer, to compensate unavoidable reversals, and the cessation of issuing further credits until the reversal (and buffer?) are compensated. The 'Initial' threshold requires insurance of the buffer. We are not aware of a route by which it is possible to reinsure the buffer and the feasibility of insurance needs further investigation).                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                                                |
| 786 | Anonymous            | QUESTIONS           | ge              | The 'full' threshold under 9.2b requires project proponents to sign legal agreements obligating them to monitor, report and compensate for avoidable reversals for the full commitment period. In the UK Woodland Carbon Code and Peatland Code, project proponents are required to sign a 'landowner commitment statement' indicating this requirement. We have considered putting in place a covenant or similar legal instrument on the project proponent, but it is a challenge to find a legal construct that would provide adequate protection over such long timescales, and we have concerns whether such a requirement would overly restrict participation in the market. As a reminder, wider legislative framework can provide such assurance, e.g. forestry legislation in the UK which makes afforestation a permanent change in land-use. | 0                                                                                                                                                                                                                                                                                                |
| 787 | Sadie Frank          | QUESTIONS           | te              | We support the initial durability requirement of 50 years and a full durability requirement of 100 years. However, we reject the notion that either duration achieves "permanence" that is physically equivalent to fossil CO <sub>2</sub> emissions. We strongly encourage the Integrity Council to adopt "durability" rather than "permanence" language in the context of temporary carbon storage that is subject to reversal risk. Credits should be labeled according to the durability of the contractual structure under which they are issued, with judgments about the adequacy of their use in different contexts left to buyers and buyer-side credit use standards.                                                                                                                                                                         | See our comment.                                                                                                                                                                                                                                                                                 |
| 787 | Sadie Frank          | QUESTIONS           | te              | When it comes to demonstrating a system capable of achieving 50 or 100 years of durability, we believe that any approaches should be subject to the kinds of rigor applied in other commercial contexts like insurance. Risk ratings and financial contributions should be based on explicit evidence. They should also be constructed to address and price the possibility that individual financial actors (including market participants) could strategically or unintentionally go bankrupt and discharge any durability-related liabilities.                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                |
| 788 | Ivan VALENCIA        | QUESTIONS           | ge              | Permanence – The CCPs unduly punish emission reductions from forestry activities in the conceptual framework, and do not acknowledge the existence of reversals in some fossil fuel avoidance activities. This mistake will only perpetuate the impression that land-based mitigation and nature based solutions are less important than other forms of mitigation, at precisely the time when they are most needed not only for mitigation but for adaptation and biodiversity conservation. Further details are in the specific comments section.                                                                                                                                                                                                                                                                                                     | Refer to comments on this section                                                                                                                                                                                                                                                                |

| 790 | Peter Hurrell        | QUESTIONS           | te              | Under the full threshold in the draft Assessment Framework, the carbon-crediting program must have an operational and independent grievance resolution mechanism. This would include a set of procedures and a clear framework for independently addressing grievances related to mitigation activities in a fair, effective, and transparent way and providing remediation when negative impacts have occurred.                                                                                                                                                                                                                                                                                                                                                                                                                                        | Again analogous to financial and energy markets, these mechanisms already exist and have been operating successfully for decades. The European Federation of Energy Traders (EFET) or the International Swaps and Derivatives Association (ISDA) have templates that can easily be applied here. |

| 791 | Anonymous            | QUESTIONS           | ge              | We agree that permanence is a critical component of offset credibility, particularly for nature-based solutions. Minimum time periods, in conjunction with insurance mechanisms like buffer pools, are critical for achieving meaningful GHG reductions and removals. However, existing registries offer a wide range of approaches on this topic (Verra has a variable approach between 30-100 years, ACR uses 40 years, CAR adds 100 years to the end of a crediting period - e.g. up to 200 years). These approaches should be acknowledged and reflected in the criteria. It should be noted that the choice for a minimum time-period is largely a policy-based decision, so any movement away from what registries already do should utilize a phased approach to allow for thoughtful changes in these policies. Furthermore, it should be noted that feasibility and practicality should be balanced with desired emissions outcomes. For instance, minimum time commitments should be long enough to ensure that real change is occurring (e.g., 1-year contracts likely do not inspire additionality), but not so long that no one will commit to taking climate action (e.g., CAR has been able to enroll very few participants under their 200 year commitment). The VCM needs to be effective, but it also needs to be usable and feasible to inspire real, additional, quantifiable, permanent change. | n/a                                                                                                                                                                                                                                                                                                                                                     |
| 792 | Anonymous            | QUESTIONS           | ge              | IC-VCM CCP-eligible credits may be used to compensate for residual fossil emissions. To be effective, these credits must be permanent — anything less is simply a deferral of carbon emissions, not neutralization. At the same time, a number of important CDR solutions have short contracted project terms and a non-negligible risk of reversal. These projects have a critical role to play in the VCM, and multiple parallel efforts are working to define how they can be used in the context of corporate climate commitments. XXXX recommends the development of CCP's that allow for the development of robust mechanisms that enable the use of temporary credits in conjunction with permanent carbon storage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <ul style="list-style-type: none"> <li>We recommend retaining Criterion 9.3 under the Assessment Framework as written, with minor suggested changes pertaining to the replacement of temporary credits.</li> </ul>                                                                                                                                      |
| 792 | Anonymous            | QUESTIONS           | ge              | As such we support the limited inclusion of temporary crediting in the CCP framework. We do not agree that the CDM tCER's experiences are a precedent for CCP temporary crediting going forward and thus do not support the notion that temporary crediting should be removed from CCP. While replacement of temporary credits by buyers presents significant challenges, we argue that the CCP framework should not preclude the possibility of robust frameworks for the use of temporary credits. In all cases, temporary credits intended to compensate for residual emissions should only be used in the presence of binding agreements ensuring that the temporary credits will be replaced with permanent credits. However, reasonable bounds should be placed on such approaches. In particular, the duration for which permanent credits may be deferred must be time-delimited to ensure buyer accountability. We recommend a maximum period of 10 years before temporary credits must be replaced by permanent ones. However, we also recommend that the Assessment Framework should allow for multiple temporary credits to fill this 10-year period (e.g., a sequence of two 5-year credits). To address these points, we propose the following changes.                                                                                                                                                | <ul style="list-style-type: none"> <li>We recommend a maximum period of 10 years before temporary credits must be replaced by permanent credits.</li> </ul>                                                                                                                                                                                             |

| 793 | Ronan Carr           | QUESTIONS           | ge              | Considering how commitment periods vary from sector to sector, a key issue for non-permanence is ensuring fungibility across credit types, i.e. allowing comparative assessments for different project types with different commitment periods. This can be achieved by making assessments of the likelihood that a project's carbon benefits will remain for the duration of its commitment period, using both top-down and bottom-up analyses.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                                                       |

| 793 | Ronan Carr                                     | QUESTIONS           | ge              | BeZero advocates three key elements of the CCPs' analytical assessment of non-permanence: the consideration of commitment periods, the strength of mechanisms to compensate for reversals, and institutional stability when assessing non-permanence. In addition, we support the requirement for pooled buffer reserve contributions to be based on project-specific risk assessments.                                                                                                                                                                                                                                                                                                                          | 0               |
| 793 | Ronan Carr                                     | QUESTIONS           | ge              | However, we also identify a number of key flaws in the CCPs current approach to non-permanence. Crucially, the CCPs do not address the lack of standardised terminology pertaining to commitment periods across accreditors. There is no common definition in the market of what constitutes a project's lifetime and what a credit is committing to, which we deem more important than mandating specific permanence periods. This is particularly problematic for nature-based and removals projects, where understanding the carbon storage dynamics is key to integrating credits into a broader carbon accounting framework.                                                                                | 0               |
| 793 | Ronan Carr                                     | QUESTIONS           | ge              | Moreover, there are similarly disparate methods for calculating and managing buffer pool contributions across the main accreditors. Not only do the extent of calculated buffer pools differ, but registries also diverge in how contributions are managed once a crediting period ends. In addition, buffer reserves are not sector-specific and do not account for differences in credit quality, allowing scope for reversals of high-quality credits to be compensated using those of lower quality. This can undermine the mechanism's compensatory function.                                                                                                                                               | 0               |
| 793 | Ronan Carr                                     | QUESTIONS           | ge              | Therefore, we recommend that improved standardisation and disclosure requirements regarding buffer pool calculations are introduced. This will provide clarity on which risks are covered by a given contribution, affording greater confidence to buyers in the market and promoting its expansion. The establishment of more stringent transparency guidelines will also enable other parties to enter the market with more sophisticated insurance products, to cover areas where current risk buffer mechanisms do not adequately insure the risk.                                                                                                                                                           | 0               |
| 793 | Ronan Carr                                     | QUESTIONS           | ge              | One specific aspect of buffer pools to consider is a requirement for project reported buffer allocations to match and reconcile with registry reported buffer allocations for the same project. Relatively straightforward improvements in data provision and transparency of this nature are essential to facilitate better information discovery and innovation in support services such as aforementioned insurance solutions.                                                                                                                                                                                                                                                                                | 0               |
| 793 | Ronan Carr                                     | QUESTIONS           | ge              | Beyond reversal risks, BeZero incorporates analyses of information risks into non-permanence assessments. Information risk refers to the reliability of the data used to report carbon performance, which is significantly linked to a project's commitment and enforceability. Although it is particularly relevant for projects with no technical risks of reversal, it remains important across every sector since many projects employ national datasets for credit issuance calculations and when determining non-permanence risks. As the CCPs and other initiatives lead to rising standards of disclosure and transparency across the market, it should contribute to lower information risks over time. | 0               |

