| 2342 | Johan Borje, Stockholm Exergi, Kel Coulson, Carbon Engineering, Angela Hepworth, Drax, Simon Manley, UNDO, David Ungar, Carbon Finance Laboratory, | 0                                                       |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | The complicated rules for proving “medium likelihood” additionality are not appropriate for an industry that is too immature to have standard and reliable IRR and market penetration data. Our projects are among the most advanced on the market, but they are first-of-a-kind. That means we are using them as a test-bed for scaling up volume and bringing down cost – nth of a kind costs and returns will be very different.                                                                                                                                                                                                  |
| 2343 | Johan Borje, Stockholm Exergi, Kel Coulson, Carbon Engineering, Angela Hepworth, Drax, Simon Manley, UNDO, David Ungar, Carbon Finance Laboratory, | 0                                                       |                 | Avoiding double counting is crucial to the credibility of carbon markets and to their contribution to tackling climate change. When corporate climate accounting through robust VCM registries and climate accounting at national level are kept separate, the question of double counting (including double issuance, double claiming and double use) is straightforward, and we strongly support the principles proposed. We also support your requirement to have full transparency on identifying any Article 6 authorization and whether a corresponding adjustment has been identified.                                                                                                                                                                                                                                                                                                                                                                                       | We urge that the IC-VCM not put in place any quality or integrity rules dependent on a project's authorization under Article 6 or the notion of double claiming across the two accounting systems. There is still enormous confusion around exactly what Article 6 will mean for government NDCs and corporate claims. Some governments plan to include removals from capital-intensive projects they support in their NDCs and believe the credits can be sold through Article 6 to a foreign corporate, as long as no corresponding adjustment is applied. Other governments worry that this kind of global trade is not possible. |

| 2344 | Johan Borje, Stockholm Exergi, Kel Coulson, Carbon Engineering, Angela Hepworth, Drax, Simon Manley, UNDO, David Ungar, Carbon Finance Laboratory, | 0                       |                 | We believe that stringent and robust permanence criteria should be at the heart of carbon removals. As with additionality, we believe this should be risk-based. The large-scale removals projects that our companies are implementing – biomass energy with carbon capture and storage, direct air capture and storage, and enhanced weathering – all have very high durability storage in the geosphere rather than the biosphere, and the risk of reversal is tiny.                                                                                             | Building obligatory and significant buffer pools is certainly relevant for low-durability, high-risk and low-cost removals. For high-durability removals where costs are high and risks are low, a buffer pool is not an adequate solution, and the economics would be challenging.                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 2344 | Johan Borje, Stockholm Exergi, Kel Coulson, Carbon Engineering, Angela Hepworth, Drax, Simon Manley, UNDO, David Ungar, Carbon Finance Laboratory, | 0                       | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | We would also urge the IC-VCM to recognise that many jurisdictions already have or are developing stringent regulatory regimes for dealing with long-term geological CO2 storage liability, and should work within the framework of those requirements, where they exist, rather than cutting across them or adding additional requirements.                                                                                                                                                                                                                                                                                                                                                                              |
| 2351 | Anonymous                                                                                                                                          | General                 |                 | Editorial Comment (EC): The draft Assessment Framework does not sufficiently address the role(s) of carbon-crediting programs and accreditation bodies to ensure that VVBs are competent to validate and verify methodologies relevant to specific types of projects and programs. In particular, not all VVBs are competent to audit REDD+ projects and programs. VVBs must have methodology-specific expertise.                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| 2353 | Anonymous                                                                                                                                          | Criterion 3.2, Table 13 |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Accreditation by the CDM is not relevant to REDD+ projects or programs, as REDD+ is not eligible under the CDM. Designated Operational Entities cannot be assumed to have competence related to REDD+. Neither the CDM Executive Board nor the UNFCCC provide oversight over the performance of VVBs when they are auditing projects and programs under independent standards. Accordingly, this section needs to be revised either to require accreditation by a member body of the International Accreditation Forum (IAF) or the carbon-crediting program, but not neither or both. Additional requirements regarding competence in oversight for those VVBs that are not IAF accredited are necessary for the latter. |
| 2354 | Anonymous                                                                                                                                          | Criterion 3.3, Table 14 |                 | Editorial Comment (EC): In Table 14, point (b). It is unclear how the effectiveness of procedures and requirements for ensuring impartiality will be reviewed. This sub-criterion could be further elucidated with good practice examples. Additionally, how should post-hoc discovery of a conflict of interest be reviewed? As part of the performance management system, or some other means?                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 2354 | Anonymous                                                                                                                                          | Criterion 3.3, Table 14 |                 | Editorial Comment (EC): In Table 14, point (c), it would be helpful to further elucidate what kinds of exceptions are envisioned for the requirement of rotating VVBs.                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 2355 | Anonymous                                                                                                                                          | Criterion 3.5           |                 | Editorial Comment (EC): Linked to the concerns expressed regarding Criterion 3.2, under “Means of Assessment”, further clarification is needed regarding which entities are eligible to provide oversight. Member bodies of the International Accreditation Forum provide this oversight for accredited VVBs, so carbon-crediting programs that require such accreditation need not perform such oversight directly. However, VVBs not accredited by an IAF member would require oversight by carbon-crediting programs that do not require such an accreditation. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 2356 | Anonymous                                                                                                                                          | Criterion 3.5, Table 16 |                 | Editorial Comment (EC): Table 16, point (b) should additionally require that the suspension or revocation of a VVB be accompanied by publicly available notice as a means of further driving transparency and accountability in the market. This approach could help other crediting programs to conduct more targeted risk assessments.                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| 2357 | Anonymous            | 0                       |                 | Editorial Comment (EC): The ICVCM should focus on pragmatically encouraging investments in the most credible programs (and in the development of new high-quality programs), while discouraging investments in the least credible credit types bit by bit, rather than focus on the creation of an aspirational standard. The “Gray Zone” in between these areas – i.e., credits not on the Negative List being sold by carbon-crediting programs that are not CCP-eligible – will narrow over time, increasing the overall integrity of the markets. Confidence in the IC-VCM and the markets will build year-on-end so long as the IC-VCM implements a pragmatic step-wise approach to improvement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Technical Comment (TC): Eliminate Step 1 credit type test and focus assessments at the carbon-crediting program level. IC-VCM’s expert should not assess every credit type nor methodology, rather analyze how additionality is assessed within a program setting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 2357 | Anonymous            | 0                       |                 | The ICVCM does not seem the appropriate body to properly assign positive value to credit types, which would be a massive undertaking best devolved to the carbon-crediting programs. There are many different credit types and mitigation activities and more arise each month. Assessing individual credit types would require significant new capacity and resources and does not appear to be the best use of the IC-VCM’s focus. For instance, hypothetically, the same credit type could be considered likely non-additional in the United States, somewhat likely additional in Kyrgyzstan (perhaps for 2-3 more years?), and very likely additional in Kenya (for the next 5-10 years). Constant monitoring of policies and common practices across jurisdictions and credit types is a daunting task and the value add of this relative to other actions the IC-VCM could take seems low.                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 2357 | Anonymous            | 0                       |                 | For the initial phase at least, the IC-VCM should adopt the International Civil Aviation Organization’s (ICAO) Carbon Offsetting and Reduction Scheme for International Aviation (CORSIA) Eligible Emissions Units, with a focus on its non-government programs and with minimal inclusionary and exclusionary changes only if extraordinary circumstances arise. Specifically, the ICVCM should remove Step 1 to focus on the Step 2 test and the development of a “Positive Lists” of programs. This shift would help avoid duplication with the carbon-crediting programs and CORSIA and be more consistent with the Draft AF requirements for Governance, Quantification, Validation & Verification, etc. At the same time, much of the major gains from the eliminated Step 1 credit type tests could be attained at significantly lower costs were the IC-VCM to narrow its focus on developing a Negative List of Credit Types, i.e. those credits that should not apply in 90%+ of geographies today. By building trust in the highest integrity programs on the market today, and encouraging the development of more, the IC-VCM would shift investments away from low quality credit types on its Negative List (and in turn, low quality credit providers) towards high integrity credits and providers. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 2358 | Anonymous            | Criterion 8.7, Table 41 |                 | Editorial Comment (EC): The tests for financial additionality under Option 1 are inappropriate for JREDD. While such financial additionality tests may be appropriate for commercial small project developers, they are not applicable to national or provincial governments implementing JREDD. Fundamentally, the calculus for jurisdictions to increase mitigation action in the FOLU sector will include political considerations, non-financial co-benefits, market access for sustainably produced commodities, technical assistance and many other factors beyond the price of credits. Asking governments to conduct such financial analyses (e.g., determining the value of unpriced factors, future soft commodity demand and prices relative to carbon, etc.) would be extremely burdensome while not meaningfully addressing additionality.                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Technical Comment (TC): Table 41: Option 2 (Delete Option 1). The test presented in Option 1 should be deleted, as it proposes a financial additionality test for jurisdictional-wide mitigation actions that is inappropriate and unnecessary for mitigation actions at this scale. Furthermore, such a complex test would be unduly burdensome for developing country governments seeking to participate in the voluntary carbon markets. This is one of the most urgent of changes needed in the Draft AF for the reasons addressed above.                                                                                                                                                                                                          |
| 2358 | Anonymous            | Criterion 8.7, Table 41 |                 | Governments may utilize any number of different policies and programs (positive incentives, market instruments, greater law enforcement, etc.), and the ability to specifically calculate or attribute the costs and impact of each policy or program to a specific result is financially prohibitive if not impossible. Programs such as JREDD should be viewed as being somewhat analogous to Nationally Determined Contributions (NDCs), which require establishing a baseline and measuring progress against that baseline. High integrity JREDD programs – those that should be eligible under the IC-VCM – would further require external verification via an independent certification body. Rather than de-prioritizing JREDD with extraneous and inapplicable requirements, the AF should look to approve and support not just JREDD but other innovative jurisdictional and sectoral programs that have the potential to deliver large scale emission reductions this decade.                                                                                                                                                                                                                                                                                                                              | Technical Comment (TC): Criterion 8.7 Rationale: The last sentence under Rationale and above Means of assessment should be deleted. This section should only reflect the rationale for additionality criteria for jurisdictional crediting rather than present it as problematic relevant to other credit types (which are also affected by exogenous factors). The core rationale is to incentivize rapid large scale mitigation actions to address climate risk across significant areas of land, reduce risks of leakage, reduce the risks of small-scale projects to game baselines, etc. Instead, the sentence reflects an unwarranted and unsupported bias against forest-based climate solutions, and/or jurisdictional vs project-based REDD+. |

| 2358 | Anonymous            | Criterion 8.7, Table 41 |                 | As a result, the additionality requirements the IC-VCM adopts for jurisdictions should be based on the existing protocols and standards for jurisdictional approaches, which underwent years of public and expert consultations and development. The IC-VCM should be aware that there currently is no analogous test to what is being proposed in its draft AF with regard to JREDD additionality, as JREDD additionality has been appropriately integrated into the consideration and development of jurisdictions' forest reference emission level (FREL) (or crediting level), which takes into account the policies, measures, and implementation levels in place when developing the FREL.                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 2358 | Anonymous            | Criterion 8.7, Table 41 |                 | · Verra's JNR additionality requirement is "for jurisdictional proponents to implement new and/or enhanced strategies, policies, and measures, and estimate the resulting GHG emission reductions against a credible FREL" (see e.g., JNR at 3.11 Additionality).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 2358 | Anonymous            | Criterion 8.7, Table 41 |                 | · ART TREES on additionality "uses a performance-based approach in that only emissions achieved below a conservative historical crediting level and removals achieved any year above a historical crediting level will be eligible for crediting." (ART TREES 2.0 at 3.3)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 2359 | Anonymous            | Criterion 8.8, Table 42 |                 | Editorial Comment (EC): The countries and subnational jurisdictions that entered into REDD+ Phase 1 ("readiness", supported by UN-REDD and FCPF, among others) and REDD+ Phase 2 ("implementation", supported by the FIP, among others) did so with the expectation of graduating to REDD+ Phase 3 (performance-based payments, whether market-based or fund-based, including FCPF-CF, ISFL, REM, Norwegian bilateral agreements) starting more than a decade ago.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Technical Comment (TC): Table 42-Full-b: this section should be deleted, or alternatively, significantly amended to address the aforementioned concerns. The wording in Full Threshold Requirement b is also confusing insofar as the number of years "between the date of the most recent proof of prior consideration of carbon credits or results-based payments and the registration of the jurisdictional REDD+ activity" is listed as [1/2/3/x], but later in the paragraph, the "date of proof of prior consideration of carbon credit" is defined as the registration itself.                                                                                                                                            |
| 2359 | Anonymous            | Criterion 8.8, Table 42 |                 | Expressions of interest by some countries and jurisdictions may have declined at times during this period due to the lack of meaningful results-based or carbon market finance, especially when compared to the steady and generally rising finance provided by the soft commodity and other markets.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 2359 | Anonymous            | Criterion 8.8, Table 42 |                 | Table 42-Full-b ignores the long lag time between early investments in REDD+ "readiness" activities (e.g., FCPF and UN-REDD) and the recent surge in demand for credits, and as a result could disqualify many jurisdictions that invested in putting REDD+ infrastructure in place early on but have only recently seen a meaningful demand signal. Rather than support and enable much needed (and much delayed) compensation for these efforts by developing countries, the Draft AF threatens to pull the rug from underneath them.                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 2359 | Anonymous            | Criterion 8.8, Table 42 |                 | Prior participation in a REDD readiness or implementation funding program (e.g., UN-REDD, FCPF, FIP, etc.) should count as an expectation for carbon credits, rather than a requirement to engage in Phase 3 performance-based finance. The proposed time limit to exclude prior participation should be removed, or alternatively, significantly amended to address these issues.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 2360 | Anonymous            | 0                       |                 | Editorial Comment (EC): Permanence is undoubtedly an important mitigation consideration that should be incentivized and prioritized, however given the urgent need for near-term action, the IC-VCM should balance the idealized stability of stocks in perpetuity with the need to rapidly deploy proven near-term tools that function at scale, without which we cannot achieve the 1.5 degree goal of the Paris Agreement. Both needs must be balanced, and we cannot let the perfect become the enemy of the necessary. Given that other sectors like energy are also subject to reversal risks (Espejo et al. 2020; Schwartzman et al. 2021), what is ultimately important is how these risks are managed, the durability and scale of the mitigation intervention, and the ability of reversals to be addressed in full. Risk management and the compensation of reversals should be tailored to realities of the applicable sector, activities, and crediting program, and not be one-size-fits-all. | Technical Comment (TC): The introduction to Section 9 on permanence unduly singles out reversal risk from the land sector, whereas other sectors, such as energy, are also subject to reversal risk. The text should take a more balanced approach and recognize the extent that spatial and temporal scale can impact the risk of reversal.                                                                                                                                                                                                                                                                                                                                                                                     |
| 2361 | Anonymous            | Criterion 9.1, Table 43 |                 | Editorial Comment (EC): Criterion 9.1 of the Assessment Framework currently singles out AFOLU activities as inherently having material risk of reversal, whereas, in reality, all sectors face reversal risk. For instance, there have been observed reversals in the energy sector, as countries transitioned away from nuclear energy. While land sector activities and NBS may have material risk, singling them out implies that they pose a unique level of risk, and puts them at a disadvantage in the market even when those risks are adequately addressed and compensation mechanisms are in place. This current approach also fails to consider the impact of scale on the risk of reversal, which is highly relevant in the case of jurisdictional REDD+. Recent research (Schwartzman et al. 2021) shows that large-scale approaches reduce the risk of reversal.                                                                                                                              | Technical Comment (TC): Table 43 of Criterion 9.1 unduly singles out reversal risk from the land sector as being material, whereas other sectors, such as energy, are also subject to reversal risk. In the case of REDD+, unlike for reforestation/afforestation, the focus is on a reduction in GHG sources, and a reversal is when annual emissions are at a level higher than the historical reference level. Yet for other forms of emission reductions below a reference level, such as from energy sector projects, the Table functionally treats them as permanent, despite this clearly not being the case. This form of reversal requires consideration of the scale of the intervention as a means of risk reduction. |

|------|----------------------|-------------------------|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2361 | Anonymous            | Criterion 9.1, Table 43 |                 | Further, largely unproven technologies that have existed for little more than a decade, such as carbon capture and storage in geological formations and direct air capture and storage, are considered to have low risk of impermanence, while natural forests, which have been demonstrating results for millions of years, are considered to be at high risk of impermanence, despite recent analysis showing that forest carbon stocks have increase in all forest biomes since 2000 (Xu et al. 2021). While risks are higher at local scales, moving to crediting of larger spatial scales can mitigate exogenous factors.                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                     |
| 2362 | Anonymous            | Criterion 9.2           |                 | Editorial Comment (TC): Criterion 9.2 creates a 50-100 year monitoring and compensation requirement that is neither feasible nor practical for most carbon mitigation activities – and certainly not Jurisdictional REDD+ – and would serve as a knowing endorsement of paper commitments that may never be enforced. The average corporate lifespan on the Standard & Poor 500 index is estimated to decline to less than 15 years this decade and the countries and jurisdictions that exist today are meaningfully different from those that existed in 1922. In the case of jurisdictional REDD+, it is extremely unlikely that governments will agree to a 100 year obligation (and in some cases they cannot), effectively killing a viable, needed, and durable climate solution.                                                                                                                                                                                                                                                                                    | Technical Comment (TC): A 50-100 year monitoring and compensation requirement is neither feasible nor necessary for Jurisdictional REDD+. An Option 4 should be added to the full threshold under Table 44, which is specific to jurisdictional-crediting approaches. |
| 2362 | Anonymous            | Criterion 9.2           |                 | Fortunately, the use of buffer pools and insurance/reinsurance for compensation schemes offer practical ways to mitigate and address the risk of reversals. Rather than requiring an arbitrary 100 years of monitoring for Jurisdictional REDD+, we recommend that a new Option 4 be added in Table 44 that is specific to jurisdictional-crediting approaches, which should require appropriate incentives to mitigate risk, and 1) a non-refundable risk-based buffer pool contribution, 2) requirements to monitor, report and compensate for reversals during the crediting period and retirement of applicable buffer pool credits when a jurisdiction leaves the program, and 3) replenishment of the buffer pool for volumes beyond what a program has contributed. It is reasonable to require a 20 year monitoring period, in line with CORSIA.                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                     |
| 2363 | Anonymous            | Criterion 9.3           |                 | Editorial Comment (EC): It is unclear why Criterion 9.3 on temporary crediting approaches has been included. This approach, in the form of tCERs for Afforestation/Reforestation projects under the CDM, was widely seen as a failure. It created a complicated and undesirable asset that received little demand from the market, put forest projects at a disadvantage and delayed needed revenue to projects. As a result, temporary crediting has not been replicated by other crediting programs nor under CORSIA. We recommend that the expert panel review the findings of the BioCarbon Fund[3], which documented the challenges of this approach.                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                     |
| 2364 | Anonymous            | Criterion 10.4          |                 | Rather, jurisdictional approaches should be recognized for their ability to better control intra-jurisdictional leakage than project-based approaches. We recommend that for jurisdictional approaches, quantification of leakage only be required within the boundaries of the applicable jurisdiction or nationally.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                     |
| 2364 | Anonymous            | Criterion 10.4          |                 | Editorial Comment (EC): Criterion 10.4 requires that quantification of leakage includes all potential sources of leakage and shall not be limited to a particular boundary. Without the imposition of a boundary, this would require nations and subnational jurisdictions participating in jurisdictional REDD+ crediting to calculate and take responsibility for emissions occurring in other countries from market leakage. While this leakage would be incredibly difficult to quantify accurately (particularly market leakage and ecological leakage), it is also beyond the control of host jurisdictions to control other sovereigns acting less responsibly, and perversely docks them for engaging in positive behavior. It is not accounted for under the UNFCCC for this very reason. However, the impact of international leakage from jurisdictional scale activities will be mitigated as more national and subnational jurisdictions are included in the market and leakage emissions are captured in national inventories and annual emissions reporting. | Technical Comment (TC): For jurisdictional-scale crediting approaches, quantification of leakage should only be required within the boundaries of the applicable jurisdiction or nationally.                                                                          |

| 2365 | Anonymous            | Criterion 13.3                                                                                                                                                                             |                 | Editorial Comment: We recognize that the issue of corresponding adjustments in the VCM has been particularly contentious. Rather than selecting between Option 1 (all carbon credits must be subject to corresponding adjustments) and Option 2 (no provisions on this matter), we suggest that IC-VCM wait to take a decision on this matter until anticipated new analysis has been conducted and published that identifies the scenarios under which corresponding adjustments can improve environmental integrity and when they are not necessary. While always requiring corresponding adjustments may represent a conservative approach to ensuring environmental integrity (when paired with other necessary requirements), it also carries significant risk for market investment, and could inhibit market growth. This important decision should be guided by the best available science and analysis, and given that few, if any, countries will be able to supply corresponding adjustment-backed credits in the near-term, a decision need not be taken prior to the end of the year. WRI would be happy to consult on this matter further. | 0                                                                                                                                       |
| 2365 | Anonymous            | Criterion 13.3                                                                                                                                                                             | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                         |
| 2366 | Anonymous            | 0                                                                                                                                                                                          |                 | CCP-compliant credits and programs should all be of comparable quality, and the technological versus biological distinction plays into the bias against biological credits as well as NBS credits. This attribute should therefore not be utilized.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | The distinction between the type of mitigation activity as technological versus biological should be eliminated.                        |
| 2366 | Anonymous            | 0                                                                                                                                                                                          |                 | The CCPs must align the requirement for “delivering on net positive sustainable development impacts” with Annex 3. Quantified SDG impacts requirement which is optional, and the Draft AF requirements (see e.g., Table 26, 29, 30, 35).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Align the CCP Annex and Assessment Framework with the CCP requirement for “delivering on net positive sustainable development impacts.” |
| 2367 | IETA                 | Consultation Question from the Summary for Decision Makers:<br>Are the most important principles, criteria and requirements included in the draft CCPs and the draft Assessment Framework? |                 | IETA supports the fundamental tenets of quality and integrity underpinning the Core Carbon Principles.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                       |
| 2367 | IETA                 | Consultation Question from the Summary for Decision Makers:<br>Are the most important principles, criteria and requirements included in the draft CCPs and the draft Assessment Framework? |                 | IETA would like to emphasize the important role of the IC-VCM in ensuring clear communication to buyers and intermediaries. This will improve trust and credibility in the market. It is key to create more easily understood project design and verification documents that outline compliance with CCPs in concise language.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                       |
| 2367 | IETA                 | Consultation Question from the Summary for Decision Makers:<br>Are the most important principles, criteria and requirements included in the draft CCPs and the draft Assessment Framework? |                 | However, concerns were raised that the criteria and requirements laid out in the Assessment Framework would hamper the market’s ability to scale by adding multiple requirements that increase cost and add to uncertainty in the market.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                       |

| 2367 | IETA                 | Consultation Question from the Summary for Decision Makers: Are the most important principles, criteria and requirements included in the draft CCPs and the draft Assessment Framework?                       |                 | The monitoring and verification systems required would be both costly and time intensive to set up, creating a bottle neck in the voluntary market at a time when it is key to accelerate climate action. In addition, the sheer weight of the requirements, could result in reduced market transparency as project developers choose to develop projects without using a registry protocol or process to avoid the higher costs of project development.                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                     |
| 2368 | IETA                 | Consultation Question from the Summary for Decision Makers: Are there principles, criteria and requirements that are not relevant or should not be included in the draft CCPs and draft Assessment Framework? |                 | While concerns exist over the detailed requirements to meet these criteria, IETA would like to reiterate that permanence, additionality, sustainable development and robust quantification are important principles to ensure the integrity of carbon credits. These principles must be included in the CCPs, however the requirements of the assessment framework would benefit from a more pragmatic approach.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                     |
| 2368 | IETA                 | Consultation Question from the Summary for Decision Makers: Are there principles, criteria and requirements that are not relevant or should not be included in the draft CCPs and draft Assessment Framework? |                 | IETA members particularly voiced concerns over the practicability of applying the criteria under section 7: Sustainable Development Impact & Safeguards (due to a lack of readily available methodologies and auditors and the fact that the IFC Performance standards are overly cumbersome for assessing and mitigating risks at the carbon project level), section 8: Additionality (the primacy given to financial additionality tests and exclusion of performance benchmarks), section 9: Permanence (as monitoring requirements exceeds institutional lifespans) and 10: Robust Quantification (in particular as related to conservativeness, baselines and leakage). There are also concerns around some of the programme governance requirements and provisions for crediting programmes to track information that is part of transactions, which is outside of the purview of standards bodies. | 0                                                                                                                                                                     |
| 2369 | IETA                 | General Comment                                                                                                                                                                                               |                 | IETA welcomes the work of the IC-VCM and is fully supportive of its mandate to create a set of universally applicable core carbon principles that signal integrity in voluntary markets.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | We recommend a shift towards focusing on the assessment of crediting programmes and embedded best practice.                                                           |
| 2369 | IETA                 | General Comment                                                                                                                                                                                               |                 | The world is facing multiple tipping points on climate change and nature loss. It is imperative to accelerate the transition towards net zero. To this end, we need to build trust in carbon markets to ensure that they can deliver their fullest potential of urgently funnelling finance towards climate action, nature conservation and sustainable community development.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Detailed recommendations on the level of assessment, initial threshold and continuous improvement mechanism are laid out in our comments on the assessment procedure. |
| 2369 | IETA                 | General Comment                                                                                                                                                                                               |                 | Voluntary carbon credits are key to accelerating the transition towards net zero by allocating private capital to a global and intractable externality – climate change. IETA recognizes the need to build a robust and mutually assured oversight mechanism to ensure standardization in the market for high integrity credits in the absence of a regulatory body.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                     |
| 2369 | IETA                 | General Comment                                                                                                                                                                                               |                 | However, IETA members have raised concerns over the practical application of criteria and requirements as laid out by the Assessment Framework and Assessment Procedure. There is a danger that, as proposed, the AF will have the counter impact on the market to that intended by the IC-VCM.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                     |

| 2370 | IETA                 | General Comment regarding Natural Climate Solutions |                 | The Secretariat notes that the consultation text is largely silent on natural climate solutions (NCS) projects, with the exception of jurisdictional REDD+ programmes. As it stands, many of the provisions in the Assessment Framework, would not be attainable for NCS projects. NBS projects are accounted for differently, and the highly prescriptive, one-size-fits all approach will not work for these projects, which must take account of natural systems and dynamics not faced by technological projects. As a consequence, CCP eligibility in our evaluation would mostly likely exclude credits from natural carbon sinks. | IETA acknowledges that the concept of alternative approaches to address non-permanence has been put forward in the Assessment Framework. We would like to reinforce the notion that robust buffer pools and reinsurance schemes provide a valid alternative to addressing the risk of reversal. ICVCM should review the existing approaches deployed by crediting programmes and evaluate the practical experience they have in effectively managing this risk rather than creating new theoretical approaches that may not work in reality. |
| 2370 | IETA                 | General Comment regarding Natural Climate Solutions |                 | IETA urges the IC-VCM to recognize the significant biophysical potential of nature in combatting climate change and furthering adaptation: NCS have the biophysical potential to provide a third of the reductions and removals needed to meet Paris targets.                                                                                                                                                                                                                                                                                                                                                                            | NCS have a significant role to play in reaching net zero and should be subject to alternative provisions, beyond JREDD.                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 2370 | IETA                 | General Comment regarding Natural Climate Solutions |                 | At the time of writing, credits from forestry and land use are the largest share in voluntary carbon markets by value. NCS credits have seen rapid growth over the last few years, given buyers' preference for multiple co-benefits generated for communities, biodiversity, pollution alleviation and soil health. To date, the vast majority of the NCS credits traded in VCMs come from projects rather than JREDD programmes which are still nascent. Creating a threshold that prevents project-based REDD projects from attaining CCP certification effectively excludes the largest source of credits from the market.           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2371 | IETA                 | Criterion 4.4                                       |                 | We largely support the guidance and approaches the ICVCM has taken on double counting, double claiming, double issuance and double use. The current language in clause 4.4, as described, would not suit the precedent that California has already set for voluntary climate action to be used under its programme.                                                                                                                                                                                                                                                                                                                      | However, we would prefer that the ICVCM engage in a constructive dialogue with jurisdictions such as California which already allow for climate action achieved through voluntary carbon markets to be used for compliance in the California carbon market.                                                                                                                                                                                                                                                                                  |
| 2371 | IETA                 | Criterion 4.4                                       |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2372 | IETA                 | Criterion 4.5                                       |                 | Further, we want the voluntary carbon market to continue innovating with other attribute-tagging schemes that aim to foster net positive biodiversity or circularity in the production and use of plastics. The current language in clause 4.5, as written, would prevent holistic approaches to improving biodiversity, plastic circularity or other environmental and social benefits accrued through the development of voluntary carbon market activities.                                                                                                                                                                           | As such, we recommend that the ICVCM engage in a constructive dialogue with the existing offset programmes such as Verra and/or The Gold Standard which have already developed approaches that allow for 'capital stacking' whereby a carbon credit can also be eligible to be claimed under a plastic credit or a biodiversity credit programme.                                                                                                                                                                                            |
| 2372 | IETA                 | Criterion 4.5                                       |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2373 | IETA                 | Criterion 5.2 A                                     |                 | It is not practical nor helpful to require a jurisdiction to attribute a specific number of ERRs achieved to specific mitigation activities. One of the many benefits of scale is the ability to enact multiple overlapping or intertwined programmes and policies. This increases success across the landscape but also makes it almost impossible to accurately attribute specific quantities of ERRs to each activity.                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2373 | IETA                 | Criterion 5.2 A                                     |                 | The crediting approach used or the category of activity (reduction vs removals) is the appropriate information to be labelled as an attribute. If the IC VCM simply meant that you should be able to track a credit to its associated project or programme, we agree with that requirement.                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2374 | IETA                 | General comments on robust quantification           |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | On the proposed process, IETA recommends the IC-VCM review should focus on the high-level requirements for methodology development, assessment and update, rather than reviewing the individual quantification methodologies.                                                                                                                                                                                                                                                                                                                |
| 2374 | IETA                 | General comments on robust quantification           |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | We also reinforce that accuracy is an important principle of the carbon market and should not be superseded by conservativeness. The goal of any carbon methodology or standard should be to reflect the impact of the activities on the atmosphere as fully and accurately as possible                                                                                                                                                                                                                                                      |
| 2374 | IETA                 | General comments on robust quantification           |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | With regards to JREDD, we recommend to remove the requirement of setting baselines consistently lower than in the previous crediting period. There are multiple factors that drive deforestation that are outside the control of a jurisdiction, such as economic downturns, the displacement of populations and a change in the natural environment. Baselines should be determined using real time emissions and an accurate, science driven approach.                                                                                     |
| 2374 | IETA                 | General comments on robust quantification           |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | The quantification of leakage as required by the assessment framework is not currently in practice by any of the standards. This is not only complex to implement but puts an undue burden on actors taking positive climate action due to negative activities outside their project boundaries.                                                                                                                                                                                                                                             |
| 2374 | IETA                 | General comments on robust quantification           |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | There is no apparent benefit from aligning crediting periods with NDC accounting timelines in terms of the integrity of credits, NDC accounting could take place at any point during the crediting process. This does however threaten to introduce additional uncertainty in the market.                                                                                                                                                                                                                                                    |

| #    | Comment submitted by | Para/Fig/Table/Note        | Type of comment | Submitted comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Proposed change                                                                                                                                                                                                                                                                                                                                                                                                                               |
|------|----------------------|----------------------------|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2375 | IETA                 | Comments on review process |                 | The proposed approach seems to assert that the expert panel will judge the robustness of protocols, which directly substitutes the expertise of the expert panel for the expertise of the registries. This type of subjective assessment also adds uncertainty to the market which will hinder the ability of the market to scale. Given the sheer numbers and frequent updates to methodologies currently available this approach is unlikely to be feasible. The leading programmes have built up expertise and capacity over decades, it is unclear that a renewed review of methodologies by the expert panel would lead to new insights. | Instead, the IC-VCM should focus on the governance and procedures of programmes. This could lead to recommendations regarding the scientific rigor and process for review.                                                                                                                                                                                                                                                                    |
| 2375 | IETA                 | Comments on review process | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | The IC-VCM review should address high-level requirements for methodology development, assessment and update. This could include provisions on the number of experts involved in the development, a science-based approach, requirements relating to peer-review, transparency of the consultation and a publication of the scientific basis behind decision, as well as provisions relating to the review cycle and robustness of the review. |
| 2375 | IETA                 | Comments on review process | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2376 | IETA                 | Table 11 D)                |                 | Provision D) of Table 11 requires that the baseline for JREDD+ activities not be higher than the baseline for the previous crediting period.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | We suggest that rather than artificially capping the baseline (which represents potential for performance), crediting should be based on the difference between real-time emissions and an accurate, science-driven baseline.                                                                                                                                                                                                                 |
| 2376 | IETA                 | Table 11 D)                |                 | We recognize that with renewable energy projects or other technologically driven mitigation efforts, it is less likely that emissions are increasing in a subsequent crediting period. However, for nature-based solutions, there are many external factors (political, social, etc.) that can drive deforestation and degradation in subsequent crediting periods.                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2376 | IETA                 | Table 11 D)                |                 | In a scenario where emissions are increasing in any jurisdiction, this approach would artificially cap the reference level to the previous baseline. We would argue that if emissions are increasing, the jurisdiction requires more finance support, not less, and therefore should not be punished with an artificially lowered baseline.                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2377 | IETA                 | Comments on accuracy       |                 | Requiring GHG programmes to stipulate that ERRs must be estimated conservatively rather than accurately undermines any incentive projects and programmes have to continue to invest in new and improved monitoring systems.                                                                                                                                                                                                                                                                                                                                                                                                                   | We suggest rephrasing as “Emission reductions and removals shall be determined using scientific methodologies and best available data to assure high levels of accuracy. If accuracy cannot be achieved, then the principle of conservativeness shall be applied such that reduction of emissions is not overestimated.”                                                                                                                      |
| 2377 | IETA                 | Comments on accuracy       |                 | The principle of conservativeness does not stipulate adjustment of results in either direction either based on measured accuracy, nor as an a-priori decision preceding measurement of accuracy. Rather, it requires a lower estimate (i.e., conservative) if results show that measurement accuracy cannot be achieved or if results are considered incomplete. To this end, this criterion is considered counterintuitive to the concept of “Robust Quantification”.                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2377 | IETA                 | Comments on accuracy       |                 | The goal of any carbon methodology or standard should be to reflect the impact of the activities on the atmosphere as fully and accurately as possible, not to simply be conservative for the sake of being conservative. If conservativeness is the ultimate goal, simple defaults could be used for all parameters instead of more complex accounting methods. Accuracy is an important principle in the carbon markets, driving the continuous improvement of the scientific method. Standards and methodologies should promote the collection of increasingly better data to improve confidence in the results.                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2377 | IETA                 | Comments on accuracy       |                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2378 | IETA                 | Table 11 K)                |                 | Section 2.2. Paragraph K) requires crediting periods to align with common time frames for the NDCs under the Paris Agreement. IETA notes that it is unclear how the alignment of crediting periods would further integrity and quality in the market. Reporting on progress towards NDCs may occur at any time during a crediting period. This also creates further uncertainty in the market as crediting periods may be of different lengths depending on the start date of each programme.                                                                                                                                                 | Remove the requirement                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 2378 | IETA                 | Table 11 K)                |                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2379 | IETA                 | General comment            |                 | IETA is largely supportive of the guidance and approaches the ICVCM has taken on double counting, double claiming, double issuance and double use.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | However, in certain instances, the IC-VCM will need to engage with jurisdictions that allow for voluntary carbon credits to be used in compliance schemes, such as California and Colombia.                                                                                                                                                                                                                                                   |