| 794 | Vega Tapia                                     | QUESTIONS           | ge              | Generalizing the criteria may pose problems to certain types of projects/ credits such as Nature Based Solutions that need specific considerations on how to manage the risk of non-permanence and the mechanisms to replace losses.                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0               |
| 795 | Thomas Hämmerle                                | QUESTIONS           | ge              | Permanence is essential, regarding removals. Nevertheless, as mentioned in section H, permanence is also depending on the type of removal. Therefore, we support the implementation of different categories according to their risk. Further, an implementation of timeframes would be a great benefit to compare different types of removals, this could also be done in section K on page 38 attributes.                                                                                                                                                                                                                                                                                                       | None            |
| 796 | Individual/employee, Intercontinental Exchange | QUESTIONS           | ge              | ICE believes the permanence principle to be of high importance for the integrity of carbon credit programmes. Given that there is a large variety of approaches to permanence, we suggest the IC- VCM assessment framework be less prescriptive. It would be more helpful to provide high level key criteria that need to be achieved instead of going too much into detail. There is no need for an entirely new standard, and instead should be consistent with best practice in the market                                                                                                                                                                                                                    | See above.      |

| 796 | Individual/employee, Intercontinental Exchange | QUESTIONS                                                  | ge              | We think that it would be better for the Integrity Council to review the process to assess and address permanence used by the program, instead of making specific decisions about permanence, see for instance the detailed example on page 60 of the draft assessment framework.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 797 | Polly Thompson                                 | QUESTIONS                                                  | ge              | Again, a sector-specific approach would be useful here. For NbS, buffer pools can be one mechanism to address reversal risk, but these should be established and enforced robustly, which IC-VCM could validate.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | see above                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 798 | Anonymous                                      | QUESTIONS                                                  | te              | Risk of reversal or elimination of benefit exists in almost all types of carbon projects, not just those in the land sector. It is very unfortunate that NCS/NBS projects have come to be treated as a lower-quality sink. The IC could offer a valuable service by not repeating the falsehood that reversals are a foregone conclusion in (only) the land sector.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | We support a robust buffer pool to mitigate reversal risk. We also consider reinsurance an option that could be usefully explored to appropriately price in risk across all types of projects.                                                                                                                                                                                                                                                                                                                |
| 799 | Anonymous                                      | Figure 1 – Pathways for meeting CCP-eligibility permanence | ge              | Please try to avoid temporary crediting - this failed under the CDM (no demand for tCERs and ICERs). Any corporate buyer of a 'temporary' carbon credit will be left with a contingent balance sheet liability - a sure way to stub out interest!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Please try to avoid temporary crediting - this failed under the CDM (no demand for tCERs and ICERs). While a consistent way to address the non-permanence risk, the temporary credit approach has proved difficult in practice and put forestry project de facto at a disadvantage compared to projects in other sectors (World Bank 2011) |
| 804 | Stephanie Sargeant                             | Figure 1 – Pathways for meeting CCP-eligibility permanence | ge              | Figure 1:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Temporary crediting has not worked in the past and should not be promoted.                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| 805 | Anonymous                                      | Figure 1 – Pathways for meeting CCP-eligibility permanence | ge              | I am a PhD student at University of California, Merced. I have been studying Acre's jurisdictional REDD+ since 2019. Based on my research, I understand that governments, especially in democratic systems, cannot guarantee permanence. Commitments of specific administrations and formally participatory governance do not mean broad societal commitments to a forest-based economy or low-emission rural development. If societies as whole do not see their aspirations in a particular economic policy, governments might change in the next elections and alter the rules of the game. Bolsonaro has impressive support in most Brazilian Amazonian states, in spite (or because) of his anti-environment, anti-NGO and anti-Indigenous positions. In such a context, subnational governments must juggle with multiple and contradictory pressures and prioritize the interests of dominant economic agents to remain in power. Subnational states also have limited autonomy and power to guarantee permanence in the face of development and environmental policies formulated and implemented at the national level. | Judging jurisdictional programs by using criteria of permanence is not reasonable or feasible. Those programs can only be accountable for the deforestation dynamics in the short term (four to eight years at maximum).                                                                                                                                                                                                                                                                                      |

| 806 | Individual/employee, Meo Carbon Solutions | Figure 1 – Pathways for meeting CCP-eligibility permanence | te              | Under Duration, this is mentioned that: "The mitigation activity will only be credited for as long as it continues to generate emission reductions or removals compared to a regularly reviewed baseline." - The statement seems to be very generalized and doesn't provide a guideline at which point the period has to stop. This is important.                                                                                                                                                                                                                                                                         | See above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 807 | Phil Cryle                                | Figure 1 – Pathways for meeting CCP-eligibility permanence | te              | An inducement price could be a useful additional test (as part of a suite of tests to assess non-permanence) to understand the risk of non-permanence i.e., what carbon price is necessary to make this project economically viable? If the project is unlikely to realise that price in the market, then the project has a material reversal risk of abandonment. If the project is likely to receive that price, then the risk of reversal is lower. Projects with no inherent reversal risk would not require this test.                                                                                               | An inducement price could be a useful additional test (as part of a suite of tests to assess non-permanence) to understand the risk of non-permanence i.e., what carbon price is necessary to make this project economically viable? | 863 | Anonymous                                 | QUESTIONS                                                  | ge              | No - As a general point, any proposal that requires host country authorisation will certainly hinder the growth of the Carbon market and increase project risk and complexity. This may also result in project delays, transfer power and ownership to government which could leave project owners vulnerable and hostage to bureaucracy and corruption.                                                                                                                                                                                                                                                                  | No - No - Do NOT include host country authorisation as it will hinder risk appetite and growth of the market. This may result in project delays, transfer power and ownership to governments which could leave Carbon project owners vulnerable and hostage to bureaucracy and corruption.                                                                                                                                                                                                                                  |
| 864 | Anonymous                                 | QUESTIONS                                                  | ge              | With regards the % Levy - No - I do not think the VCM should mandate a levy % of proceeds to developing Countries most vulnerable to climate change. This will only complicate matters. How do you define developing, vulnerable or the % levy?                                                                                                                                                                                                                                                                                                                                                                           | With regards the % Levy - No - I do not think the VCM should levy a % of proceeds to developing Countries most vulnerable to climate change. This will only complicate matters.                                                                                                                                                                                                                                                                                                                                             |
| 864 | Anonymous                                 | QUESTIONS                                                  | ge              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | However, I think that Carbon Projects should have a component of revenue going to the respective governments and local communities built into their programs.                                                                                                                                                                                                                                                                                                                                                               |
| 865 | Anonymous                                 | QUESTIONS                                                  | ge              | Given that most certificates are available because developing countries have not logged forests; a percentage of VCM proceeds should be taxed and sent directly to the country from which certificates were generated. If protecting forests generates income to developing countries that would probably support environmental protection there.                                                                                                                                                                                                                                                                         | See above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 865 | Anonymous                                 | QUESTIONS                                                  | ge              | Any company should only be allowed to "offset" a maximum of 20-25% of their emissions. Based on estimates from the State of the Carbon Cycle Report (SOCCR) net CO2 flux from terrestrial ecosystems globally amounts to approx. 9.2 GtCO2 which is ~16% of global emissions. Project Drawdown puts the number at around 24% I think. In short, if we took credit for all carbon sequestration services that Nature currently bestows upon the Earth, and claimed that in the form of carbon offset certificates, we should be short 75-85% of human-caused carbon emissions, which we have no choice but to decarbonize. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 865 | Anonymous                                 | QUESTIONS                                                  | ge              | Regenerative agricultural practices and ecosystem restoration could maybe hit 5-10Gt per year levels. That's still approximately 5-10% of 25% of human-caused emissions. How are you working on credits that support regenerative agriculture.                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 865 | Anonymous                                 | QUESTIONS                                                  | ge              | Maybe allow certificates that pass all ratings to price themselves higher? Right now, carbon offsets are for the most part, based on cursory exposure, treated in a binary manner? I realize that they are priced very differently, but I'm not sure what justifies the price variation.                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 865 | Anonymous                                 | QUESTIONS                                                  | ge              | Finally, you should require that all offset projects, including sequestration technologies, including carbon capture and sequestration (CCS) associated with any fuel generating facility or simply carbon capture technologies, to publicly disclose their carbon budget on a per unit basis, e.g., net sequestration v. emissions per ton CO2 sequestered. I haven't seen enough of these technologies qualify their emissions                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 866 | Aya Yamazaki                              | QUESTIONS                                                  | ge              | Corresponding adjustment with the host country government should not be used as criteria for the high integrity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | As stated in the above comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| 867 | Anonymous                                             | QUESTIONS           | te              | For credits from projects from sectors covered by the NDC of host country could be used as a claim to "fund Climate Action and NDC of host country" without transfer of carbon ownership                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | For credits from projects from sectors covered by the NDC of host country could be used as a claim to "fund Climate Action and NDC of host country" without transfer of carbon ownership |
| 868 | Richard Tipper                                        | QUESTIONS           | te              | No - the definition of a Voluntary credit is that it is helping the host country (and ultimately the world) to achieve its carbon targets - ultimately Net Zero. Unless it is going to be traded as a compliance credit it should not have to involve an adjustment to the NDC or the issuance, transfer or cancellation of ITMOs.                                                                                                                                                                                                                                                                                                                                                                                                                         | One way to clarify this would be to replace the term "Offset" with "contribution towards Net Zero (or other target)"                                                                     |
| 869 | Calvin Tran                                           | QUESTIONS           | te              | The VCM should provide the option to label credits for CAs, but not require it. Buyers may find CA-labeled credits more attractive because of the cascading effect of additional offsets produced in the host country to meet its NDCs, but host countries may (reasonably) not want to authorize certain credits for CAs and should reserve the right to do so without preventing those credits for being sold on VCMs.                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                          |
| 869 | Calvin Tran                                           | QUESTIONS           | te              | Regarding levying a share of proceeds to assist developing countries in adaptation, this consideration would add more complexity and financial considerations for project developers. As many projects are still considering their upfront costs, costs of carbon credits, and financial models, this consideration may cause more difficulties for projects to reach profitability. Instead, a share of proceeds can be implemented, optional or conditional, at the project level for projects that assist in adaptation in developing countries, acting as a value-add for those specific projects and their costs. We are also curious about mechanisms that could shift the cost of contributing to adaptation to VCM buyers, not VCM producers.      | 0                                                                                                                                                                                        |
| 869 | Calvin Tran                                           | QUESTIONS           | te              | Similar to the response above, the cancellation of carbon credits at issuance or other similar provisions may provide more difficulties for projects to reach scale and profitability. We seek better and clearer guidance on the conservativeness of buffer and leakage pools, to increase chances that credits in excess of what are being sold are produced.                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                        |
| 870 | Individual/employee, Coalition for Rainforest Nations | QUESTIONS           | te              | Yes to all three questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | See above                                                                                                                                                                                |
| 873 | Anonymous                                             | QUESTIONS           | ge              | We believe that the host country authorization and the associated corresponding adjustment should not be made mandatory, since the compliance and voluntary market should operate in parallel. Indeed, the GHG accounting systems of States and private companies do not overlap and they are used for different aims. This means that voluntary carbon credits generated in one country are not supposed to be used to offset the GHG emissions of another country. Therefore, corresponding adjustment, in most cases (we might exclude only the use of voluntary carbon credits in the national compliance markets, where allowed), it is not necessary.                                                                                                | None                                                                                                                                                                                     |
| 873 | Anonymous                                             | QUESTIONS           | ge              | Making the host country authorization mandatory would effectively hinder host countries from achieving their own NDCs, given that corresponding adjustments would require a deduction from national registries in each instance. Accounting frameworks and claims in the voluntary carbon market run separate to those in compliance markets, as they do not concern the same actors.                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                        |
| 873 | Anonymous                                             | QUESTIONS           | ge              | The VCM offers an opportunity to funnel finance into mitigation that is additional in order to accelerate the transition to net zero. Requiring corresponding adjustments will downsize the VCM, thereby reducing the total amount of funding allocated to climate mitigation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                        |
| 873 | Anonymous                                             | QUESTIONS           | ge              | In addition, most countries today do not have the accounting frameworks in place to be able to consider corresponding adjustments. This raise the risk of slowing down transactions in the VCM when additional investments into climate action are urgently needed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                        |
| 874 | Anonymous                                             | QUESTIONS           | ge              | We believe that the share of proceeds to assist developing countries to meet the costs of adaptation shall not be applied as mandatory to the voluntary market. The main concern is referred to the additional burden such a levy poses on project developers. Climate change disproportionately affects the population of developing countries. Exposing activity proponents in the Global South to this additional levy effectively imposes a tax on highly impacted populations to pay for the adaptation to climate change which they are trying to mitigate via their projects. Beyond the distribution effect, it also punishes first movers who are taking action on climate mitigation rather than imposing a levy on actors who continue to emit. | None                                                                                                                                                                                     |

| 874 | Anonymous                                       | QUESTIONS           | ge              | We believe that the contribution to overall mitigation of global emissions shall not be applied as mandatory to the voluntary market. The provisions of the Paris Agreement were designed to govern transactions between state actors and do not explicitly take the financial architecture of VCM into account. Administering such a contribution would be extremely costly and complex to enforce in a voluntary setting. Furthermore, this would increase the risk taken by activity proponents and pose a barrier to entry to the market at a time when we are facing an impending supply shortage. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 875 | Anonymous                                       | QUESTIONS           | ge              | No, no, no                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | N/A                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 876 | Johan Börje                                     | QUESTIONS           | ge              | It is essential that the principles of the IC-VCM does not imply that an authorized project (with CA) is of better integrity/quality than an unauthorized project (without a CA). This does not preclude that such information is part of the public information available about the project. If this is not achievable in general, special provisions should be made for negative emissions with geological storage.                                                                                                                                                                                   | -                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| 881 | Individual/employee, Radicle             | QUESTIONS           | ge              | Considerations regarding Paris Alignment should remain optional.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | No mandatory corresponding adjustments, no mandatory SOPs or cancellation for OMGE. This should only be done on a voluntary basis for the voluntary market. |
| 881 | Individual/employee, Radicle             | QUESTIONS           | ge              | All transactions in voluntary carbon markets represent climate action by non-state actors that go above and beyond what is required by law. These climate actions enable financing of emissions reductions and removals that ultimately contribute to the achievement of the NDCs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                           |
| 881 | Individual/employee, Radicle             | QUESTIONS           | ge              | It is paramount that voluntary actions are not disincentivized by adding additional levies and charges, particularly when those are likely to fall on project developers in the Global South.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                           |
| 882 | Individual/employee, NBS Brazil Alliance | QUESTIONS           | ge              | We are strongly in favour of Option 2: "no provisions on this matter should be used". In our view, no corresponding adjustments should not included in the VCM, for the reasons given below:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | See above.                                                                                                                                                  |
| 882 | Individual/employee, NBS Brazil Alliance | QUESTIONS           | ge              | Firstly, the use of corresponding adjustments can have a negative impact on host countries in developing countries. By exporting their mitigation outcomes, the host country still needs to invest in additional mitigation outcomes to reach their NDCs. Depending on the costs of the mitigation outcomes exported, and the costs of the mitigation options still available to the host country, such transfers could result in negative economic impacts for the host country. The exact costs to host countries vary depending on the marginal abatement cost curve (MACCs) of each country. Given that investors usually look for low-cost mitigation options, the host country is left with higher mitigation outputs to meet their NDCs. The result is that the overall cost of meeting NDCs will increase at the national economy level. A recent study for the World Bank Climate Market Club estimates that the opportunity costs to developing countries ranges from US\$ 20 to US\$78 /tCO2e. Consequently, programmes that purchase credits at, e.g., US\$ 10/tCO2e, result in an additional abatement cost of US\$ 10-68 to the host country. | 0                                                                                                                                                           |
| 882 | Individual/employee, NBS Brazil Alliance | QUESTIONS           | ge              | Second, it could create a disincentive for host countries to adopt ambitious NDCs. Unlike the Kyoto Protocol, when developing countries did not have emission reductions targets, under the Paris Agreement, all countries have to meet the emission targets stated in their respective NDCs. This creates a conundrum: while developing countries depend on inward investment to reduce their emissions, corresponding adjustments required for emissions trading could affect their ability to meet NDC targets. In essence, host countries are disincentivized to adopt ambitious NDCs, as these would jeopardize their ability to attract inward investment and climate finance                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                           |
| 882 | Individual/employee, NBS Brazil Alliance | QUESTIONS           | ge              | Thirdly, corresponding adjustments result in a zero-sum game with no positive global climate benefit. Given that emission reductions deducted from a host country are used to authorise GHG emissions in the purchaser's country, corresponding adjustments result in a zero-sum game with no positive global climate benefit. Voluntary transactions without corresponding adjustments, instead, can assist countries in meeting their NDC targets and result in emission reductions that either contribute to, or that are additional to the targets of the Paris Agreement, a truly positive outcome.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                           |
| 882 | Individual/employee, NBS Brazil Alliance | QUESTIONS           | ge              | Fourthly, voluntary projects do not need to be accounted by the UNFCCC, as the investor companies are not mandated to reduce their emissions and therefore do not need these credits for domestic or international compliance. The emission reductions created by their voluntary projects, consequently, do not need to be reflected in any official accounts: the seller's credits are not debited from the host country's account, and not added to the national account of the buyer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                           |
| 882 | Individual/employee, NBS Brazil Alliance | QUESTIONS           | ge              | For the reasons above, we recommend that voluntary carbon markets should continue to run parallel and not included in the accounting of the Paris Agreement. In this way, voluntary carbon markets could provide the basis for international climate cooperation without being detrimental to host countries' targets.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                           |