| 2379 | IETA                 | General comment     | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Further, the voluntary carbon market should continue innovating with other attribute-tagging schemes that aim to foster net positive biodiversity or circularity in the production and use of plastics. We recommend that the ICVCM engage in a constructive dialogue with the existing programmes that allow for 'capital stacking'. These approaches permit a carbon credit to also be claimed under a plastic credit or a biodiversity credit programme.                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2380 | IETA                 | General comment     |                 | IETA wholeheartedly supports the notion of carbon credits furthering sustainable development.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | IETA recommends including provisions on strong safeguards in the initial threshold assessment, while establishing a multistakeholder working group to improve SDG reporting. Members expressed the view that qualitative impact reporting – where applicable - should become the threshold over time.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 2380 | IETA                 | General comment     |                 | The implementation of such impact assessments will require a transition period as data, metrics, and auditor capacity are not currently available at scale across all relevant regions. IETA recommends using a risk-based approach tailored to specific project types rather than requiring full sustainable development impact assessments across the board.                                                                                                                                                                                                                                                                                                                                 | The concept of net positive sustainable development impacts requires further clarification as it may not be possible to adequately quantify and compare all impacts across 17 Sustainable Development Goals to calculate a net impact.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 2380 | IETA                 | General comment     |                 | It is unlikely that individual projects would be able to account for all impacts across 16 SDGs (in addition to climate). It is unclear how to account for 'net' impacts across different SDGs, targets and indicators.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | During the first phase, IETA recommends labeling positive Sustainable Development Impact on one or more SDGs as an attribute rather than making it a requirement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 2380 | IETA                 | General comment     | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Defining appropriate safeguards for jurisdictional REDD+ activities has been a focus of UNFCCC work for two decades. The Cancun Safeguards are the result of a collaborative, international process that included supply countries as well as key stakeholders such as Indigenous Peoples. IETA proposes that the Cancun Safeguards form the basis of assessment for JREDD programmes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 2381 | IETA                 | 0                   |                 | IETA is generally supportive of the proposed definition for the CCP on Sustainable Development Impacts and Safeguards, including the comprehensive range of criteria laid out in the Assessment Framework. Building on the work of existing and widely accepted standards such as IFC Performance Standards for defining CCP eligibility is a noble and necessary aspiration to build trust. Overall, we praise the Integrity Council for trying to find the right balance to scale the market with integrity.                                                                                                                                                                                 | We therefore urge IC-VCM to consider a risk-based approach and/or a gradual implementation vs enforcing all requirements at the initial threshold, to test their feasibility (only criterion 10 has a mix of initial and full threshold requirements).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 2381 | IETA                 | 0                   |                 | However, we believe that implementing all the Assessment Framework's requirements on the ground for this CCP will prove challenging in many cases. We are concerned that the requirements are too onerous and can't be achieved globally immediately, therefore putting critical mitigation activities at risk. And while the proposed procedures would sit with the carbon crediting programmes, our Members believe their implementation, which sits with the project developers, will go beyond their capabilities.                                                                                                                                                                         | We suggest removing proposed requirements that include regulatory requirements that fall outside of the scope of mitigation activities, or that are covered by existing regulatory compliance requirements in Standards (e.g., pollution laws, labor laws). All credible offset project standards require compliance with existing applicable regulations and laws. Imposing regulatory requirements that exceed local regulations and that are in many cases not related to the underlying carbon mitigation activity, falls well outside of the remit and scope of a carbon crediting programme.                                                                                                                                                                                                                                                                                                                                      |
| 2382 | IETA                 | 0                   |                 | We are concerned with the practicalities of implementing and monitoring adherence across the 11 criteria, both for developers and for the future body that will oversee CCPs. How would the liability of non-compliance be assigned? For several criteria, it is unclear what the "monitoring" requirements exactly imply, and what evidence will be requested. Crediting programmes have developed their governance through open and extensive consultation processes, but they do not enforce IFC performance standards at this stage. We also note that The Cancun safeguards were specifically designed for jurisdictional REDD yet the Assessment Framework goes beyond these Safeguards. | We suggest using a risk-based approach vs. asking that all requirements are met independently in all circumstances. It is worth noting that some projects in some countries (e.g. forestry project in the US), are capable of meeting, or even exceeding, high criteria standards as they have capacity and scalable processes and systems to integrate the criteria into their operations. For them, the proposed requirements may be achievable. However, other projects most likely won't meet them (e.g. small-scale cookstove projects) as they'll be far too onerous and too costly. It would be useful to collect feedback as to which of these criteria are perceived as most critical and for which methodologies (e.g. FPIC for nature-based projects). What happens if a host country (or subnational jurisdiction) has laws that do not confirm or even deny certain criteria? Would any project then be denied compliance? |
| 2383 | IETA                 | 0                   |                 | There is a genuine challenge in resourcing the enforcement for CCPs. Increasing standards can raise barriers to entry for actors with the best intentions, while other (less scrupulous) actors would not be impacted as they won't comply regardless. With the exhaustive range of criteria proposed, one needs to also bear in mind there is a greater legal risk of breaching one or more of the criteria, and therefore opening up accusations of not following best practice.                                                                                                                                                                                                             | Transition periods (including a continuous improvement mechanism) will help, to avoid saying no single credit in the market is eligible until programmes comply. It seems to be a trade-off between current proposals in the Assessment Framework, what is practical to implement, and how quickly it will be implemented. Companies and developers need to focus on investing in / delivering emission reductions and removals now, not in a couple of years.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 2384 | IETA                 | 0                   |                 | Would CPP endorsements apply retrospectively or only for units issued by a project after the endorsement date? It will be important to understand what percentage of these criteria are currently enforced in the market. It would also be helpful to see an assessment of where current safeguard procedures for the main VCM crediting programmes fall short.                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| 2385 | IETA                 | 0                                                                                                                                                                                                                                                                     |                 | Ensuring SDG net positive impact is a challenge and needs clarification, especially as the SDG framework was not designed to measure net impacts. Are we comparing positive impact within the same SDG, or across various SDGs? We note that each SDG is a discrete goal, each with its own impact. The goals are not fungible with another. Therefore, if a project results in a positive outcome for one goal and a negative outcome for another goal, the goals cannot be “netted” rather the outcomes are discretely and separately categorised. In addition, If the purpose of high-quality carbon credit is to assist non-state actors to take action on climate change, should the CCPs focus on mitigation integrity with no net SDG harm and have SDG performance certified separately? It is unlikely that a project would have impact on every SDG, let alone have a net positive impact across every indicator, target and goal. | Provide clarification on the netting out impacts across all SDGs.                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2385 | IETA                 | 0                                                                                                                                                                                                                                                                     | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Consider qualitative impact reporting.                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| 2386 | IETA                 | 0                                                                                                                                                                                                                                                                     |                 | For Criterion 11 (Access and benefit-sharing), we believe that downstream monitoring of benefit-sharing is impractical as it is not the role of the crediting programmes to oversee these arrangements. In addition, in a growing market with an ever more complex secondary market, tracking how benefit sharing will be managed relative to revenue from post credit issuance and subsequent transactions would be impossible, that is simply not how a functioning secondary market operates.                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2387 | IETA                 | 0                                                                                                                                                                                                                                                                     |                 | We note that the UN Cancun Safeguards were developed specifically for Jurisdictional REDD+ after years of negotiation and significant consultation with and input from IPLCs, UNFCCC parties and other stakeholders.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | We strongly recommend that these apply for JREDD rather than alternative or additional provisions. An example of how the Cancun SGs have been used to create a robust set of Safeguards is ART. ART-TREES unpacked the Cancun Safeguards into themes (with significant input from leading global SGs experts), with indicators to enable implementation, monitoring and verification of these Safeguards.                                                                                            |
| 2388 | IETA                 | General comment                                                                                                                                                                                                                                                       | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | IETA recommends reversing the proposed two step approach: Rather than focusing on an up-front risk-based approach for project types, IETA recommends the IC-VCM should screen the programme's approaches to additionality setting first. Where these are found to be insufficient, the recommendation should be for the programme to update its additionality rules.                                                                                                                                 |
| 2388 | IETA                 | General comment                                                                                                                                                                                                                                                       | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Where applicable, IETA would welcome the use of financial additionality tests to fast-track the assessment of credits with a high likelihood of financial additionality. This approach could potentially be taken in high-risk sectors. However, this first step of the assessment should not lead to an automatic exclusion of credits, project types or programmes. Rather, an assessment of a low or medium likelihood should result in additional criteria outlined under step 2 to be reviewed. |
| 2388 | IETA                 | General comment                                                                                                                                                                                                                                                       | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | In addition, IETA recommends the inclusion of performance standards as a permissible additionality test.                                                                                                                                                                                                                                                                                                                                                                                             |
| 2389 | IETA                 | Consultation question from the Summary for Decision Makers: Additionality for project-level mitigation activities: Are there alternative approaches to additionality that should be considered and that are not covered under the current draft Assessment Framework? | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | One approach to additionality we believe should be considered in the Assessment Framework is that of standardized approaches (performance beyond sectoral and regional BAU benchmarks).                                                                                                                                                                                                                                                                                                              |

| 2389 | IETA                 | Consultation question from the Summary for Decision Makers: Additionality for project-level mitigation activities: Are there alternative approaches to additionality that should be considered and that are not covered under the current draft Assessment Framework? | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | We believe performance benchmarks – when determined conservatively and constrained to a specific geography – provide a robust and defensible additionality assessment that standardizes the approach across projects in the identified jurisdiction. Performance benchmarks are typically also linked to the project baseline which systematically standardizes the credit quantification process. Performance benchmarks are commonly used in the VCM to determine additionality across a project type in a specific geography. This represents current best practice in the market. |
| 2389 | IETA                 | Consultation question from the Summary for Decision Makers: Additionality for project-level mitigation activities: Are there alternative approaches to additionality that should be considered and that are not covered under the current draft Assessment Framework? | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | If the IC-VCM is to adopt performance standards, the role of the Expert Panel may be to ensure the conservativeness and transparency of the performance standard development process by reviewing the procedure laid out in the Carbon Crediting Programmes’ normative documents for determining these benchmarks, and ensuring the process includes expert reviews and public comment.                                                                                                                                                                                               |
| 2390 | IETA                 | Consultation question from the Summary for Decision Makers: Are there any specific criteria which the draft Assessment Framework should take into account in its guidance on additionality?                                                                           |                 | IETA broadly supports the proposed approach to legal considerations for additionality. However, Criterion 8.4 also addresses situations where regulations are not enforced and suggests that a programme should include a time limit for additionality in these situations. This places an undue burden on crediting programmes and we suggest reliance on a programme’s additionality review process. During its normal review process, programmes should include a review of the enforcement status for relevant regulations. Where regulations continue to not be enforced, projects should remain eligible and not be bound by an artificial period dictated by IC-VCM or the crediting programme. Enforcement failures could also be localised in which case project specific evidence should be sufficient. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 2391 | IETA                 | Consultation question from the Summary for Decision Makers: Are there any specific criteria which the draft Assessment Framework should take into account in its guidance on additionality?                                                                           |                 | There are many variables that contribute to how “common practice” is defined. We support the use of a penetration rate as a component of the overall additionality assessment; however, we feel it should be evaluated on a project-specific basis rather than with a flat rate that applies to all mitigation activities. Programmes should ensure such rates are established appropriately for the geography and sector.                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| 2391 | IETA                 | Consultation question from the Summary for Decision Makers: Are there any specific criteria which the draft Assessment Framework should take into account in its guidance on additionality? |                 | Additionally, we believe that penetration rates can more effectively be defined on a sub-national basis, rather than at the country level. IETA does not support the introduction of a blanket cover market penetration rate. Any number is arbitrary and fails to recognise the nuance of geography, sector and sub-sector. However, if this approach were to be pursued a rate closer to 20% would be considered more appropriate than 10%. | 0               |
| 2391 | IETA                 | Consultation question from the Summary for Decision Makers: Are there any specific criteria which the draft Assessment Framework should take into account in its guidance on additionality? |                 | These are decisions that should be taken by crediting programmes as part of their methodology development processes. Finally, we note that penetration rates should not be restricted for use only with barrier assessments or investment analysis, as suggested in the language under Criterion 8.6, but also when coupled with regulatory additionality tests.                                                                              | 0               |
| 2391 | IETA                 | Consultation question from the Summary for Decision Makers: Are there any specific criteria which the draft Assessment Framework should take into account in its guidance on additionality? | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0               |

| 2392 | IETA                 | <p>Consultation question from the Summary for Decision Makers: The Integrity Council proposes in its draft Assessment Framework a risk-based assessment of additionality to be conducted by the Expert Panel by project type, as a first step in the overall assessment of additionality for CCP. Please provide comment as to the feasibility and desirability of this additional level of risk-based analysis by project type.</p> |                 | <p>The proposed risk-based analysis by project type has mixed support from the IETA membership. On the one hand, it is welcomed in that there is strong agreement of wanting to ensure all credits in the VCM are truly additional and of high quality; however, there is concern that this approach risks missing the important nuance of project-specific additionality assessments and could result in swathes of projects being mis-represented as non-additional based on judgements made by the Expert Panel.</p>                                                                                                                                                                                                                                                                                                                               | <p>Rather than focusing on an up-front risk-based approach for project types, IETA recommends the IC-VCM should screen the programme's approaches to additionality setting first.</p> |
| 2392 | IETA                 | <p>Consultation question from the Summary for Decision Makers: The Integrity Council proposes in its draft Assessment Framework a risk-based assessment of additionality to be conducted by the Expert Panel by project type, as a first step in the overall assessment of additionality for CCP. Please provide comment as to the feasibility and desirability of this additional level of risk-based analysis by project type.</p> |                 | <p>We request that the IC-VCM considers the difficulties in defining a "typical project" when considering a risk-based assessment of additionality. As seen when reviewing project documentation for any specific project, each project is unique and has project-specific elements, including project finances, IRR, and implementation practices. Considering the variability of each project, it would be very difficult for the Expert Panel to accurately assess additionality across an entire mitigation activity type. There is also concern that the Expert Panel's judgement may be subjective and not easily replicable. If the expert panel is using variable criteria such as typical IRR or assumptions on future fuel prices, how can project proponents or Standards assess their performance against this criterion objectively?</p> | <p>Where these are found to be insufficient, the recommendation should be for the programme to update its additionality rules.</p>                                                    |

| 2392 | IETA                 | Consultation question from the Summary for Decision Makers: The Integrity Council proposes in its draft Assessment Framework a risk-based assessment of additionality to be conducted by the Expert Panel by project type, as a first step in the overall assessment of additionality for CCP. Please provide comment as to the feasibility and desirability of this additional level of risk-based analysis by project type. |                 | A financial additionality test can only be applied at the level of a specific project. It is, after all, an assessment of a specific project's financial characteristics. This same type of financial testing cannot be applied at the level of a "credit type" (as proposed by IC-VCM) to determine the "typical financial viability" (page 44 of CCP part 4) of a particular credit type. The variation across technologies, projects, businesses, regions, countries, etc is far too great to reasonably determine "typical" financial viability.                                                                                                                                                                                                                                                                                                                               | Further definitions are needed on what constitutes an activity or a project type, potentially with regional specificity. |
| 2392 | IETA                 | Consultation question from the Summary for Decision Makers: The Integrity Council proposes in its draft Assessment Framework a risk-based assessment of additionality to be conducted by the Expert Panel by project type, as a first step in the overall assessment of additionality for CCP. Please provide comment as to the feasibility and desirability of this additional level of risk-based analysis by project type. |                 | Finally, there is concern that the proposed approach will create bottlenecks in the market. The pace of development for new methodologies is rapid, and an Expert Panel review of each new mitigation activity will be time consuming, and likely unable to keep pace with the new developments being managed by the Standards. We suggest that the IC-VCM reverse Steps 1 and 2 identified in Section 8 of the Assessment Framework and focus first on the robustness of the Standards' additionality assessments before embarking on risk-based assessments of additionality across mitigation activities. The market-level assessment may only need to be completed if the Expert Panel finds that the crediting programmes do not sufficiently assess additionality, and market proponents request a secondary review of the overall risk of additionality for a project type. | 0                                                                                                                        |

| 2392 | IETA                 | Consultation question from the Summary for Decision Makers: The Integrity Council proposes in its draft Assessment Framework a risk-based assessment of additionality to be conducted by the Expert Panel by project type, as a first step in the overall assessment of additionality for CCP. Please provide comment as to the feasibility and desirability of this additional level of risk-based analysis by project type. | 0               |                   | Where applicable, IETA would welcome the use of financial additionality tests to fast-track the assessment of credits with a high likelihood of financial additionality. This approach could potentially be taken in high-risk sectors, such as (but not limited to) renewable energy and plantation based afforestation. |
| 2392 | IETA                 | Consultation question from the Summary for Decision Makers: The Integrity Council proposes in its draft Assessment Framework a risk-based assessment of additionality to be conducted by the Expert Panel by project type, as a first step in the overall assessment of additionality for CCP. Please provide comment as to the feasibility and desirability of this additional level of risk-based analysis by project type. | 0               |                   | However, this first step of the assessment should not lead to an automatic exclusion of a credits, project type or programme. Rather an assessment of a low or medium likelihood should result in additional criteria outlined under step 2 to be reviewed.                                                               |

| 2392 | IETA                 | Consultation question from the Summary for Decision Makers: The Integrity Council proposes in its draft Assessment Framework a risk-based assessment of additionality to be conducted by the Expert Panel by project type, as a first step in the overall assessment of additionality for CCP. Please provide comment as to the feasibility and desirability of this additional level of risk-based analysis by project type. | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0               |
| 2393 | IETA                 | Consultation question from the Summary for Decision Makers: In this assessment, the Integrity Council proposes to use as one data point analysis of carbon prices. Please provide comments as to the feasibility of use of this indicator, and on the alternative use of marginal abatement costs for this purpose.                                                                                                           |                 | The proposed approach in the Assessment Framework leans heavily on financial additionality, which the IETA membership supports as one of the means to determine whether a project would not have otherwise occurred. However, some concerns with the criteria have been identified. It will be difficult to use carbon credit prices in the financial additionality assessment due to fast-changing market dynamics, difficulty finding reliable sources, and the impossibility of predicting the future. The current market is not large enough nor liquid enough to provide reliable, transparent pricing of carbon credits. Since the VCM does not have a price ceiling or floor, credit prices change based on buyer geography, buyer purchase schedules, and other uncontrollable factors in the market. Since most credits are traded over the counter and crediting programmes do not require price disclosure, the available estimates for carbon prices are based on anecdotal information from buyers and sellers rather than reported. At best, they provide an overall market average, but not project-specific prices which would be necessary to accurately use this criterion to assess additionality. Similarly, it will be important for the Expert Panel to clearly describe how a market-wide IRR is determined if IRR is to be used in the additionality assessment. IRR will vary project-to-project and is both financing and geography dependent. | 0               |
| 2394 | IETA                 | Additionality for jurisdictional REDD+ activities                                                                                                                                                                                                                                                                                                                                                                             |                 | On Criterion 8.7 (p 95 of the compendium), IETA support option 2 of not adding additional requirements for JREDD programmes. It is unlikely that activities today would succeed in demonstrating expected revenues received per credited tCO2e are sufficient to cover expected costs /tCO2e achieved. This requirement would effectively preclude JREDD credits from achieving the CCP certification. Members voiced concerns both on the potential of an administrative bottle neck and the project developers' willingness or legal rights, to disclose internal financials due to competitiveness implications.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0               |
| 2395 | IETA                 | Consultation question from the Summary for Decision Makers: Should there be a requirement to nest baselines of REDD+ projects on avoided deforestation?                                                                                                                                                                                                                                                                       |                 | IETA is supportive of nesting forestry projects baselines into national schemes. We would request clarification on whether this refers to an allocation of baselines based on risk maps or accounting alignment between jurisdictions and projects. In jurisdictional schemes, baselines are determined by the host country or subnational entity and may be outside the scope of the IC-VCMs mandate.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0               |

| 2395 | IETA                 | Consultation question from the Summary for Decision Makers: Should there be a requirement to nest baselines of REDD+ projects on avoided deforestation?                                           |                 | Nesting arrangements may take many forms and the CCPs should permit flexibility to incentivize partnerships across scales and allow jurisdictions, IPLCS, private sector and other stakeholders to negotiate the terms that are most mutually beneficial to their situation. As some jurisdictions will require more time to develop their baselines and define nesting frameworks, the requirements should provide accommodations for projects on a “pathway” to nesting their baselines at the earliest opportunity.                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 2396 | IETA                 | Consultation question from the Summary for Decision Makers: How should crediting under project-based REDD+ mitigation activities be considered within the scope of jurisdictional REDD+ programs? |                 | Overall, the criteria laid out in the Assessment Framework go above and beyond the most ambitious standards in the market today that were specifically designed with integrity in mind such as ART TREES and JNR.                                                                                                                                                                                                                                                                                                                                                    | IETA proposes to introduce threshold requirements that reflect practices achievable in developing countries today, as JREDD programmes today are nascent and have undergone extensive consultation processes to determine local inclusion and quality assurance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2396 | IETA                 | Consultation question from the Summary for Decision Makers: How should crediting under project-based REDD+ mitigation activities be considered within the scope of jurisdictional REDD+ programs? |                 | The vast majority of members polled believed that JREDD should be subject to alternative, rather than supplementary, additionality criteria (more than 80% of respondents).                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 2396 | IETA                 | Consultation question from the Summary for Decision Makers: How should crediting under project-based REDD+ mitigation activities be considered within the scope of jurisdictional REDD+ programs? | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 2397 | IETA                 | Criterion 8.6 D) Positive Lists                                                                                                                                                                   |                 | The Assessment Framework has done a good job of identifying and defining the use of positive lists as an effective means of assessing additionality. We are generally very supportive of crediting programmes using this method to evaluate projects.                                                                                                                                                                                                                                                                                                                | We request the IC-VCM considers specifically allowing “first of kind” projects to be automatically considered additional in order to encourage new and innovative projects to access carbon finance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 2398 | IETA                 | Criterion 8.5 Prior Consideration                                                                                                                                                                 |                 | The Assessment Framework has included Criterion 8.5 Evidence Showing Expectation of Carbon Credits (“prior consideration”) in every pathway to CCP-eligibility. This has mixed views from the IETA membership, most notably because no major crediting programme currently includes this in their assessments of additionality and very few projects would be able to retroactively prove this requirement was met. There are many ways to assess additionality, as shown in Section 8 of the Assessment Framework, and financial additionality is only one of them. | We recommend the IC-VCM use this criterion in some pathways to CCP-eligibility, but consider alternative, robust means of assessing additionality for projects where this was not the primary driver. For example, projects that did not initially identify carbon finance, but need carbon finance to scale their emission reductions. Further, if the IC-VCM opts to maintain the mandatory assessment of prior consideration, companies should be able to have a minimum of 3+ years, or potentially an unlimited time period between the proof of prior consideration and project start date. Many project types have extensive engineering, development, and construction periods that may take several years to reach completion. If prior consideration for credit revenue was determined, it should not matter when the project is implemented and operational. Flexible approaches to prior consideration may, amongst other provisions, include the project listing date. |

|------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2399 | IETA                 | Table 39                                                                                                                                                                                                                                                                                                                                         |                 | We also note an inconsistency in Table 39 of this section. Under the “Initial” threshold, it requires a programme to achieve all requirements of the “Full” threshold OR a project developer to provide publicly available evidence or an attestation regarding prior consideration. However, very often individual project developers will publicly list a project with a crediting programme prior to the start date of that particular mitigation activity. This listing process is included as the first option under the “Full” threshold and should also be specifically stated as acceptable to meet the “Initial” threshold requirements even where a crediting programme does not necessarily require listing prior to a project’s start date. | 0                                                                                                                                                                                                                                                                                                                                                                                      |
| 2400 | IETA                 | Overall Considerations for Implementation                                                                                                                                                                                                                                                                                                        |                 | As identified earlier in this document, IETA is concerned with the ability to implement all the criteria proposed by the IC-VCM. The Expert Panel assessments and reviews will be time consuming yet, as we know, time is of the essence. Additionality is a core component of ensuring high-quality carbon credits, but the proposed approach has several criteria that may create bottlenecks in the market. We see a risk that ongoing reviews and assessments by the Expert Panel may not keep pace with the reviews and assessments being completed by Standards and their expert reviewers, and the resources required to duplicate work may be immense.                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                      |
| 2401 | IETA                 | General Comment                                                                                                                                                                                                                                                                                                                                  | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Similarly as with additionality, IETA recommends that the IC-VCM assessment shift its focus towards assessing the overall approach each programme takes to addressing non-permanence. This will avoid excluding entire sectors based on project type assessments.                                                                                                                      |
| 2401 | IETA                 | General Comment                                                                                                                                                                                                                                                                                                                                  | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Credible programmes should have provisions in place to assess the risk of non-permanence, a long-term plan on how to manage these risks, as well as mechanisms to replace losses.                                                                                                                                                                                                      |
| 2401 | IETA                 | General Comment                                                                                                                                                                                                                                                                                                                                  | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | IETA is supportive of the proposed use of alternative approaches to address non-permanence, but this needs further definition. We support the notion of robust buffer pools providing a valid alternative to addressing risk of reversal. We further recommend exploring the option of reinsurance and joint approaches to buffer pools as and when these mechanisms become available. |
| 2402 | IETA                 | SDM Consultation Question:<br>The Integrity Council is open to views on the appropriate balance of requirements between the criteria applied to assess permanence, as well as alternative approaches.<br>Are there alternative approaches to permanence that should be considered and that are not covered under the draft Assessment Framework? |                 | IETA is supportive of strong permanence assessments as part of the CCPs. We recognise the critical need for permanence, and agree that the high-level principle is generally framed correctly, but there are significant flaws in the approach to applying the principle outlined in the Assessment Framework. One of the main concerns is that the Assessment Framework generally, as well as specifically in the section on permanence, is too detailed and prescriptive. When it comes to permanence, there are a variety of approaches, some which may or may not be appropriate for specific activity types or regions.                                                                                                                            | We urge the IC-VCM to take a more high-level approach, establishing a true quality threshold that reflects best practice in the market, vs an entirely new standard.                                                                                                                                                                                                                   |
| 2403 | IETA                 | CRITERION 9.1: DEGREE OF REVERSAL RISK                                                                                                                                                                                                                                                                                                           |                 | IETA has concerns with Criterion 9.1. Our main one is that setting out these examples could be perceived as a pre-judgement of the degree of reversal risk for certain project types, with a tendency to favour technological project types over natural climate solutions (NCS) project types. Much of this assessment depends on the specific activity or technology, and therefore we have concerns with these three broad risk categories that seem to gloss over the nuance of risk associated with specific activities.                                                                                                                                                                                                                           | The IC-VCM would be better placed to review the process to assess and address permanence used by the programme, versus making specific decisions about permanence. Guidance in the form of an overall risk framework, and not a predetermined risk profile would be more useful to compare different projects in different sectors.                                                    |
| 2403 | IETA                 | CRITERION 9.1: DEGREE OF REVERSAL RISK                                                                                                                                                                                                                                                                                                           | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | We request clarity on the form of storage for the direct air capture listed in the low-risk category. The form of storage for direct air capture determines the risk of reversal, risk cannot be determined without knowing the form of storage.                                                                                                                                       |

|------|----------------------|--------------------------------------------------------------------------------------------|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2404 | IETA                 | CRITERION 2A): LENGTH OF COMMITMENT TO MONITOR AND COMPENSATE FOR REVERSALS                |                 | There was some division among our members on the achievability of both the initial and full threshold requirements. Particularly, there were concerns raised with the 100-year commitment to monitor, which forms the basis of all of the options under the initial and full threshold requirements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | We strongly suggest reconsidering the 100-year commitment, and suggest instead shorter, multi-decadal project commitments.                                                                                                                                                                                                                                           |
| 2404 | IETA                 | CRITERION 2A): LENGTH OF COMMITMENT TO MONITOR AND COMPENSATE FOR REVERSALS                |                 | The 100-year commitment seems to be founded on the 100-year global warming potential (GWP) however this has no scientific basis in relation to the permanence of a carbon emission reduction or removal in the atmosphere. This 100-year monitoring and compensation commitment will deter participation in carbon-crediting programmes which may leave gaps in the much-needed financing of these critical activities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | We also request clarity on the rationale behind the 50-year commitment under Option 1 of the initial threshold requirements; what is the 50-year commitment period based upon, and why couldn't this threshold equally be justified as 40 years, 30 years, or some other commitment period that better aligns with existing and widely used carbon market standards? |
| 2404 | IETA                 | CRITERION 2A): LENGTH OF COMMITMENT TO MONITOR AND COMPENSATE FOR REVERSALS                | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | All programmes ought to have provisions in place to address the risk of reversal, potential losses and a multi-decadal management plan related to both. We would also like to reiterate the possibility of labeling years of permanence assured in registries.                                                                                                       |
| 2405 | IETA                 | CRITERION 2A): LENGTH OF COMMITMENT TO MONITOR AND COMPENSATE FOR REVERSALS (AF pp. 61-63) |                 | Tonne-yr accounting was explicitly mentioned as ineligible for CCP eligibility, yet option 2 seems to present a form of tonne-year accounting. We are concerned that crediting under tonne-year accounting, rather than measured project performance, will disincentivize project participation due to the duration between project development and recouping associated costs. There is no existing and consistent basis in the market for this practice. Further, tonne-year accounting is not an acceptable substitute for the real, enforceable risk mitigation mechanisms such as buffer pools or insurance mechanisms.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | We also request clarity on the Option 2 proposals under the initial and full thresholds.                                                                                                                                                                                                                                                                             |
| 2405 | IETA                 | CRITERION 2A): LENGTH OF COMMITMENT TO MONITOR AND COMPENSATE FOR REVERSALS (AF pp. 61-63) |                 | Across IETA's broad membership there are varying views on tonne-year accounting:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                                                                    |
| 2405 | IETA                 | CRITERION 2A): LENGTH OF COMMITMENT TO MONITOR AND COMPENSATE FOR REVERSALS (AF pp. 61-63) |                 | We recognize the flexibility that it can provide, potential enrollment of new landowners who are unwilling or unable to enroll in programmes that require long-term commitments, the focus on achieved climate benefits that are not at risk of reversal – thereby adding certainty related to permanence and providing an alternative approach to non-permanence risk. However, there are also several concerns that have been raised about such proposal by crediting programmes (e.g Verra) and we urge them to consider as the proposed updates and methodology developments are approved and finalized.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                                                                                                                    |
| 2405 | IETA                 | CRITERION 2A): LENGTH OF COMMITMENT TO MONITOR AND COMPENSATE FOR REVERSALS (AF pp. 61-63) |                 | Many of the "pros" listed above are accompanied by drawbacks, or "cons". These will be outlined below. While the approval of tonne-year accounting for the crediting programme may lead to enrolment of new landowners, on the other hand, it can be used to justify short-term project commitment periods, which has implications for other aspects of project quality and is also likely to lead to an abandonment of landowners enrolling in programmes that require a longer commitment. Furthermore, with lower barriers to entry, including no need to commit credits to a buffer pool and no penalties upon exiting a commitment, there is a risk that a large number of temporary credits could flood the market, lowering prices for existing developers who have committed to traditional long-term commitments, and reducing the incentive for enrolment in long-term commitments, as mentioned above. Long-term commitment periods (ranging from 30-200 years), provide the necessary confidence in the counterfactual scenario provided by the project proponent. This shift towards shorter timeframes is concerning, considering the concept as stands has not been tested in the carbon market and its validity is highly dependent upon specific assessment method and assumptions. | 0                                                                                                                                                                                                                                                                                                                                                                    |

| 2406 | IETA                 | Option 2 continued                                                                         |                 | Furthermore, tonne-year accounting assumes that the short-term climate benefits of delaying emissions are sufficient to offset the long-term impact of the same emissions. From a physical science perspective, it is not clear that this is the case. Temporary storage will by definition lead to higher temperatures after the commitment period, because the emissions are released. If the commitment period is 100 years, this may not make a difference – but if the temporary period is 1-2 years from now, it will likely negatively affect climate goals. In other words, it is not clear that the negative impact of releasing 1 tonne 1 year from now can be negated by simply combining 100 1-year temporary periods. If this is the case, the full impacts of the emissions would still occur, and the credits would effectively be meaningless. | 0                                                                                                                                                                                                                             |
| 2407 | IETA                 | CRITERION 2A): LENGTH OF COMMITMENT TO MONITOR AND COMPENSATE FOR REVERSALS (AF pp. 61-63) |                 | Option 3 under the initial and full thresholds offers “alternative approaches to the length of the commitment period... to reach a similar level of compensation for reversals”. IETA supports this option as it offers some much-needed flexibility, but more detail and clarity is required. Without this, this option will only serve to confuse the market and create greater uncertainty.                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | We request that the IC-VCM provide some examples of alternative approaches that might be accepted under the threshold requirements.                                                                                           |
| 2407 | IETA                 | CRITERION 2A): LENGTH OF COMMITMENT TO MONITOR AND COMPENSATE FOR REVERSALS (AF pp. 61-63) |                 | IETA welcomes the notion that robust buffer pools may be considered to balance a 100-year permanence requirement. In the future, there is also strong potential for reinsurance mechanisms of buffer pools, once the relevant financial products are widely available in the market.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                             |
| 2407 | IETA                 | CRITERION 2A): LENGTH OF COMMITMENT TO MONITOR AND COMPENSATE FOR REVERSALS (AF pp. 61-63) |                 | For JREDD, IETA would also encourage the IC-VCM to take into consideration compensation mechanisms such as those used by ART to ensure permanence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                             |
| 2408 | IETA                 | CRITERION 2B): SUFFICIENCY OF COMPENSATION MECHANISM                                       |                 | Again, IETA’s membership has significant concerns with the requirements outlined under Criterion 9.2b. There was very little support for the requirements when presented in a poll. Many of the concerns are related to the applicability or achievability of the requirements, in different regions or sectors. For example, there were concerns that the full threshold requirement for the treatment of avoidable reversals, obligating the carbon-crediting programme to require “proponents to sign legal agreements obligating them to monitor, report and compensate for avoidable reversals for the full commitment period”, will be too difficult to implement in many countries, as it will be impossible to legally chase many entities to compensate.                                                                                              | If the carbon programme assures proper management of permanence, there is no reason for the IC-VCM to implement such specific requirements. There are existing buffer design approaches that are tried, tested, and credible. |
| 2408 | IETA                 | CRITERION 2B): SUFFICIENCY OF COMPENSATION MECHANISM                                       |                 | When it comes to NCS specifically, it is not always clear whether reversals are avoidable or unavoidable – while carbon losses to natural disturbances can easily be distinguished as unavoidable, there can sometimes be a blurring (i.e., a controlled fire for a specific reason by a landowner that then gets out of control). Differentiating between avoidable and unavoidable reversals at a jurisdictional level can also be difficult.                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                             |
| 2408 | IETA                 | CRITERION 2B): SUFFICIENCY OF COMPENSATION MECHANISM                                       |                 | While we recognise that Criterion 9.2 is an alternative requirement to meet the CCP for permanence, we also have significant concerns with Criterion 9.3 (detailed below).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                             |

| #    | Comment submitted by | Para/Fig/Table/Note                              | Type of comment | Submitted comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Proposed change                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| 2409 | IETA                 | CRITERION 9.3:<br>TEMPORARY CREDITING APPROACHES |                 | IETA has significant concerns with the temporary crediting approach described in the assessment framework. Seventy percent (70%) of IETA members who were polled on this approach said they did not agree with the temporary crediting approach outlined in Criterion 3. IETA has represented the carbon market business community for over twenty years and has a significant breadth of knowledge and experience within our membership. Many of our members compared the temporary crediting approach to a previous approach taken under the Clean Development Mechanism (CDM), called a temporary certified emissions reduction (tCER). tCERs were “credits given for emission removals certified for an afforestation or reforestation CDM project (to be replaced upon expiry at the end of the second commitment period)”. IETA members with experience in carbon markets, including under the CDM, characterised the tCER approach as a failure. tCERs never gained widespread acceptance by the buyers for the reason that they created an open-ended obligation to replace the temporary credit when it expired a decade or more hence. Even the most willing and ambitious user of such a credit were not ready to manage this risk and were therefore deeply concerned with the prospect of reintroducing a concept that had already proven to be unworkable. There were a number of specific concerns raised: | Potential alternatives/ solutions:                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2409 | IETA                 | CRITERION 9.3:<br>TEMPORARY CREDITING APPROACHES |                 | The administrative burden of tracking these credits is significant, as there will be many more credits, expiry dates, cancellations, and then replacements that must be tracked                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | From a demand-side perspective, there is likely more appetite to pay more for a robust, quality credit that is purchased once, and can account for the claims made for that credit (instead of purchasing a temporary credit that must be replaced). Therefore, solutions that address permanence through enhanced existing mechanisms (i.e., buffer pools), and an understanding of associated claims that can be made with these credit types. |