| 883 |                      | QUESTIONS           | ge              | The Adaptation Fund would like to recall the letter by the Alliance of Small Island States (AOSIS) and Least Developed Countries (LDC) Group to the Integrity Council for the Voluntary Carbon Market (IC-VCM), urging it to apply several key principles from the Paris Agreement Article 6 “rulebook” to the voluntary carbon market (see <a href="https://www.aosis.org/letter-to-the-integrity-council-of-the-voluntary-carbon-markets-on-aligning-with-best-practices/">https://www.aosis.org/letter-to-the-integrity-council-of-the-voluntary-carbon-markets-on-aligning-with-best-practices/</a> ). The two groups represent 85 countries that are particularly vulnerable to climate change. In particular, they encourage the IC-VCM to apply a 5% share of proceeds for adaptation to the Adaptation Fund in order to align the voluntary carbon markets with the Paris Agreement and to generate additional resources for adaptation in the context of urgent and increasing needs. According to the Chairs of AOSIS and LDC Group, “Alignment with Article 6 on these elements would not only benefit [their] countries, but also put the VCM in the vanguard of progressive instruments to tackle the climate emergency.”                                                                                | The Adaptation Fund welcomes, with appreciation, the initiative by AOSIS and LDC group calling for the IC-VCM to apply a 5% share of process for adaptation to the Adaptation Fund. The Adaptation Fund is well placed and prepared to programme resources generated from a share of proceeds from international carbon markets into concrete adaptation projects. The Fund is ready for receiving and programming resources from the Paris Agreement’s Article 6.4 carbon market as well as the voluntary carbon market to help meet the urgent needs of developing countries. |
| 883 |                      | QUESTIONS           | ge              | In accordance with this call, the Adaptation Fund welcomes, with appreciation, the initiative calling for the IC-VCM to apply a 5% share of process for adaptation to the Adaptation Fund. The Adaptation Fund is well placed and prepared to programme resources generated from a share of proceeds from international carbon markets into concrete adaptation projects. The Fund has been established in 2001 and has been operational since 2007 to assist developing countries that are particularly vulnerable to the adverse impacts of climate change in meeting the cost of adaptation by funding concrete adaptation projects and programmes in developing countries. The Fund’s initial resource mobilisation model relied primarily on a two per cent share of proceeds arising from the sale of Certified Emission Reductions (CERs) under the Clean Development Mechanism. This has been an innovative funding model that set the Adaptation Fund apart from other multilateral climate funds. In line with UNFCCC Decision 3/CMA.3, the Adaptation Fund is set to receive a 5% share of proceeds that is levied under the Paris Agreement’s Article 6.4 to assist developing country Parties that are particularly vulnerable to the adverse effects of climate change to meet the costs of adaptation. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 883 |                      | QUESTIONS           | ge              | As of June 2022, the Fund has programmed almost US\$ 1 billion in resources, out of which over one fifth has been generated from the CER’s share of proceeds. In addition to this automatic funding source, the Fund is also able to receive voluntary contributions from national and subnational governments, as well as from sources alternative to government funding, including foundations, the private sector, and individuals. In 2021, the Fund has received a record amount of US\$ 350 million in annual pledges from a total of 16 national and subnational governments. This diversified funding model is part of the Fund’s Resource Mobilization Strategy, which was developed by the Board in response to the decline in revenue from the CERs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 883 |                      | QUESTIONS           | ge              | The Fund is ready to respond to growing demands and expectations by countries by further increasing its ambition and delivery of resources to developing countries for adaptation activities. The Board has already prepared for an increased delivery of resources and accreditation of up to two national implementing entities per country. The Board is also in the process of developing the second Resource Mobilization Strategy and Action Plan for the period 2022 – 2025 that will set out a needs based approach for setting resource mobilization targets. The Fund has been receiving increasing requests for funding, with proposals in the active pipeline totaling at least US\$ 350 million per year and with an increasing trend. The Fund is ready for receiving and programming resources from the Paris Agreement’s Article 6.4 carbon market as well as the voluntary carbon market to help meet the urgent needs of developing countries.                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 884 | Josiah McClellan     | QUESTIONS           | ge              | L, question b                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | The guidance cites a McKinsey study that 90% of practical NCS come from the global south with 90% of climate commitments from the global north. This indicates that there will be a geographic transfer of wealth as the voluntary carbon market expands. Rather than mandate a levy, the ICVCM should evaluate the anticipated transfer of wealth over time and adjust its guidance only as needed.                                                                                                                                                                            |

This will only drive up the cost of credits by artificially reducing supply and slowing the market scale-up. If we believe that the carbon principles are complete, then we should trust a market that scales up with CCP eligibility. If we need to create further reductions to carbon credits beyond what is already highlighted in the guidance, then we should ask if the proposed guidance is sufficient.                                                           |

| 886 | Anonymous                 | QUESTIONS           | ge              | Article 6 requires CAs for authorized projects or those falling under CORSIA. Other VCM projects are not required by the Paris agreement to have CA's. Again, CAs are not an indicator of quality and may directly penalize those countries where foreign investment in mitigation activities is needed. The end result could be a significant decline in demand for international credits.                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                            |

| 886 | Anonymous                 | QUESTIONS           | ge              | The Paris Agreement does not address the interaction between and among voluntary and compliance carbon markets and the international rules will not regulate the voluntary carbon market even when they are agreed unless a country chooses to implement these domestically.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                            |
| 887 | Emma van de Ven           | QUESTIONS           | ge              | This question can only be answered after all countries (especially developing countries) have adopted and implemented all the necessary systems to support the corresponding adjustments. Before all of this is in place, including a test of the functionality of the corresponding adjustments in practice, this question can't be answered.                                                                                                                                                                                                                                                                                                                                                                                                                         | Postpone judgement on corresponding adjustment                                                                                                                                                                                                                                                                                                                               |
| 888 | Max DuBuisson             | QUESTIONS           | ge              | No, VCM transactions are wholly independent from the international carbon accounting ledgers and should not require the applicatoin of corresponding adjustments. One of the beautiful functions of the VCM is to drive private financing to support efforts to protect this public good: the atmosphere. Requiring CAs will significantly impede private investment in climate solutions.                                                                                                                                                                                                                                                                                                                                                                             | Do not require CAs for voluntary credit transactions.                                                                                                                                                                                                                                                                                                                        |