| 2409 | IETA                 | CRITERION 9.3:<br>TEMPORARY CREDITING APPROACHES |                 | It will likely dampen the appetite for these credits, having to replace a unit will make purchasing that unit in the first place a much less attractive offer                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 2409 | IETA                 | CRITERION 9.3:<br>TEMPORARY CREDITING APPROACHES |                 | It may cause further confusion and doubt amongst non-experts with the concept of permanence which is not helpful when trying to build legitimacy in the market.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 2410 | IETA                 | CRITERION 9.4:<br>INSTITUTIONAL SUSTAINABILITY   |                 | Again, IETA has some concerns with the proposed institutional sustainability requirements under Criterion 9.4 as proposed in the Assessment Framework. The poll of our Membership demonstrated a divergence of views, with the most votes going towards disagreeing with Criterion 9.4, followed by those who are undecided. If the expectation is to have carbon-crediting programmes in place for 100 years in order to enforce the 100-year monitoring and compensation requirements, less than half a percent of U.S. businesses have survived that long. Setting that expectation for carbon programmes, when it has not been done by any other businesses, seems extraordinary, and unnecessarily punitive.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 2411 | IETA                 | PERMANENCE FOR JREDD                             |                 | Crediting under J-REDD activities is based on reducing the flow rate of emissions rather than the absolute forest carbon stocks. As such, approaches to permanence should be commensurate with the nature of crediting approaches under a J-REDD activity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | We recommend that the ICVCM allow for each carbon crediting programme to determine the best credible approach to permanence for J-REDD activities, with the ICVCM regularly reviewing programme rules on approaches to permanence for J-REDD.                                                                                                                                                                                                    |
| 2411 | IETA                 | PERMANENCE FOR JREDD                             |                 | Permanence approaches for J-REDD activities should be limited to a risk-based buffer pool and subsequent penalties for reversals within the crediting period.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 2411 | IETA                 | PERMANENCE FOR JREDD                             |                 | In sum, we do not agree with a top-down approach to permanence for J-REDD activities as described by the ICVCM and recommend that the ICVCM engage in a constructive dialogue with relevant offset programmes to ensure that credible approaches are applied for each J-REDD activity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| 2412 | IETA                 | CRITERION 10.2 B)<br>Determination of the baseline scenario and quantification of baseline emissions or removals |                 | Many methodologies in existence today do not require a baseline "selection". Baselines are standardized and determined through exhaustive methodology development processes subject to expert review. In these cases, it would not be possible for the expert panel to conduct a meaningful assessment of uncertainty.                                                                                                                                                                                                                                                                                                                                                                                               | Take into account standardized baseline methodologies                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 2413 | IETA                 | CRITERION 10.2 B)<br>Determination of the baseline scenario and quantification of baseline emissions or removals |                 | Criterion 10.2 further references the need to align baseline scenarios with all relevant mitigation activities under the NDC provisions. Members flagged this to be an impractical provision as NDCs are not legally binding. Mitigation activities should be considered additional until such a time as the NDC provisions are transposed into policy and regulatory frameworks. At this point voluntary mitigation activities would no longer pass a regulatory additionality test and should therefore automatically be excluded.                                                                                                                                                                                 | Remove requirement                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 2414 | IETA                 | CRITERION 10.4 Quantification of leakage emissions                                                               |                 | International leakage is not currently accounted for by any GHG Programme, including under the UNFCCC. It is not only challenging to accurately quantify, this provisions sets a perverse incentive by discounting credits from a good actor for negative actions taking place beyond its borders.                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 2414 | IETA                 | CRITERION 10.4 Quantification of leakage emissions                                                               |                 | As more national accounting areas are included in the carbon market, international leakage will be captured in the annual emissions reporting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | We recommend that this provision be removed.                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2415 | IETA                 | General comment                                                                                                  |                 | IETA agrees that the transition towards net zero is a critical element for VCM integrity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | This CCP requires more detailed definitions on the criteria used to determine whether a climate solution is net zero aligned. It is most critical that the judgement aligns with best available scientific view of the transition in a location and sector.                                                                                                                                                                                                             |
| 2415 | IETA                 | General comment                                                                                                  |                 | Members noted, however, that this section lacked clarity in terms of the mitigation activities that would constitute such lock-in effect.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Criteria must be grounded in science-based pathways and may consider the inclusion of positive lists, NDCs provisions and sustainable finance taxonomies.                                                                                                                                                                                                                                                                                                               |
| 2416 | IETA                 | 0                                                                                                                |                 | IETA notes that the provisions on the transition towards net zero emissions primarily include a negative screening of mitigation activities that have the potential to lock in emissions due to long term investments. IETA agrees that this is a critical element for VCM integrity. Members noted, however, that this section lacked clarity in terms of the mitigation activities that would constitute such lock-in effect. This provision also adds considerable uncertainty given that whether that technology provides a transition to net zero, depends on the region and the sector, and .the VCM has a large role to play in supporting the transition and helping raise ambition beyond avoiding lock-in. | IETA requests that the IC-VCM provide more detail on the objective criteria that will be used and/or the factors that will be considered by the expert panel in the expert judgement on whether an activity is net zero aligned.                                                                                                                                                                                                                                        |
| 2416 | IETA                 | 0                                                                                                                |                 | Carbon projects run counter to the net zero transition when the carbon revenue incentivizes a polluting activity. This comes up when GHG's are a waste stream from some primary production. The most prominent allegations, of course, surround HFC-23 destruction in China under Kyoto. Similar concerns are being raised with respect to LCFS credits from dairies. In theory, one could see the same concerns arising from nitric acid, coal mine methane, etc.                                                                                                                                                                                                                                                   | Such an assessment must be grounded in science-based pathways and may consider other sources of information, e.g. positive lists, NDC provisions or sustainable finance taxonomies, particularly in emerging markets or developing economies. It is most critical that the judgement aligns with best available scientific view of the transition in a location and sector, but additional positive considerations may also help shape the expert opinion.              |
| 2416 | IETA                 | 0                                                                                                                |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Leaving the assessment up to expert judgement without considering such parameters risks incurring a conflict of opinion between the expert panel, host country, project developer, and/or carbon crediting programme as to what constitutes net-zero aligned activities. Expert opinion may be insufficient if based on broad screening requirements, rather than detailed assessment of national strategies and policies that have undergone stakeholder consultation. |
| 2416 | IETA                 | 0                                                                                                                |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Other provisions in the assessment framework, such as additionality equally rely on expert judgement. However, we have ample information on the criteria used to come to a decision.                                                                                                                                                                                                                                                                                    |
| 2417 | IETA                 | General Comment                                                                                                  |                 | As an overarching principle, IETA recommends labelling that enables market participants to navigate VCMs with greater ease according to buyer preference. Labels should be selected for the unique information they provide and not repeat data easily accessible in the registries.                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 2417 | IETA                 | General Comment                                                                                                  |                 | On the establishment of other attributes, members requested the AF avoids the duplication of information that would readily be available in registries (origin, credit types). Furthermore, IETA suggests that attributes should be mutually exclusive.                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| 2418 | IETA                 | Consultation Question from the Summary for Decision Makers<br>Should the Integrity Council consider the establishment of an attribute to differentiate credits according to the type of underlying mitigation activity? |                 | IETA members resoundingly welcome the establishment of an attribute to differentiate the type of underlying mitigation activity.                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                      |
| 2419 | IETA                 | Consultation Question from the Summary for Decision Makers<br>If so, at what level should types be differentiated (e.g., reductions vs removals, tech-based vs nature-based)?                                           | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | IETA proposes that the attribute establishes a differentiation of removals and reductions, as well as a differentiation of nature-based and technological solutions both for reduction and removal credits.                                            |
| 2420 | IETA                 | Type of mitigation outcome                                                                                                                                                                                              |                 | IETA supports the universal labeling of credits indicating the type of mitigation activity.                                                                                                                                                                                                                                                                                                                                                                                      | We suggest to include the distinction of natural and technological solutions for both reductions and removals.                                                                                                                                         |
| 2421 | IETA                 | 0                                                                                                                                                                                                                       |                 | There was very little support for an attribute relating to emergent technologies as the assessment would prove difficult to establish would require continuous updates, and arbitrary decisions regarding what was classified as “emergent” vs incumbent.                                                                                                                                                                                                                        | Do not include a label for emerging technologies                                                                                                                                                                                                       |
| 2422 | IETA                 | 12.2 Attribute 2<br>Quantified SDG impacts                                                                                                                                                                              |                 | On Sustainable Development Impacts, the membership was divided with some fearing a bifurcation of the market by adding an additional 16 labels, while others emphasized the importance of signaling co-benefits to buyers.                                                                                                                                                                                                                                                       | On the whole IETA recommends including quantified Sustainable Development Impacts as an attribute rather than a requirement for the initial threshold.                                                                                                 |
| 2422 | IETA                 | 12.2 Attribute 2<br>Quantified SDG impacts                                                                                                                                                                              |                 | Across the IETA membership, there were mixed views on the level of detail required to create meaningful attributes versus opting for simplicity. This became particularly apparent on the topic of quantified Sustainable Development impacts which would effectively add 16 new labels to the existing categories.                                                                                                                                                              | IETA would like to propose further market research with demand side actors to understand the level of detail buyers in the VCM are looking for and their associated willingness to pay to mitigate any negative cost impact on small scale developers. |
| 2422 | IETA                 | 12.2 Attribute 2<br>Quantified SDG impacts                                                                                                                                                                              |                 | Proponents laid out that buyers would welcome such a distinction as they are often looking to fulfill multiple commitments across biodiversity, gender and human rights when investing in carbon credits. It is key that the cost of labelling does not create an additional burden on activity proponents. Demand side actors will benefit from significant economies of scale as research on these attributes today is undertaken by each procurement department individually. | 0                                                                                                                                                                                                                                                      |
| 2422 | IETA                 | 12.2 Attribute 2<br>Quantified SDG impacts                                                                                                                                                                              |                 | Opponents voiced significant concern over further bifurcating the market. The verification infrastructure to apply and certify these attributes is costly, while the methodologies and audit infrastructure in many cases are to date underdeveloped. This attribute could be introduced at a later date when the relevant MRV infrastructure has matured.                                                                                                                       | 0                                                                                                                                                                                                                                                      |
| 2423 | IETA                 | 12.3 Attribute 3:<br>Adaptation co-benefits                                                                                                                                                                             |                 | We equally support the labelling of adaptation benefits of credits as this is a unique attribute of certain credit types that buyers might want to select for.                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                      |
| 2423 | IETA                 | 12.3 Attribute 3:<br>Adaptation co-benefits                                                                                                                                                                             |                 | IETA members are generally supportive of an attribute to label adaptation benefits, as these are specific to certain project types and cannot be easily discerned by the buyer. However, the section requires further clarification as to the criteria applied in assessment.                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                      |
| 2424 | IETA                 | 0                                                                                                                                                                                                                       |                 | IETA recalls that all transactions in voluntary carbon markets represent climate action by non-state actors that go above and beyond what is required by law. These climate actions enable financing of emissions reductions and removals that ultimately contribute to the achievement of the NDCs.                                                                                                                                                                             | Considerations with regards to Paris Alignment should remain optional.                                                                                                                                                                                 |
| 2424 | IETA                 | 0                                                                                                                                                                                                                       |                 | It is paramount that voluntary actions are not disincentivized by adding additional levies and charges, particularly when those are likely to fall on project developers in the Global South.                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                      |
| 2424 | IETA                 | 0                                                                                                                                                                                                                       |                 | As such, IETA recommends that the Share of Proceeds does not become a requirement since it runs the risk of further disadvantaging populations that are hardest hit by climate impacts.                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                      |

| 2424 | IETA                 | 0                                                                                                                                                                                                                           |                 | We equally recommend not to apply a cancellation rate on VCM credits in line with the Overall Mitigation of Global Emissions under article 6 of the Paris Agreement, as this is effectively a tax on climate action over non-action.                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                  |
| 2424 | IETA                 | 0                                                                                                                                                                                                                           |                 | Host country authorization should be labelled as an attribute to allow for application as and when countries build out appropriate accounting infrastructure.                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                  |
| 2425 | IETA                 | 0                                                                                                                                                                                                                           |                 | In considering this section of the Assessment Framework, it is important to bear in mind the fundamental difference between compliance and voluntary carbon markets. Participation in VCMs is a voluntary contribution by consumers and corporates in order to compensate for their own carbon footprint, in parallel to reducing as far as possible their actual emissions.                                                                                                                                                                                                                        | 0                                                                                                                                                  |
| 2425 | IETA                 | 0                                                                                                                                                                                                                           |                 | The benefit of the VCM is it encourages financial flows towards carbon reduction or removal projects that help Parties to the Paris Agreement (i.e. countries) with an NDC obligation to meet their targets. Compliance schemes are, in contrast, designed by regional authorities to reduce the carbon emissions in that region to achieve the NDC of that region.                                                                                                                                                                                                                                 | 0                                                                                                                                                  |
| 2425 | IETA                 | 0                                                                                                                                                                                                                           |                 | It is key not to inadvertently disadvantage voluntary actors that are taking climate actions above and beyond what is legally required of them.                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                  |
| 2426 | IETA                 | Consultation Question from the Summary for Decision Makers<br>Should the voluntary carbon market levy a share of proceeds to assist developing countries most vulnerable to climate change to meet the costs of adaptation? |                 | Overall, more than 70% of respondents indicated that they would not be in favour of a blanket cover requirement on share of proceeds.                                                                                                                                                                                                                                                                                                                                                                                                                                                               | IETA proposes to maintain the share of proceeds provision as optional and potentially integrate it as an additional distinction in the attributes. |
| 2426 | IETA                 | Consultation Question from the Summary for Decision Makers<br>Should the voluntary carbon market levy a share of proceeds to assist developing countries most vulnerable to climate change to meet the costs of adaptation? |                 | About a quarter of respondents indicated during a later poll they might be supportive under specific circumstances and 13% voted in favour of share of proceeds. The most favoured share of proceeds proposed is less than 5% with some suggesting a nominal 1% contribution to dispel any negative sentiment towards VCMs.                                                                                                                                                                                                                                                                         | 0                                                                                                                                                  |
| 2426 | IETA                 | Consultation Question from the Summary for Decision Makers<br>Should the voluntary carbon market levy a share of proceeds to assist developing countries most vulnerable to climate change to meet the costs of adaptation? |                 | The most often cited concern referred to the additional burden such a levy poses on project developers. Climate change disproportionately affects the population of developing countries. Exposing activity proponents in the Global South to this additional levy effectively imposes a tax on highly impacted populations to pay for the adaptation to climate change which they are trying to mitigate via their projects. Beyond the distribution effect, it also punishes first movers who are taking action on climate mitigation rather than imposing a levy on actors who continue to emit. | 0                                                                                                                                                  |

| 2426 | IETA                 | Consultation Question from the Summary for Decision Makers<br>Should the voluntary carbon market levy a share of proceeds to assist developing countries most vulnerable to climate change to meet the costs of adaptation?                            |                 | Another issue raised is the administrative burden of setting up share of proceeds schemes and the unresolved question of identifying an impartial and efficient fund to distribute these contributions.                                                                                                                                                            | 0               |
| 2426 | IETA                 | Consultation Question from the Summary for Decision Makers<br>Should the voluntary carbon market levy a share of proceeds to assist developing countries most vulnerable to climate change to meet the costs of adaptation?                            |                 | Individual members proposed that this levy could be imposed selectively on projects hosted in the Global North.                                                                                                                                                                                                                                                    | 0               |
| 2426 | IETA                 | Consultation Question from the Summary for Decision Makers<br>Should the voluntary carbon market levy a share of proceeds to assist developing countries most vulnerable to climate change to meet the costs of adaptation?                            |                 | Proponents of the share of proceeds levy highlight that the most vulnerable countries often do not benefit from VCM projects as they do not have the appropriate business environment. The share of proceeds should be viewed as an opportunity to equitably ensure that those countries most affected by climate change receive funding to meet adaptation needs. | 0               |
| 2427 | IETA                 | Consultation Question from the Summary for Decision Makers<br>Should the voluntary carbon market provide a contribution to overall mitigation of global emissions, through the cancellation of carbon credits at issuance or other similar provisions? |                 | IETA recognizes the need to reach net zero by mid-century and halve emissions by 2030.                                                                                                                                                                                                                                                                             | 0               |

| #    | Comment submitted by | Para/Fig/Table/Note                                                                                                                                                                                                                                                  | Type of comment | Submitted comment                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Proposed change                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| 2427 | IETA                 | Consultation Question from the Summary for Decision Makers<br>Should the voluntary carbon market provide a contribution to overall mitigation of global emissions, through the cancellation of carbon credits at issuance or other similar provisions?               |                 | In an informal poll, just under two thirds of respondents (62%) did not agree that the crediting programmes or other VCM actors should provide a contribution towards the overall mitigation of global emissions include requirements for cancellation at issuance or other provisions. Almost a quarter of respondents remained undecided on the issue, while 13% supported the notion.                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 2427 | IETA                 | Consultation Question from the Summary for Decision Makers<br>Should the voluntary carbon market provide a contribution to overall mitigation of global emissions, through the cancellation of carbon credits at issuance or other similar provisions?               |                 | The provisions of the Paris Agreement were designed to govern transactions between state actors and do not explicitly take the financial architecture of VCM into account. Administering such a contribution would be extremely costly and complex to enforce in a voluntary setting. Furthermore, this would increase the risk taken by activity proponents and pose a barrier to entry to the market at a time when we are facing an impending supply shortage. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 2428 | IETA                 | Consultation Question from the Summary for Decision Makers<br>Should the voluntary use of carbon credits require host country authorization to ensure association with corresponding adjustments? Should this be conditional on specific circumstances or use cases? |                 | During an informal poll, IETA members overwhelmingly responded that they do not believe that host country authorization and the associated corresponding adjustment should become a requirement (80% of respondents voted no).                                                                                                                                                                                                                                    | IETA does not support the notion that corporate claims constitute double claiming under the Paris Agreement as corporates are non-state actors and therefore not a party to the agreement. Corporate claims are accounted for separately from national claims but may become subject to regulation in VCM host countries or the country where demand side actors are headquartered. Adding an additional requirement under uncertain future policy decisions further complicates market transactions. |
| 2428 | IETA                 | Consultation Question from the Summary for Decision Makers<br>Should the voluntary use of carbon credits require host country authorization to ensure association with corresponding adjustments? Should this be conditional on specific circumstances or use cases? |                 | IETA would like to propose that host country authorization remain an attribute as proposed in Annex A of the CCPs. We would further like to urge the IC-VCM to issue a joint statement with the VCM on the role of host country authorization in the voluntary carbon market.                                                                                                                                                                                     | IETA welcomes a conversion of voluntary and compliance accounting systems in the future as, and when, all parties involved have developed robust accounting architecture under Article 6.                                                                                                                                                                                                                                                                                                             |

| #    | Comment submitted by | Para/Fig/Table/Note                                                                                                                                                                                                                                                  | Type of comment | Submitted comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Proposed change |

| 2428 | IETA                 | Consultation Question from the Summary for Decision Makers<br>Should the voluntary use of carbon credits require host country authorization to ensure association with corresponding adjustments? Should this be conditional on specific circumstances or use cases? |                 | Requiring host country authorization would effectively hinder host countries from achieving their own NDCs, given that corresponding adjustments would require a deduction from national registries in each instance. Given that the majority of VCM credits today is hosted by developing countries, the notion of requiring corresponding adjustments runs counter to sustainable development and "common but differentiated responsibilities" principles enshrined in the UNFCCC. | 0               |
| 2428 | IETA                 | Consultation Question from the Summary for Decision Makers<br>Should the voluntary use of carbon credits require host country authorization to ensure association with corresponding adjustments? Should this be conditional on specific circumstances or use cases? |                 | Accounting frameworks and claims in the voluntary carbon market run separate to those in compliance markets, as they do not concern the same actors. IETA recognizes that there may be a need for a meta registry to track correspondingly adjusted credits in the voluntary market.                                                                                                                                                                                                 | 0               |
| 2428 | IETA                 | Consultation Question from the Summary for Decision Makers<br>Should the voluntary use of carbon credits require host country authorization to ensure association with corresponding adjustments? Should this be conditional on specific circumstances or use cases? |                 | The VCM offers an opportunity to funnel finance into mitigation that is additional in order to accelerate the transition to net zero. Requiring corresponding adjustments will stifle the VCM, thereby reducing the total amount of funding allocated to climate mitigation and thereby posing a direct contradiction with the Core Carbon Principle 'Transition Towards Net Zero Emissions', section 11 of the assessment framework.                                                | 0               |
| 2428 | IETA                 | Consultation Question from the Summary for Decision Makers<br>Should the voluntary use of carbon credits require host country authorization to ensure association with corresponding adjustments? Should this be conditional on specific circumstances or use cases? |                 | Most countries today do not have the accounting frameworks in place to be able to accord corresponding adjustments. This runs the risk of slowing down transactions in the VCM when additional investments into climate action are urgently needed.                                                                                                                                                                                                                                  | 0               |

| #    | Comment submitted by | Para/Fig/Table/Note                                                                                                                                                                                                                                                  | Type of comment | Submitted comment                                                                                                                                                                                                                                                                                                          | Proposed change                                                                                                                                                                                                                                                                                                                                             |

| 2428 | IETA                 | Consultation Question from the Summary for Decision Makers<br>Should the voluntary use of carbon credits require host country authorization to ensure association with corresponding adjustments? Should this be conditional on specific circumstances or use cases? |                 | Proponents of universal corresponding adjustments flagged there may be a risk of displacement if host countries reduce their mitigation efforts in places where VCM activities cover a significant share of their reduction targets.                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                           |
| 2429 | IETA                 | Introduction: General comments                                                                                                                                                                                                                                       |                 | The process for assessing eligibility against the CCPs, and the way in which decisions are implemented, will be a vital aspect of the Integrity Council's work programme. We have significant concerns in the current proposals for this part of the process.                                                              | IETA calls on the IC-VCM, the Expert Panel and Board to create a quality threshold that can be seamlessly applied today, in order to create confidence in the market without further delay.                                                                                                                                                                 |
| 2429 | IETA                 | Introduction: General comments                                                                                                                                                                                                                                       |                 | 0                                                                                                                                                                                                                                                                                                                          | IETA supports the concept of an initial threshold requirement that reflects current best practice in the market. IETA recommends that best practice be determined via a broad benchmarking exercise focused on practices across standards.                                                                                                                  |

| 2429 | IETA                 | Introduction: General comments                                                                                                                                                                                                                                       |                 | 0                                                                                                                                                                                                                                                                                                                          | Ensuring the Integrity Council does not overstep its mandate by engaging directly in complaints and appeals                                                                                                                                                                                                                                                 |
| 2429 | IETA                 | Introduction: General comments                                                                                                                                                                                                                                       |                 | 0                                                                                                                                                                                                                                                                                                                          | IETA would further like to note that individual members have proposed a number of alternative approaches to the assessment procedure, such as spot checks on key credit types, the use of positive & negative lists, or implementation a 0-5 grading system against the full threshold criteria in lieu of a pass/fail assessment.                          |
| 2430 | IETA                 | AP 1.5: PHASED APPROACH TO CCP IMPLEMENTATION                                                                                                                                                                                                                        |                 | IETA notes the urgency of tackling the climate crisis today. It is key to accelerate investments into climate solutions. In order to do this, we need to scale high quality credits currently available in the market. The proposed process runs the risk slowing down rather than accelerating high quality transactions. | To avoid any further delay, IETA recommends simplifying the process to allow for CCP verification to be applicable in early 2023.                                                                                                                                                                                                                           |
| 2430 | IETA                 | AP 1.5: PHASED APPROACH TO CCP IMPLEMENTATION                                                                                                                                                                                                                        |                 | 0                                                                                                                                                                                                                                                                                                                          | The assessment procedure should focus on approving crediting programmes first by reviewing existing practices to address safeguards, additionality, robust quantification and permanence.                                                                                                                                                                   |
| 2430 | IETA                 | AP 1.5: PHASED APPROACH TO CCP IMPLEMENTATION                                                                                                                                                                                                                        |                 | 0                                                                                                                                                                                                                                                                                                                          | As part of this process, IETA recommends the establishment of multistakeholder working groups to create a continuous improvement cycle reflecting scientific and market advances. These working groups would primarily tackle common issue areas such as additionality, permanence and SD Impacts.                                                          |
| 2430 | IETA                 | AP 1.5: PHASED APPROACH TO CCP IMPLEMENTATION                                                                                                                                                                                                                        |                 | 0                                                                                                                                                                                                                                                                                                                          | Working groups could also include the review of certain credit types to create principles-based recommendations on typologies that may warrant further examination.                                                                                                                                                                                         |

| 2430 | IETA                 | AP 1.5: PHASED APPROACH TO CCP IMPLEMENTATION                                                                                                                                                                                                              | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | IETA would further like to note that individual members have proposed a number of alternative approaches to the assessment procedure, such as spot checks on key credit types, the use of positive & negative lists, or implementation a 0-5 grading system against the full threshold criteria in lieu of a pass/fail assessment.                                                                                                                                                                                                                                                       |
| 2431 | IETA                 | Consultation Question from the Summary for Decision Makers<br>Are the requirements appropriately balanced between the initial and full stringency thresholds to address outstanding integrity concerns affecting the trust in the voluntary carbon market? |                 | IETA supports the concept of an initial threshold requirement that reflects current best practice in the market. We believe the best way to improve integrity in the market is start with a threshold that is achievable by the leading programmed within reasonable timeframes, such as those endorsed by ICROA. This should be followed by a mechanism to review and adjust the requirements over time which is backed by science, experience gained with the practical application of the quality threshold, and in alignment with the governance processes of the existing crediting programmes.                                                                                                                                                                                                                                                                                                                                                 | IETA's recommendation is that there should be an initial threshold based on current best practice (that is leading practices beyond BAU) against which CCP eligibility is assessed. This threshold could evolve over time to reflect changes in the consensus on what constitutes best practice. This will require an ongoing consensus and consultation approach as each new threshold is considered. The full stringency requirements could act as a guide to indicate how the threshold may change in the future, but commitment towards them should not be required from the outset. |
| 2431 | IETA                 | Consultation Question from the Summary for Decision Makers<br>Are the requirements appropriately balanced between the initial and full stringency thresholds to address outstanding integrity concerns affecting the trust in the voluntary carbon market? |                 | IETA does not support the phased approach to implementation of the CCPs as currently proposed by the IC-VCM. There are several reasons that led us to take this position: Under the proposed approach, CCP eligibility against the initial threshold – for both crediting programmes and carbon credit types – requires a commitment from crediting programmes to take all reasonable steps to meet the more stringent requirements of the assessment framework in a timely manner.                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 2431 | IETA                 | Consultation Question from the Summary for Decision Makers<br>Are the requirements appropriately balanced between the initial and full stringency thresholds to address outstanding integrity concerns affecting the trust in the voluntary carbon market? |                 | The requirements of the initial threshold will already be very challenging to meet. Implementation of the criteria as outlined would take years, meaning no credits currently available in the market would be CCP eligible until such a time as programmes are able to comply.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 2431 | IETA                 | Consultation Question from the Summary for Decision Makers<br>Are the requirements appropriately balanced between the initial and full stringency thresholds to address outstanding integrity concerns affecting the trust in the voluntary carbon market? |                 | Requiring crediting programmes, from the outset, to also take all reasonable steps towards meeting the full stringency requirements is likely to be a step too far. In many cases, crediting programmes simply will not be able to make these commitments because they do not have unilateral control over the rules and modalities of their programme. If they wish to make changes, their own governance procedures may require them to conduct extensive consultations and seek expert reviews to understand how any proposed changes may affect their constituents. Consequently, they may not have the ability to commit to take all reasonable steps to meet the more stringent requirements that would breach their own governance procedures. Setting out full stringency requirements in 2022 also runs the risk of falling behind best practice for high quality credits by the time such a full threshold is applied years down the road. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| 2432 | IETA                 | Continued from previous comment                                          |                 | If crediting programmes don't feel they can make such a large commitment at the outset, it will deter them from applying for assessment against the CCPs and engaging in the process. This will be highly damaging for the Integrity Council. If the major crediting programmes chose to refrain from assessment, it could irrevocably damage the reputation of the Integrity Council as it seeks to gain credibility and authority as a regulator of the market.                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 2433 | IETA                 | AP 1.5: PHASED APPROACH TO CCP IMPLEMENTATION Initial Threshold          |                 | IETA calls on the IC-VCM, the Expert Panel and Board to create a threshold that can be seamlessly applied today, in order to create confidence in the market without further delay.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Requirements for the first phase should reflect best practice in the market (based on a broad benchmarking exercise), building on existing assessments by ICROA and CORSIA.                                                                                                                                                                                                                                            |
| 2433 | IETA                 | AP 1.5: PHASED APPROACH TO CCP IMPLEMENTATION Initial Threshold          |                 | IETA supports the concept of an initial threshold requirement that reflects current best practice in the market. We believe the best way to improve integrity in the market is to start with a threshold that is achievable by leading programmes within reasonable timeframes, such as those endorsed by ICROA and the independent crediting programs approved by ICAO.                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 2433 | IETA                 | AP 1.5: PHASED APPROACH TO CCP IMPLEMENTATION Initial Threshold          |                 | IETA recommends that best practice be determined via a broad benchmarking exercise focused on practices across programmes. Crediting programmes today employ different approaches to address common concerns such as additionality, permanence, SDG Impact and leakage. A review of current practice would yield much needed clarity on the sufficiency and improvement areas of these measures.                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 2433 | IETA                 | AP 1.5: PHASED APPROACH TO CCP IMPLEMENTATION Initial Threshold          |                 | This should be followed by a continuous improvement mechanism, to update the requirements over time which is backed by science, experience gained with the practical application of the threshold, and respectful of the governance processes of the existing programmes.                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 2434 | IETA                 | AP 1.5: PHASED APPROACH TO CCP IMPLEMENTATION Full Threshold requirement |                 | The dangers of the extensive requirements as laid out in the current proposal are two-fold: if crediting programmes and active proponents don't believe they can meet the threshold (and many of say they cannot) they may not apply for CCP assessment thereby rendering the verification moot. Secondly, the monitoring and governance systems required to enforce these criteria require tremendous resources and pose a potential multi-year bottle neck in bringing CCP units to market. This will effectively slow down investment flows to climate mitigation activities at a time when we need to accelerate our actions to stay within global temperature limits of 1.5°C. | IETA proposes that the IC-VCM adopt a continuous improvement mechanism to ensure ongoing updates of the CCP and Assessment Framework. A continuous improvement mechanism would ensure that new advancements and best practice can be reflected in the CCPs rather than pre-defining full threshold requirements today that may not meet quality requirements in the future market or that programmes cannot commit to. |
| 2434 | IETA                 | AP 1.5: PHASED APPROACH TO CCP IMPLEMENTATION Full Threshold requirement |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Such a continuous improvement mechanism should interlink with the cycle of updates implemented by the programmes. It is key to ensure predictability of updates by indicating provisions subject to updates for each cycle and implementing a set review cycle, members recommended 3-5 years.                                                                                                                         |
| 2434 | IETA                 | AP 1.5: PHASED APPROACH TO CCP IMPLEMENTATION Full Threshold requirement |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Under the continuous improvement mechanism, IETA recommends the ICVCM establish multi-stakeholder working groups – managed by the IC-VCM - to address continuous improvements across issue areas. Such an approach ensures the inclusivity of solutions-developed while ensuring both high ambition and a commitment to implementation by CCP approved entities.                                                       |

| 2434 | IETA                 | AP 1.5: PHASED APPROACH TO CCP IMPLEMENTATION Full Threshold requirement                             | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | · Specific credit types                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 2435 | IETA                 | 3: ASSESSMENT OF CARBON CREDIT TYPES                                                                 |                 | IETA fundamentally questions whether the IC-VCM should assess all carbon credit types. There are a number of considerations that may make this unworkable in practice. For one, the categories of credit types are broad and there are many nuances with each one that may frustrate an accurate assessment against the CCPs. For instance, the CCP eligibility of a category such as “renewables” will be affected by a variety of factors such as:                                                                                                                                                                                                                       | IETA recommends the CCP eligibility assessment remains at the crediting programme level in the first instance while also defining a list of ‘hot spot’ credit types and methodologies that warrant further analysis. The hot spot list would be excluded from the initial approval of programmes and continue to be assessed on a rolling basis. In all likelihood, credits included in the hot spot analysis require a tailored set of interventions to address the specific concerns of the expert panel, such as vintage cut-offs for renewables or methodology-level assessments for some NCS categories. |
| 2435 | IETA                 | 3: ASSESSMENT OF CARBON CREDIT TYPES                                                                 |                 | The technology type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Strong emphasis should be placed on the MRV requirements of the applicant programmes to ensure they have the necessary procedures in place to make accurate judgements on the integrity of activities and their credit types. Implementing a blanket approach to assessing all credit types will not be workable.                                                                                                                                                                                                                                                                                             |
| 2435 | IETA                 | 3: ASSESSMENT OF CARBON CREDIT TYPES                                                                 |                 | The policy framework of the host country/location                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | IETA recognizes there is a need to build trust in the VCM. The Integrity Council should conduct spot checks on certain credit types, or sub-types, where integrity concerns exist. The Integrity Council could draw on information available to the market (such as from rating agencies), to help evaluate where to conduct spot checks. The IC-VCM consistently applying spot checks across programmes and methodologies will ensure the application of the spirit of the CCPs by programmes and send a market signal.                                                                                      |

| 2435 | IETA                 | 3: ASSESSMENT OF CARBON CREDIT TYPES                                                                 |                 | In addition to this, the current proposal envisages a five-year validity period for CCP eligible credit types. But methodologies are constantly being updated or new methodologies are regularly being developed. Therefore, either the five-year validity period will be far too long to keep up to date with changes that are occurring, or it will send a signal to the market to stop innovating. Neither of these outcomes would be beneficial to this process. The market practice for assurances processes provides for a three-year validity period but the standards being applied typically are not as intrusive or prescriptive as that proposed by the IC-VCM. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2435 | IETA                 | 3: ASSESSMENT OF CARBON CREDIT TYPES                                                                 |                 | Forming a proper judgement on CCP eligibility would require an assessment at the methodology or project level, but clearly this is impractical. Therefore, we understand the logic of this middle-ground approach that the Integrity Council has proposed, but we are concerned that it would still require an undue amount of work without producing the desired results.                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2436 | IETA                 | General comments on mandate in relation to assessment decisions, enforcement, complaints and appeals |                 | The IC-VCM intention is to create a common quality threshold to ensure quality of VCCs and confidence in the market. This intention of the IC-VCM as a standard setter is wholeheartedly supported. If done correctly, market participants should want to apply for accreditation.                                                                                                                                                                                                                                                                                                                                                                                         | Focus IC-VCM mandate at the level credit production and avoid replicating resource intensive assurance processes. Focus on developing principles-based recommendations for crediting programmed to implement. Devolve complaints and appeals for decisions of the ICVCM in evaluating crediting programs to independent 3rd party.                                                                                                                                                                                                                                                                            |

| 2436 | IETA                 | General comments on mandate in relation to assessment decisions, enforcement, complaints and appeals |                 | The primary concern is the extent of the IC-VCM mandate which will require significant resources to conduct ongoing assurance processes. Members question whether it is more fitting for these activities to be conducted by existing market participants (accreditation and verification bodies).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2436 | IETA                 | General comments on mandate in relation to assessment decisions, enforcement, complaints and appeals |                 | On the mandate of the IC-VCM, IETA would like to note that members broadly support the assessment and assurance mechanisms. However, concerns were raised over the complaints and appeals procedure for decisions of the ICVCM in evaluating crediting programs, which was perceived to be more appropriately housed by an independent 3rd party.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2437 | IETA                 | 4: APPLYING ASSESSMENT DECISIONS                                                                     |                 | CCP tagged credits will be the final outcome of the assessment process, therefore the whole system will rely on accurate tagging. Given that there are millions of carbon credits currently in circulation in the voluntary market, the scope for inaccurate tagging – either accidental or deliberate – will be large and could come with significant financial and legal implications.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | The Integrity Council should consider the role of technical solutions to this challenge, such as the Climate Warehouse. These large-scale pieces of market infrastructure will be vital to provide accurate information to the market, track changes to the CCP status of credits and help identify where accurate tagging has occurred. The Integrity Council should engage closely with infrastructure providers to ensure their systems are sufficiently robust to deliver this service. |
| 2437 | IETA                 | 4: APPLYING ASSESSMENT DECISIONS                                                                     | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | A rigorous assurance process will also be needed. The Integrity Council should provide more detail on how this will work to ensure it is fit for purpose.                                                                                                                                                                                                                                                                                                                                   |
| 2438 | IETA                 | 5 & 6: ONGOING ASSURANCE, ENFORCEMENT, COMPLAINTS AND APPEALS                                        |                 | Governance of the production of credits means ensuring VCCs attain certain quality standards of additionality and verification. Currently each issuing standard sets its own eligibility criteria for projects that it registers, as well as for entities that can obtain access to the registry, making it difficult for market participants to easily verify the quality and consequently the value (both from an impact level and a fair price) of a VCC.                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2438 | IETA                 | 5 & 6: ONGOING ASSURANCE, ENFORCEMENT, COMPLAINTS AND APPEALS                                        |                 | The IC-VCM intention is to create a common standard to ensure quality if VCCs and confidence in the market. This intention is wholeheartedly supported. If done correctly, market participants should want to apply for accreditation. However, on consideration of the extensive CCP assessment criteria it appears the system proposed will create another layer of scrutiny that will be impractical, or even impossible, to meet, and may end up with low or no uptake in applications. The risk is that, with the publicity around CCPs, end buyers may make an assumption that if there is no or little uptake of accreditation that means the general quality is low, and confidence ebbs and then cash stops flowing. Instead of scaling up the VCC market, the CCPs as they stand, could have the unintended consequence of causing the market in VCCs to shrink. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2439 | IETA                 | 5 & 6: ONGOING ASSURANCE, ENFORCEMENT, COMPLAINTS AND APPEALS<br>Continued                           |                 | IETA has concerns that the current proposals for assurance, enforcement, complaints and appeals oversteps the mandate of the Integrity Council. Many of the programmes that might apply for assessment already have many layers of oversight and regulation. These may be internal processes within the programmes themselves, but could also include regulation from external bodies such as:                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | IETA recommends that the role of the Ombudsman is separate from the Integrity Council its remit is restricted to assessing the decisions taken by the Integrity Council in respect of the assessments against the CCPs.                                                                                                                                                                                                                                                                     |

| 2439 | IETA                 | 5 & 6: ONGOING ASSURANCE, ENFORCEMENT, COMPLAINTS AND APPEALS<br>Continued                                                                                                                                                |                 | Adding an extra layer of oversight from the Integrity Council ('checking the checkers') may be unnecessary in many cases but also risks creating conflicts with existing systems already in place.                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                       |
| 2439 | IETA                 | 5 & 6: ONGOING ASSURANCE, ENFORCEMENT, COMPLAINTS AND APPEALS<br>Continued                                                                                                                                                |                 | On the mandate of the IC-VCM, IETA would like to note that there is strong support for the IC-VCM as a standard-setter. Members also broadly supported the assessment and assurance mechanisms, while raising resource restrictions causing potential bottlenecks.                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                       |
| 2439 | IETA                 | 5 & 6: ONGOING ASSURANCE, ENFORCEMENT, COMPLAINTS AND APPEALS<br>Continued                                                                                                                                                |                 | However, concerns were raised over the complaints and appeals procedure which was perceived to be more appropriately housed by an independent 3rd party.                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                       |
| 2439 | IETA                 | 5 & 6: ONGOING ASSURANCE, ENFORCEMENT, COMPLAINTS AND APPEALS<br>Continued                                                                                                                                                |                 | As an example, IETA has concerns with the Integrity Council's intention to act as an Ombudsman to the market. Firstly, the Ombudsman role may not be fully impartial as they may be providing a grievance process on decisions the Integrity Council has made but are implemented by the crediting programmes. Secondly, there could be scenarios where the Ombudsman seeks to overrule the grievance process that a programme maintains, which would call into question the authority of the Integrity Council to make such rulings. | 0                                                                                                                                                                                                                                       |
| 2440 | IETA                 | Consultation Question from the Summary for Decision Makers<br>Should the Integrity Council reserve the right by exception to assess programs unsolicited, at its own discretion, based on publicly available information? |                 | IETA does not believe that the Integrity Council should assess programmed unsolicited. The Integrity Council should aim to develop a cooperative system that incentivises programmes to apply for assessment because they see a value in it. Conducting unsolicited assessments would be the opposite of this cooperative approach.                                                                                                                                                                                                   | IETA's recommendation is that in circumstances where an unsolicited assessment might be considered, time and effort is instead spent on engaging with the programme and understanding why they have not chosen to apply for assessment. |
| 2440 | IETA                 | Consultation Question from the Summary for Decision Makers<br>Should the Integrity Council reserve the right by exception to assess programs unsolicited, at its own discretion, based on publicly available information? |                 | The proposed assessment procedure – following application by a programme, – also places a strong emphasis on interaction and dialogue between the executive secretariat, expert panel and the applicant programme. If that dialogue is absent in an unsolicited assessment, it will reduce the accuracy of the assessment and raise doubts over the final decision. This will likely reduce trust in the Integrity Council's processes and do nothing to raise integrity in the market.                                               | 0                                                                                                                                                                                                                                       |

| 2441 | IETA                 | Consultation Question from the Summary for Decision Makers<br>Should the Integrity Council draw on assessments by the Technical Advisory Body under CORSIA or any other comparable body?                                                                                                                                                                                                     | 0               |                                                                                                                                                                                                                                                                                       | IETA recommends the Integrity Council to draw on assessments conducted by other bodies when conducting their own assessments of carbon crediting programmes. The work carried out by other groups, such as ICAO's Technical Advisory Body or ICROA Standards Assessment Procedure, has been very extensive and in many cases will be duplicative of the assessments that the Integrity Council will undertake. Given the large workload that will be required at the outset to assess programmes and credit types, and the limited resources available, we recommend the Integrity Council draw on these other assessments to fullest extent possible in order to expedite their work programme in this start-up phase. Work could possibly be undertaken by these parties to seek greater alignment and standardization of their assessment criteria. |
| 2442 | IETA                 | Consultation Question from the Summary for Decision Makers<br>The Integrity Council is considering the use of conditional approval to expedite initial threshold uptake. During such timeframe, carbon-crediting programs will be granted CCP-approved status. When and how should pledges or commitments be presented, monitored and what sanctions should apply in case of non-fulfilment? |                 | When polled, Members supported the use of conditional approval to expedite initial threshold uptake. IETA would like to recall the initial threshold should reflect current best practice in the market in order to expedite uptake over all (as laid out under 1.5 phased approach). | Following assessment of the crediting programme, a list of these remedial actions should be developed by the Integrity Council and the crediting programme, which need to be undertaken to receive full approval against the initial threshold. These actions, along with reasonable timeframes to deliver them, should be published on the Integrity Council's website. The crediting programme should remain in close dialogue with the Integrity Council to report progress on undertaking the remedial actions.                                                                                                                                                                                                                                                                                                                                    |
| 2442 | IETA                 | Consultation Question from the Summary for Decision Makers<br>The Integrity Council is considering the use of conditional approval to expedite initial threshold uptake. During such timeframe, carbon-crediting programs will be granted CCP-approved status. When and how should pledges or commitments be presented, monitored and what sanctions should apply in case of non-fulfilment? | 0               |                                                                                                                                                                                                                                                                                       | If the remedial actions cannot be implemented within the stated timeframes, conditional CCP approval should be removed. In these circumstances, the crediting programme will then need to meet the initial threshold requirements before receiving full CCP approval.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 2443 | Verra                | Additionality                                                                                                                                                                                                                                                                                                                                                                                |                 | The high-level definition of additionality refers narrowly to "the incentive created by carbon credit revenues", which suggests an inappropriate primary emphasis on financial additionality within the additionality concept.                                                        | Change the reference from "carbon credit revenues" to "carbon markets"                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 2444 | Verra                | No double counting                                                                                                                                                                                                                                                                                                                                                                           |                 | The double counting principle is too broad in stating that all forms of double counting must be avoided. See Verra input on this principle in the SDM part 3.                                                                                                                         | · Include nuance in the high-level double counting principle to recognize that some double counting (but not all) can lead to problems of mitigation efforts being reduced. Suggest replace with: "The GHG emission reductions or removals from a mitigation activity shall not be double-counted where this would lead to a reduction in aggregate mitigation effort."                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| 2451 | Verra                | Question: Are there principles, criteria and requirements that are not relevant or should not be included in the draft CCPs and draft Assessment Framework? | 0               |                   | <ul style="list-style-type: none"> <li>· Instead of making global assessments of what project types are additional and which methodologies are adequate, the ICVCM needs to draw itself back to a level of assessing programs on whether they appropriately determine additionality and methodologies. Concretely, this means the outcome of assessments would only be issued at the program level. The assessment could of course still examine a lower tier of information on programs – including additionality and methodology decisions – but this would be done in a targeted manner to inform whether standards and processes applied at the program level are adequate. This could be done, for example, through sampling or spot checks, without needing to undertake full reviews of all project types and the hundreds of approved methodologies. This approach would support improvements in programs’ processes, while continuing to respect the role of programs and reducing the assessment burden on the ICVCM.</li> </ul> |

In practice, many of the requirements set out in the assessment framework are either applied at the program level or are applied consistently across a program’s methodologies.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 2451 | Verra                | Question: Are there principles, criteria and requirements that are not relevant or should not be included in the draft CCPs and draft Assessment Framework? | 0               |                   | <ul style="list-style-type: none"> <li>· We are generally concerned that the ICVCM process is at risk of creating significant friction in the carbon market that could impede necessary climate action. While integrity is obviously important, so is impact. If ICVCM spends too much effort defining and assessing the minutia of VCM processes and methodologies it will become an impediment to scaling activity and create significant distortions in the market. There is also a risk of holding voluntary activities to a significantly higher standard than direct regulations and programs, when VCM by their nature are one of the few tools to drive emissions reductions beyond regulatory requirements and close the gap between policies and climate targets. The feasibility of the process may be as important as the substance of the assessments in this sense. We strongly recommend simplifying and phasing the process so that it can be implemented fairly and efficiently.</li> </ul>                               |

| 2452 | Verra                | Question: Are there principles, criteria and requirements that are not included and should be added?                                                                                                   | 0               |                   | <ul style="list-style-type: none"> <li>The ICVCM should add a requirement that programs have credible procedures to systematically review their scope of allowable mitigation activities. This could include a consideration of additionality across specific programs or geographic locations and conditions, where there is a wish to simplify the response to additionality or where there are concerns that additionality tools may not always sufficiently reduce the risk of non-additional projects being registered. A systematic review process by programs should ensure scope is reviewed at least every five years. Many programs already make such decisions on program scope but there is a general need to formalize and regularize the review processes within programs. Making this requirement explicit within the AF also means that the assessment of overall likelihood of additionality per activity type, as seen in step 1 of the additionality framework, does not need to be undertaken by the ICVCM because there is assurance it is being done by programs.</li> </ul> |
| 2452 | Verra                | Question: Are there principles, criteria and requirements that are not included and should be added?                                                                                                   | 0               |                   | <ul style="list-style-type: none"> <li>We understand the wish among many actors in the market – where a broad and consultative process leads to a conclusion that a project type is inappropriate in the voluntary market – that this should be assigned to a small negative list. However, any such process can be very targeted and is not a rationale for making generic additionality determinations of all project types. The time and resources required by ICVCM to assess all project types will block both the working of the market and valuable climate action.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 2453 | Verra                | Question: Are the requirements appropriately balanced between the initial and full stringency thresholds to address outstanding integrity concerns affecting the trust in the voluntary carbon market? | 0               |                   | <ul style="list-style-type: none"> <li>We consider that the phasing of initial and full requirements in the assessment framework and procedure should be replaced with a more conventional version control of the CCP and AF. This would define the requirements of a version 1 of the CCP and AF at an ambitious but achievable level that matches best practice among programs while still leading to immediate improvements in some achievable areas.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| 2453 | Verra                | Question: Are the requirements appropriately balanced between the initial and full stringency thresholds to address outstanding integrity concerns affecting the trust in the voluntary carbon market? | 0               |                   | <ul style="list-style-type: none"> <li>Specifying requirements at the outset with no expectation they will be met for some time, as is currently foreseen in the initial/full phasing approach, will undermine confidence in programs as it implies they are deficient until such full requirements are met. The nature of standards is in fact that the benchmark of integrity is set by the requirements prevailing at a particular point of time but that these evolve over time. For any standard elaborated at the level of detail of the draft AF, it is not realistic to suggest that any current formulation of “full” requirements can be final; there will be need to revise both the initial and full requirements over time.</li> </ul>                                                                                                                                                                                                                                                                                                                                                |

| 2454 | Verra                | Question: What timeframe would you recommend for the duration of the initial threshold, taking into account the time needed for carbon-crediting programs to revise standards, processes and procedures; carbon-crediting periods; issues related to legal contracts etc.? | 0               |                   | <ul style="list-style-type: none"> <li>As argued in our last point about the initial/full phasing approach, we consider this should be replaced by a more conventional version control of the CCP and AF. The timing of version 2 would depend on the degree to which requirements are expanded in this version beyond version 1, however we could imagine that version 2 of the AF could be introduced 1-2 years after version 1 is established. Programs would be gaining insight from the collaborative work programs as to the nature of forthcoming requirements and how to implement them.</li> </ul>                                                                                                                                                                                                                                                                                                     |
| 2455 | Verra                | Question: Is this different for different areas of the draft Assessment Framework?                                                                                                                                                                                         | 0               |                   | <ul style="list-style-type: none"> <li>There is need to manage the evolution of the CCP and AF in a stable, clear and simple manner. The implementation time of new requirements should determine which version of the CCP and AF they are included in. If some new requirements will take longer to implement than the general timing of version 2, or are of a lesser priority for implementation than other requirements, these should be held back to version 3. Over time, we see that the CCP and AF should be ever evolving and improving.</li> </ul>                                                                                                                                                                                                                                                                                                                                                    |
| 2456 | Verra                | Question: Are there other key considerations that should be explored?                                                                                                                                                                                                      | 0               |                   | <ul style="list-style-type: none"> <li>The evolution of the CCP and AF should prioritize issues which are understood to potentially suffer from integrity issues. This more targeted or surgical approach can help the ICVCM ensure it is making a big impact early on and then expanding this over time in an achievable manner. Our concern with the current approach seen in the CCP and AF is that it demands perfection on all fronts immediately (with some exceptions due to the initial/full phasing). This will bog down the assessment system with evaluations of issues we are relatively confident are already in reasonable shape, with the impact that the credibility of current programs will be undermined, the marketplace will become uncertain, and the mobilization of investment and climate action sought by the ICVCM will be halted.</li> </ul>                                        |
| 2456 | Verra                | Question: Are there other key considerations that should be explored?                                                                                                                                                                                                      | 0               |                   | <ul style="list-style-type: none"> <li>The ICVCM needs to recognize that risks differ across project types and geographical location and other conditions, and programs are able to adjust their requirement and practices in order focus attention in higher risk areas.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2456 | Verra                | Question: Are there other key considerations that should be explored?                                                                                                                                                                                                      | 0               |                   | <ul style="list-style-type: none"> <li>The longer-term CCP work program we are suggesting should present the structure and timelines for the further elaboration of subsequent versions of the CCP and AF and identify issues needing to be addressed in further detail or new issues to be integrated. The ICVCM and all market participants will learn a lot from the first round of assessments, and there should be a plan to apply these learnings to future versions rather than assuming it can be designed perfectly up front.</li> </ul>                                                                                                                                                                                                                                                                                                                                                               |
| 2457 | Verra                | Question: Should the Integrity Council draw on assessments by the Technical Advisory Body under CORSIA or any other comparable body?                                                                                                                                       | 0               |                   | <ul style="list-style-type: none"> <li>Yes. At least for the assessment against version 1 of the CCP and AF, the ICVCM should leverage the assessment undertaken in the CORSIA GHG program review as much as possible. This is the most comprehensive review of crediting programs to date and has considerable overlap with the assessment framework for the CCP. To date, CORSIA has approved eight GHG programs, of the 23 that have applied, demonstrating the effectiveness of its work to exclude programs that do not sufficiently ensure integrity. To be clear, version 1 of the CCP and AF can be broadly aligned with CORSIA requirements, meaning that CORSIA's approval of programs against its requirements should be sufficient to be trusted by the ICVCM process without having to repeat the assessment of these requirements. This can considerably accelerate the ICVCM process.</li> </ul> |
| 2457 | Verra                | Question: Should the Integrity Council draw on assessments by the Technical Advisory Body under CORSIA or any other comparable body?                                                                                                                                       | 0               |                   | <ul style="list-style-type: none"> <li>Importantly, however, if it is considered that the CORSIA process has shortcomings vis-à-vis the requirements set for the CCP and AF, in particular where these are considered to be more problematic or of higher risk, the ICVCM may supplement CORSIA's assessment with targeted assessment of its own even in the assessment against version 1. Such areas might include issues like permanence, AFOLU projects and large-scale, grid-connected renewable energy.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                         |

An ongoing evolution in ambition should also be maintained by (a) conducting work programs, in consultation with programs, to elaborate further requirements to be contained in subsequent versions of the assessment framework, and (b) establishing a separate attribute with a higher degree of sustainable development impacts and safeguards that programs may apply for in addition to the CCP attribute. Programs would have an incentive to attain this attribute, in particular where they are active in certifying projects for which sustainable development risks or potential positive impacts are greater.</li> </ul> |

The assessment could of course still examine a lower tier of information on programs – including additionality and methodology decisions – but this would be done in a targeted manner to inform whether standards and processes applied at the program level are adequate. This could be done, for example, through sampling or spot checks, without needing to undertake full reviews of all project types and the hundreds of approved methodologies. Under this approach, the ICVCM would not attempt a global additionality assessment of project types (step 1 of the additionality framework) but would instead allow programs the scope to take account of local circumstances and expertise. We also consider however that this should include a requirement for programs to undertake a regular review of the allowable scope of activities within their programs, including through a process equivalent to the assessment of overall likelihood of additionality per activity type seen in step 1 of the assessment framework.</li> </ul> |
| 2465 | Verra                | Additionality for project-level mitigation activities                                                                                                                                                                                                                                                                                                                 | 0               |                   | The focus exclusively on carbon prices and financial additionality will be a significant challenge. Carbon prices can be highly variable and uncertain, as can other project cost and revenue streams such as fuel prices, and different stakeholders have different tolerance for risk and prioritization of pure financial factors vs other factors in deciding whether to undertake an activity. For example, a renewable energy project's financial additionality will depend on electricity prices, the make-up of the local grid, exposure of the grid to fuel prices (liquids, natural gas and coal), local permitting and construction costs, tax rules, subsidies, etc. Many of these cost and revenue considerations will also change significantly over time so a consistent high level global assessment is impossible and more granular regular assessment is impractical for the ICVCM and unlikely to add value relative to robust program rules and procedures.                                                                                                                                                                                                           |

| 2467 | Verra                | Additionality for jurisdictional REDD+ activities:    | 0               |                                                                                                                                                                                                                                                                                                                                                | While Verra supports nesting (our VCS JNR framework sets out the best available process for nesting), we do not support a requirement for projects to be nested in jurisdictional baselines in the short or medium term. To ensure the integrity of our carbon units, standards such as the VCS have different and more rigorous requirements for REDD projects and programs than most jurisdictions. Over time, technological, governance, and other evolutions at the jurisdictional level will allow for the easier development of jurisdictional REDD programs that meet VCM standards' requirements. At the same time, VCM standards' requirements will evolve to meet jurisdictions' needs. Even in the long-term, however, sub-jurisdictional action shouldn't be penalized if it meets a VCM standard, but the jurisdiction has not taken action on REDD. |

| 2468 | Verra                | Additionality for jurisdictional REDD+ activities:    | 0               |                                                                                                                                                                                                                                                                                                                                                | · In VCS JNR, project issuance may be limited by the performance of the jurisdiction in Scenario 3, where credits are only issued to the jurisdiction itself. The jurisdiction distributes the benefits (or lack thereof) through a benefit-sharing program. We think that crediting scenarios should be considered that allow for projects to be credited even if a jurisdiction underperforms (e.g., JNR Scenario 2).                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2469 | Verra                | Para 2                                                |                 | Regulatory additionality needs clarification to accommodate lack of sufficient enforcement. This view is supported by the rationale for criterion 8.4 in the daft AF. Also, being regulated does not necessarily mean that the action is mandated                                                                                              | The sentence ending "if an activity is already regulated, it should not be credited" needs modification because regulated activities are additional in some circumstances.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 2469 | Verra                | Para 2                                                | 0               |                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 2470 | Verra                | Para 1                                                |                 | Carbon credits will not always have been expected prior to the implementation of a J-REDD activity, as it may begin with other funding but then need carbon finance to continue due to changing circumstances. The VCM in relation to J-REDD needs to recognize and work with changes in government, legislation, jurisdictional funding, etc. | Need to amend para 1 to remove any requirement that Jurisdictional REDD+ must provide evidence of the expectation of carbon credits prior to the implementation of the activity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 2471 | Verra                | Last para                                             |                 | This paragraph, in particular the sentence beginning "This view does not imply ..." is very unclear and leaves a lot of uncertainty as to how AF requirements will be applied to jurisdictional REDD+ activities.                                                                                                                              | Reformulate para.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

We understand the need for an objective and transparent system but do not agree that the form of the process needs to be specified in this way. This is largely due to potential resource implications, in particular if there are to be no or few limitations as to the nature of potential grievances that may be raised and who may raise them. | · Crediting programs should have flexibility to determine how to constitute its grievance mechanism within the meaning of this criterion, and that the carbon-crediting program should have the option to constitute the grievance mechanism within its organizational structure. ICVCM requirements should focus on the quality of the processes rather than specifying a particular form. |

| 2478 | Verra                | Table 7             |                 | · d) While this is challenging because of the need to keep the process open, programs need flexibility to guard against de minimis or spurious claims. Measures to effect this may in some circumstances should have flexibility in determining whether and how to charge for evaluating grievances.                                                                                                                                                                                                                                                                                                                                                                                                                                                               | · d) Reasonable measures to guard against de minimis or spurious grievances being raised should be allowable, for example through limiting who may raise grievances, the nature of grievances or when they may be raised. Under some circumstances, it may be appropriate to charge fees for some aspects of the process. The ICVCM process will need to assess any such measures to ensure they are considered reasonable and do not unduly block grievances from being raised or addressed. |
| 2478 | Verra                | Table 7             |                 | · e) Verra disagrees that an “independent committee” should receive and address complaints.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | · e), h) and i) should be deleted                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2478 | Verra                | Table 7             |                 | · h) This is a significant administrative and financial burden. Verra should have flexibility in how grievances are addressed and when and what information on grievances should be made public.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2478 | Verra                | Table 7             |                 | · i) Verra believes this requirement would undermine internal governance structures by ceding control over significant portions of its program to an independent entity not subject to Verra control. It is unnecessary for the core purpose of Governance requirements, which is credit quality. Additionally, this requirement includes a mandate for an independent entity to “redress harms”. There is no internal limitation on this mandate. This requirement would be incredibly difficult to operationalize, and it raises questions for carbon crediting programs, project proponents, and VVBs about potentially significant unknown liability.                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2478 | Verra                | Table 7             |                 | · This would also hamstring the ability of crediting programs to administer their programs as this could give PPs infinite opportunities to challenge the decisions made by programs. As a result, this would generate tremendous uncertainty in the market.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2479 | Verra                | Table 8             |                 | · a) Meaning of the requirement is unclear.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | · a) Propose the following revision to Requirement a): “The carbon-crediting program shall have robust procedures and checks related to the identification and assignment of account representatives (e.g., know your customer checks) for opening an account, to ensure that carbon credits are issued to the correct account.”                                                                                                                                                              |
| 2479 | Verra                | Table 8             |                 | · b) and c) Verra makes project proponents responsible for compensating for excess credits in cases of erroneous over-issuance. We do not consider that establishing liability for buyers or VVBs is workable in the market.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | · d) Propose revision to read: “The carbon-crediting program shall transparently identify credits that have been authorized for international transfer for “other mitigation purposes”                                                                                                                                                                                                                                                                                                        |
| 2479 | Verra                | Table 8             |                 | · d) It is not necessary that programs must always require information on whether the use of credits has been authorized under Article 6 by host countries. It is sufficient to require information when the use of a credit has been authorized. Verra intends to label VCUs where they are authorised, but Verra disagrees that it should have to indicate whether all VCUs are authorised or not.                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

They are also intrusive into the internal management decisions of carbon crediting programs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Delete requirements a), b), d), e), and g).                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 2480 | Verra                | Table 9             |                 | · d) and e) Some of these requirements are akin to financial disclosure requirements for publicly traded companies, and are inappropriate for non-profit carbon crediting programs. The scope of the disclosure requirements is broad and would be administratively burdensome.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2480 | Verra                | Table 9             |                 | · g) ISO 26000 is a set of recommendations, not requirements. There is no certification process. So, it is not something that a carbon-crediting program can “adhere” to. Verra supports procedures and policies around sustainability. However, Verra recommends that ICVCM clarify the scope of the required procedures. The current requirement includes the phrase “and promoting a positive impact on social issues such as” and then lists a number of issues. However, the use of the term “such as” makes this requirement free-floating and indeterminate. Verra recommends that the ICVCM focus this requirement on procedures that directly relate to the purposes of having governance requirements generally (i.e., credit quality and market trust). | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| 2482 | Verra                | Table 11                                                        |                 | · g) While we agree in general with conservativeness, the CCP should not strive to add conservativeness when a more accurate estimate is reasonable. Accuracy is a first order principle, whereas conservativeness is used to compensate for inaccuracy and uncertainty.                                                                                                                                                                                                                                                                                                                                                                                                                                         | · g) remove “(rather than striving to use the most accurate estimate)”                                                                                                                                                                                                                                             |
| 2482 | Verra                | Table 11                                                        |                 | · h) This requirement is very general and it is difficult to know what program requirements would be adequate. It is easy to say consider but hard to be more directive at a program level.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | · i) add “Such projects are allocated credits based on their individual performance or as agreed with the jurisdiction.”                                                                                                                                                                                           |
| 2482 | Verra                | Table 11                                                        |                 | · i) and j) It is unclear if nested projects in a jurisdictional program would be allowed to be directly credited. We do support direct crediting of nested projects based on project-level performance or as otherwise agreed with the jurisdiction. If we understand j) correctly to mean that project performance should relate directly to jurisdictional performance, we do not support it.                                                                                                                                                                                                                                                                                                                 | · j) Select option 2 (include no text on this issue)                                                                                                                                                                                                                                                               |
| 2482 | Verra                | Table 11                                                        |                 | · k) It is not necessary to align crediting periods with NDC cycles, as this will create artificially short crediting periods near the years when NDC change. It is more important that the crediting periods fit with the activity and economics of the projects. What is useful to follow is the increased dynamism of crediting periods, such that they are renewed every five years (but not necessarily in 2030, 2035, etc), with accompanying opportunities to adjust baselines and possibly reassess additionality.                                                                                                                                                                                       | · k) transform requirement into requiring 5 yearly crediting periods and renewals, with obligation to review baselines.                                                                                                                                                                                            |
| 2482 | Verra                | Table 11                                                        |                 | · m) Need more clarity on this concept. Are these additional parameters to be monitored on top of a methodology? This seems like a methodology requirement rather than a program requirement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                  |
| 2483 | Verra                | GHG emission reductions or removals shall be determined ex-post |                 | Some types of activities such as destruction of ozone depleting substances or diversion of organics from landfill have an activity that is verifiable but the emissions savings relative to baseline will occur over subsequent years. These may not have a risk of reversal and there is often no new information to verify ex post in later years so why not allow crediting at the time of the activity?                                                                                                                                                                                                                                                                                                      | Suggest changing “carbon credits shall not be issued for emission reductions or removals that are yet to occur” to “carbon credits shall not be issued for emission reduction or removal activities that are yet to occur”                                                                                         |
| 2484 | Verra                | Table 12                                                        |                 | A high-level comment on this section is some of the VVB requirements may need to be revisited as digital / automated MRV requirements are defined and begin to be built into carbon crediting program rules.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | No immediate changes needed.                                                                                                                                                                                                                                                                                       |
| 2485 | Verra                | Table 12                                                        |                 | f) The purpose of this requirement is unclear but it seems to question the need for the project’s carbon revenues. If so, this misunderstands the drivers of issuance frequency (e.g., technical constraints, cost, credit price developments) and projects should not be labelled “inactive” for not issuing every year. It is also not clear what grounds programs would have to do anything but issue the credits.                                                                                                                                                                                                                                                                                            | Requirement should be deleted, as currently drafted. It could be considered in the context of considering requests for project crediting period renewal.                                                                                                                                                           |
| 2485 | Verra                | Table 12                                                        |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                  |
| 2486 | Verra                | Table 13                                                        |                 | b) and c) The VVB should not be required to hold accreditation at the time when a verification report is (eventually) submitted to the carbon crediting program. This contradicts table 12g and puts project proponent in the crosshairs of disciplinary action that the program might take – e.g., VVB issues verification report; VVB performance then declines and program/accreditation body suspends VVB’s accreditation. At that point, the project wouldn’t be able to submit the verification report. The CDM made this mistake in its early days, and programs have since come to the working principle with VVB discipline, suspension etc that you need to punish the VVB, not the project proponent. | b) and c) Delete these requirements as these do not concern the accreditation process, but rather validation and verification activities in criterion 3.1 table 12 (where the requirement already states that accreditation must be held at the time of final validation or verification reports being completed). |
| 2487 | Verra                | 0                                                               |                 | · The double counting principle is too broad in stating that all forms of double counting must be avoided and is inconsistent with the argumentation in the SDM. See Verra input on this principle in part 3.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Replace the principle with: “The GHG emission reductions or removals from a mitigation activity shall not be double-counted where this would lead to a reduction in aggregate mitigation effort.” See Verra input on this principle in part 3.                                                                     |
| 2487 | Verra                | 0                                                               |                 | · The test of whether double counting should be avoided is whether it leads to lower mitigation effort than is (a) measured or (b) originally intended. These are met by the forms of double counting addressed in the AF.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                  |
| 2488 | Verra                | 0                                                               |                 | · The list of criteria and their explanations should be consistent between the summary bullets in the opening paras and the subsequent elaboration of criteria. It is very confusing to have inconsistent lists of criteria. However, some of the phrasing in the summary is very helpful and this should be incorporated under the individual criteria.                                                                                                                                                                                                                                                                                                                                                         | Suggest eliminating the opening summary para (with the 3 bullets) and integrating the arguments from the opening summary into the relevant criteria.                                                                                                                                                               |

|------|----------------------|---------------------|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2489 | Verra                | Table 17            |                 | · In principle, double registration under two programs should be allowable as long as they are not issuing credits for the same monitoring/verification period. This may be valid if the project proponents wish to preserve access to different credit markets. However, allowing this relies on an adequate system of checks across programs.                                                                | · Apply same distinction of within and between programs, as with criterion 4.2                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2489 | Verra                | Table 17            |                 | · The meaning of “active” needs clarification and it is not clear whether and if it should be prohibited.                                                                                                                                                                                                                                                                                                      | · a) Requirement is not needed as it is covered by requirement b                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2489 | Verra                | Table 17            | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                | · b) Reformulate requirement to focus on a check with other programs prior to issuance and not allowing issuance from same activity in different programs for same monitoring/verification period unless the other program cancels the relevant credits. It should not concern ICVCM whether the first or second program to issue should be the one to cancel. However, the wording should remain open as it may be possible to split such checks between registration and issuance stages, as requiring checks upon every issuance would be too cumbersome. |
| 2489 | Verra                | Table 17            | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                | · Such checks across different crediting programs will require programs to collaborate and create systems to enable checks. This will not be possible to operationalize in the initial period.                                                                                                                                                                                                                                                                                                                                                               |
| 2489 | Verra                | Table 17            | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                | · c) Requirement is repetitive and not needed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 2490 | Verra                | Table 18            |                 | · Criteria 4.1 and 4.2 could be merged. Both require checks at registration and issuance stages, and have within and between program aspects, with the latter needing a cross-program system that will take time to develop. Double registration and overlapping claim are conceptually similar (full or partial degrees of overlap), although arguably partial scope should not be tolerated at registration. | · Requirements can be simplified, for example by merging (b) and (c)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

This is not the role or expertise of crediting programs. The market is developing capacity for price disclosure through service providers and reference contracts.</li> </ul>                                                                                                                                                                                                                                                                                                                                                            |
| 2496 | Verra                | 0                   |                 | While a do no harm approach is the appropriate minimum threshold for social and environmental safeguards, the requirements proposed in Criteria 7.1-7.9 will be challenging in many cases. Many of the requirements will be nearly impossible for projects to meet and for auditors to verify within the initial threshold. | Propose to reevaluate the requirements in this chapter to ensure an ambitious but achievable list. An evolution in ambition should be maintained by (a) conducting work programs, in consultation with programs, to elaborate further requirements to be contained in subsequent versions of the assessment framework, and (b) establishing a separate attribute with a higher degree of sustainable development impacts and safeguards that programs may apply for in addition to the CCP attribute. Programs would have an incentive to attain this attribute, in particular where they are active in certifying projects for which sustainable development risks or potential positive impacts are greater. |
| 2497 | Verra                | Table 27            |                 | Requirements for labour rights and working conditions (e.g., requiring projects to follow local labor laws; requiring projects to monitor supply chains to address labour concerns) are not practical or workable.                                                                                                          | <ul style="list-style-type: none"> <li>Rephrase the requirements to allow for a minimum threshold to be set and complemented by continuous improvement.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| 2504 | Verra                | Table 34            |                 | d) It is too much to ask of project-based activities for them to demonstrate coordination with or fulfil national-level safeguards                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | d) Eliminate “coordinated and”; replace “national” with “jurisdictional”; eliminate “and fulfil their requirements”                                                                                                                                                                                                                                                                                                                                         |
| 2505 | Verra                | Table 35            |                 | · SD impacts are not additive and the concept of net positive SD impacts is not appropriate as currently defined. Without a clear understanding of what is meant, projects may take on significant burden to assess and demonstrate nothing more than “do no harm” levels of SD contribution.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | · Reconsider the “net positive SD impacts” approach and how it differs practically from “do no harm”. We recommend the CCPs focus on mitigation integrity with no net SDG harm and allow SDG benefits certified separately if relevant (i.e., focus on no net harm/safeguards for initial threshold).                                                                                                                                                       |
| 2505 | Verra                | Table 35            |                 | · Qualitative assessment of positive and negative impacts are required at the initial threshold. It is not practical for projects to meet this requirement without significant lead time.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | · If this requirement remains, clarity must be provided on the meaning of “substantive net positive significant SD contribution” (i.e., must projects demonstrate net positive across all SDGs).                                                                                                                                                                                                                                                            |
| 2505 | Verra                | Table 35            | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | · At minimum, table 35 needs revision to list all requirements as needing to be implemented at the 'full' stage at the earliest. However, these requirements as drafted currently will not be feasible to meet even in the full period and it would be both more realistic and effective to shift the bulk of criteria into the attributes framework (see earlier comments).                                                                                |
| 2506 | Verra                | Table 36            |                 | · Many of the requirements for access and benefit sharing are wholly unworkable (e.g., point (I) requiring programs to monitor effective implementation of access and benefit sharing)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | · Remove these requirements. At most, projects should be required as part of the CCP assessment to demonstrate procedures for ensuring equitable and fair benefit-sharing, which could be implemented through, for example, stakeholder engagement and participation requirements at the standard level.                                                                                                                                                    |