| 889 | Anonymous                 | QUESTIONS           | ge              | We recommend that this remains voluntary (up to the issuer).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                            |
| 890 | Anonymous                 | QUESTIONS           | te              | In order to ensure that voluntary carbon market financing continues to flow in the near term, it is vital that IC VCM set out a clear and unambiguous signal to the market that while Article 6 implementation infrastructure is put in place at the national and international levels the VCM will continue to operate unimpeded under the "unauthorized transfers window" of Article 6. We agree with the inclusion of an attribute notation that indicates whether a credit under the CCP label has been authorized for a UN corresponding adjustment by the Host Country. Since Corresponding Adjustments are not available in the market today, and it will take considerable time to put these systems in place, CAs should not be required for CCP eligibility. | We agree with the inclusion of an attribute notation that indicates whether a credit under the CCP label has been authorized for a UN corresponding adjustment by the Host Country. | 891 | Individual/employee, BBVA | QUESTIONS           | ge              | A requirement on host country authorisation would be very positive to ensure that the credit is not double counted. However, there is a strong lack of experience on this matter as of today.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | n/a                                                                                                                                                                                                                                                                                                                                                                          |
| 891 | Individual/employee, BBVA | QUESTIONS           | ge              | Additionally, this would increase the associated political risk in the voluntary carbon markets. Depending on government swings, credit allocations could be reversed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                            |
| 891 | Individual/employee, BBVA | QUESTIONS           | ge              | We would suggest deferring this issue to a later stage when there is more clarity and experience on this matter. This would avoid increasing the complexity of each project development.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                            |
| 891 | Individual/employee, BBVA | QUESTIONS           | ge              | In our opinion, VCM should not levy a share of proceeds to assist developing countries. Since nature based projects are more strongly linked to developing countries and the purchase of carbon credits currently takes place more in developed economies, there is already an inherent funding mechanism from developed economies to developing countries.                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                            |

| 893 | Molly Brown                    | QUESTIONS           | ge              | 1. The voluntary market is by definition independent from the compliance market and both markets should not be mixed. The host country authorisation can be an informative attribute as well as corresponding adjustments, but nothing else. The voluntary buyers will decide if they want to pay for this attribute. We see doors open for corruption and bribery if this becomes a requirement. For all kind of compliance purposes like CORSIA etc. corresponding adjustments are a "must".                                                                                                                                                                                                                   | .                                                                                                                                                                                                                                    |
| 893 | Molly Brown                    | QUESTIONS           | ge              | 2. No, this should remain at the discretion of the project developers. We are concerned that already now – in the draft version – we talk about share of proceeds, and voluntary cancellation for adaptation. These are concepts developed under the CDM, for good but different reasons, and we don't see the need for the same bureaucracy in the voluntary market. We also question which institution will distribute the money, and who will pay for this service – we are afraid it will be the project developers.                                                                                                                                                                                         | 0                                                                                                                                                                                                                                    |
| 893 | Molly Brown                    | QUESTIONS           | ge              | 3. No, the conservative approach in all methodologies already guarantees a contribution to OMGE. Additional contributions should remain at the sole discretion of the project developer or the final buyer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                    |
| 894 | Eftimiya Salo                  | QUESTIONS           | te              | Addressing double-counting should not be optional as it is absolutely critical to the effective functioning of the market. When a compensation claim is made, that statement should be grounded in truth. It is simply not acceptable to make a compensation claim using emission reductions or removals that have already been counted and claimed by the host country of the project. Contrary to the intention, this in fact results in a net increase of emissions in the atmosphere as only 1 tCO2 has been avoided or removed instead of 2 tCO2 - one by the company and one by the host country.                                                                                                          | Corresponding adjustment should be applied for all credits traded on the voluntary carbon market.                                                                                                                                    |
| 894 | Eftimiya Salo                  | QUESTIONS           | te              | If a company claims to be carbon neutral through carbon credits that are also counted into the project's host country goals, as far as climate ambition is concerned, the company hasn't actually done anything extra. On the other hand, double counting can also disincentivize countries from implementing much needed climate action. Offsetting should always be additional to national climate targets for an increase in overall climate ambitions. If corresponding adjustment is not applied, carbon credits should not be used for making offset claims, while companies can still support such projects, they should change the claim to "climate action", "contribution claim" or "climate finance". | Having a share of proceeds to meet the cost of climate adaptation and contribution to overall mitigation of global emissions is a good idea.                                                                                         |
| 895 | Anonymous                      | QUESTIONS           | ge              | A. Should the VCM levy a share of proceeds to assist developing countries?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Funding the host country's climate adaption need should not be achieved through an additional levy on the project/program. It should be part of the project/program itself, along with a fair and transparent Revenue Sharing model. |
| 895 | Anonymous                      | QUESTIONS           | ge              | XXXX believes that industry best practice requires any project or program to essentially demonstrate that their mitigation activity contributes to the host country's climate adaptation needs. Further, we stress on the need for transparent Revenue Sharing agreements that ensure that majority of the funds remain in the host country jurisdiction to support climate efforts therein. If an effective project/program and transparent revenue sharing is guaranteed, there would be no need for an additional levy.                                                                                                                                                                                       | 0                                                                                                                                                                                                                                    |
| 896 | Luzia Bieri                    | QUESTIONS           | ge              | a) No. An alignment of the voluntary carbon market with the Paris Agreement shall not become a requirement: corresponding adjustments shall remain optional.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | n/a                                                                                                                                                                                                                                  |