It should not focus on the outcome judgements produced by these processes (additionality, methodologies) except for the purpose of informing the assessment of the processes and whether they have been followed.                                                                                                     |
| 2507 | Verra                | 0                   |                 | o Step 2 for additionality (section 8.2 relates to operations at the program level; there may be differences in how programs tailor standards and processes in relation to additionality for different project types, but the way they work and conduct assessments are applied by the program and show a high degree of coherence across project types.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2507 | Verra                | 0                   |                 | o Similarly for permanence (section 9), the tools and process established by programs work coherently across the program. For example, our buffer reserve operates across AFOLU projects and is driven by program-level guidance on how to assess risk and set buffer rates across project types and methodologies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2507 | Verra                | 0                   |                 | o The methodological aspects identified for robust quantification (section 10) are produced by a program-level methodology development process, which seeks to bring coherence to the overall approaches, despite by necessity being tailored to different project types.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2507 | Verra                | 0                   |                 | · Crediting programs are complex systems and good examples display coherence and consistency of approaches across all their activities. The focus of the CCP and AF needs to be reoriented to the program level to evaluate the adequacy and effectiveness of the standards and processes at this program level. As per our comments below, the attempts to really assess different mitigation types (additionality step 1 in section 8.1 and the methodology assessments in section 10.1) duplicate the work of programs but are risk producing summary, generic judgements of enormous significance for the market, for climate action and communities that are appropriate globally. Many programs have very robust measures in place to form judgements, honed over a decade and a half, in which programs have been consulting experts and communities, developing guidance and refining systems and processes. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2508 | Verra                | Intro and figure 3  |                 | · It is not possible to conduct a generic assessment of the overall likelihood of additionality per carbon credit type, as envisaged in the first additionality step, due to the diversity of local circumstances, the lack of appropriate data and the extensive need for specialized and localized expertise. This is already seen in it not being possible to clarify the level of granularity foreseen for the classification in “types of mitigation activity” (individual methodologies or methodology classes).                                                                                                                                                                                                                                                                                                                                                                                               | · This first step should be completely removed from the AF and its procedure.                                                                                                                                                                                                                                                                                                                                                                               |
| 2508 | Verra                | Intro and figure 3  |                 | · The idea of the first step is a conceptual ideal that cannot be realized in practice and will only consume resources, create bottlenecks to the approval of new methodologies and credit types, and stymie progress with actual mitigation, as well as most likely ending in subjective assessments that are unlikely to gain legitimacy or authority. The ICVCM would take on responsibility for the determination of additionality for each type of carbon credit. It will disempower programs and region/activity specific assessments by usurping a role that is properly placed with the programs.                                                                                                                                                                                                                                                                                                            | · The assessment relating to assessment should focus on programs’ approaches and processes in their assessment of additionality. The AF should be modified to approve additionality approaches on a program-by-program basis. This would allow programs to leverage greater volumes of specialist and localized expertise, be flexible to tailor approaches appropriately to local circumstances and continue to innovate while ensuring rigor and quality. |

| 2508 | Verra                | Intro and figure 3          |                 | · The Expert Panel does not have the requisite expertise to conduct the first step.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | · As appropriate, Criteria 8.1 - 8.3 need to be integrated into what is currently portrayed as step 2 (section 8.2, criteria 8.4-8.6).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 2508 | Verra                | Intro and figure 3          |                 | · The time and resources required by ICVCM to assess all project types will block both the working of the market and valuable climate action.                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | · We understand the wish among many actors in the market – where a broad and consultative process leads to a conclusion that a project type is inappropriate in the voluntary market – that this should be assigned to a small negative list. However, any such process can be more targeted and is not a rationale for making generic additionality determinations of all project types.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 2508 | Verra                | Intro and figure 3          | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | · However, we also consider the ICVCM should add a requirement that programs should have in place credible procedures to systematically review the scope of allowable mitigation activities. This could include a consideration of additionality across specific programs or geographic locations, where there is a wish to simplify the response to additionality conditions or where there are concerns that additionality tools may not always sufficiently reduce the risk of non-additional projects being registered. A systematic review process should ensure scope is reviewed at least every five years. Such review could keep market penetration rates under review to determine at which point projects will no longer be credited. This would enable these to be tailored by sector and type of country (e.g., developed vs. LDC). For example, a relatively low market penetration of renewable energy (e.g., 3-5%) may be sufficient in many countries to create the foundation for further expansion without carbon finance, but in soil carbon or LFG that threshold is significantly higher. |
| 2509 | Verra                | Type of mitigation activity |                 | It isn't clear at what level of granularity the 'type of mitigation activity' will be specified. For example, will it be, "Renewable energy", "wind power", "offshore wind power", or "wind power in LDCs, SIDS and LLDCs"?                                                                                                                                                                                                                                                                                                                                                                                    | The first step should be completely removed from the AF and its procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 2510 | Verra                | 0                           |                 | Market penetration is ambiguously defined. Some of the definition seems to suggest the adoption level of the activity should be compared with the total of all types of activities that provide the same service. This isn't correct – one must compare the adoption level relative to the total potential for the given activity type. E.g., for offshore wind, you would compare the adoption level to the total potential for offshore wind in the given region, not the total capacity of the regional electricity grid.                                                                                   | · This criterion needs to be integrated into what is currently portrayed as step 2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2510 | Verra                | 0                           | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | · Need to be clearer on the definition of market penetration – a good definition is already provided on p54: "Market penetration shall be appropriately defined in terms of recent uptake or stock installations in relation to a realistic maximum market size, taking into account any constraints for the uptake of the relevant technology, service, or practice".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 2510 | Verra                | 0                           | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | · Consider using a different word than 'market', as not everything is a market. A good alternative would be 'activity adoption level'                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2510 | Verra                | 0                           | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | · A single threshold would be impractical and not useful – see above example of difference between renewable energy and soil carbon and/or LFG projects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 2511 | Verra                | Table 38                    |                 | · In the full implementation stage, the requirement to assess prior to issuance whether new policies or previously unenforced policies are now being enforced will introduce much burden on the process and possibly also subjectivity into the verification. It will also introduce considerable uncertainty for projects, including their investors, proponents and communities, as they will no longer be certain of carbon revenues for the crediting period. Furthermore, the impact of this constant uncertainty and very sudden financial impacts may hinder governments from enforcing their policies. | · In the full implementation phase, require the impact of new policies and newly enforced policies to be taken into account only when considering requests for the renewal of crediting periods.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 2511 | Verra                | Table 38                    |                 | · It is understood that a switch to enforcing policies does need to be taken into account at some point. This should however be done – even in the full implementation phase – with the renewal of crediting periods, as this offers a balance between project certainty on the one hand and the recognition and encouragement of policy enforcement on the other.                                                                                                                                                                                                                                             | · However, we note that systematic lack of enforcement, where this appears inconsistent with levels of enforcement for other comparable policies, may be a consideration in a program's review of allowable mitigation activities Verra referred to in the context of section 8 on additionality.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2511 | Verra                | Table 38                    |                 | · Having shorter crediting period (e.g., 5 years for non-AFOLU), can help ensure these policy changes are taken into account earlier rather than later.                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2512 | Verra                | Rationale section           |                 | The definition of project start date is bifurcated and inappropriate. It is problematic to vary the definition depending on the activity type (whether it involves assessment or not) and will be difficult to implement in practice. It is also an unnecessary complexity.                                                                                                                                                                                                                                                                                                                                    | Use simple definition for project start date along the lines of "date on which the project began generating GHG emission reductions or removals"                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 2513 | Verra                | 0                           |                 | · Positive lists are not an additionality test themselves – they are the expression of the result of another test. For example, you can use a barrier analysis to ascertain the additionality of a project type – if it passes, it is added to the positive list.                                                                                                                                                                                                                                                                                                                                              | · Remove positive list as an approach to assess additionality in the intro sentence to Criterion 8.6; Reframe section "Criterion 8.6c)" accordingly.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2513 | Verra                | 0                           |                 | · Performance benchmark approaches belong directly in the bulleted list and the AF should establish criteria for them? They represent a rigorous approach that has been used in several methodologies and under many crediting programs.                                                                                                                                                                                                                                                                                                                                                                       | · Include performance benchmarks. Establish simple criteria to assess crediting programs' use of them, independent of issues of financial additionality.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| 2513 | Verra                | 0                                                                            |                 | · c) The proposed common practice threshold or market penetration rate of 5%, included as part of the project-based method, is too low. Five percent is an appropriate value for putting an activity on to a positive list if used on its own, but not for an additionality assessment that also includes investment and barrier analysis. Verra has found that the simplistic approach of a flat 5% threshold particularly prevents additional NCS activities from qualifying and thresholds should be set by project type.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | · c) Consider developing a more nuanced approach along the lines suggested. Verra is working on this and can provide further input. One idea would be to combine the adoption level (market penetration) approach with an investment and/or barrier analysis approach – e.g., if the adoption level is 20% or less and the type of mitigation activity faces investment or other barriers (as demonstrated by applying the test), the mitigation activity could be put on the positive list (i.e., deemed to be additional). |

| 2516 | Verra                | Paragraph 6: “Criterion 9.2 and Criterion 9.3 are alternative approaches...” |                 | The sentence “Jurisdictional REDD+ activities require the same safeguards concerning permanence as other mitigation activities, and therefore similar provisions should apply, though it is acknowledged that there is an inherent difference in the nature of these approaches because of the necessary partnership with government,” is very unclear and leaves a lot of doubt as to how AF requirements will be applied to jurisdictional REDD+ activities                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Clarify the meaning of this sentence                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 2517 | Verra                | Paragraph 4: last sentence                                                   |                 | The last sentence states: “For those activities with material risk, more stringent requirements are needed to provide sufficient assurance related to carbon credit integrity.” The degree of risk only appears to impact avoidable reversals in Table 45 (via a footnote). Section 9.2-9.4 does not make it clear that the requirements do not apply to mitigation activities with zero degree of risk. This is suggested in Figure 4 but should be more explicitly mentioned.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Differentiate and clarify requirements in 9.2-9.4 based on the degree of risk (as suggested in comments below).                                                                                                                                                                                                                                                                                                                                                                                                              |
| 2518 | Verra                | Table 44                                                                     |                 | Initial/Full Phase Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | · Add the following text to both the Initial and Full Phase requirements:                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2518 | Verra                | Table 44                                                                     |                 | Requiring 50 (Initial Phase) and 100 (Full Phase) year commitments to monitor and compensate for immediate full issuance of credits or projects to apply partial crediting proportionate to the length of the commitment period (i.e., 1% of a credit per year committed) is problematic for several reasons:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | “For carbon stocks that face low reversal risks (e.g., biochar, sequestration via harvested wood products, CCS and deep-sea deposition of seaweed), the carbon crediting program shall demonstrate that potential reversal risks have been appropriately assessed and compensated for (e.g., through the upfront cancellation of buffer credits).”                                                                                                                                                                           |
| 2518 | Verra                | Table 44                                                                     |                 | · Monitoring for any duration is not currently possible for some removal project types. For example, when biochar is used in building materials, the PP will not know the exact building(s) the biochar ends up in due to traceability issues and, therefore, will be unable to monitor those building(s). Nevertheless, the odds of the building(s) being destroyed within 100 years and the building materials (e.g., biochar mixed with concrete) subsequently incinerated, is very low. Likewise, harvested wood product sequestration projects, where the wood is used as a construction material may face similar issues. Last, new removal project activities in the blue carbon space that credit sequestration in the deep sea (e.g., from seaweed farming) cannot be feasibility monitored yet have very low reversal risk.                                                                                                                                                                                                                     | · For the Initial Phase only, keep Options 1 and 2, and modify Option 3 to more clearly specify that it allows full crediting (i.e., does not require the use of partial crediting/tonne-year accounting) for GHG programs that commit to robust 20-year monitoring and compensation. Specifically, change the text to:                                                                                                                                                                                                      |
| 2518 | Verra                | Table 44                                                                     |                 | · Many project proponents and project types (e.g., REDD), especially in the Global South, will be unable to make commitments of 50 to 100 years and, therefore, will walk away from project development. The liability is too long, and those that take the responsibility seriously will recognize their inability to guarantee that they can follow through. The outcome will be that credible PPs will be disincentivized from participating in carbon markets, and less credible PPs who are not concerned about making commitments they cannot meet will continue to develop projects. Further, in many countries 50-to-100-year commitments will not be enforceable and many, if not most, PPs will not exist in 50 to 100 years. For these reasons, long-term commitments made by a PP will not provide more certainty than shorter-term commitments during the project crediting period combined with buffer contributions based on 100-year reversal risk assessments, or long-term monitoring and compensation by the carbon crediting program. | “Alternative approaches to the length of commitment period that, in combination with stringent requirements on sufficiency of compensation mechanisms and institutional stability, to reach a similar level of assurance of compensation for reversals. For example,                                                                                                                                                                                                                                                         |
| 2518 | Verra                | Table 44                                                                     |                 | · Partial crediting proportionate to the commitment period will not be economically viable for many project types (e.g., agriculture) in the near-term (unless carbon prices for NBS projects increase significantly).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | a) the GHG Program may provide immediate full issuance of credits if it commits to 20-year monitoring and compensation; AND                                                                                                                                                                                                                                                                                                                                                                                                  |

| 2518 | Verra                | Table 44            |                 | Additional Full Phase Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | b) The project contributes credits to a pooled buffer account based on a 100-year reversal risk assessment; AND                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2518 | Verra                | Table 44            |                 | Verra supports IC-VCMs push towards 100-year program-level commitments in the full phase, assuming there is flexibility for:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | c) All buffer credits associated with the project shall be cancelled at the end of the project's crediting period to cover potential future reversals."                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2518 | Verra                | Table 44            |                 | 1) The commitment to be made by the carbon crediting program (or project proponent); and                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 2518 | Verra                | Table 44            |                 | 2) Some project types with low reversal risk (see comment above) and monitoring challenges to be exempt from monitoring under Option 3.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 2518 | Verra                | Table 44            |                 | Furthermore, if long-term monitoring is required, Verra will need time to build a long-term remote monitoring system that will enable it to commit to monitoring projects beyond the current crediting period (which can be as low as 20 years) and compensating for any reversals when they occur. Remote sensing-based monitoring is the only feasible option for long-term monitoring and there are still many scientific gaps that need to be filled. Therefore, there would need to be some flexibility in the interim as technology evolves and our ability to monitor projects remotely improves.                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 2519 | Verra                | Table 45            |                 | The guidance currently requires the crediting program's buffer reserve to be re-insured for avoidable reversals if the mitigation activity proponent is unable to compensate for the reversals. This is problematic because buffer re-insurance is not available. For over a year, Verra has been engaging with several insurance companies about this possibility, but a product has yet to be developed.                                                                                                                                                                                                                                                                                                                                                                                              | Remove the re-insurance requirement until there is certainty that this is a viable pathway and can be operationalized. Specifically, delete: "The crediting standard's buffer reserve shall be insured (e.g., through a "reinsurance" policy); insurance would only cover avoidable reversals if the mitigation activity proponent is unable to compensate the reversals."                                                                                                                                                                                                                 |
| 2520 | Verra                | Table 45            |                 | In the Full Phase, the carbon crediting program is required to have proponents sign legal agreements that obligate them to monitor, report and compensate for avoidable reversals for the full commitment period.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Using the IC-VCM language from Table 44, expand Full Phase option "a" under "treatment of avoidable reversals" in table 45 to:                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2520 | Verra                | Table 45            |                 | In most cases, PPs will not have control over what happens on the land after an NBS project finishes its crediting period because PPs do not usually own or will not continue managing the land. Therefore, the implication of this type of legal agreement is that the PP will need to purchase carbon credits on the market to compensate for any reversals (assuming the agreement is enforceable). Some PPs may be able to take on this financial risk, but it's unlikely other PPs, especially those in the global South, will be able to. Further, this approach assumes that credits will be available in 100 years to compensate for reversals. It is better to manage this risk upfront with appropriate buffer contributions and associated long-term monitoring and cancellation of credits. | a) "The carbon crediting program shall require mitigation activity proponents to sign legal agreements obligating them to monitor, report and compensate for avoidable reversals for the full commitment period OR have an alternative approach with stringent requirements on the sufficiency of compensation mechanisms and institutional stability, to reach a similar level of assurance of compensation for reversals (e.g., buffer contributions that are sufficient to cover the risk). AND                                                                                         |
| 2520 | Verra                | Table 45            |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | b) Following an avoidable reversal during a mitigation activity crediting period, the carbon crediting program shall cease the issuance of carbon credits to the project until the project mitigation activity proponents have fully compensated for the reversals."                                                                                                                                                                                                                                                                                                                       |
| 2521 | Verra                | Table 47            |                 | In the Full Phase, carbon crediting programs are required to have legal provisions in place to transfer/assign enforcement obligations in the case of the standard's dissolution. However, it's unclear who would be willing to take on this obligation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Until it is clear that such organizational/legal options exist, remove this requirement and instead require programs to cancel all remaining buffer credits to the atmosphere to cover potential future reversals in the event of dissolution.                                                                                                                                                                                                                                                                                                                                             |
| 2521 | Verra                | Table 47            |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Specifically, edit the text as follows: "The carbon crediting program shall meet the initial threshold requirements AND have legal provisions in place to transfer/assign enforcement obligation in the case of the standard's dissolution cancel all buffer credits in the event of the program's dissolution"                                                                                                                                                                                                                                                                            |
| 2522 | Verra                | 0                   |                 | Between the section numbers and the criteria numbers, the numbering is particularly confusing in this section (even more than in other parts).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | While appreciating the complexity of the document, it would be reconsidering and streamlining the full structure of the document to find a clearer way of establishing references.                                                                                                                                                                                                                                                                                                                                                                                                         |
| 2523 | Verra                | 0                   |                 | · It is difficult to have confidence that the "systematic assessment" of types of carbon credits (or types of mitigation activities) will not ultimately be layer upon layer of subjective "expert judgement". There is no clarity as to how all the low/medium/high/unknown ratings indicated in table 48 will be converted into the percentage probabilities called for in table 49. Even if the methodology were clear, the thought that all these considerations can be rolled up into meaningful summary judgements – with the power to undermine entire fields of mitigation activity, investment and environmental and social benefit - is at best challenging and at worst misguided.                                                                                                           | · The focus of assessment for methodologies should be on the adequacy of processes, and adherence to these processes, at the program level. It should not focus on the individual methodologies produced by these processes, except for the purpose of informing the assessment of the processes and whether they have been appropriately followed. Therefore, the only assessment outcome that should be made by the ICVCM process should be at the program level, and not at the methodology level. It should not repeat the detailed work to evaluate each element of each methodology. |

The procedure seems to indicate a series of judgement calls and assumptions by the expert panel on very detailed aspects of the methodology. This would require a series of expert panels that are qualified to comment on each element of each methodology in each location. This is a significant over-reach and will be a huge duplication of the processes undertaken by the program administrators that are already being robustly reviewed under section 2.</li> </ul> | <ul style="list-style-type: none"> <li>We understand the wish among many actors in the market – where a broad and consultative process leads to a conclusion that a project type is inappropriate in the voluntary market – that this should be assigned to a small negative list. However, any such process can be more targeted and is not a rationale for assessing every methodology approved by programs. Furthermore, any such process should be addressed to project types and not individual methodologies prepared and/or approved by programs.</li> </ul> |

| 2527 | Verra                | Second phase aspects to be assessed for credits authorized for Article 6 purposes, aspect 1) and 2) (last section before criterion 10.3) |                 | o If the country does not authorize the credits, the mitigation impact may be used by the host country towards its NDC, in addition to the project credits being used for whatever other purpose by the buying entity. Host countries are able to do this under the Article 6 decisions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                |
| 2527 | Verra                | Second phase aspects to be assessed for credits authorized for Article 6 purposes, aspect 1) and 2) (last section before criterion 10.3) |                 | · Therefore, the treatment of additionality and baselines should be the same between the authorization and non-authorization cases. The difference in treatment comes from adjustments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                |
| 2527 | Verra                | Second phase aspects to be assessed for credits authorized for Article 6 purposes, aspect 1) and 2) (last section before criterion 10.3) |                 | · The issue still remains as to whether intentions expressed through NDC or LEDS targets, where these are in fact quantified, should determine baselines. This is however an issue of whether the NDC and LEDS are “enforced”, through specific policies and actions being implemented and, in turn, also enforced. This issue should therefore be treated in line with criterion 8.4 on the consideration of legal requirements, where expectations of policy enforcement are addressed.· It makes no sense, in a VCM context, to limit the credits issued to projects because some of the emissions reductions they have verifiably made should or could – in principle – have been made by the host country or via policies that are unenforced.<br>· But it is important that it is the presence and impact of concrete climate policies and actions that should be considered in this assessment, and not the mere statement of an NDC or LEDS. These policies and actions form the environment of projects and impact their additionality and baselines. | 0                                                                                                                                                |
| 2527 | Verra                | Second phase aspects to be assessed for credits authorized for Article 6 purposes, aspect 1) and 2) (last section before criterion 10.3) |                 | · Similarly, it is not possible to assess in quantitative terms whether a baseline is “aligned with achieving the Paris goals” There are no universal, clear criteria for this. Again, a baseline can only be assessed against specific policies and actions. These may or may not be aligned with the country’s NDC, which may or may not be aligned with Paris goals. If an NDC is not aligned with the temperature goal of Paris, that is not something that can be assessed in the baseline condition of a methodology However, none of this changes the fact that projects represent a reduction/removal beyond what would have otherwise happened.                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                |
| 2528 | Verra                | 0                                                                                                                                        |                 | · The reference to emissions “caused by” the mitigation activity could be interpreted to be too narrow. The requirement should apply to all sources and sinks within the project boundary, and take account of the uncertainty, robustness and conservativeness of the estimates.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Replace “any emissions caused by the mitigation activity” with “all emissions and removals relevant to the boundary of the mitigation activity”. |
| 2528 | Verra                | 0                                                                                                                                        |                 | · The criterion should also assess the completeness of project sources and sinks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                |
| 2528 | Verra                | 0                                                                                                                                        |                 | · It worth repeating our earlier comment that the CCP should not strive to add conservativeness when a more accurate estimate is reasonable. Accuracy is a first order principle, whereas conservativeness is used to compensate for inaccuracy and uncertainty.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                |
| 2529 | Verra                | International leakage                                                                                                                    |                 | · ICVCM should be cautious about introducing accounting across national borders, and deviating from UNFCCC accounting norms in doing so. At least for the initial phase of the AF, we don’t believe it is practical to introduce international accounting for leakage. It could be considered over time, if ICVCM undertakes a full analysis as to the impacts and practicality of monitoring and accounting across national borders.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Remove international leakage from initial phase.                                                                                                 |
| 2529 | Verra                | International leakage                                                                                                                    |                 | · Step a.1) upstream/downstream emissions: this is not leakage and should be addressed under the completeness of the baseline and project condition, not under leakage. See comment on direct and indirect emissions above d) Monitoring should be as accurate and unbiased as possible. Conservativeness is an approach to deal with uncertainty but it is not a goal in itself.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Step a.1) Move upstream/downstream emissions into baseline and project emissions section                                                         |

| 2531 | Verra                | Table 49 – Requirements for robustness of quantification of emission reductions or removals |                 | Unclear how this can be used. Is the Mt threshold for all projects in the most recent year or per project? It will be very difficult if not impossible to come up with numerical estimations of the probability of conservativeness.                                                                                                                                                                                                                                                                                                                                                                             | This whole section should be reconsidered. Focus on evaluating the process and rules for methodology development and testing to make sure that the methodologies were developed following that system. It sometimes takes years to develop each methodology, and this assessment would require repeating most of that work.                                                         |
| 2532 | Verra                | 0                                                                                           |                 | · Absence of the definition of “carbon lock-in”                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | · The CCP should provide an explicit definition of the term “carbon lock-in” (within the context of carbon markets) to provide further guidance to GHG programs and empower them to establish approaches for addressing carbon lock-in within their program documents and methodologies                                                                                             |
| 2532 | Verra                | 0                                                                                           |                 | · An absence of “innovation” and “best-available technology” does not imply an activity is locking levels of emissions, technologies or carbon-intensive practices. Demonstrating progression from common practice is an additionality concern and should not be conflated with this issue.                                                                                                                                                                                                                                                                                                                      | · The focus of assessment for this criterion should be on the adequacy of the process set out in program documents, and adherence to the process, at the program level. It should therefore not focus on the outcomes of the processes or seek to repeat the detailed work of programs to reach them.                                                                               |
| 2532 | Verra                | 0                                                                                           |                 | · It is not clear why it is the judgement of the Expert Panel that is needed to assess whether projects contribute to the transition towards net-zero emissions. The Expert Panel should certainly not judge the net-zero compatibility of every existing or proposed mitigation activity type in a program.                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                                                                                   |
| 2533 | Verra                | Table 50                                                                                    |                 | · Requirements for transition towards net zero emissions do not reflect a transition and are instead formulated as if the world were already at net zero                                                                                                                                                                                                                                                                                                                                                                                                                                                         | · The requirements in Table 50 should be clear and objective, such that adherence to them can be more easily determined and demonstrated.                                                                                                                                                                                                                                           |
| 2533 | Verra                | Table 50                                                                                    |                 | · Need more clarity regarding intermediary/transition type mitigation activities. There are a handful of mitigation activity types (like flare gas reduction for brownfield settings etc.) that involve fossil fuel production and related infrastructure but are springboards to achieving significant near-term emission reductions. These can be seen as intermediary/transition type mitigation activities that are effective, indispensable (in the short-term) and are unlikely to change in jurisdictions where they are not required by regulation (and therefore, where carbon markets make an impact). | · Rephrase requirements to reflect that projects will sometimes need to continue addressing and improving on the use of technologies which are not consistent with net zero emissions, but should not increase their uptake or prolong their use                                                                                                                                    |
| 2533 | Verra                | Table 50                                                                                    |                 | · a) Need more clarity in assessment criterion “...what would otherwise be reasonably expected...”                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | · Requirements should be revised to ensure intermediary/transition type mitigation activities are not lost in pursuit of ideals.                                                                                                                                                                                                                                                    |
| 2533 | Verra                | Table 50                                                                                    |                 | · c) is not an effective measure for the criterion.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | · Condense the requirements by combining a and d, and deleting c. Specifically, modify the text to the following:                                                                                                                                                                                                                                                                   |

| 2534 | Verra                | 0                                                                                           |                 | · We are prepared to support mitigation type attributes that the market finds useful, though we consider these should be simple and few.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                                                                                                                                   |
| 2534 | Verra                | 0                                                                                           |                 | · We note that net removals will often obscure the presence of some reductions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                   |
| 2535 | Verra                | 0                                                                                           |                 | · We support that programs facilitate transparency on Article 6 authorizations for VCM purposes in this manner. It complements other processes for labelling authorizations for NDC and CORSIA purposes. We are currently planning to specify this as “VCM purposes”, as a more specific purpose that “other purposes”, which is of course the Article 6 category that it falls within.                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                   |
| 2536 | Verra                | 0                                                                                           |                 | · We would support the use of optional attributes to convey information on SD impacts and safeguards that are able to go beyond more basic threshold criteria for requirements. Such attributes would need to be grounded in concrete, practical indicators and sound methodologies.                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                   |
| 2536 | Verra                | 0                                                                                           |                 | · Verra already has two SD-related programs, which can also lead to SDG-related attributes being added to VCUs. These should be recognized during the CCP assessment.                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                   |
| 2536 | Verra                | 0                                                                                           |                 | · The Article 6 references in the rationale are not relevant to a net positive SD impact concept. The Article 6 rules speak only of an SD contribution and consistency with national SD objectives.                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                   |
| 2537 | Verra                | 0                                                                                           |                 | · While being supportive of ways for predominantly mitigation related projects to contribute to adaptation needs, this attribute sets out what could be a completely new program. This would take a considerable period to develop and implement. It would also be necessary to test the economics of such a new program.                                                                                                                                                                                                                                                                                        | · Reformulate the attribute such that crediting programs determine whether adaptation co-benefits are present, without seeking to assess the extent to which they meet national priorities and needs. This information can however support host countries in their own determination of whether the adaptation co-benefits we certify are in alignment with their adaptation plans. |

|------|----------------------|---------------------|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------|
| 2537 | Verra                | 0                   |                 | · The ICVCM should not require crediting programs to ensure adaptation measures are aligned with the national priorities and needs of host countries. It is not yet clear that this is appropriate or possible. We are also aware that adaptation components of mitigation activities do not impact on the integrity of the credits.                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                              |
| 2537 | Verra                | 0                   |                 | · As it is not mandatory for projects to meet the requirements of the attribute, crediting programs may also choose to not offer this attribute.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                              |
| 2538 | Verra                | 0                   |                 | · Our general position is that crediting programs should not have to require a share of proceeds for adaptation finance to be provided by projects, for the following reasons: (a) it does not concern the integrity of credits, and so would be both a distraction and scope creep for ICVCM, (b) it would put a levy on those taking action on mitigation, therefore dampening mitigation and increasing future needs for adaptation effort and finance, and (c) the VCM can better serve adaptation needs by integrating adaptation considerations directly into project design so that projects make use of opportunities to serve adaptation as well as mitigation whenever possible. We are very open to this latter approach and the use of an attribute to display it.          | · Adopt option 2: no provisions on this matter |
| 2538 | Verra                | 0                   |                 | · There should not be an expectation that the VCM must follow all developments in Article 6.4. Even crediting programs under Article 6.2 would not be mandatorily subject to an SOP. While the need for adaptation finance is substantial and urgent, the SOP itself is a political outcome in light of the failure to provide finance through better means. We would like to see a more positive and effective method selected for development in the VCM.                                                                                                                                                                                                                                                                                                                             | 0                                              |
| 2538 | Verra                | 0                   |                 | · However, we also note that, if the market decides on either a voluntary or mandatory basis to pursue this approach, Verra would be in a position to technically and transparently facilitate its implementation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                              |
| 2539 | Verra                | 0                   |                 | · Our general position is that crediting programs should not have to require OMGE from projects. The concern that markets are a zero sum game that depend on net mitigation measures to have a positive climate impact is now being addressed by SBTi, VCMi and other mitigation hierarchy proponents. These require that emission do not go up as a result of retirement credits and therefore directly address any risk that market are only a zero-sum game (which was never really the case, due to multiplier effects).                                                                                                                                                                                                                                                            | · Adopt option 2: no provisions on this matter |
| 2539 | Verra                | 0                   |                 | · OMGE can also negatively impact decisions to implement mitigation projects, because fewer credits would be available to project proponents.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                              |
| 2539 | Verra                | 0                   |                 | · However, we also note that, if the market decides on either a voluntary or mandatory basis to pursue this approach, Verra would be in a position to technically and transparently facilitate its implementation. If projects wish to implement OMGE, this can be done through discounting, as this is simple and effective, and does not impact methodological accuracy. An optional OMGE attribute could be issued for this purpose.                                                                                                                                                                                                                                                                                                                                                 | 0                                              |
| 2540 | Verra                | 0                   |                 | · Crediting programs should not require credits to be Article 6 authorized and correspondingly adjusted in the VCM. Parties to the UNFCCC have declined to make this mandatory for the VCM in their own Article 6 and NDC accounting rules.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | · Adopt option 2: no provisions on this matter |
| 2540 | Verra                | 0                   |                 | · Double counting itself is not the problem. The actual problem is that double counting (a) can mislead as to the actual amount of aggregate mitigation occurring and (b) can cause originally-intended mitigation efforts to be reduced. The first concern is that two parties saying they have reduced emissions overstates the actual level of mitigation occurring when emissions or emission reductions are counted within the same level of accounting (e.g. two countries or two entities). The second concern is that, where both parties believe they have achieved their intended mitigation effort, they both slow or cease their mitigation effort despite the fact that actual emission reductions are insufficient to satisfy both parties' original mitigation ambition. | 0                                              |

| 2540 | Verra                | 0                   |                 | <p>Where company emissions are a subset of national emissions, the first concern does not arise. However, the second concern is less clear. On face value, it may seem that lower emissions from the project will reduce the host country's need to undertake mitigation effort under its NDC, meaning that the project has simply "displaced" host country measures and undermined the emission reductions it was successful in making. While we accept this risk of displacement is the issue we should concentrate on, there are many reasons why the risk will not be realized in practice in many developing country contexts, because sometimes: (a) the VCM project is not in a sector covered by the NDC, so it has no impact on NDC accounting, (b) conditional NDCs foresee the need for international finance, so its arrival does not reduce the host country's own mitigation effort below what was intended, (c) less quantitative approaches in NDCs and climate policy mean that mitigation effort is not sensitive to falling emissions, and (d) a lack of capacity or resources may challenge the host country's ability to achieve its NDC.</p> | 0                                                                                                                                                                                                                                                                                                              |
| 2540 | Verra                | 0                   |                 | <p>In short, there are many reasons why a belief that double claiming is inherently bad is in fact an oversimplification of the situation in the VCM. Using this oversimplification as grounds to always require authorization and corresponding adjustments in the VCM is inappropriate.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                              |
| 2540 | Verra                | 0                   |                 | <p>To be clear, an examination of the above issues in some VCM contexts may conclude that the risk of displacing host country mitigation efforts are higher, which may lead investors to seek the backing of authorization and corresponding adjustments to provide assurance that the mitigation they achieve will not be undermined. We also expect that improvements in the breadth, depth and rigor of NDCs will, over time, lead more investors to seek this route. We would support that further work be done to better understand these situations, although we see this as the role of VCMI rather than ICVCM. However, the current status of NDCs and climate policy in many potential VCM host countries means that a general expectation of authorization and corresponding adjustments is not yet warranted.</p>                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                              |

| 2556 | Verra                | 0                   |                 | There is scope for confusing this term with “implementing partner”, which is a common term in crediting programs and the carbon market.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Suggest clarifying what is meant by this definition in a manner that is more specific and does not create confusion with “implementing partner”.                                                                                                                                                                                                                                                                                                                                                                    |
| 2557 | Verra                | 0                   |                 | Emission reductions and removals from projects are measured and verified.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Suggest clarifying this definition and its reference to “predicted and or assumed” vis-à-vis the measurement and verification of emission reductions and removals from projects.                                                                                                                                                                                                                                                                                                                                    |
| 2558 | Verra                | 0                   |                 | The key point about retirement is that it denotes use against a purpose.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Suggest putting the current second sentence in first place, and deleting the word “administrative”                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 2558 | Verra                | 0                   |                 | Cancellation can occur for reasons other than administrative purposes, for example where credits are cancelled in order that they cannot be retired against a specific purpose (thus removing them from the market and tightening mitigation levels).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 2559 | Verra                | 0                   |                 | The reference to verification occurring after project inception is confusing. Suggest the more pertinent point is that verification can occur sometime after the mitigation occurs, so the vintage of a credit is typically different from its issuance date.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Suggest clarifying the relationship between vintage year and issuance date (and project inception as well, if needed).                                                                                                                                                                                                                                                                                                                                                                                              |
| 2560 | Verra                | Para 3              |                 | It is not appropriate to say the ICVCM “has a mandate” to develop the CCP, given that it is essentially self-appointed via the TSVCM.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Suggest describing the ICVCM as a multistakeholder body. Suggest revising the 3rd para to read: “The Integrity Council has developed Core Carbon Principles (CCPs), supported by a detailed Assessment Framework, to identify high-quality carbon credits and to assess carbon-crediting programs. The tag should be ICVCM compliant or ICVCM aligned.                                                                                                                                                              |
| 2561 | Verra                | Para 4              |                 | ICVCM CCP is not a market or a regulator (unlike CORSIA) so “CCP-aligned” is more appropriate than “eligible” or “compliant”. This comment applies throughout this document and the others.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Refer simply to a “crediting program”.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| 2563 | Verra                | First bullet        |                 | The governing board also appoints the members of the expert panel.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 2564 | Verra                | 0                   |                 | · This definition is very vague and confusing, and contradicts common usage of the term.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | · We suggest a different approach in which only the program receives an assessment outcome of CCP alignment. Under this approach, this confusing definition of “credit type” is not needed. This is considerably more aligned with the purpose of the ICVCM in seeking to be clear on where integrity is present.                                                                                                                                                                                                   |
| 2564 | Verra                | 0                   |                 | · It also proves unable to determine an appropriate granularity. This in turn makes it difficult to review the efficacy of the assessment framework in relation to additionality and methodologies (i.e., when we don’t know at what level of granularity assessment of mitigation types will be done).                                                                                                                                                                                                                                                                                                                                                                                                                                             | · We understand the wish among many actors in the market – where a broad and consultative process leads to a conclusion that a project type is inappropriate in the voluntary market – that this should be assigned to a small negative list. However, any such process can be more targeted and is not a rationale for assessing every methodology approved by programs. Furthermore, any such process should be addressed to project types and not individual methodologies prepared and/or approved by programs. |
| 2564 | Verra                | 0                   |                 | · For reasons we explain in our response to CCP 10 in the assessment framework (robust quantification), the focus of assessment for methodologies should be on the adequacy of processes, and adherence to these processes, at the program level. It should not focus on the individual methodologies, or groups of methodologies, produced by these processes, except for the purpose of informing the assessment of the processes and whether they have been appropriate followed (sample or spot checks). Therefore, the only assessment outcome that should be made by the ICVCM process should be at the program level, and not at the methodology level. It should not repeat the detailed work to evaluate each element of each methodology. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 2564 | Verra                | 0                   |                 | · It is also very difficult to believe that the time and resources required by ICVCM to assess all methodologies, or groups thereof, will not block both the working of the market and valuable climate action.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 2564 | Verra                | 0                   |                 | · There are almost 200 different methodologies or combinations of methodologies used by VCS projects. Some projects use a combination of methodologies, so ICVCM would presumably have to approve the methodology combination under the current approach                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 2565 | Verra                | Point 3             |                 | · For reasons we explain in our response to CCP 10 in the assessment framework (robust quantification) and against section 1.3 above, the focus of assessment for methodologies should be on the adequacy of processes, and adherence to these processes, at the program level.                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | · We suggest a different approach in which only the program receives an assessment outcome of CCP alignment.                                                                                                                                                                                                                                                                                                                                                                                                        |
| 2565 | Verra                | Point 3             |                 | · It is unclear if the label would be applied retroactively and whether there is a cut-off vintage for this. 4.2.1 says existing credits can be tagged. Is it any credit from an approved program and approved method? If there are multiple versions of a method will ICVCM review the prior versions too?                                                                                                                                                                                                                                                                                                                                                                                                                                         | · Clarify which existing credits can be tagged.                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| 2566 | Verra                | 0                                                                                                                                                                     |                 | · Specifying requirements at the outset with no expectation they will be met for some time will undermine confidence in programs as it implies they are deficient until such full requirements are met. The nature of standards is in fact that the benchmark of integrity is set by the requirements prevailing at a particular point of time but that these evolve over time. For any standard elaborated at the level of detail of the draft AF, it is not realistic to suggest that any current formulation of “full” requirements can be final; there will be need to revise both the initial and full requirements over time. | A clearer approach would be to define the requirements of a version 1 of the AF at a level which is ambitious but achievable and, if needed, separately identify areas of work and collaboration to develop requirements that would be published and become applicable through subsequent versions of the framework.                                                                                                                            |
| 2566 | Verra                | 0                                                                                                                                                                     |                 | · Similarly, if the CCP-aligned attribute is applied to credits when programs have not yet met all requirements, this may undermine the credibility of the ICVCM and the CCP.                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2567 | Verra                | 0                                                                                                                                                                     |                 | This is not at all clear. Programs should be assessed against the criteria and requirements set out in the AF, which define how the alignment with the CCP is to be assessed. There should be no other expectations of alignment with unwritten, unspoken and inevitably subjective principles which have not been clearly specified.                                                                                                                                                                                                                                                                                               | Suggest deletion of this entire section.                                                                                                                                                                                                                                                                                                                                                                                                        |
| 2568 | Verra                | Question: Should the Integrity Council reserve the right by exception to assess programs unsolicited, at its own discretion, based on publicly available information? |                 | Programs should only be assessed upon their application for assessment. This must be an opt-in process. While Verra has no intention to not apply for assessment, we firmly believe that programs must have the right to choose not to be assessed. The consequence of not applying is not being able to apply the CCP-aligned attribute, which is the same consequence as being assessed to not meet the CCP criteria and requirements.                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2569 | Verra                | 0                                                                                                                                                                     |                 | · Programs must be able to determine what is confidential. We agree reasons must be compelling and are open to discussion on this point but it cannot be that the ICVCM would publish information while a program claims it to be confidential.                                                                                                                                                                                                                                                                                                                                                                                     | Programs must be able to determine what is confidential.                                                                                                                                                                                                                                                                                                                                                                                        |
| 2570 | Verra                | 0                                                                                                                                                                     |                 | · To our knowledge, the ICVCM has not undertaken an analysis of alternative assurance models and should not assume that the Expert Panel is the only option for performing the assessment. The ICVCM will need to face the issue of assessing alternative assurance models or revisiting the balance of the Expert Panel, or both. The Expert Panel does not currently have the requisite resources, expertise or experience to take on the proposed assessment tasks.                                                                                                                                                              | · Further assessment is needed with regard to appropriate assurance models for the proposed assessments.                                                                                                                                                                                                                                                                                                                                        |
| 2570 | Verra                | 0                                                                                                                                                                     |                 | · For fairness to applicant programs, the applications and assessments should be organized in batches so that they are concurrent. Decisions for all programs that apply within a certain application period should be released at the same time to avoid distorting the market. We understand that there may need to be exceptions to this general principle in the case of significant delays for specific programs.                                                                                                                                                                                                              | · The volume and heaviness of the assessment workload across all credit types and methodologies could be enormously reduced by targeting known problems, with an option of adding specific credit types to a negative list. This would complement a new requirement on programs to periodically (not more than 5 years apart) review the scope of their allowable mitigation activities, as argued for above and in Verra’s comments on the AF. |
| 2570 | Verra                | 0                                                                                                                                                                     |                 | · A timeline for the processing of applications, decision making and notification is not clear.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | · Applications and assessments should be organized in batches so that they are concurrent.                                                                                                                                                                                                                                                                                                                                                      |
| 2570 | Verra                | 0                                                                                                                                                                     |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | · A timeline for the processing of applications, decision making and notification should be established.                                                                                                                                                                                                                                                                                                                                        |
| 2571 | Verra                | 0                                                                                                                                                                     |                 | We do not understand the need to solicit comments from stakeholders at this point in the process. It is not the role of stakeholders under the ICVCM process to assess whether the applicant program conforms to the CCP and this is not consistent with programs’ normative documents being the basis for the assessment. Other opportunities should be instead integrated on the basis of a draft assessment.                                                                                                                                                                                                                     | Other opportunities should be instead built into the process on the basis of a draft assessment.                                                                                                                                                                                                                                                                                                                                                |

| 2572 | Verra                |                     |                 | <p>Question: The Integrity Council is considering the use of conditional approval to expedite initial threshold uptake, where a program can commit within a precise timeframe to fully implement initial threshold requirements. During such timeframe, carbon-crediting programs will be granted CCP-approved status. When and how should pledges or commitments be presented, monitored and what sanctions should apply in case of non-fulfilment?</p> | <p>· We appreciate this suggestion to help expedite being deemed to meet the CCP, however we consider its use should be very limited such that it is no longer necessary for the CCP alignment to be considered “conditional”. Our concern is that “conditional approval” will be more confusing to the market and non-fulfilment of commitments for any requirements will undermine the credibility of the ICVCM.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <p>A clearer approach would be to define the requirements of a version 1 of the AF at a level which is ambitious but achievable. Programs would have the flexibility to apply when they consider they are ready. Remediation plans and limitations on the severity of non-fulfilment of requirements should provide adequate means for ensuring full alignment within a relatively short period after the assessment is given.</p> |
| 2572 | Verra                |                     |                 | <p>Question: The Integrity Council is considering the use of conditional approval to expedite initial threshold uptake, where a program can commit within a precise timeframe to fully implement initial threshold requirements. During such timeframe, carbon-crediting programs will be granted CCP-approved status. When and how should pledges or commitments be presented, monitored and what sanctions should apply in case of non-fulfilment?</p> | <p>· We therefore think the only unfulfilled requirements that should be considered are those that will not impact the integrity of the program for the short period they remain unfulfilled. These may be addressed by giving a full (not conditional) positive assessment, with an agreed, robust and time-bound remediation plan. In the event that the remediation plan is not kept and the requirements remain unfulfilled beyond a specified period, it could be considered that the CCP-aligned status could be withdrawn for new issuances from that point onwards (avoiding the need to withdraw the CCP-aligned attributes from credits after they have been given). We envisage however that only minor non-alignment with the CCP should be considered for these purposes, such that programs will not have an incentive to not successfully work towards meeting the full requirements.</p> | 0                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 2573 | Verra                | 0                   |                 | <p>· This purpose and meaning of this section are very unclear. It seems to address many topics beyond how long the CCP-aligned status is maintained, but the duration of the initial phase is not given.</p>                                                                                                                                                                                                                                            | <p>Add clarification after 5th paragraph. “Program approvals will remain active until a subsequent ICVCM review is complete”</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2573 | Verra                | 0                   |                 | <p>· If a program is being reassessed when it reaches the end of its approval period, the current approval should stay active until the updated assessment is complete. Otherwise, programs and projects could be disadvantaged due to timing and workload on the ICVCM side.</p>                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2574 | Verra                | 0                   |                 | <p>It is not clear what would be considered a material change to normative program documents. Carbon crediting programs continue to develop and evolve, with updates to procedural documents and standards documents being issued every 3-6 months. How will the crediting programs determine which of these updates ICVCM considers material?</p>                                                                                                       | <p>Provide more elaboration what constitutes a “material” change.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| 2576 | Verra                | 0                   |                 | · “Poor conduct” is vague and subjective. It is not clear what “obstruction” and “discrimination” refer to in this context. This para should take account of caveats of materiality and intent.                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2577 | Verra                | 0                   |                 | · No process is defined. This section is presented as programs being at the whim of the ICVCM when there is significant investment and uncertainty at stake.                                                                                                                                                                                                                                                                                                           | · There must be adequate process and timelines – prior to a termination – regarding steps and opportunities for programs to present their evidence and views.                                                                                                                                                                                                                                                                                   |
| 2578 | Verra                | 0                   |                 | · For reasons we explain in our response to CCP 10 in the assessment framework (robust quantification) and against section 1.3 above, the focus of assessment should be on the adequacy of processes, and adherence to these processes, at the program level.                                                                                                                                                                                                          | · We suggest a different approach in which only the program receives an assessment outcome of CCP alignment.                                                                                                                                                                                                                                                                                                                                    |
| 2578 | Verra                | 0                   |                 | · Programs should only be assessed upon their application for assessment. This must be an opt-in process. While Verra has no intention to not apply for assessment, we firmly believe that programs must have the right to choose not to be assessed. The consequence of not applying is not being able to apply the CCP-aligned attribute, which is the same consequence as being assessed to not meet the CCP criteria and requirements.                             | · Delete the last paragraph on assessing credit types issued by programs that have not applied for assessment.                                                                                                                                                                                                                                                                                                                                  |
| 2579 | Verra                | 0                   |                 | · The combination of all these criteria mean in practice that any credit type could be selected and a reason can be found, especially once the subjectivity of many of the criteria is factored in (e.g., pace of execution, net zero transition, balanced coverage). As a result, the combination of criteria provides no clarity on what the prioritization should be.                                                                                               | · We suggest a different approach in which only the program receives an assessment outcome of CCP alignment.                                                                                                                                                                                                                                                                                                                                    |
| 2579 | Verra                | 0                   |                 | · It is not clear where the information basis for the criteria should come from (e.g., current and forward-looking mix)                                                                                                                                                                                                                                                                                                                                                | · The volume and heaviness of the assessment workload across all credit types and methodologies could be enormously reduced by targeting known problems, with an option of adding specific credit types to a negative list. This would complement a new requirement on programs to periodically (not more than 5 years apart) review the scope of their allowable mitigation activities, as argued for above and in Verra’s comments on the AF. |
| 2579 | Verra                | 0                   |                 | · The criteria do not address fairness across programs or within the market. If ICVCM’s approval creates a premium for that type of credit, this could be a significant distortion in the market due to factors out of the control of programs.                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2579 | Verra                | 0                   |                 | · Programs should not be disadvantaged for the having a higher number of methodologies.                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2579 | Verra                | 0                   |                 | · These problems are significant, given the volume and heaviness of the assessment that the Expert Panel is proposing it take on, which can be expected to stretch over many years and be constantly replenished as new methodologies and updates are developed. Verra considers that the focus of assessment should be on the adequacy of processes, and adherence to these processes, at the program level, and should not be targeted at credit type.               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2580 | Verra                | 0                   |                 | · If further guidance is needed, this should be developed for a subsequent version of the CCP and AF, which should be developed through proper work programs and collaboration and applied in subsequent application rounds. The ICVCM should not developed and apply guidance in an ad hoc way.                                                                                                                                                                       | · The assessment process should work within the existing guidance, and not simply add more guidance and requirements in the course of undertaking the assessment.                                                                                                                                                                                                                                                                               |
| 2581 | Verra                | 0                   |                 | · To our knowledge, the ICVCM has not undertaken an analysis of alternative assurance models and should not assume that the Expert Panel is the only option for performing the assessment. The ICVCM will need to face the issue of assessing alternative assurance models or revisiting the balance of the expert panel, or both. The Expert Panel does not currently have the requisite resources, expertise or experience to take on the proposed assessment tasks. | · Further assessment is needed with regard to appropriate assurance models for the proposed assessments.                                                                                                                                                                                                                                                                                                                                        |
| 2581 | Verra                | 0                   |                 | · The degree of differentiation among credits and scope for subjectivity implied by the second para will not provide for the level of clarity for the market that the ICVCM is aiming for.                                                                                                                                                                                                                                                                             | · If ICVCM is indeed to assess all credit types, include further explanation on how the Expert Panel would secure and manage the appropriate resources, expertise and experience.                                                                                                                                                                                                                                                               |
| 2581 | Verra                | 0                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | · The degree of differentiation among credit types, as advocated in the second para, should be avoided.                                                                                                                                                                                                                                                                                                                                         |

| 2582 | Verra                | 0                   |                 | · We do not understand the need to solicit comments from stakeholders at this point in the process. It is not the role of stakeholders under the ICVCM process to assess whether the applicant program conforms to the CCP and this is not consistent with programs' normative documents being the basis for the assessment. Other opportunities should be instead integrated on the basis of a draft assessment.                                                                                                                                                                                                                                    | Other opportunities should be instead built into the process on the basis of a draft assessment.                                                                                                                                                             |
| 2583 | Verra                | 0                   |                 | · The decision-making processes are not clear. The Expert Panel is to submit a final recommendation to the Governing Board for approval. However, what if the Expert Panel or Governing Body cannot agree?                                                                                                                                                                                                                                                                                                                                                                                                                                           | ICVCM should set out more clearly its decision-making processes, This should include elaborating the threshold for the Expert Panel to make a final recommendation and the Governing Body to make a decision.                                                |
| 2584 | Verra                | 0                   |                 | · Carbon credits are CCP-aligned if "any further conditions for the eligibility of the carbon credit type, as determined by the Integrity Council in its decision on eligibility of the credit type, are satisfied for the specific carbon credits in question." This is extremely vague and open-ended. It also doesn't appear to relate to program or credit type assessment. The assessment should not be based on ICVCM's assumed roving and undefined authority.                                                                                                                                                                                | Remove the text that bases CCP eligibility on any "further conditions" that ICVCM may impose. The assessment process should work within the existing guidance, and not simply add more guidance and requirements in the course of undertaking the assessment |
| 2584 | Verra                | 0                   |                 | · If further guidance is needed, this should be developed for a subsequent version of the CCP and AF, which should be developed through proper work programs and collaboration and applied in subsequent application rounds. The ICVCM should not developed and apply guidance in an ad hoc way.                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                            |
| 2585 | Verra                | 0                   |                 | It is not clear what provisional tagging means. Is the intent that programs have some sort of internal provisional tag system that only becomes publicly visible after the ICVCM completes its assurance in 4.2.4. This would not be workable. It should be remembered that each new issuance within every program will require an assessment of which newly issued credits should receive which attributes.                                                                                                                                                                                                                                         | Delete references to "provisional" tagging.                                                                                                                                                                                                                  |
| 2585 | Verra                | 0                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Assurance should not seek to check the every credit that programs have issued and will issue, but should instead be gained through a system of spot checking.                                                                                                |

| 2586 | Verra                | 0                   |                 | · 5.3 Grievance mechanisms: The assessment framework contains requirements for programs to operate grievance mechanisms, however the ICVCM does not have a mandate to act as Ombudsperson or an appeals mechanism. The ICVCM does not have the role "to ensure that the program has operated its grievance mechanism in line with the draft CCPs and draft Assessment Framework", as it only has the role of assessing programs and making its findings public. This appears to be a further case in which the ICVCM wishes to go beyond its role of keeping programs on their toes to seek to take decisions on projects and issues in their place. | 0                                                                                                                                                                                                                                                            |

| 2591 | ACR ART              | TE                  |                 | We of course agree that offset credits should be of the highest quality, reflecting reductions, avoidance or removals that are additional to those that would occur in the absence of carbon markets (including exceeding performance benchmarks); are quantified and reported in an accurate and conservative way against a public, science-based methodology; are verified by an accredited third-party, and are generated from activities and programs that have measures in place to address risks of non-permanence and leakage. In addition, they should be associated with a credible standard-setting body that provides rigorous processes for registration, validation, monitoring, verification, methodology assessment and revision over time, and transparent tracking of the issuance and retirement of serialized credits.                                    | 0               |
| 2591 | ACR ART              | TE                  |                 | Overall, we are concerned about the complexity and subjectivity of the assessment process and the prescriptive nature of the requirements. Many of the requirements in the Assessment Framework go well beyond currently accepted market norms – including the Paris Agreement itself and compliance markets such as California and ICAO’s CORSIA - without strong supporting rationale for the need for new approaches. These are detailed in our comments.                                                                                                                                                                                                                                                                                                                                                                                                                 | 0               |
| 2591 | ACR ART              | TE                  |                 | The fact that no crediting programs or credits in the market today will meet the current proposed ICVCM threshold and therefore will not be deemed CCP compliant will send a harmful signal to the marketplace and will cause buyers to stop investing in existing or forthcoming offset credit projects and jurisdictional REDD+ programs until there is clarity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0               |
| 2591 | ACR ART              | TE                  |                 | The topics of additionality, baselines, leakage, non-permanence, verification and double counting are inherently complex. There is no right “one size fits all” approach, and different crediting programs have evolved different approaches that work in different sectoral, geographic and economic contexts. If there are specific concerns about integrity, they should be focused with some level of precision to apply an appropriate solution for the context. The bar for quality should not be set with new untested approaches. The threshold criteria should be rigorously road tested and analyzed for cost-benefit. Similarly, going back and relying on approaches that have proven to be unworkable (such as temporary crediting) or easy to game (such as IRR calculations to demonstrate financial additionality) will also not improve quality in the VCM. | 0               |
| 2591 | ACR ART              | TE                  |                 | A large number of projects in the market today are following rigorous methodological rules and requirements for safeguards and independent verification. If the process is made even more onerous, not only will projects and jurisdictions not be incentivized to continue to improve performance, this process may drive them to seek other ways to access finance via pathways with less stringent requirements or to simply define their own methodologies rather than continue                                                                                                                                                                                                                                                                                                                                                                                          | 0               |
| 2591 | ACR ART              | TE                  |                 | crediting under reputable global GHG Programs. This is the opposite of what the ICVCM is trying to achieve.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0               |
| 2591 | ACR ART              | TE                  |                 | Recognized, science based, peer-reviewed crediting bodies have a long, credible history and should have the primary role in assessing and establishing their methodologies. This is where regionally necessary, and topic specific experts reside. In addition, they should continue to regularly review existing methodologies including baseline determination, additionality assessment and monitoring and quantification protocols to reflect the latest science, economic and technological advances, or changes in domestic regulation. ICVCM should not substitute its untested technical review for peer-reviewed, expert processes currently used by the registries.                                                                                                                                                                                                | 0               |
| 2592 | ACR ART              | TE                  |                 | Some of the Assessment Framework requirements are unnecessarily complex and not even relevant for all crediting types. In addition, there are elements of integrity that are out of the control of carbon crediting bodies such as around contractual arrangements and commercial terms and disclosure of benefit sharing arrangements (as opposed to requiring participatory process where appropriate).                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0               |
| 2592 | ACR ART              | TE                  |                 | The use of the IFC Performance Standards for safeguards, as detailed in Section 7 Sustainable Development Impacts and Safeguards, is an example. Environmental and social safeguard requirements should be based on project/program and regional-specific risk. Any risks should be identified and mitigated, however, the risks for an industrial methane capture project in the U.S. are inherently different than a community-based forestry project in Mexico, therefore, requirements should be different. In addition, the requirements for assessments and reporting on labor rights and working conditions, resource efficiency and pollution prevention, biodiversity conservation and sustainable management of living natural resources and gender equality are all extreme and should only be required if a true risk is identified.                             | 0               |

| 2592 | ACR ART              | TE                  |                 | Furthermore, the requirements to utilize specific frameworks for SDG monitoring and reporting is also overly prescriptive and ensuring net positive SDG impact likely challenging. While reporting qualitatively on SDG contributions of carbon projects is acceptable and a common practice (and a requirement of ICAO), having those contributions certified against a standard should be optional. Certainly projects should positively contribute to sustainable development, however, different projects have different levels of contribution, which is largely a buyer preference and not an indication of the integrity of the emission reduction or removal and does not affect the empirical impact in meeting climate goals. For example, industrial projects that capture methane have an incredibly important climate contribution since methane is a short-lived climate pollutant, but may not have many other SDG contributions. That should not detract from the quality of the emission reduction credit.                                                                                                                | 0               |
| 2592 | ACR ART              | TE                  |                 | While social issues are of critical cultural importance, adding SDG co-benefits as a requirement for the CCP label will materially slow the qualification process, delay the uptake of the ICVCM framework and unneeded transaction confusion. The excessive nature of the required social benefit quantification could also limit and skew project development away from projects that create these benefits because the development costs for these types of projects will be much higher than projects that don't create these extra societal benefits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0               |
| 2592 | ACR ART              | TE                  |                 | In Section 6 Minimum information requirements, while we fully agree with the importance of transparency and adequate carbon credit program governance (i.e., avoidance of conflict of interest and ensuring a robust code of business conduct), many of the elements identified for reporting are overly expansive, overstep what the registries require or are impractical. In 6.1 initial a)1-15 and b)1-4 (clarification that some of this information is public, but not all. For example a)5 "all necessary information to enable third parties to replicate the emission reduction calculations (including baseline quantification) and assess the social and environmental impacts of the activity" is not workable. It appears that the Expert Panel would like any individual to be able to replicate the VVB process. The VVBs will be reviewing all of this material and if the integrity of the VVB process is ensured through the accreditation (for competency) and oversight process, it is not necessary for outside individuals to do so. In addition, information on benefit sharing arrangements is not usually public. | 0               |
| 2592 | ACR ART              | TE                  |                 | Related to stakeholder consultation, requiring quantitative reporting and proof of positive net benefits, for 3 issuance periods beyond crediting period end is excessive and adds additional costs. Increasing project costs for these types of activities could push developers to other project types and away from projects that have significant social benefits, or it could push developers to create project using alternative tracking tools like Crypto or without a registry. This outcome reduces the transparency and impacts the credibility that the ICVCM is trying to improve.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0               |
| 2592 | ACR ART              | TE                  |                 | In the full threshold for Section 6 c)1-4 under #1, making public all workbooks, data and calculations for baseline and additionality oversteps confidentiality. For #4, it is not the purview of crediting bodies to assess whether the mitigation is compatible with net-zero by midcentury if even possible to objectively assess.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0               |
| 2592 | ACR ART              | TE                  |                 | On Option 1a, 1b or 2a for making public transaction volume, pricing and benefit sharing allocation, crediting programs are not involved in transactions and do not collect this data.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0               |
| 2592 | ACR ART              | TE                  |                 | Requiring projects to provide key commercial terms like price and revenue (or specific calculation sheets), or how projects provide equitable and fair revenue sharing is also not justified from a carbon mitigation perspective and infringes on key competitive information. Requiring this type of information, could cause developers to be less transparent and some could choose other options (e.g., crypto) rather than development of a project according to existing registry standards                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0               |
| 2592 | ACR ART              | TE                  |                 | The nature and format of benefit sharing should be developed in a participatory manner and should be appropriate to the scale, set of stakeholders, and legal framework of the host country.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0               |

| 2592 | ACR ART              | TE                  |                 | Mandating a single benefit sharing agreement or prescribing the outcomes denies stakeholders like Indigenous Peoples, Local Communities and others the right to negotiate the terms and arrangements most beneficial to them. Carbon crediting standards and registries are not parties to ERPAs and do not track contractual arrangements. Therefore Option 1B, no reporting of key financial information should be required.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0               |
| 2592 | ACR ART              | TE                  |                 | In Section 10 Robust Quantification of Emission Reductions and Removals, we disagree with the notion of a process to assess the (baselines and other quantification of) individual project types and methodologies. This evaluation of robust quantification should be done at a program level.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0               |
| 2592 | ACR ART              | TE                  |                 | We also comment on a few specific aspects of the quantification section. First, requiring GHG programs to stipulate that ERRs must be estimated conservatively rather than accurately undermines any incentive projects and programs have to continue to invest in new and improved monitoring systems. The goal of any carbon methodology or Standard should be to reflect the impact of the activities on the atmosphere as fully and accurately as possible, not to simply be conservative for the sake of being conservative. If conservativeness is the ultimate goal, simple defaults could be used for all parameters instead of more complex accounting methods. Standards and methodologies should promote the collection of increasingly better data to improve confidence in the results. Furthermore we are confused about how underreporting has a negative impact on the market and why deductions must be taken or provisions made to prevent underreporting. This especially seems to contradict earlier sections which stress that conservativeness is the main objective. | 0               |
| 2592 | ACR ART              | TE                  |                 | International leakage should be removed from consideration. It is not currently accounted for, including under the UNFCCC, because not only is it challenging to accurately quantify, but also because it is perverse to discount credits from a good actor for bad actions happening beyond its borders. As more national accounting areas are included in the carbon market, international leakage will be captured in the annual emissions reporting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0               |
| 2592 | ACR ART              | TE                  |                 | Nesting arrangements and benefit sharing arrangements should not be prescribed rather be left to the Jurisdiction and the appropriate stakeholders to determine in line with appropriate safeguards.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0               |
| 2592 | ACR ART              | TE                  |                 | Crediting periods should not be required to align with NDC reporting. This is neither practical or necessary. In addition, for jurisdictional REDD+, it is not possible to require a jurisdiction to attribute a specific number of ERRs achieved to specific mitigation activities. One of the many benefits of scale is the ability to enact multiple overlapping or intertwined programs and policies. This increases success across the landscape but also makes it almost impossible to accurately attribute specific quantities of ERRs to each activity. Quantifying the total reductions or removals as well as listing the activities conducted provides the same level of assurance as to the drivers of the reductions or removals.                                                                                                                                                                                                                                                                                                                                              | 0               |

| 2592 | ACR ART              | TE                  |                 | "net zero consistent."). This is unnecessarily complex. Net zero consistent is subjective and depends on the timing of crediting, jurisdiction and sector. It is unclear how these requirements would be evaluated or verified and how far up and down stream would need to be considered (if a full life cycle assessment for all activities and components). The same goal could be met by ensuring the crediting programs have robust additionality requirements and even through the application of a negative list of project types that are ineligible for the CCP label such as those that lock in long-term emissions.                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0               |
| 2592 | ACR ART              | TE                  |                 | Proposed requirements in Section 13 Issues Related to Paris Agreement Alignment, also go beyond current market practice and arguably do not impact the quality of an emission reduction or removal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0               |
| 2593 | ACR ART              | ED                  |                 | There are a number of Assessment Framework elements that are currently identified as being required in the future under the "full assessment" that, with some minor edits and clarifications, could be met now. Those include:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0               |

| 2593 | ACR ART              | ED                  |                 | Criterion 9.4: Institutional sustainability under FULL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0               |
| 2594 | ACR ART              | GE/TE               |                 | Predictability in the VCM is critical. Therefore, the market needs clarity on current threshold requirements for obtaining the CCP label as well as a clear understanding of the process and timing to review and update the Assessment Framework in the future. This includes for alignment with new decisions to be taken under the Paris Agreement and enhancements and technological advances to monitoring and reporting methods.                                                                                                                                                                                                                                                                                                                                                          | 0               |
| 2594 | ACR ART              | GE/TE               |                 | We urge the creation of a quality threshold that can be seamlessly applied today, in order to create confidence in the market without further delay. This initial threshold should reflect current best practice in the market and be reasonably achievable in a timely manner by leading crediting programs such as the independent crediting programs approved by ICAO.                                                                                                                                                                                                                                                                                                                                                                                                                       | 0               |
| 2594 | ACR ART              | GE/TE               |                 | Aligned with recommendations from others in the industry, we recommend that a best practice threshold be determined via a broad benchmarking exercise focused on practices across standards. Crediting programs employ different approaches to address common elements of quality including additionality, non-permanence and safeguards. A review of current practice would yield much needed clarity on the sufficiency and improvement areas of these measures.                                                                                                                                                                                                                                                                                                                              | 0               |
| 2594 | ACR ART              | GE/TE               |                 | This should be followed by a continuous improvement mechanism to review requirements over time, backed by science, informed by experience gained with the practical application of the threshold requirements, and conducted in a manner respectful of the governance processes of existing crediting programs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0               |
| 2594 | ACR ART              | GE/TE               |                 | Any proposed changes to Standards cannot be required to be agreed and implemented overnight, rather would have to be phased in. Each Standard has defined timelines for transitions which largely do not align with the proposed timelines for ICVCM. For example, the Standard may be revised within 3 years but projects may have a full crediting period to implement some of the changes meaning they would not be in conformance with the CCPs for a much longer time. In some instances, projects may have spent years and considerable resources being developed and may not be able to change their approaches in a short timeframe or without additional resources being obtained. For Indigenous Peoples and Local Community projects in particular, this may present a large burden. | 0               |
| 2594 | ACR ART              | GE/TE               |                 | The dangers of the extensive requirements as laid out in the current proposal are two-fold: crediting program and active proponents may not apply for CCP assessment thereby rendering the process moot. Secondly, the monitoring and governance systems required to enforce these criteria require tremendous resources and pose a potential multi-year bottle neck in bringing CCP units to market. This will effectively halt investment flows to climate mitigation activities at a time when we need to accelerate our actions to stay within global temperature limits of 1.5°C.                                                                                                                                                                                                          | 0               |
| 2595 | ACR ART              | GE                  |                 | It is urgent to drive climate finance to emission reduction activities and technologies around the world and to scale the availability of high-quality credits in the market. The proposed process runs the risk of slowing down rather than accelerating high quality transactions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0               |
| 2595 | ACR ART              | GE                  |                 | Specifically on the assessment process as detailed – in particular with regard to review of crediting programs and separately of methodologies / project types for probability of additionality, robustness of baseline setting etc, we propose an alternate, streamlined approach that will require fewer resources and reduce the time to market for CCPs.                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0               |

|------|----------------------|---------------------|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| 2595 | ACR ART              | GE                  |                 | The assessment procedure should focus on building on other existing assessment frameworks and evaluations rather than undertaking its own assessment from scratch. Frameworks such as Western Climate Initiative (WCI) have been implemented by linked jurisdictions and include criteria for governance and quality aspects of offset credits. The ICAO assessment of crediting bodies for CORSIA eligibility – including the objective criteria for evaluation of compliance against quality criteria - provides an excellent foundation for the ICVCM and would significantly reduce the administrative and cost burden for both standards and the ICVCM. Parallel, duplicative assessment processes do not add integrity to the market but increase confusion as well as costs for all stakeholders. | 0               |
| 2595 | ACR ART              | GE                  |                 | In a streamlined model, the ICVCM could fast track approval of crediting programs already approved by ICAO. This could include “automatically” endorsing ICAO approved independent crediting programs (NOTE: NOT government crediting programs) as meeting the ICVCM governance, registry, validation and verification, and avoiding double counting requirements of the Assessment Framework.                                                                                                                                                                                                                                                                                                                                                                                                           | 0               |
| 2595 | ACR ART              | GE                  |                 | The methodology-by-methodology, sector or project-type phased assessments of additionality and baselines should NOT be conducted as proposed in the draft Assessment Framework. This duplication of work will not only create a massive bottleneck in the process, but also intends to supplant the processes that standards already have in place to ensure consultation and expert input to the approved methodologies.                                                                                                                                                                                                                                                                                                                                                                                | 0               |
| 2595 | ACR ART              | GE                  |                 | The ICVCM Assessment Framework should instead include high-level principles to support objective program-level evaluations of approaches at the program level for assurance of additionality, safeguards, robust quantification and non-permanence. This can also build on the extensive work done by the ICAO TAB to benchmark crediting programs and allow flexibility in appropriate region and sector-based compliance with the criteria (a functional equivalency among different approaches).                                                                                                                                                                                                                                                                                                      | 0               |
| 2595 | ACR ART              | GE                  |                 | The development of a negative list of project types that are deemed non-additional / non eligible for the CCP label (grid connected renewables in non-LDC countries, fossil fuel switch etc) could facilitate an on-ramp for eligibility of other crediting types / sectors without the need for a methodology-by-methodology review.                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0               |
| 2595 | ACR ART              | GE                  |                 | The initial threshold framework should be in place until the CCPs are fully implemented across the crediting programs                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0               |
| 2596 | ACR ART              | GE                  |                 | Arguably the ICAO decisions on independent crediting programs should be immediately applicable to meeting ICVCM requirements for governance, validation and verification, registry and avoiding double counting. The inclusion and exclusion of certain credit types under the ICAO decisions could be revisited in a more streamlined and surgical manner – focusing on true risks – than a full methodology-by-methodology or sector review by the Expert Panel.                                                                                                                                                                                                                                                                                                                                       | 0               |
| 2597 | ACR ART              | GE/TE               |                 | The Assessment Framework is highly subjective. Many of the provisions rely solely or heavily on the expert panel’s judgement. It is unclear how conformance will be determined or if there will be consistent interpretation of the requirements by different assessors over time. Furthermore, it seems the expert panel decisions on highly technical matter across various sectors and geographies will override the decisions that have already been taken by crediting bodies through their own processes of stakeholder consultation and expert technical review. This will undermine the market entirely.                                                                                                                                                                                         | 0               |
| 2597 | ACR ART              | GE/TE               |                 | It is critical that the Assessment Framework be accompanied by objective evaluation criteria and clear guidelines for interpretation of the criteria. (See ICAO documents).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0               |
| 2597 | ACR ART              | GE/TE               |                 | In addition, transparent governance is essential indicating the competence of decision-makers, and detailing who is making recommendations, who is making decisions, how those recommendations and decisions are made (committee level, group level, by consensus, by majority vote) and how discrepancies in opinions will be resolved. Furthermore, an appropriate grievance process should be in place for crediting bodies to appeal ICVCM decisions.                                                                                                                                                                                                                                                                                                                                                | 0               |

| 2598 | ACR ART              | TE                  |                 | YES, The ICVCM should build extensively on existing evaluations. This includes approval of crediting programs by regulatory bodies such as the California Air Resources Board, ARB, which has oversight of Offset Project Registries (OPRs). ACR has been operating as an approved OPR in California for a decade, supporting ARB's implementation of the cap and trade program and having issued roughly 2/3 of credits that can be used by capped entities towards their compliance obligation. ACR submitted a comprehensive application and was deemed by ARB to meet all requirements of the cap and trade regulation including organizational governance and mitigation of conflicts of interest, rigor and transparency of process, technical competence of staff for managing the carbon offset project listing and registration process and for oversight of verification, and operation of registry infrastructure. We meet accreditation requirements on knowledge of the regulation, all offset protocols and verification (through a testing process), meet regularly with and are audited for performance by ARB.                                                                    | 0               |
| 2598 | ACR ART              | TE                  |                 | The ICVCM should also build on approval of crediting bodies (and credit types) by ICAO based on a rigorous assessment by the 19-member international Technical Advisory Body (TAB) to adherence to program-level and credit-level quality criteria that were developed and piloted over the course of several years. If assessments conducted by these types of bodies were eligible as a means of demonstrating adherence to CCPs, it would greatly reduce the administrative burden for both Standards and the ICVCM. Duplicating efforts is inefficient, time-consuming and creates significant market uncertainty.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0               |