| 897 | Individual/employee, CLA                                             | QUESTIONS           | ge              | Should the voluntary carbon market levy a share of proceeds to assist developing countries most vulnerable to climate change to meet the costs of adaptation?                                                                                                                                                                                                                                                                                                                                                                          | As above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 897 | Individual/employee, CLA                                             | QUESTIONS           | ge              | For the UK voluntary carbon market (VCM) to grow, it must make business sense to develop nature-based carbon removal projects. For nature-based projects, the programmes need to ensure that the associated costs are proportionate to the scale of the investment.                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 897 | Individual/employee, CLA                                             | QUESTIONS           | ge              | It is likely that compliance with the CCP assessment framework may increase project administrative costs, and a levy on top of these costs may make a project commercially less attractive. More fundamentally, such a levy would be a tax for the purposes of national accounting. We cannot see any rationale for adding to the normal UK tax regime that will apply to proceeds from the VCM, and from which support for adaptation for vulnerable countries should come.                                                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 897 | Individual/employee, CLA                                             | QUESTIONS           | ge              | It is expected that much the growth in carbon markets will be within developing countries as these countries are often where there is scope for large-scale nature-based removals and verified carbon improvements. Therefore, these countries stand to benefit from finance from the VCM directly.                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 897 | Individual/employee, CLA                                             | QUESTIONS           | ge              | Should the voluntary carbon market provide a contribution to overall mitigation of global emissions, through the cancellation of carbon credits at issuance or other similar provisions?                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 897 | Individual/employee, CLA                                             | QUESTIONS           | ge              | No. As the framework already requires to calculate emission mitigations conservatively and hold back a buffer of credits, it should not also be required to cancel carbon credits at issuance. This would be up to the purchaser, as part of their net zero strategy, to opt to purchase more than their annual carbon dioxide emission equivalents worth of credits to achieve this goal. This is not an uncommon position for large corporates to take. Philanthropists may also choose to invest in the VCM in this way.            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 898 | Phil Cryle                                                           | QUESTIONS           | te              | Proceeds of the voluntary carbon market are compensation for the services and resources consumed in sequestering / avoiding carbon. Levying a 'tax' on carbon project originators or buyers will only serve to reduce investment. There should be other funding avenues explored for adaptation in developing nations such as green bonds, or markets for preserving natural capital/biodiversity.                                                                                                                                     | Proceeds of the voluntary carbon market are compensation for the services and resources consumed in sequestering / avoiding carbon. | 898 | Phil Cryle                                                           | QUESTIONS           | te              | No. The presence of a secondary market is a necessary feature to attract capital and ensure robust price discovery. An expiry date that aligns to regular baseline revisions is an alternative that would ensure credits are retired in a timely way. This is distinct from the idea of a temporary credit as the mitigation outcome would continue to exist according so long as it is permanent. Rather this would serve as an obligation to retire by a certain date somewhat analogous to the delivery date of a futures contract. | No. The presence of a secondary market is a necessary feature to attract capital and ensure robust price discovery. | 900 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | QUESTIONS           | ge              | · Requiring CAs for the voluntary NBS market introduce a high level of risk and uncertainty that is likely to deter companies from voluntarily investing the levels of funding needed and could significantly hinder the growth of the market. Introduction of a need for CAs is likely to mean that a key lever for ending tropical deforestation and keeping the world on a 1.5C degree pathway would be lost.                                                                                                                                                                                                                                  | 0                  |
| 900 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | QUESTIONS           | ge              | · Proponents of CAs in the VCM argue that without them, the VCM could displace national activity, reducing overall climate ambition. There is currently little evidence that this will be the case.                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                  |
| 900 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | QUESTIONS           | ge              | · A thorough qualitative assessment to establish the rationale and value of corresponding adjustments in VCM should be undertaken before any recommendations are made.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                  |
| 900 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | QUESTIONS           | ge              | · This should only take place once the capacity for jurisdictions to deliver on corresponding adjustments has been established.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                  |
| 900 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | QUESTIONS           | ge              | b) A requirement to levy a share of proceeds at issuance for the Adaptation Fund could effectively constitute a reverse carbon tax on jurisdictions/projects in those developing countries that the fund is meant to benefit, and was deemed to be inappropriate for the VCM, as VCM credits are not considered Article 6.4 compliant ERs.                                                                                                                                                                                                                                                                                                        | 0                  |
| 900 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | QUESTIONS           | ge              | c) No, crediting programmes or other VCM actors should not provide a contribution towards the overall mitigation of global emissions. The provisions of the Paris Agreement were designed to govern transactions between state actors and do not explicitly take the financial architecture of VCM into account. Administering such a contribution would be extremely costly and complex to enforce in a voluntary setting. Furthermore, this would increase the risk taken by activity proponents and pose a barrier to entry to the market at a time when we are facing an impending supply shortage.                                           | 0                  |
| 901 | Anonymous                                                            | QUESTIONS           | ge              | The enforcement/conditionality of authorization would affect countries less advanced in the Application of Article 6. This would affect private parties and would create an even larger gap between countries.                                                                                                                                                                                                                                                                                                                                                                                                                                    | See comments above |
| 901 | Anonymous                                                            | QUESTIONS           | ge              | The voluntary carbon market should remain private, it is not a substitute for the regulated market.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                  |
| 901 | Anonymous                                                            | QUESTIONS           | ge              | Many governments are proceeding slowly in the development of regulated markets due to the complexity of the mechanism. Since time is of the essence, practical approaches should be devised to add to the NDCs. At the level of the Paris Agreement, it could be explored that a certain percentage of the carbon offsets traded by the voluntary market is deducted and counted towards the NDC goals of the country where the sale takes place. This would trigger governments to enable the voluntary markets and provide them with an understanding of the financial mechanism while creating registries while the regulated markets develop. | 0                  |
| 902 | Individual/employee, Drax                                            | QUESTIONS           | ge              | While we welcome the optionality for credits to have corresponding adjustments at a future point in time once the Article 6 system is up and running, but do not believe every credit needs to have a corresponding adjustment. We also do not see this as a crucial question for the IC-VCM to solve, but rather a question of what corporate / national emissions accounting claims can be made with credits with vs. without corresponding adjustments.                                                                                                                                                                                        | N/A                |
| 902 | Individual/employee, Drax                                            | QUESTIONS           | ge              | On the question on whether to mandate deductions for adaption fund and OMGE fund we do not see that as question for the IC-VCM to solve, but rather for each crediting program to make their independent decision on. We welcome the fact that Article 6.4 credits will make these deductions but believe each other program should independently decide whether to contribute and how much to contribute. Crucial is that end-buyers should be able to understand how their carbon credits have contributed to the adaptation fund / OMGE.                                                                                                       | 0                  |
| 902 | Individual/employee, Drax                                            | QUESTIONS           | ge              | Finally, it will be crucial to clarify that corporate and national-level accounting should operate in parallel. It is not a double counting issue for both a company and a country to count a carbon removal.                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                  |

| 903 | Individual/employee, Grantham Research Institute, London School of Economics and Political Science | QUESTIONS           | ge              | Corresponding adjustments should not be necessary for voluntary claims made by non-state actors to compensate for their residual emissions, provided they have reduced their own emissions in line with a pathway to 1.5°C – which most should adhere to if they use offsets in a high-integrity way as set out by the ‘mitigation hierarchy’ of the Voluntary Carbon Markets Integrity Initiative, Science-Based Targets Initiative, and Oxford Offsetting Principles. It is valuable for companies to support developing countries with climate finance to achieve their NDCs as a form of taking responsibility for residual carbon emissions (provided that claims are commensurate with the action taken – which, granted, is outside the remit of the Integrity Council). There do not need to be strict controls to avoid double-claiming in such situations, since country-level accounting of emissions is not connected to that at the company level.                                                                                                                                                        | N/A               |
| 904 | Individual/employee, Grantham Research Institute, London School of Economics and Political Science | QUESTIONS           | ge              | Adding a share of proceeds should be strongly considered. It would add social legitimacy to the market overall by supporting some of the most vulnerable people around the world who may not otherwise benefit from carbon markets (due to restrictive conditions for investment in their area), but without interfering in market allocation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | N/A               |
| 904 | Individual/employee, Grantham Research Institute, London School of Economics and Political Science | QUESTIONS           | ge              | This should be weighed alongside other potential impacts. Firstly, including a share of proceeds would align with the Paris Agreement’s Article 6.4 mechanism (and surpass the Article 6.2 mechanism) and in so doing reduce the incentive to issue credits through voluntary standards rather than Article 6.4. Because a share of proceeds would be a flat rate on all credits, any extra logistical burden for market players would be limited, and the bulk of excess profits might otherwise flow back to shareholders in high-income countries. However, the charge may cause some marginal projects to be financially unviable. This could be a problem for equity and justice if these forestalled projects are disproportionately located in low-income, vulnerable countries – which would counter-productive to the goals of including the share of proceeds in the first place. To guide this decision, the Integrity Council should commission analysis of the impact on financial viability of projects across a range of sectors and countries, paying explicit attention to geographical distribution. | 0                 |

| 905 | Anonymous                                                                                          | QUESTIONS           | ge              | This is a multi-faceted issue, and our comments focus on the specific instance where a voluntary carbon market operates in a domestic setting only, with no facility for credits to cross national boundaries.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                 |
| 905 | Anonymous                                                                                          | QUESTIONS           | ge              | In this instance, there should not be a requirement for a Corresponding Adjustment to be made – the credit is only used against emissions the same country. Such domestic programmes can form an important part of measures to achieve NDCs – corresponding adjustments would disincentivise their use, resulting in less emissions reduction/removals to meet an NDC.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                 |

| 905 | Anonymous                                                                                          | QUESTIONS           | ge              | Option 1: Share of proceeds of x% at issuance for the benefit of the Adaptation Fund. Would this apply to verified units only, and is it a share of the sale price or share of any issuance fees? Currently, it is set at ‘2% of the proceeds’. As a share of the issuance fees a structure to collect and allocate monies to the fund might be reasonable, but as a share of the sale price, the complexity and administration burden would not be practical.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                 |

| 905 | Anonymous                                                                                          | QUESTIONS           | ge              | It makes sense that CORSIA and any international shipping mechanism be ‘extra’ to the emissions reductions achieved through NDCs, and that they count ‘extra’ to the Overall Mitigation of Global Emissions (OMGE = Sum(NDC) + CORSIA + Shipping). However, voluntary markets, particularly those which are ‘domestic’ in nature (credits generated and used within the same country) should be allowed to use those credits against their country’s NDC.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                 |
| 906 | Sadie Frank                                                                                        | QUESTIONS           | te              | Should the voluntary use of carbon credits require host country authorisation to ensure association with corresponding adjustments? Should this be conditional on specific circumstances or use cases?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | See our comment.  |
| 906 | Sadie Frank                                                                                        | QUESTIONS           | te              | The presence or absence of a corresponding adjustment should be factually specified in an attribute tag. If the Integrity Council takes a position on whether corresponding adjustments should be used, it should also adopt a statement in support of the general mitigation hierarchy (in which internal emission reductions are prioritized over carbon credit use).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                 |

| 906 | Sadie Frank          | QUESTIONS           | te              | Should the voluntary carbon market levy a share of proceeds to assist developing countries most vulnerable to climate change to meet the costs of adaptation?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                   |
| 906 | Sadie Frank          | QUESTIONS           | te              | We think this is a good proposal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                   |
| 906 | Sadie Frank          | QUESTIONS           | te              | Should the voluntary carbon market provide a contribution to overall mitigation of global emissions, through the cancellation of carbon credits at issuance or other similar provisions?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                   |
| 906 | Sadie Frank          | QUESTIONS           | te              | The best way to support a contribution to overall mitigation is to reduce the reliance on the use of carbon credits to compensate for greenhouse gas emissions in the first place.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                   |
| 907 | Ivan VALENCIA        | QUESTIONS           | ge              | Given the fact that Decision 2/CMA.3 strongly encourages Parties and stakeholders using cooperative approaches to commit to contribute resources for adaptation in the local country, this should be included in the criteria for the Full threshold.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Refer to comments on this section                                                                   |
| 908 | Darcy Jones          | QUESTIONS           | ge              | 1. At a minimum, the IC-VCM must ensure that programs provide adequate information to buyers on the status of the credits on offer in relation to host country authorizations as this is a critical point for many buyers, whether in the voluntary or in the compliance carbon market.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | N/A                                                                                                 |
| 908 | Darcy Jones          | QUESTIONS           | ge              | 2. Yes. EDF welcomes the discussion of a potential contribution by the voluntary carbon market (VCM) to the adaptation finance efforts required to meet the needs of the most vulnerable communities. We see this as a welcome extension of the social impact of the VCM. It is clear that the VCM is already contributing to the meaningful effort to combat climate change. At the same time, the co-benefits of the mitigation support provided by the VCM are likely to primarily benefit countries and communities with higher level of emissions and bypass many communities already impacted by climate change. While EDF acknowledges that more must be done at governmental and intergovernmental levels to address the woeful gap in finance to meet the needs of communities now, this gesture from the IC-VCM is a powerful one. | 0                                                                                                   |
| 908 | Darcy Jones          | QUESTIONS           | ge              | Implementation of this contribution should not, however, be at the expense of bona fide, high-impact sustainable development projects that are already providing benefits directly to communities. In implementing this idea, we therefore urge the IC-VCM to consider the adequacy of targeting and modulating the contribution requirement according to the type and scale of projects                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                   |
| 909 | Anonymous            | QUESTIONS           | ge              | Authorization for Article 6 corresponding adjustments does not affect carbon credit quality intrinsically. It is a country level decision, of which the buyer is aware when purchasing credits internationally. It should not be an exclusion or inclusion criteria for core carbon principles.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | It should be conditional on specific circumstances and cases, depending on each country's policies. |
| 910 | Anonymous            | QUESTIONS           | ge              | This doesn't seem like an appropriate way to use the voluntary market. Private sector businesses are not the appropriate entities for collecting what would essentially be a tax. Carbon crediting programs do not have the infrastructure for this. For instance, many carbon crediting programs are NGOs, and levying a share of proceeds could create tax complications. These programs are also typically understaffed, and this additional work would create an undue burden on the programs.                                                                                                                                                                                                                                                                                                                                           | n/a                                                                                                 |
| 910 | Anonymous            | QUESTIONS           | ge              | We echo IETA's comment that the provisions of the Paris Agreement were designed to govern transactions between state actors and do not explicitly take the financial architecture of VCM into account. Administering such a contribution would be extremely costly and complex to enforce in a voluntary setting. Furthermore, this would increase the risk taken by activity proponents and pose a barrier to entry to the market at a time when we are facing an impending supply shortage.                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                   |
| 911 | Anonymous            | QUESTIONS           | ge              | About the share of proceeds,                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | N/A                                                                                                 |
| 911 | Anonymous            | QUESTIONS           | ge              | We believe that the share of proceeds to assist developing countries to meet the costs of adaptation shall not be applied as mandatory to the voluntary market. The main concern is referred to the additional burden such a levy poses on project developers. Exposing activity proponents to this additional levy effectively imposes a tax on highly impacted populations to pay for the adaptation to climate change which they are trying to mitigate via their projects. Beyond the distribution effect, it also punishes first movers who are taking action on climate mitigation rather than imposing a levy on actors who continue to emit.                                                                                                                                                                                         | 0                                                                                                   |
| 911 | Anonymous            | QUESTIONS           | ge              | Another issue is the administrative burden of setting up share of proceeds schemes and the unresolved question of identifying an impartial and efficient fund to distribute these contributions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                   |

| 912 | Anonymous            | QUESTIONS           | ge              | We believe that the contribution to overall mitigation of global emissions shall not be applied as mandatory to the voluntary market. The provisions of the Paris Agreement were designed to govern transactions between state actors and do not explicitly take the financial architecture of VCM into account. Administering such a contribution would be extremely costly and complex to enforce in a voluntary setting. Furthermore, this would increase the risk taken by activity proponents and pose a barrier to entry to the market at a time when we are facing an impending supply shortage.                                                                                                                                                                                                    | 0               |
| 913 | Anonymous            | QUESTIONS           | te              | Should the voluntary use of carbon credits require host country authorization to ensure association with corresponding adjustments?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | NA              |
| 913 | Anonymous            | QUESTIONS           | te              | No. Requiring the application of corresponding adjustments for voluntary projects is to unnecessarily and unreasonably entangle the voluntary carbon markets in a framework that was designed for an entirely different purpose. The voluntary carbon markets can and should continue to operate in parallel to the frameworks that have been designed and established under the context of the Paris Agreement, and therefore this should not be an ICVCM requirement. Further, we believe this parallel approach is sufficient for voluntary carbon credits without a CA applied to count towards a project host country's NDCs; in fact, this process is a fundamental method of channelling climate financing towards emerging market countries and is an intentional part of the design of Article 6. | 0               |
| 914 | Anonymous            | QUESTIONS           | te              | Should the voluntary carbon market levy a share of proceeds to assist developing countries most vulnerable to climate change to meet the costs of adaptation?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | na              |
| 914 | Anonymous            | QUESTIONS           | te              | No. Despite the good intentions behind the question, requiring this of voluntary projects is to unnecessarily and unreasonably entangle the voluntary carbon markets in a framework that was designed for an entirely different purpose. The voluntary carbon markets can and should continue to operate in parallel to the frameworks that have been designed and established under the context of the Paris Agreement, and therefore this should not be an ICVCM requirement.                                                                                                                                                                                                                                                                                                                            | 0               |
| 914 | Anonymous            | QUESTIONS           | te              | More broadly speaking, the VCM should enable the transition of countries towards sustainable development. The role of the private sector in this as a risk taker, financier, implementer and monitoring agent is key and the right incentives must be set in place for change to happen.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0               |
| 915 | Ronan Carr           | QUESTIONS           | ge              | · BeZero does not advocate the CCPs including a corresponding adjustment requirement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | NA              |
| 915 | Ronan Carr           | QUESTIONS           | ge              | · We do not consider it necessary to align the CCPs with the Paris Agreement, and doing this could cause issues for host countries.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0               |
| 915 | Ronan Carr           | QUESTIONS           | ge              | The ICVCM has identified three areas where a voluntary standard could align more closely with the rules set out for Article 6 markets under the Paris Agreement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0               |
| 915 | Ronan Carr           | QUESTIONS           | ge              | BeZero acknowledges the importance of Article 6 markets in the context of the emerging CCPs. However, these areas relate to issues beyond credit quality assessments, while the fungibility of credits between Article 6 and voluntary markets does not depend on these attributes being aligned.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0               |
| 915 | Ronan Carr           | QUESTIONS           | ge              | In addition, there are challenges to how the VCM could administer the proposals outlined, given the lack of regulatory infrastructure to e.g. administer a levy mechanism. We support the core objective of the CCPs to set minimum standards of quality for the purpose of supporting the scale-up of the VCM.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0               |
| 915 | Ronan Carr           | QUESTIONS           | ge              | Our view is that aligning the CCPs to broader requirements in the Paris Agreement is not necessary to achieve this objective and may present additional obstacles to scaling up. For example, restricting the supply of credits in the VCM could increase development costs for suppliers in host countries.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0               |
| 916 | Vega Tapia           | QUESTIONS           | ge              | Should the voluntary carbon market provide a contribution to overall mitigation of global emissions, through the cancellation of carbon credits at issuance or other similar provisions?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | N/a             |
| 916 | Vega Tapia           | QUESTIONS           | ge              | We believe that this mitigation to Voluntary Carbon Markets would lead to a significant burden and to disincentivizing its development when it is most needed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0               |
| 917 | John Holler          | QUESTIONS           | ge              | a) Should the voluntary use of carbon credits require host country authorisation to ensure association with corresponding adjustments? Should this be conditional on specific circumstances or use cases?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | N/A             |