| 2600 | ACR ART              | TE                  |                 | Government funding support by itself should not eliminate the potential for a specific project type to be eligible as an offset credit. For example, Direct Air Capture projects or long-term CO2 storage projects are essential for addressing climate change and the value of a carbon credit will not typically provide sufficient incentive to enable their development – as such direct government tax incentives like that found in the U.S. or Canada will be needed in addition to carbon revenue.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0               |
| 2600 | ACR ART              | TE                  |                 | Option b is in place for ACR projects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0               |
| 2600 | ACR ART              | TE                  |                 | For jurisdictional REDD+, ART has robust provisions to avoid double counting in all of its forms. However, it would not meet the current requirements vis a vis double counting with domestic compliance systems. A domestic regulated carbon market can be a powerful tool for countries to implement including allowing reduction and removal credits generated in the country through GHG projects for use to meet the compliance obligation. In some cases, these are used to meet the compliance obligation only, and no claim for offsetting or other benefits is allowed to be made. In this instance, these ERRs should be permitted to count as reductions by the national GHG program and be issued under a GHG Program. There is no double claim made or double use. The only claim is towards reducing the national GHG emissions. The compliance system is a means of valuing carbon and driving finance to those that can achieve reductions and removals immediately while longer term programs are developed and implemented. We recommend specifically permitting an exclusion from these double counting provisions for domestic compliance systems where no claims can be made. | 0               |
| 2601 | ACR ART              | TE                  |                 | We believe that Option 2): evidence of alignment with national regulatory framework provides the most flexibility and rigor.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0               |
| 2602 | ACR ART              | TE                  |                 | Environmental and social safeguards should be included in all crediting frameworks; however, the implementation will depend on geography and sector. As proposed by ICVCM the safeguards are excessive and impractical, too prescriptive to be broadly applied, VBBs are not currently accredited for these scopes (and it may be beyond current competencies), and thus this is an over-reach for the CCPs and AF. We suggest a more generic framework that includes assurances that applicable environmental and social safeguards have been addressed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0               |
| 2602 | ACR ART              | TE                  |                 | ESG safeguards for jurisdictional REDD+ should be based on the Cancún Safeguards and their operationalization including building on current reporting to the UNFCCC. Requirements that go beyond this are inappropriate.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0               |
| 2602 | ACR ART              | TE                  |                 | We have many concerns with the proposed framework:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0               |

| 2602 | ACR ART              | TE                  |                 | 1. There should be acknowledgement that the safeguards apply only to the mitigation activities in the locations where they occur and that cited safeguards requirements may appropriately and justifiably not be applicable to some mitigation activities and/or some projects or programs due to the circumstances of the project or program.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0               |
| 2602 | ACR ART              | TE                  |                 | 2. Rather than ICVCM attempting to define all possible permutations and approaches that could be used and where they do and do not apply to activities, we would suggest that the ICVCM consider a simplified list of topic-based criteria which each Standard could include in the manner that best suits the nature of their programs. This provides the underlying rigor sought while providing flexibility for the differences in scale, type of activity and location of the activities occurring.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0               |
| 2602 | ACR ART              | TE                  |                 | 3. There should be a clear link between the legal framework and requirements of the host country or jurisdiction and the safeguards requirements. Projects and programs should (as required in other CCPs) be operating legally within their location and should ensure that national, regional, and local laws and requirements are followed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0               |
| 2602 | ACR ART              | TE                  |                 | 4. We recommend the ICVCM consult forest countries, Standards and program developers regarding the possibility and legality of implementing many of the safeguards. For example, in Criterion 13.1.6, several indicators state that Standards must require certain activities by projects and programs "regardless of whether the Indigenous People are recognized as such..." or where Indigenous Peoples claim lands but have no recognized rights to the lands. From a practical standpoint, this would be impossible to implement as a Standard would need to among other things, define Indigenous Peoples under its program, define which should be recognized under its programs and what rights are afforded to them, and determine how land claims should be evaluated. Given the diversity of Indigenous Peoples and customary land tenure rights throughout the world, it is not appropriate for each Standard to individually provide a single definition for use across the globe. At a minimum, this will lead to large differences between Standards and significant confusion in the marketplace. | 0               |
| 2602 | ACR ART              | TE                  |                 | Similarly, the legality and ability of Standards to require and projects and programs to implement all the safeguards should be considered in consultation with a wide array of stakeholders. A Standard does not have the sovereignty to assign carbon rights or land tenure rights to any stakeholder or to force programs and projects to do things where in conflict with national or local laws.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0               |
| 2602 | ACR ART              | TE                  |                 | 5. The scope of these safeguards which combines aspects of multiple programs and safeguards definitions each designed for individual purposes presents will require a tremendous effort by Standards and projects and programs to implement. Small scale projects will be able to address them more quickly as many will not be applicable. However, larger projects and jurisdictional programs will require years to fully develop and implement these with a significant cost. We recommend the Expert Panel consult with Standards and program developers as to the possible implementation timeline and likelihood that programs or large projects may simply decide not to participate. It would be a travesty if the ICVCM CCPs and AF were designed in a way that only small-scale projects could meet the requirements as this would miss the opportunity for significant climate change mitigation opportunities to occur.                                                                                                                                                                              | 0               |
| 2602 | ACR ART              | TE                  |                 | 6. There are inconsistencies in the safeguards as presented. For example, involuntary relocation simply requires consultation in 13.1.4 but requires full consent if related to Indigenous Peoples as stated in 13.1.6. Many of the criterion go in to great, prescriptive detail whereas Cancun Safeguard B which traditionally encompasses access to information, anti-corruption and other key safeguards is simply relegated to a single criterion.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0               |
| 2603 | ACR ART              | GE                  |                 | We do not agree with the requirements for MRV of Sustainable Development impacts. There are many industrial project types (high GWP refrigerant destruction, methane capture) that have HUGE mitigation value, are clearly incentivized by the VCM, but do not have the same SDG impact as some other project types. We are trying to solve the climate crisis, so that should be the focus in addition to assuring no harm by projects, compliance with all national and international laws, regulations, and requirements for participatory processes. Contributions to SDGs is highly desirable, but MRV will not be simple to implement in a standardized manner across geographies and sectors.                                                                                                                                                                                                                                                                                                                                                                                                              | 0               |

| 2603 | ACR ART              | GE                  |                 | Detailed requirements as currently outlined in the ICVCM could result in fewer of the most socially beneficial projects being developed because the proposed significantly higher MRV cost.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0               |
| 2603 | ACR ART              | GE                  |                 | SDG monitoring should be considered as optional attributes rather than as mandatory. This will provide a pathway for inclusion and market differentiation and allow programs to implement on a timeframe that is achievable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0               |
| 2604 | ACR ART              | TE                  |                 | Mitigation activities managed by IPLCs are often part of projects for which the IPLCs are not direct proponents (this includes projects and jurisdictional REDD programs). Therefore, differentiated safeguards would have to more broadly apply to any project that includes Indigenous Peoples and Local Communities. It would be much more pragmatic to have flexible safeguards requirements based on consultative process (as applicable) and risk mitigation than having differentiated requirements for IPLCs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0               |
| 2605 | ACR ART              | TE                  |                 | It should be first noted that consent and consultation are not the same as indicated in this question and that FPIC is usually defined as appropriate based on the nature and impact of the activities, not based on who the project or program proponent is. We recommend FPIC rather than consultation be used when appropriate in line with best practices (as defined by UNDP and other similar organizations) across all proponents and in line with the legal framework of the country where the activity occurs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0               |
| 2606 | ACR ART              | GE                  |                 | ICVCM includes financial analysis, barrier analysis, market penetration (common practice) analysis, legal requirements, and positive lists established by registries.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0               |
| 2606 | ACR ART              | GE                  |                 | We do not agree with the proposed structure for assessing additionality, which would impose new requirements on crediting bodies and on project developers. It is unclear what problem these new requirements are solving, how they were developed, if/how they will add value and if they are even practical in terms of implementation and verifiability.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0               |
| 2606 | ACR ART              | GE                  |                 | Over two decades of analysis and consideration of additionality testing has resulted in a variety of new approaches to assess additionality that are currently applied across the market. This includes performance standards that are used in combination with legal/regulatory additionality tests, such as employed by ACR (and the California Air Resources Board) as well as requirements for regulatory additionality combined with a barriers test. In our view, these do not need to be replaced, and we therefore recommend that the Expert Panel and ICVCM Board carefully analyze commonly applied approaches to additionality such as performance standards that do NOT include financial assessments or the need to demonstrate intent for carbon revenues.                                                                                                                                                                                                                                                       | 0               |
| 2606 | ACR ART              | GE                  |                 | Specifically with regard to financial additionality, the IRR test has multiple challenges including the inability to standardize an approach across sectors, geographies and financing structures; the inability to obtain benchmark IRR in certain sectors (such as forestry); the need to disclose confidential financial information on project returns and internal hurdle rates; the ability to easily game the numbers and the difficulty in verifying the results.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0               |
| 2606 | ACR ART              | GE                  |                 | Furthermore, we disagree with the sentiment that the investment analysis must show that carbon revenues must specifically raise the financial feasibility above a yet to be defined financial benchmark. The sensitivity analysis even further complicates the approach. Such complexities require significant amounts of research and time to even determine whether a project is eligible, which ultimately could narrow participation to all but the largest carbon offset developers. The barrier analysis and market penetration analysis provide a good alternative to the financial analysis, but we disagree that the market penetration assessment must be combined with one of the other viability assessments rather than stand-alone and disagree with the subjective nature of applying "medium", "high", or "relatively low" assessment categories. Similarly, we agree that positive lists should be justified and periodically updated but disagree they must conform to the criteria for investment analysis. | 0               |
| 2606 | ACR ART              | GE                  |                 | Specifically as related to jurisdictional REDD+, the additionality test must be practical for implementation by governments, as employed by ART and as described below.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0               |

| 2607 | ACR ART              | TE/ED               |                 | The Assessment Framework introduces a complex two step evaluation process to determine additionality. The first step is an evaluation by the expert panel of the probability that the activity is additional. The framework states "The likelihood of additionality depends on the financial attractiveness of a mitigation activity without carbon credit revenues. An activity that financially is highly attractive is more likely to be implemented without carbon credits (except where other barriers prevent its implementation). In contrast, mitigation activities with very poor financial performance will be unlikely to be implemented without carbon credit revenues. The most commonly applied indicator for assessing the financial attractiveness of a mitigation activity is its internal rate of return (IRR) in relation to a required benchmark for investments."                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | We recommend ELIMINATING the assessment in Step 1, which is subjective, questions the processes of the crediting bodies and will introduce great market uncertainty.                                                                                                                                                                                    |
| 2607 | ACR ART              | TE/ED               |                 | For jurisdictional REDD+ this type of assessment is impractical and unnecessary because it is clear that we are losing forests at an unprecedented rate and countries need financial incentives to reduce deforestation and protect and restore forests.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Instead of the two-phased approach, we recommend that for project level crediting the ICVCM assess whether carbon crediting programs have transparent, sectorally-appropriate, science-based additionality tests that incentivize the project action, rather than specifically or exclusively fund it.                                                  |
| 2607 | ACR ART              | TE/ED               |                 | For project-based crediting, this highly subjective exercise seems to substitute the Expert Panel's judgement for the processes within the crediting bodies to both develop appropriate additionality tests as part of the methodology process as well as to apply that test based on the technical competence of staff and oversee the independent verification of that test. How does the ICVCM intend to be an expert on all of the various types of projects in existence?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | For jurisdictional REDD+, we suggest performance-based additionality as defined in TREES as allowing for crediting below a conservative, historic performance level. It is important to note that regulatory additionality tests are not appropriate for jurisdictional REDD+, however, for which enforcement of laws is critical to achieving results. |
| 2607 | ACR ART              | TE/ED               |                 | We are concerned with the proposed requirement to conduct a financial attractiveness assessment on every project. In our experience, financial assessments are not always a robust approach for determining additionality, in particular when comparing the project scenario with and without carbon revenue. This is because this type of analysis is inherently subjective, due to variability in the cost of capital and pricing. The use of IRR alone is an insufficient measure of project viability since it ignores the cost of capital, which varies widely amongst project owners. For example, each company or project owner will have different access to and reliance on equity and debt, and this varies depending on the type of organization (e.g., for profit vs nonprofit). Then, different project owners will select different capital structures based on access and cost, which influences the project weighted average cost of capital (WACC), and the cost of capital will vary over time due to changes in macro and market conditions. Further, there is no consistent, industry accepted approach to underwriting investments in carbon projects with respect to future timber prices and carbon prices, but also related to other revenue streams (e.g., agricultural products, hunting and recreation leases). Deferring to the traditionally recognized financiers of timberland investments and agricultural activities, such as pension funds, would not provide the necessary benchmark information. There is no standard benchmark for land-based carbon offset investments and these would vary greatly by geography and project type (wetland restoration would be different than IFM on small private timberlands or from agricultural practices). Therefore, it would be very difficult to rely on sample data or literature, and, in our view, experts would be unable to provide a valid assessment of the indicators. Finally, because of this wide variability of financial inputs it could easily result in cases where projects that are deemed viable do not secure financing, while other projects that are deemed unviable do secure financing, somewhat weakening the use of this test to determine project additionality. | For both projects and jurisdictional REDD+, we strongly suggest eliminating the pure financial additionality tests and the prior intent of carbon revenues and allowing for performance standards as appropriate additionality tests.                                                                                                                   |
| 2607 | ACR ART              | TE/ED               |                 | We also note that the subjectivity and variability of these analyses make them virtually impossible to verify with reasonable assurance, and verification bodies often lack the expertise to assess such subjective assumptions. It is equally difficult to secure qualified subcontractors to assist verifiers with this assessment, and the hired 'experts' often lack the relevant industry knowledge. Forcing verifiers to make these assessments will result in inconsistency across project verifications.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                       |
| 2607 | ACR ART              | TE/ED               |                 | As a critical input to these analyses, carbon credit price and transaction costs are highly variable and subject to change over time. Carbon projects can take years to develop. The speculative nature of this attribute in the financial analysis has real world, HUGE implications as to whether a project would be considered additional and pursued. In the absence of better, more specific guidance on how this must be implemented, this requirement could adversely affect project implementation with little actual basis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                       |

|------|----------------------|---------------------|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| 2607 | ACR ART              | TE/ED               |                 | As a specific example, forests are an asset with multiple potential revenue streams and management outcomes. IRR maximization is a motivator in considering multiple management pathways. However, it is not an exclusive motivator and amenity value is often equally or more important. IRR should be used as it is intended - as one attribute of a fuller decision framework for evaluating a management pathway. Requiring either “no income, cost savings or benefits other than carbon credit revenues” or “relatively poor financial attractiveness without carbon credit revenues” AND “carbon credits revenues significantly impact financial feasibility” AND “achievement of financial attractiveness with carbon credit revenues” sets an unrealistic bar for determining financial additionality.                                                                                                                                                      | 0               |
| 2608 | ACR ART              | GE/TE               |                 | As described above, carbon prices are not an indicator of additionality and should not influence the outcome of the financial analysis component. Price reflects a host of variables including supply/demand balance, purchase size, the number of substitutes, geographic preferences, buyer brand identity, additional benefits, etc. In addition, price is commercially sensitive information that most project developers will be unwilling to divulge.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0               |
| 2609 | ACR ART              | TE/ED               |                 | ICVCM seems to want to substitute the Expert Panel’s judgement for the crediting program’s science-based peer review process. How does the ICVCM intend to be an expert on the myriad of project types in existence? This is likely an unreasonable expectation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0               |
| 2609 | ACR ART              | TE/ED               |                 | We recommend ELIMINATING the Expert Panel additionality assessment in Step 1, which is subjective, questions the processes of the crediting bodies and will introduce great market uncertainty.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0               |
| 2609 | ACR ART              | TE/ED               |                 | Instead of the two-phased approach, we recommend that for project level crediting the ICVCM assess whether carbon crediting programs have transparent, sectorally-appropriate, science-based additionality tests that incentivize the project action, rather than specifically or exclusively fund it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0               |
| 2609 | ACR ART              | TE/ED               |                 | For all credit types, we strongly suggest eliminating the pure financial additionality tests and the prior intent of carbon revenues and allowing for performance standards as appropriate additionality tests.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0               |
| 2609 | ACR ART              | TE/ED               |                 | Negative lists of activities could also streamline the process since there is likely strong industry agreement on major categories of activities that are non-additional.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0               |
| 2609 | ACR ART              | TE/ED               |                 | For jurisdictional REDD+, to meet the proposed ICVCM financial additionality test, “Jurisdictional REDD+ activity proponents shall provide evidence demonstrating that expected revenues received per tonne of credited CO2-equivalent mitigation (or per tonne paid for through results-based finance) are sufficient to cover or exceed the expected costs per tonne of CO2-equivalent mitigation achieved. Expected cost per tonne shall be estimated as the ratio of: i. the jurisdictional REDD+ activity proponent’s estimate of the total jurisdictional budget needed to undertake the REDD+ implementation plan amortised over the jurisdictional REDD+ activity’s initial crediting period; and ii. the jurisdictional REDD+ activity proponent’s estimate of the total emission reductions and removals it expects to achieve by undertaking the REDD+ implementation plan, amortised over the jurisdictional REDD+ activity’s initial crediting period.” | 0               |
| 2609 | ACR ART              | TE/ED               |                 | This type of requirement for financial additionality makes no sense at a jurisdictional scale. Drivers of deforestation and degradation always have a significant financial component. The revenue from protection and restoration activities has to be greater than the alternative land use and would need to be considered when planning the activities. Furthermore, a financial additionality test would be difficult, if not impossible, to document and verify. Acquiring the financial information from every landowner and small-scale project implementer as would be needed to perform the full analysis would be extremely burdensome.                                                                                                                                                                                                                                                                                                                   | 0               |

|------|----------------------|---------------------|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| 2609 | ACR ART              | TE/ED               |                 | In addition to the above, the jurisdiction must demonstrate the implementation of new and enhanced policies and measures to meet the proposed additionality test. It is unclear in the proposed options how this will be assessed whether the new laws or the ongoing or new activities can “be reasonably expected to significantly lower emissions.” What is significant and on what basis would such an assessment take place when the activities or laws are part of a greater overall portfolio of laws and activities? Would a jurisdiction be required to make ex-ante estimates? This would not be a reasonable exercise to require, nor would it likely result in meaningful results. Jurisdictional REDD+ inherently must include and work to optimize both existing policies and new policies. A REDD+ strategy that doesn’t include both existing and new policies will be very difficult to implement, as these strategies often seek to leverage existing policies and frameworks to create benefit sharing mechanisms, expand programs within existing regulations, and improve efficiency (and in some cases, enforcement) of them. | 0               |
| 2609 | ACR ART              | TE/ED               |                 | We suggest that the Expert Panel consider the approach used by current jurisdictional programs as these have been vetted through expert review and many public consultations. For example, ART relies on a performance-based additionality test by only crediting for emission reductions achieved below a conservative, historical emissions baseline and for removals on land that has been degraded / deforested for at least five years. ART also requires that governments have in place REDD+ implementation plans that describe policies and measures that are contributing to reducing deforestation. These plans take years to implement and show results.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0               |
| 2609 | ACR ART              | TE/ED               |                 | Also under the Assessment Framework, jurisdictional REDD+ activity proponent must also show evidence of expectation of carbon credits by providing “clearly documented evidence that the generation of carbon credits or results-based payments was considered prior to the start of the first crediting period. This may include the application or other formal documentation submitted to any jurisdictional REDD+ carbon crediting or results-based payments program, an official document shared with stakeholders with clear intent to apply to a carbon crediting or results-based payments program, or a recorded stakeholder meeting where such an application to a carbon crediting or results-based payments program was discussed.” This requirement is also not appropriate for jurisdictional REDD+.                                                                                                                                                                                                                                                                                                                                  | 0               |
| 2609 | ACR ART              | TE/ED               |                 | Already, the level of effort for a jurisdiction to comply with current REDD+ offset standards is significant, costly and requires extensive technical support, capacity building and importantly, political will. In addition to developing and implementing REDD+ Strategies, jurisdictions must develop and maintain MRV systems, benefit-sharing systems, and robust safeguard information systems that include public portals and significant participatory processes. Jurisdictions must also determine the legal underpinning for ownership of carbon assets, create trusts to transparently receive and disburse carbon finance and a multitude of other activities that would NOT have occurred in the absence of the carbon market.                                                                                                                                                                                                                                                                                                                                                                                                        | 0               |
| 2609 | ACR ART              | TE/ED               |                 | Jurisdictions are gaining access to carbon markets now for the first time, and many jurisdictions are in the early stages of designing their REDD+ programs in hopes of achieving results that will attract much needed carbon finance. Imposing additional barriers could devastate so much commendable action that has been taken to date and we strongly recommend that the proposed additionality requirements be removed. Instead, we suggest that the ICVCM consider the requirements of ART TREES, for example, as having been through an extensive stakeholder review and Board approval process.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0               |
| 2609 | ACR ART              | TE/ED               |                 | Specifically for jurisdictional REDD+, we suggest performance-based additionality as defined in TREES as allowing for crediting below a conservative, historic performance level. It is important to note that regulatory additionality tests are not appropriate for jurisdictional REDD+, however, for which enforcement of laws is critical to achieving results.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0               |
| 2610 | ACR ART              | TE                  |                 | Criterion 8.5, as noted by ICVCM, goes beyond the project start date requirements established by crediting bodies. The existing lookback limitations and deadlines for validation/registration of a project following the start date serves to screen out pre-existing projects while allowing project developers some flexibility in navigating robust reporting and documentation rules.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0               |
| 2610 | ACR ART              | TE                  |                 | An additional requirement to provide evidence that carbon credits were explicitly considered prior to the project start date will add an undue administrative burden to project developers and will needlessly exclude some high-quality projects from CCP eligibility. We strongly recommend the removal of criterion 8.5 from the assessment of additionality.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0               |

|------|----------------------|---------------------|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| 2611 | ACR ART              | TE                  |                 | The first two proposed options in the Assessment Framework for assuring permanence require either 1) a 50- year project monitoring and reversal compensation term, or 2) a 25 year legally binding minimum MRV term with discounted ton-year crediting (e.g., 25% credits per year). The 100 years as “permanent” is proposed based on the 100-year GWP’s, which have no scientific basis in relation to the permanence of carbon emissions reductions or removals in the atmosphere.                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0               |
| 2611 | ACR ART              | TE                  |                 | The vast majority of forestry credits being issued by independent standards today (likely less than 3%) do not meet these requirements, nor are they reasonable if the objective is maximum program uptake and climate impact in the near term. It is questionable whether a 100- year commitment by any organization is even credible given the relatively short institutional life of companies. Furthermore, we advocate that the CCPs explicitly prohibit or propose extreme limitations on ton year accounting (as in option 2) due to the lack of scientific consensus on that approach, and the vast difference in crediting that result from different approaches that have been proposed and applied by Standards.                                                                                                                                                                                                                                         | 0               |
| 2611 | ACR ART              | TE                  |                 | Option 3 should be deemed as equally viable as other options and defined as multi-decadal commitments for projects with enforcement for MRV during that period, a robust reversal risk mechanisms including a buffer pool and no buffer pool refunds. The mechanism should ensure reporting and compensating in real time (during the verification cycle).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0               |
| 2611 | ACR ART              | TE                  |                 | For JREDD, option 3 should be defined as enforcement for MRV and compensation for reversals in real time (during the verification cycle) and retirement of cumulative buffer pool contributions when the Participant leaves the program to compensate for future potential reversals.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0               |
| 2611 | ACR ART              | TE                  |                 | While being implemented by some project-level crediting programs, differentiation between intentional and unintentional reversals is not appropriate for jurisdictional REDD+. To date, no program has an insured buffer pool and only a few have enforceable legally-binding agreements for long-term MRV.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0               |
| 2611 | ACR ART              | TE                  |                 | In cases in which reversal reporting and compensation is required immediately, and in which the buffer pool is robust (no refunding of credits), the buffer pool may be able to adequately compensate for future reversals many decades past the end of MRV. It is important to note that reversal risk is inherently different for activities that are being implemented at a scale (i.e., national or subnational) with appropriate risk mitigation measures in place including contributing to a buffer pool and monitoring, reporting and compensating for reversals.                                                                                                                                                                                                                                                                                                                                                                                           | 0               |
| 2611 | ACR ART              | TE                  |                 | For jurisdictional REDD+ a reversal occurs when reported annual emissions are above the conservative, historical crediting level of emissions from deforestation and forest degradation. These are actual ER that have been verified to have occurred. Unlike at the project scale, a single fire or harvest event does not necessarily cause a reversal in a jurisdictional REDD+ program since forest carbon stock reversals in one area may be absorbed or netted out through performance reducing emissions and enhancing stocks in other areas. There is no differentiation between intentional and unintentional reversals because these jurisdictional reversal results from a combination of natural and anthropogenic causes (related to, but not limited to timber harvesting, agricultural expansion, community dependence on forest products, supply chains, overall economic health, strength of land and forest management policy, governance, etc.). | 0               |
| 2611 | ACR ART              | TE                  |                 | Jurisdictional-level implementation can ensure more robust accounting for reversals since at a large scale, forest carbon stock reversals in one area may be absorbed or netted out through exceptional performance in other areas. Unlike at the project scale, a single fire or harvest event does not necessarily cause a reversal in a jurisdictional REDD+ program. Therefore, at minimum, jurisdictional approaches to implementation should be recognized for reducing risk or reversals, effectively downgrading where nature-based activities sit on the “susceptibility of reversal” matrix.                                                                                                                                                                                                                                                                                                                                                              | 0               |
| 2611 | ACR ART              | TE                  |                 | ART’s standard TREES has requirements in place to contribute to the buffer pool as well as monitor, report and compensate for reversals. Buffer pool contributions are not refunded over time. The TREES buffer pool contributions (25% of credits per issuance, which can potentially be reduced to 5% if a jurisdiction achieves all three mitigating factors, but most likely at the higher end) are significant when compared with the annual percent of forest loss across large areas.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0               |

| 2611 | ACR ART              | TE                  |                 | According to data from Global Forests Watch, while cumulative forest loss can occur in jurisdictions that are not effectively implementing or being rewarded for reducing emissions from deforestation, the loss occurs slowly over time - having trended under 1% annually for the past 15 years, and interannual differences are relatively low even during changes in governments. This analysis suggests it is unlikely that a Participant would have a reversal for an amount that exceeds its cumulative buffer contribution. Given the trends in annual forest loss of under 1%, the Participant's comparatively sizeable buffer pool contribution should conservatively compensate for any prospective reversals for many decades into the future.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                        |
| 2611 | ACR ART              | TE                  |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                        |
| 2611 | ACR ART              | TE                  |                 | Under TREES, in the event of a reversal, the Participant reports the total volume (of annual reported emissions higher than the conservative historic crediting level). The ART Secretariat retires the corresponding volume of units from the buffer pool. If the reversal volume exceeds the Participant's total contributions to the buffer pool to date, the Participant must replenish the difference. If the Participant does not have units available to compensate for any amount that the reversal exceeds buffer pool volume contributed to date (from any credits issued that have not been transferred or retired), that amount would be compensated by other credits from the pool. The Participant would then be required to replenish that volume from a future issuance. This may carry forward to multiple future issuances or across crediting periods as needed to ensure the full amount is replenished. In addition, after a reversal, a Participants must increase its buffer contribution for a period of five calendar years by 5% to reflect increased reversal risk. The five calendar years carries forward across crediting periods as well. This requirement is enforced through the legal Terms of Use Agreement. | 0                                                                                                                                                                        |
| 2611 | ACR ART              | TE                  |                 | If a Participant were to leave the ART program prior to the successful replenishment of the buffer pool, they would be required to purchase credits to make the buffer pool whole as per the legally binding Terms of Use Agreement they signed when they joined ART.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                        |
| 2611 | ACR ART              | TE                  |                 | When any Participant leaves the ART program, any remaining buffer pool credits they have contributed are automatically retired. This is to compensate for any future reversals that may occur. In addition, buffer pool credits are never returned to a Participant.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                        |
| 2612 | ACR ART              | GE                  |                 | We believe labeling projects by generic categories will be useful for buyers. However, too many labels will create confusion. ACR and ART currently have registry functionality in place to label credits as either verified emission reductions or removals (not further differentiated by tech or nature since that is obvious under the project type), for credits that have a host country authorization (and ultimately a corresponding adjustment) and for credits that are ICAO qualified. We support labels for projects that have additional certifications such as for the SDGs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                        |
| 2613 | ACR ART              | TE                  |                 | Article 6 requires authorization for transfers under Article 6 and for use of credits for CORSIA compliance. VCM projects are not required by the Paris agreement to have authorization. Both the ACR and ART registries have functionality in place to publish host country letters of authorization, label authorized units and label units with CAs. This should be optional.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                        |

| 2623 | ACR ART              | Te                  |                 | Crediting programs are not involved in the transactional aspects of carbon markets. This is well beyond our remit. ART, and ACR as appropriate, requires VVBs to ensure that benefit sharing agreements have been implemented as agreed upon, but we do not ask for the end recipient to specify what they did with the funds they received.                                                                               | Delete this criterion as it is beyond the scope of a GHG crediting program.                                                                                                                                                                                                                                                                                                                 |
| 2623 | ACR ART              | Te                  |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                           |
| 2624 | ACR ART              | Ge                  |                 | ACR and ART can clarify that grievances will be responded to in a certain reasonable timeframe. However, the time to investigate and resolve a grievance is highly dependent on the nature of the grievance. The time bound resolution may be outside of ACR and ART's control.                                                                                                                                            | Either delete "time-bound" from the criterion or clarify that the initial response must be "time-bound" but that a resolution's timeframe may vary based on the nature of the issue.                                                                                                                                                                                                        |
| 2624 | ACR ART              | Ge                  |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                           |
| 2625 | ACR ART              | Ge                  |                 | Any grievances received that are evaluated as part of the program verification public comment process will be public. There may be circumstances in which grievances will not be made public though at the request of the submitter or the legal system.                                                                                                                                                                   | ACR and ART suggest allowing exceptions based on the request of the submitter, legal considerations, and other cases where a grievance should remain confidential.                                                                                                                                                                                                                          |
| 2625 | ACR ART              | Ge                  |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                           |
| 2626 | ACR ART              | Ge                  |                 | We will not be able to demonstrate conformance with these requirements unless they are streamlined as they imply a lot of downstream monitoring.                                                                                                                                                                                                                                                                           | We recommend eliminating requirement i) as resolution / redress of the grievance is addressed in our process.                                                                                                                                                                                                                                                                               |
| 2626 | ACR ART              | Ge                  |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                           |
| 2627 | ACR ART              | Te                  |                 | The ACR and TREES Validation and Verification Standard outlines what actions will be taken to address any errors identified in previous validations and verifications. It does not identify liability however.                                                                                                                                                                                                             | GHG Crediting programs should have rules to address errors found. However, assigning a liability is not the mandate of the GHG Crediting program. These terms would be included in the ERPA.                                                                                                                                                                                                |
| 2627 | ACR ART              | Te                  |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                           |
| 2628 | ACR ART              | Ge                  |                 | The ACR and TREES Validation and Verification Standard outlines what actions will be taken to address any errors identified in previous validations and verifications.                                                                                                                                                                                                                                                     | We recommend eliminating cancellation of previously issued as an option for recourse. Methods of addressing past errors should be identified and clearly outlined. However, cancelling credits should not occur as this causes significant uncertainty and risks to the market. Instead, compensation methods should be employed.                                                           |
| 2629 | ACR ART              | Ge                  |                 | Winrock has internal procedures for evaluation of ACR and ART management and staff. Organizational and staff KPIs are not public nor are performance evaluations, nor do we think this is appropriate.                                                                                                                                                                                                                     | We support performance reviews and evaluation; however, we recommend eliminating the clause requiring making the outcomes of such processes public. This will not add to the integrity of the credit achieved and is likely to result in a less rigorous internal process. Deeper reflection is likely to occur when the results are to be discussed internally only.                       |
| 2630 | ACR ART              | Ge                  |                 | Winrock is annually audited according to GAAP, which includes ACR and ART, and the results of the Winrock audit are published in its annual report. However, there are no " Formal and transparent arrangements for determining how to apply the corporate reporting, risk management and internal control principles." .... Neither ACR nor ART have separate financials.                                                 | We recommend designing the criteria in this section to be more flexible as each GHG crediting program has a different structure and a single approach to high integrity governance is unlikely to fit all structures. Providing additional information as to the concern the criterion is attempting to address will help programs identify and suggest alternative approaches more easily. |
| 2630 | ACR ART              | Ge                  |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                           |
| 2631 | ACR ART              | Ge                  |                 | We do not understand what this means or what it has to do with organizational or credit integrity.                                                                                                                                                                                                                                                                                                                         | Please clarify the intent of this criterion. Providing additional information as to the concern the criterion is attempting to address will help programs identify and suggest alternative approaches more easily.                                                                                                                                                                          |