| 917 | John Holler                                    | QUESTIONS           | ge              | Host country authorisation with corresponding adjustments should be required immediately where carbon credits are used to meet compliance obligations (e.g., CORSIA, carbon tax obligations, etc.). Host country authorisation with corresponding adjustments should also be required where carbon credits are used to make a compensation claim against the credit-retiring entity's own emissions. As such, to be transparent about the potential for the host country to claim the mitigation outcome, all CCP-eligible credits should be required to indicate whether such adjustments have been applied, via the attribution approach in Annex A or otherwise. In recognition that it will take time for countries to be able to accommodate corresponding adjustments and therefore not be available in the volumes needed for the VCM, the ICVCM should be transparent about the risks of not securing credits with corresponding adjustments if compensation claims are made (e.g. disclaimer language about potential false claims, greenwashing, etc.), and recommend the use of contribution claims in the absence of such as an alternative approach which avoids such issues. Host country authorisation with corresponding adjustments should not be required where carbon credits are used to make a contribution claim. A contribution claim is an alternative to compensation claims whereby the entity retiring the carbon credit makes no claim against their own emissions but rather allows the mitigation benefit to be claimed solely by the host country. | 0               |
| 917 | John Holler                                    | QUESTIONS           | ge              | b) Should the voluntary carbon market levy a share of proceeds to assist developing countries most vulnerable to climate change to meet the costs of adaptation?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0               |
| 917 | John Holler                                    | QUESTIONS           | ge              | The implications of a levy are not clear without further consideration and review. We recommend further consideration of this question including, inter alia, whether a market levy similar or equal to that imposed under the UNFCCC mechanism would be necessary to ensure that the UNFCCC mechanism is not placed at a market disadvantage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0               |
| 917 | John Holler                                    | QUESTIONS           | ge              | c) Should the voluntary carbon market provide a contribution to overall mitigation of global emissions, through the cancellation of carbon credits at issuance or other similar provisions?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0               |
| 917 | John Holler                                    | QUESTIONS           | ge              | The implications of introducing OMGE to the VCM are not clear without further consideration and review. We recommend further consideration of this question including, inter alia, whether an OMGE approach would be necessary to ensure that the UNFCCC mechanism is not placed at a market disadvantage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0               |
| 918 | Anonymous                                      | QUESTIONS           | ge              | In line with previous comments, we believe that suggesting such industry wide approaches as mandatory cancellation of a proportion of legitimate carbon credits would be vastly overstepping the scope of the ICVCM and could scale down the market. This concept goes well beyond the establishment of CCPs for carbon credits, and should not be considered by this initiative.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | above           |
| 919 | Individual/employee, Intercontinental Exchange | QUESTIONS           | ge              | a) Should the voluntary use of carbon credits require host country authorisation to ensure association with corresponding adjustments? Should this be conditional on specific circumstances or use cases?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | See above.      |
| 919 | Individual/employee, Intercontinental Exchange | QUESTIONS           | ge              | No. The majority of countries do not have the accounting, legal and regulatory frameworks in place to be able to accord corresponding adjustments. Therefore, requiring host country authorisation runs the risk of slowing down transactions in the VCM.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0               |
| 919 | Individual/employee, Intercontinental Exchange | QUESTIONS           | ge              | b) Should the voluntary carbon market levy a share of proceeds to assist developing countries most vulnerable to climate change to meet the costs of adaptation?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0               |
| 919 | Individual/employee, Intercontinental Exchange | QUESTIONS           | ge              | ICE appreciates the current challenges to provide benefits from carbon credit projects to the most vulnerable countries.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0               |
| 919 | Individual/employee, Intercontinental Exchange | QUESTIONS           | ge              | A mandatory levy would be an additional burden for project developers, which would run counter to the goal of expanding the creation of carbon credits. Also, there is currently no clarity about how to identify an impartial and efficient mechanism to distribute these contributions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0               |
| 919 | Individual/employee, Intercontinental Exchange | QUESTIONS           | ge              | Nevertheless, considerations with regards to Paris Alignment should remain optional and could potentially be integrated as an additional distinction in the attributes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0               |
| 919 | Individual/employee, Intercontinental Exchange | QUESTIONS           | ge              | c) Should the voluntary carbon market provide a contribution to overall mitigation of global emissions, through the cancellation of carbon credits at issuance or other similar provisions?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0               |
| 919 | Individual/employee, Intercontinental Exchange | QUESTIONS           | ge              | The Paris Agreement provisions are mandatory for signatory states. Administering such a contribution would be costly and difficult to enforce in a voluntary setting and thus may pose a barrier to entry to the market.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0               |

| 920 | MJ Mace              | QUESTIONS                    | ge              | 1.Should the voluntary use of carbon credits require host country authorization to ensure association with corresponding adjustments?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | N/A see comments above                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 920 | MJ Mace              | QUESTIONS                    | ge              | Yes. This should not be optional, but required to avoid greenwashing. It should not be dependent on use cases – all use cases should require authorization under Article 6.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 920 | MJ Mace              | QUESTIONS                    | ge              | 2.Should the voluntary carbon market levy a share of proceeds to assist developing countries most vulnerable to climate change to meet the costs of adaptation?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 920 | MJ Mace              | QUESTIONS                    | ge              | Yes. This is now best practice under Article 6.4 and strongly encouraged under Article 6.2. Moreover, this is not a new element as the concept has been applied for many years under the CDM with little impact on the market. While it may increase cost, this increase will not be significant at the 5% level identified under Article 6, nor does this element have to be administratively burdensome. VCM programmes will compete in many markets with Article 6 units. These programmes should step up and help channel financial flows toward adaptation needs, rather than undercutting these efforts. A level playing field will be beneficial to support the goals of this international initiative, which has been agreed by all countries and explicitly supported for application to the VCM by SIDS and LDCs. This aim should be strongly supported across the VCM. It will lend credibility to the use of markets in addressing residual emissions that cannot be abated.                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 920 | MJ Mace              | QUESTIONS                    | ge              | 3.Should the voluntary carbon market provide a contribution to overall mitigation of global emissions, through the cancellation of carbon credits at issuance or other similar provisions?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 920 | MJ Mace              | QUESTIONS                    | ge              | Yes. Cancellations at issuance for OMGE, tied to corresponding adjustments, will ensure that the mitigation is actually in global emissions, rather than merely a cancellation of units that leaves emission reductions available for use by the host Party. Similar provisions may also be workable. OMGE is now international best practice under Article 6.4 and strongly encouraged of Parties and stakeholders under Article 6.2. OMGE will be beneficial in accelerating global emission reductions and this is a critical time in global efforts to get on a net zero pathway. The minimum 2% agreed at the international level under 6.4 is not burdensome and can be applied and increased in an administratively simple way at the programme level. While direct emission reductions are needed to move the world to net zero, to the extent entities rely on credits for compliance purposes and/or to offset their residual emissions that cannot be abated, a portion should be cancelled and accounted for to accelerate global abatement. A level playing field will be beneficial on this issue between Article 6 and other voluntary market programmes to support the goals of this international initiative - which has been agreed by all countries and explicitly supported for application to the VCM by SIDS and LDCs. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

Corresponding Adjustments for the VCM are not appropriate and should not be imposed. We also believe that a mandatory fee on the VCM would disincentivize the development of the market. Many NCS projects are already, in effect, transferring money from the Global North to the Global South; most global analyses of NCS opportunity identify the Global South as the clear opportunity for NCS at scale. Scaling up that transfer of carbon finance from North to South as quickly as possible through market growth is the fastest way to achieve this goal. However, we support the creation of a voluntary fund, and credits and programs that contribute to it should carry attribute tagging. |

| 924 | Anonymous            | Part 4: Assessment Framework | ge              | Our general remark that the requirements may be so detailed and so far removed from today's practice that they may even hamper scaling up apply especially to all of the many and very detailed requirements in part 4. Each detail may be considered valid if you assess them in isolation, but added all together it is probably too much. Also not all of these requirements are equally relevant. Would it be possible to have a stricter prioritization on what is need to have and what is nice to have? For smaller and midsized projects that do not have large organisations behind them and have less money to spend, eligibility with the CCPs thus does not come within their reach. This does not contribute to the inclusiveness ICVCM is striving for. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