| 2632 | ACR ART              | Ge                  |                 | We do not understand what this means or what it has to do with credit integrity.                                                                                                                                                                                                                                                                                                                                                                                                                                        | Please clarify the intent of this criterion. Providing additional information as to the concern the criterion is attempting to address will help programs identify and suggest alternative approaches more easily.                                                                                                                                                                                                                              |
| 2633 | ACR ART              | Ge                  |                 | We do not understand what this means or what it has to do with credit integrity.                                                                                                                                                                                                                                                                                                                                                                                                                                        | Please clarify the intent of this criterion. Providing additional information as to the concern the criterion is attempting to address will help programs identify and suggest alternative approaches more easily.                                                                                                                                                                                                                              |
| 2634 | ACR ART              | Ge                  |                 | Development of management systems and/or verification against them would be prohibitive for a small staff. ACR and ART's operations are covered under Winrock's operations and guidelines.                                                                                                                                                                                                                                                                                                                              | We recommend designing the criteria in this section to be more flexible as each GHG crediting program has a different structure and a single approach to high integrity governance is unlikely to fit all structures. Providing additional information as to the concern the criterion is attempting to address will help programs identify and suggest alternative approaches more easily.                                                     |
| 2635 | ACR ART              | Ge                  |                 | Why is this necessary and what does it contribute to credit integrity? For ART developing an example for a jurisdictional approach would not likely be helpful given the wide variability of programs that will join.                                                                                                                                                                                                                                                                                                   | We suggest removing this requirement. Providing additional information as to the concern the criterion is attempting to address will help programs identify and suggest alternative approaches more easily.                                                                                                                                                                                                                                     |
| 2636 | ACR ART              | Ge                  |                 | This would be captured in the periodic review.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | This criterion is not necessary if there are processes in place to periodically review and assess the methodologies as is required elsewhere.                                                                                                                                                                                                                                                                                                   |
| 2637 | ACR ART              | Te                  |                 | ART allows a maximum 4-year lookback period from the time the Participant joins ART if the jurisdiction can meet all MRV and safeguard requirements for the previous years. Participants are required to identify the new and ongoing activities conducted during the timeframe as part of the REDD+ program.                                                                                                                                                                                                           | We would recommend permitting a lookback period for jurisdictional REDD+ subject to data and safeguards requirements to reflect the reality that programs must often begin initial efforts prior to joining a GHG crediting program. It is appropriate to allow start dates to align with calendar years rather than specific dates to simplify accounting and provide flexibility when multiple activities are beginning around the same time. |
| 2637 | ACR ART              | Te                  |                 | ACR has time bound requirements for listing and validating projects from the start date.                                                                                                                                                                                                                                                                                                                                                                                                                                | Project-level safeguards must be in place to allow flexibility for different project start dates and implementation.                                                                                                                                                                                                                                                                                                                            |
| 2638 | ACR ART              | Ge                  |                 | This is a requirement of TREES for the TREES Crediting Approach. The removals crediting approach is based on the area being restored in the reference period and therefore, it is allowed to increase over time as this is more conservative. The HFLD Crediting Approach permits increases which would reflect improved performance of the Participant at mitigating drivers of deforestation and degradation.                                                                                                         | We recommend either removing this requirement or modifying it to both reflect different types of activities and to reflect changing conditions. It would be helpful to understand why this requirement is in place for jurisdictional REDD but not project REDD however to better suggest alternatives.                                                                                                                                         |
| 2639 | ACR ART              | Ge                  |                 | This is already in place for ACR, however under ART, TREES requires the Participant to use the same GWP included in its UNFCCC reporting to align reporting as much as possible. If the transition to the 5th IPCC report has not yet occurred, we require a plan for transitioning to be presented. We do not have a date associated with it however.                                                                                                                                                                  | The deadline for the transition should be permit more flexibility as long as baseline and annual emission calculations are consistent. Full transition to the 5th AR is required under the Paris Agreement so we will see countries making that change.                                                                                                                                                                                         |
| 2640 | ACR ART              | Ge                  |                 | We fundamentally disagree with conservativeness being more important than accuracy. We also do not require that each input parameter use the most conservative value and then require an uncertainty deduction to also be taken. The overall uncertainty of over-reporting is identified, and an appropriate deduction is required. This ensures the integrity of the credit without being punitive to programs. Under-reporting of credits does not harm the market or negatively impact the integrity of the credits. | We recommend this phrasing "emission reductions or removals be determined in a conservative manner (rather than striving to use the most accurate estimate)" be revised to reflect the importance of both conservativeness and completeness in line with the principles of most GHG programs. Strengthen the focus on accuracy over conservatism also incentivizes ongoing MRV improvements                                                     |
| 2641 | ACR ART              | Ge                  |                 | While projects incorporate legal requirements (regulatory additionality) and government policies in the baseline determination, this is not a concept that can be operationalized for jurisdictional REDD+ and does not allow activities to contribute to NDC achievement.                                                                                                                                                                                                                                              | We recommend clarifying that performance threshold crediting levels automatically incorporate this requirement and the requirement to specifically list all non-REDD+ actions and legal requirements that may impact performance is not possible.                                                                                                                                                                                               |
| 2641 | ACR ART              | Ge                  |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2642 | ACR ART              | Ge                  |                 | We do not see how alignment of the crediting periods and NDC reporting promotes integrity. Reporting on progress towards NDCs may occur at any time during a crediting period. Also, does this suggest that crediting periods may be of different lengths depending on when a program begins?                                                                                                                                                                                                                           | We recommend not requiring alignment of the crediting period and NDC reporting to allow consistent crediting periods across programs. rfc                                                                                                                                                                                                                                                                                                       |
| 2643 | ACR ART              | Ge                  |                 | ACR requires a new baseline and additionality assessment for a new crediting period (but does not agree with the financial additionality test as being the only one).                                                                                                                                                                                                                                                                                                                                                   | For projects we recommend clarifying that additionality will be re-assessed using the test in place.                                                                                                                                                                                                                                                                                                                                            |
| 2643 | ACR ART              | Ge                  |                 | TREES requires reassessment of the crediting level every 5 years to ensure that any changes in business as usual are captured and to drive ambition. However, TREES does not and will not require financial additionality as it is an inappropriate test for JREDD (as evidenced by all three Standards using the same performance threshold test).                                                                                                                                                                     | We recommend permitting the use of the performance threshold additionality test for JREDD programs in line with the best practice for this scale exemplified by all jurisdictional programs currently.                                                                                                                                                                                                                                          |
| 2644 | ACR ART              | Ge                  |                 | For projects, this is captured in the accounting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | We recommend removing this requirement for JREDD as it is not possible nor useful at a jurisdictional scale.                                                                                                                                                                                                                                                                                                                                    |
| 2644 | ACR ART              | Ge                  |                 | This is not possible to define at a jurisdictional scale and would not add more information regarding performance and integrity than simply providing data demonstrating that the emissions have been reduced and removals have increased.                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| #    | Comment submitted by | Para/Fig/Table/Note | Type of comment | Submitted comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Proposed change                                                                                                                                                                                                                                                                                                                           |
|------|----------------------|---------------------|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2645 | ACR ART              | Ge                  |                 | Neither ACR nor ART see a reason to require issuance requests of verified credits at certain intervals as this will depend on when credits are contracted for sale. It is unclear how this requirement ensures quality and integrity for previously issued credits. If an activity ceases to operate, it will either not generate credits in the future or experience a reversal which will be compensated for in line with the requirements of the Standard.                                                                                                                                                                                                                                                                                                                                                 | We recommend removing this requirement as it does not add to the integrity of an already verified emission reduction or removal.                                                                                                                                                                                                          |
| 2646 | ACR ART              | Te                  |                 | ART allows an exception for the use of credits as issued ONLY for use in a domestic compliance scheme. These are not recognized by ART or subtracted from TREES issuance                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | We recommend permitting the exclusion of domestic compliance schemes, such as tax obligations, where no GHG claim is being made. This is not widely used now but will enable governments to use a wider variety of schemes to incentivize financing of REDD+ programs without reducing integrity.                                         |
| 2647 | ACR ART              | T                   |                 | ART allows an exception for the use of credits as issued ONLY for use in a domestic compliance scheme. These are not recognized by ART or subtracted from TREES issuance. Otherwise, the robust provisions in TREES protect against the double issuance, double use, or double claiming of ERRs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | We recommend permitting the exclusion of domestic compliance schemes, such as tax obligations, where no GHG claim is being made. This is not widely used now but will enable governments to use a wider variety of schemes to incentivize financing of REDD+ programs without reducing integrity.                                         |
| 2648 | ACR ART              | T                   |                 | ART allows an exception for the use of credits as issued ONLY for use in a domestic compliance scheme. These are not recognized by ART or subtracted from TREES issuance. Otherwise, the robust provisions in TREES protect against the double issuance, double use, or double claiming of ERRs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | We recommend permitting the exclusion of domestic compliance schemes, such as tax obligations, where no GHG claim is being made. This is not widely used now but will enable governments to use a wider variety of schemes to incentivize financing of REDD+ programs without reducing integrity.                                         |
| 2649 | ACR ART              | T                   |                 | ART allows an exception for the use of credits as issued ONLY for use in a domestic compliance scheme. These are not recognized by ART or subtracted from TREES issuance. Otherwise, the robust provisions in TREES protect against the double issuance, double use, or double claiming of ERRs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | We recommend permitting the exclusion of domestic compliance schemes, such as tax obligations, where no GHG claim is being made. This is not widely used now but will enable governments to use a wider variety of schemes to incentivize financing of REDD+ programs without reducing integrity.                                         |
| 2650 | ACR ART              | T                   |                 | Errors in previous validation and verifications are addressed as outlined in the VVS. The process identified in the requirement is not the process required by ACR or by TREES, as this would lead to the potential cancellation of already transacted credits which is not workable in the market. ACR and TREES requires the next verification to be adjusted as appropriate to compensate for the error.                                                                                                                                                                                                                                                                                                                                                                                                   | We recommend eliminating cancellation of previously issued credits as an option for recourse. Methods of addressing past errors should be identified and clearly outlined. However, cancelling credits should not occur as this causes significant uncertainty and risks to the market. Instead, compensation methods should be employed. |
| 2651 | ACR ART              | T                   |                 | ART allows an exception for the use of credits as issued ONLY for use in a domestic compliance scheme. These are not recognized by ART or subtracted from TREES issuance. Otherwise, the robust provisions in TREES protect against the double issuance, double use, or double claiming of ERRs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | We recommend permitting the exclusion of domestic compliance schemes, such as tax obligations, where no GHG claim is being made. This is not widely used now but will enable governments to use a wider variety of schemes to incentivize financing of REDD+ programs without reducing integrity.                                         |
| 2652 | ACR ART              | T                   |                 | ART allows an exception for the use of credits as issued ONLY for use in a domestic compliance scheme. These are not recognized by ART or subtracted from TREES issuance. Otherwise, the robust provisions in TREES protect against the double issuance, double use, or double claiming of ERRs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | We recommend permitting the exclusion of domestic compliance schemes, such as tax obligations, where no GHG claim is being made. This is not widely used now but will enable governments to use a wider variety of schemes to incentivize financing of REDD+ programs without reducing integrity.                                         |
| 2653 | ACR ART              | T                   |                 | TREES requires ownership to be defined and supporting evidence to be provided for all ERRs claimed. ART does not require a legal attestation however.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | We recommend maintaining the requirement in A that requires documentation and evidence of ownership. If this requirement is met, a legal attestation does not add additional value.                                                                                                                                                       |
| 2654 | ACR ART              | G                   |                 | Both ACR and ART require many of these items to be publicly available through the associated Registry. However, neither ACR or ART will require all this information to be publicly available. The quantity of evidence and data listed here is tremendous (especially at a national scale). It appears designed to ensure that any individual to be able to replicate the VVB process. If the integrity of the VVB process is ensured through the above requirements, it is not necessary for outside individuals to attempt to replicate the review. Outside individuals would not meet the competency requirements ACR and ART place on VVBs nor be subject to the training and oversight ACR and ART provide. Therefore, they should not conduct their own reviews and the detailed data is not required. | We recommend revising the requirement to reflect key program documentation rather than all supporting evidence.                                                                                                                                                                                                                           |
| 2655 | ACR ART              | G                   |                 | This requirement is unclear. What is an "associated risks benefit sharing arrangement" and what is "informed public endorsement"? ACR and ART will continue to allow some of these documents to be deemed commercially sensitive information. For example:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | We recommend clarifying the intent of this requirement to allow suggestions to be made for alternative approaches and for an evaluation of the appropriateness of all these requirements to be made. Legitimate scenarios exist where information should be confidential.                                                                 |
| 2655 | ACR ART              | G                   |                 | 1) Benefit sharing arrangements may be deemed confidential in case such as agreements with project developers who do not wish the terms they negotiated to be public knowledge as the arrangement is part of the proprietary business model (Noting that confidential information must be available to the VVBs)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                         |

|------|----------------------|---------------------|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2656 | ACR ART              | G                   |                 | 1) ACR and ART require basic information to be publicly available. It is unclear what the extent of this requirement entails. For a national program, there may be dozens of workbooks leading up to the final calculations. We do not feel it is necessary for every underlying data point to be publicly accessible. If a buyer wishes to request it, they may do so from the ART Participant. | We recommend clarifying the requirements as discussed in the comment, evaluating whether the requirement is appropriate and necessary, and selecting option 1b which eliminates all the requirements regarding revenues received and how the money is spent.                                                                                                                                                                                                                                                                                              |
| 2656 | ACR ART              | G                   |                 | 2) This requirement is unclear. Guidelines for whom to respond to missing documentation inquiries and what is meant by missing documentation?                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| 2656 | ACR ART              | G                   |                 | 4) ACR and ART do not feel it is the purview of the offset market to assess whether the mitigation is compatible with net-zero by midcentury. This is both outside of the scope of Registries and nearly impossible to truly assess.                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 2656 | ACR ART              | G                   |                 | We recommend Option 1b which eliminates all the requirements regarding revenues received and how the money is spent. Registries are not involved in transactions, and they should not be to avoid any conflicts of interest. Therefore, requiring this data to be reported and/or defining how the revenues can be used is not within the scope of the Standards.                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 2657 | ACR ART              | G                   |                 | We do not specify methodologies for doing this type of assessment.                                                                                                                                                                                                                                                                                                                               | We recommend clarifying that the requirement is for GHG crediting programs to allow flexibility of approaches rather than to dictate methodologies.                                                                                                                                                                                                                                                                                                                                                                                                       |
| 2658 | ACR ART              | T                   |                 | For ACR, national and local laws and regulations, including for labor, are required.                                                                                                                                                                                                                                                                                                             | Environmental and social safeguards should be included in all crediting frameworks; however, the implementation will depend on geography and sector. As proposed by ICVCM the safeguards are excessive and impractical, too prescriptive to be broadly applied, VVBs are not currently accredited for these scopes (and it may be beyond current competencies), and thus this is an over-reach for the CCPs and AF. We suggest a more generic framework that includes assurances that applicable environmental and social safeguards have been addressed. |
| 2658 | ACR ART              | T                   |                 | All these items fall outside the Cancun Safeguards and as such are not covered by the TREES requirements explicitly.                                                                                                                                                                                                                                                                             | ESG safeguards for jurisdictional REDD+ should be based on the Cancún Safeguards and their operationalization including building on current reporting to the UNFCCC. Requirements that go beyond this are inappropriate.                                                                                                                                                                                                                                                                                                                                  |
| 2658 | ACR ART              | T                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                | Furthermore, for projects and JREDD, SDG monitoring and IFC safeguard conformance should be considered as optional attributes rather than as mandatory. This will provide a pathway for inclusion and market differentiation and allow programs to implement on a timeframe that is achievable.                                                                                                                                                                                                                                                           |

| 2676 | ACR ART              | T                   |                 | TREES requires that "Participants have in place procedures for guaranteeing nondiscriminatory and non-cost prohibitive access to dispute resolution mechanisms at all                                                                                                                                                                                                                                                                                                                                                                                                     | See comment on Part 4, Criterion 1.9, Full, B                                                                                                                                                                                             |
| 2676 | ACR ART              | T                   |                 | relevant levels". TREES does not define the procedure that must be used however and does not specify a timeline for resolution as that depends entirely on the nature of the dispute and the resolution process in place.                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                         |
| 2677 | ACR ART              | T                   |                 | This is not specified in the Cancun Safeguards, so TREES does not explicitly have this requirement. Our Safeguards Guidance Document discusses how gender is a cross cutting issue that should be addressed in each theme however.                                                                                                                                                                                                                                                                                                                                        | See comment on Part 4, Criterion 1.9, Full, B                                                                                                                                                                                             |
| 2677 | ACR ART              | T                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                         |
| 2678 | ACR ART              | T                   |                 | This is not specified in the Cancun Safeguards, so TREES does not have this requirement. TREES does require Participants to discuss how the REDD+ activities have contributed to sustainable development but does not require this type of detail. Expert review and public consultation would be needed to evaluate whether these requirements are possible or appropriate for a jurisdictional program.                                                                                                                                                                 | See comment on Part 4, Criterion 1.9, Full, B                                                                                                                                                                                             |
| 2678 | ACR ART              | T                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | .                                                                                                                                                                                                                                         |
| 2678 | ACR ART              | T                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                         |
| 2679 | ACR ART              | T                   |                 | TREES includes themes requiring the full and effective participation of all stakeholders and IPLCs as well as themes regarding access to information and access to justice which support the participation. It is unclear whether these will fulfill the requirement however as no theme specifically defines the responsibility for benefit sharing arrangements.                                                                                                                                                                                                        | See comment on Part 4, Criterion 1.9, Full, B                                                                                                                                                                                             |
| 2679 | ACR ART              | T                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                         |
| 2680 | ACR ART              | T                   |                 | Carbon crediting programs must recognize the differences in legal frameworks in different jurisdictions and the variable nature of benefit sharing arrangements (for example: a benefit sharing agreement with an organization that owns the carbon rights and is transferring them will inherently be different than a benefit sharing agreement with an organization that is receiving benefits in return for implementing activities). As such, it is not appropriate for a crediting program to define a single set of requirements for benefit sharing arrangements. | See comment on Part 4, Criterion 1.9, Full, B                                                                                                                                                                                             |

| 2685 | ACR ART              | G                   |                 | Carbon crediting programs are not involved in transactions and are unable to define terms for agreements. This is well beyond the remit of the carbon crediting programs and stakeholders should be able to negotiate the terms that they desire.                                                                                                                                                                                                                                                                                                                         | We recommend eliminating any requirements relating to the secondary market for carbon crediting programs.                                                                                                                                 |
| 2685 | ACR ART              | G                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                         |
| 2686 | ACR ART              | G                   |                 | TREES requires VVBs to confirm that all safeguards are met including anti-corruption indicators. It is unclear if this is a "performance system".                                                                                                                                                                                                                                                                                                                                                                                                                         | We recommend revising this to clarify that full implementation of the Cancun Safeguards for JREDD meet this requirement due to the anti-corruption themes.                                                                                |

| 2687 | ACR ART              | T                   |                 | 8.1 proposes an IRR approach to assessing the first-tier additionality threshold for ICVCM eligibility - "financial attractiveness". It is unclear how an IRR threshold approach would be conducted across an entire project category (as well as whether it would even be appropriate), whether from sample data, literature, or expert judgement.                                                                                                                                                                                                                                                                                                                                                                                                                                    | We do not agree with the proposed structure for assessing additionality, which would impose new requirements on crediting bodies and on project developers. It is unclear what problem these new requirements are solving, how they were developed, if/how they will add value and if they are even practical in terms of implementation and verifiability.                                                                                                                                                                                                                                                                                                                                                                                                              |
| 2687 | ACR ART              | T                   |                 | In our experience, IRR thresholds are typically proprietary and vary from project to project, and therefore are more relevant to a specific project, rather than applied to an entire project type/category.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Over two decades of analysis and consideration of additionality testing has resulted in a variety of new approaches to assess additionality that are currently applied across the market. This includes performance standards that are used in combination with legal/regulatory additionality tests, such as employed by ACR (and the California Air Resources Board) as well as requirements for regulatory additionality combined with a barriers test. In our view, these do not need to be replaced, and we therefore recommend that the Expert Panel and ICVCM Board carefully analyze commonly applied approaches to additionality such as performance standards that do NOT include financial assessments or the need to demonstrate intent for carbon revenues. |
| 2687 | ACR ART              | T                   |                 | The financial attractiveness parameters (I1, I2, I3) are not adequately defined (what's the basis of the 1, 0.7, and 0.3 values?) and requiring "no income", "very poor", or "relatively poor" financial attractiveness will ultimately disincentivize credible climate action. Embedded assumptions on benchmark IRR and carbon credit pricing further undermine the credibility of this approach.                                                                                                                                                                                                                                                                                                                                                                                    | Specifically with regard to financial additionality, the IRR test has multiple challenges including the inability to standardize an approach across sectors, geographies and financing structures; the inability to obtain benchmark IRR in certain sectors (such as forestry); the need to disclose confidential financial information on project returns and internal hurdle rates; the ability to easily game the numbers and the difficulty in verifying the results.                                                                                                                                                                                                                                                                                                |
| 2687 | ACR ART              | T                   |                 | The assessment becomes even more problematic if IRR is required to shift from negative to positive (i.e., "achieve financial attractiveness") based on carbon finance alone. Carbon finance is often one of several revenue sources that are "stacked" with other management efforts and funding sources needed to fully develop a project. In IFM, for example, carbon finance will never fully compensate for forgone timber revenues. The low uptake of A/R, grassland, and wetland projects is further evidence that carbon projects are not always (and often aren't) a standalone profitable endeavor, when compared to other potential management strategies.                                                                                                                   | Furthermore, we disagree with the sentiment that the investment analysis must show that carbon revenues must specifically raise the financial feasibility above a yet to be defined financial benchmark. The sensitivity analysis even further complicates the approach. Such complexities require significant amounts of research and time to even determine whether a project is eligible, which ultimately could narrow participation to all but the largest carbon offset developers.                                                                                                                                                                                                                                                                                |
| 2687 | ACR ART              | T                   |                 | AFOLU projects face inherently large initial investment costs to entering the carbon market, as well as tradeoffs between commodity production and carbon sequestration. Recognizing only mitigation activities with negative or low IRR's will inherently disincentivize entire classes of mitigation activities, many of which are highly scalable.                                                                                                                                                                                                                                                                                                                                                                                                                                  | The barrier analysis and market penetration analysis provide a good alternative to the financial analysis, but we disagree that the market penetration assessment must be combined with one of the other viability assessments rather than stand-alone and disagree with the subjective nature of applying "medium", "high", or "relatively low" assessment categories. Similarly, we agree that positive lists should be justified and periodically updated but disagree they must conform to the criteria for investment analysis.                                                                                                                                                                                                                                     |
| 2687 | ACR ART              | T                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Therefore we suggest that the methodology-by-methodology, sector or project-type phased assessments of additionality and baselines should NOT be conducted by the Expert Panel as proposed in the draft Assessment Framework. This duplication of work will not only create a massive bottleneck in the process, but also intends to supplant the processes that standards already have in place to ensure consultation and expert input to the approved methodologies.                                                                                                                                                                                                                                                                                                  |
| 2687 | ACR ART              | T                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | The ICVCM Assessment Framework should instead include high-level principles to support objective program-level evaluations of approaches at the program level for assurance of additionality, safeguards, robust quantification and non-permanence. This can also build on the extensive work done by the ICAO TAB to benchmark crediting programs and allow flexibility in appropriate region and sector-based compliance with the criteria (a functional equivalency among different approaches).                                                                                                                                                                                                                                                                      |
| 2687 | ACR ART              | T                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | The development of a negative list of project types that are deemed non-additional / non eligible for the CCP label (grid connected renewables in non-LDC countries, fossil fuel switch etc) could facilitate an on-ramp for eligibility of other crediting types / sectors without the need for a methodology-by-methodology review.                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2688 | ACR ART              | T                   |                 | The implementation barriers test is qualitative and subjective. It relies on expert judgement as to whether the project faces "considerable", "convincingly", "likely", or "decisive" barriers to implementation, somehow ultimately requiring a qualitative expert judgement ranking in the form of a percentage (how can a qualitative assessment determine thresholds as to whether an implementation barrier falls above 90% = very high; greater than 67% = medium; or less than 67% = low?). The market is accustomed to quantifying project attributes based on quantitative data (e.g., financial indicators, penetration rates, uncertainty, and others). Broadly subjective and qualitative characterizations of project attributes undermine the validity of this approach. | The barrier analysis and market penetration analysis provide a good alternative to the financial analysis, but we disagree that the market penetration assessment must be combined with one of the other viability assessments rather than stand-alone and disagree with the subjective nature of applying "medium", "high", or "relatively low" assessment categories. Similarly, we agree that positive lists should be justified and periodically updated but disagree they must conform to the criteria for investment analysis.                                                                                                                                                                                                                                     |

| #    | Comment submitted by | Para/Fig/Table/Note | Type of comment | Submitted comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Proposed change                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

This can also build on the extensive work done by the ICAO TAB to benchmark crediting programs and allow flexibility in appropriate region and sector-based compliance with the criteria (a functional equivalency among different approaches).                         |
| 2688 | ACR ART              | T                   | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | The development of a negative list of project types that are deemed non-additional / non eligible for the CCP label (grid connected renewables in non-LDC countries, fossil fuel switch etc) could facilitate an on-ramp for eligibility of other crediting types / sectors without the need for a methodology-by-methodology review.                                                                                                                                                                                       |
| 2689 | ACR ART              | T                   |                 | The market penetration test may be a useful for some project activities (perhaps solar), but seemingly less so for AFOLU. For example, while we expect market penetration would be quite low for wetland and grassland mitigation, A/R, and IFM, we are concerned there isn't adequate data available to draw concrete conclusions across entire project types. It is further complicated by a subjective and qualitative assessment of the uncertainty of financial attractiveness parameters.                                                                                                                                                                                                   | we suggest that the initial tier 1 additionality assessment by the ICVCM be eliminated. The methodology-by-methodology, sector or project-type phased assessments of additionality and baselines should NOT be conducted as proposed in the draft Assessment Framework. This duplication of work will not only create a massive bottleneck in the process, but also intends to supplant the processes that standards already have in place to ensure consultation and expert input to the approved methodologies.           |
| 2689 | ACR ART              | T                   | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | The ICVCM Assessment Framework should instead include high-level principles to support objective program-level evaluations of approaches at the program level for assurance of additionality, safeguards, robust quantification and non-permanence. | 2690 | ACR ART              | T                   |                 | Step 2 assesses additionality based on regulatory surplus, consideration of carbon revenues, and the viability of the mitigation activity (i.e., investment analysis, barrier analysis, market penetration, and positive lists). The section would benefit from a clear statement as to the hierarchy of the assessment (is it program level, project type, or project level?). ACR rules contain many of these same tests of additionality – which are assessed at the project level.                                                                                                                                                                                                            | Eliminate the tiered additionality assessment by the ICVCM. The methodology-by-methodology, sector or project-type phased assessments of additionality and baselines should NOT be conducted as proposed in the draft Assessment Framework. This duplication of work will not only create a massive bottleneck in the process, but also intends to supplant the processes that standards already have in place to ensure consultation and expert input to the approved methodologies.                                       |
| 2690 | ACR ART              | T                   |                 | We are generally in agreement that projects should exceed legal requirements. However, we are concerned if the expectation is that evidence of carbon intent must predate project start. ACR PP's typically engage with ACR at listing, and may not be familiar with such a requirement prior to engaging with a registry.                                                                                                                                                                                                                                                                                                                                                                        | The ICVCM Assessment Framework should instead include high-level principles to support objective program-level evaluations of approaches at the program level for assurance of additionality, safeguards, robust quantification and non-permanence. This can also build on the extensive work done by the ICAO TAB to benchmark crediting programs and allow flexibility in appropriate region and sector-based compliance with the criteria (a functional equivalency among different approaches).                         |
| 2690 | ACR ART              | T                   |                 | A continued fatal flaw in the ICVCM approach is its threshold approach. In the 8.6a investment analysis, carbon revenues must "shift" IRR from negative to positive. In barrier analysis carbon revenues must overcome each identified barrier. Market penetration must surpass a blanket % threshold across all project types. As elaborated below, carbon revenues by themselves (especially at current pricing) often are not fully capable of shifting these circumstances. Rather, they are used as a revenue supplement, or are combined with other revenue streams. Carbon sequestration is a distinct commodity amongst other potential revenue streams and should be considered as such. | The development of a negative list of project types that are deemed non-additional / non eligible for the CCP label (grid connected renewables in non-LDC countries, fossil fuel switch etc) could facilitate an on-ramp for eligibility of other crediting types / sectors without the need for a methodology-by-methodology review.                                                                                                                                                                                       |
| 2690 | ACR ART              | T                   |                 | Our other general comment is similar to step 1. Developing qualitative rankings based on expert judgement only adds subjectivity and confusion to the market.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2691 | ACR ART              | G                   |                 | We are generally in agreement that projects should exceed legal requirements and should be periodically reevaluated. However, requiring an assessment of regulatory surplus prior to registration is problematic, as they inherently have not yet enrolled in our program and we do not review projects prior to listing.                                                                                                                                                                                                                                                                                                                                                                         | Clarification of requirement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| 2692 | ACR ART              | G                   |                 | In some, but not all cases, we agree it's reasonable to demonstrate that carbon credits were considered in developing the project – assuming listing submittal, board resolutions, land acquisition date, establishment of carbon inventory, and other reasonable demonstrations would qualify. However, a requirement that the evidence must pre-date the carbon project start date is problematic. ACR project start dates typically COINCIDE with an actionable/measurable activity (examples above; most often listing submittal).                                                                                                                                                                               | Clarification of requirement.                                                                                                                                                                                                                                                                                                                                                                                            |
| 2692 | ACR ART              | G                   |                 | We suggest the ICVCM reconsider the requirement to provide evidence of intent PRIOR to the project start date and, where applicable allow listing submittal as acceptable evidence of intent, and that such formal documentation of intent can occur COINCIDENT with project start date.                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 2692 | ACR ART              | G                   |                 | Since project start date coincides with an actionable engagement with the registry, we contend that setting a timeframe between project start date and validation provides similar assurance of additionality as setting a timeframe between “proof of prior consideration” (as set out in the CCP’s) and registration of the mitigation activity (please define “registration”).                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 2692 | ACR ART              | G                   |                 | In cases of a performance standard (exceeding a BAU baseline), intent of carbon revenues is not part of the additionality test.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 2693 | ACR ART              | G                   |                 | The ACR 3-prong additionality test addresses the approaches mentioned in 8.6.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Remove requirement for carbon revenues to fully “shift” financial performance per IRR.                                                                                                                                                                                                                                                                                                                                   |
| 2693 | ACR ART              | G                   |                 | The majority of ACR AFOLU projects do perform investment analysis at the project level. The analysis typically shows the project/investment represents a lower IRR than baseline alternatives (i.e., logging, forgoing revegetation and mitigation efforts, allowing continued degradation). Carbon revenues at current pricing are most always not sufficient to fully "shift" the activity to being financially attractive. Rather, they recover a portion of the cost associated with managing for climate benefits. Even when carbon revenues are paired with other revenue streams (e.g., habitat, recreation, conservation) they often still present an overall loss in IRR compared to baseline alternatives. | 0                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 2694 | ACR ART              | T                   |                 | See response below.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | We recommend the elimination of the financial additionality requirements for JREDD+ as well as the demonstration of impacts of new policies and measures and of advanced consideration of carbon credits.                                                                                                                                                                                                                |
| 2694 | ACR ART              | T                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | We also recommend that a performance threshold approach for additionality for REDD+ such as currently employed by ART and other major jurisdictional programs be an approved additionality test for jurisdictional REDD+ without other requirements. This approach has been tested through multiple peer review and public consultation processes and was selected as best suited to the scale and nature of activities. |
| 2695 | ACR ART              | G                   |                 | TREES requires Participants to share a REDD+ Implementation Plan that outlines new and ongoing activities to achieve emission reductions and removals. It is not clear how "that are explicitly designed and reasonably expected to sufficiently address key drivers of deforestation and degradation at scale" is to be demonstrated or evaluated. No jurisdiction is going to put forth a plan it does not believe will achieve results, so this requirement seems unnecessary and very subjective.                                                                                                                                                                                                                | See comment on Part 4, 8.4                                                                                                                                                                                                                                                                                                                                                                                               |
| 2695 | ACR ART              | G                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 2696 | ACR ART              | G                   |                 | Option 2. It is unlikely that such a calculation could be conducted in a meaningful manner, and it is unclear how such information supports the integrity of the resulting credit.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | See comment on Part 4, 8.4                                                                                                                                                                                                                                                                                                                                                                                               |

| 2700 | ACR ART              | T                   |                 | It doesn't make sense to have a step to determine the degree of reversal risk. This is something that happens at the crediting program level and should be able to pass the sniff test without an Expert Panel evaluation.                                                                                                                                                                                                                                                                                                                                                         | Eliminate the initial step to evaluate the degree of reversal risk and instead ensure that programs have appropriate reversal risk mitigation mechanisms in place for any project type that has this risk (less stringent mechanisms for projects with lower risks).                                                                                                                          |
| 2700 | ACR ART              | T                   |                 | For projects with "material" non-permanence risk (all AFOLU), the framework is largely built around either a 100+ year project monitoring and compensation term, or an equivalent crediting adjustment (e.g., 1% credits per year for 100 years). The 100 years is seemingly built around 100 GWP's, which have no relevance to permanence of carbon emissions reductions or removals.                                                                                                                                                                                             | Option 3 should be deemed as equally viable as other options and defined as what programs are currently doing: multi-decadal commitments for projects with enforcement for MRV during that period, a robust reversal risk mechanisms including a buffer pool and no buffer pool refunds. The mechanism should ensure reporting and compensating in real time (during the verification cycle). |
| 2700 | ACR ART              | T                   |                 | The 100-year permanence threshold is not realistically enforceable, does not coincide with the known near-term actions that are needed to combat climate change, and should be removed/revised. The market and climate will not benefit from ICVCM shaming projects that refuse to undertake unachievable and unenforceable project commitments.                                                                                                                                                                                                                                   | For JREDD, option 3 should be defined as enforcement for MRV and compensation for reversals in real time (during the verification cycle) and retirement of cumulative buffer pool contributions when the Participant leaves the program to compensate for future potential reversals                                                                                                          |
| 2700 | ACR ART              | T                   |                 | ICVCM should also remove the option 2 ("XX+ commitment period...with a path...to 100 years"). This is ton-year accounting and is not a commonly employed or accepted practice in the carbon market to date. In fact, ACR has rejected ton year accounting, and Verra recently rejected ton-year accounting as a practice after public consultation and widespread non-consensus on the validity of the approach (see pages 45 –97 of their public comment responses).                                                                                                              | In cases in which reversal reporting and compensation is required immediately (within the verification cycle), and in which the buffer pool is robust (no refunding of credits), the buffer pool may be able to adequately compensate for future reversals many decades past the end of MRV.                                                                                                  |
| 2700 | ACR ART              | T                   |                 | ICVCM should focus on ensuring functioning and robust risk mitigation mechanisms that safeguard permanence over clearly stated, realistic, measurable, and (for projects) enforceable timeframes. This is illuded to in option 3 (alternative approaches), which will be important to define in a way that is clear and workable.                                                                                                                                                                                                                                                  | While being implemented by some project-level crediting programs, differentiation between intentional and unintentional reversals is not appropriate for jurisdictional REDD+. To date, no program has an insured buffer pool and only a few have enforceable legally-binding agreements for long-term MRV, which is likely unattainable in many contexts.                                    |
| 2701 | ACR ART              | T                   |                 | It doesn't make sense to have a step to determine the degree of reversal risk. This is something that happens at the crediting program level and should be able to pass the sniff test without an Expert Panel evaluation.                                                                                                                                                                                                                                                                                                                                                         | Eliminate the initial step to evaluate the degree of reversal risk and instead ensure that programs have appropriate reversal risk mitigation mechanisms in place for any project type that has this risk (less stringent mechanisms for projects with lower risks).                                                                                                                          |
| 2701 | ACR ART              | T                   |                 | Table 43 alludes that all AFOLU projects have "Material" non-permanence risk if they are subject to natural disturbance..."over a specified time horizon (100 years)". The assessment framework should be clearer that 100 years is an example of a specified time horizon as other time horizons are seemingly considered as minimum MRV and compensation under criterion 9.2a option 2 and alternative approach 3.                                                                                                                                                               | Clarify that options are flexible for demonstration of requirements for programmatic elements for meeting multi-decadal reversal risk mitigation measures.                                                                                                                                                                                                                                    |
| 2702 | ACR ART              | T                   |                 | Table 44 initial threshold option 1 requires commitment to monitor and compensate for a minimum of 50 years. What is 50 years based upon, and why couldn't this threshold equally be justified as 40, 30, or some other threshold that better aligns with existing carbon market project terms?                                                                                                                                                                                                                                                                                    | Consider alternative options to the 50 year minimum MRV and reversal compensation period for projects such as ACR's 40-year term.                                                                                                                                                                                                                                                             |
| 2702 | ACR ART              | T                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                             |
| 2703 | ACR ART              | T                   |                 | Table 44 initial threshold option 2 requires a 25+ year duration, paired with incentives to a path towards full crediting after 100 years (ton-year accounting). Requiring both a 25-year project duration and 1% over 100 years will disincentivize investment in climate mitigation, as the timeframe for recouping initial investment is beyond the acceptable return timeframe for literally any organization. Ton-year accounting is not a commonly applied or accepted approach in the existing carbon market, so it is puzzling and concerning that ICVCM would propose it. | Reconsider the viability of option 2. If ton year accounting is to be allowed, clarify the requirement for MRV and compensation over a multi-decadal timeframe (not naked ton year accounting).                                                                                                                                                                                               |
| 2703 | ACR ART              | T                   |                 | Table 44 option 3 (both initial and full thresholds) suggests alternative approaches that may suffice to reach equivalent assurance of permanence. This flexibility is great and necessary. The approach should avoid subjectivity and expert judgement in favor of a systematic assessment framework.                                                                                                                                                                                                                                                                             | Option 3 should be defined as multi-decadal commitments for projects with enforcement for MRV during that period, a robust reversal risk mechanisms including a buffer pool and no buffer pool refunds. The mechanism should ensure reporting and compensating in real time (during the verification cycle).                                                                                  |
| 2703 | ACR ART              | T                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | For JREDD, option 3 should be defined as enforcement for MRV and compensation for reversals in real time (during the verification cycle) and retirement of cumulative buffer pool contributions when the Participant leaves the program to compensate for future potential reversals.                                                                                                         |
| 2703 | ACR ART              | T                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Eliminate the mandate for legally binding multidecadal MRV                                                                                                                                                                                                                                                                                                                                    |
| 2704 | ACR ART              | G                   |                 | The requirement for either 100+ year commitment or 50+ year commitment and 1% crediting per year are both highly problematic (for reasons already stated) and don't align with the near-term action we know is relevant to combatting climate change.                                                                                                                                                                                                                                                                                                                              | Eliminate this (future) requirement.                                                                                                                                                                                                                                                                                                                                                          |
| 2704 | ACR ART              | G                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                             |
| 2705 | ACR ART              | T                   |                 | While at the project level ACR does differentiate between avoidable and unavoidable reversals, ART does not. At the jurisdictional scale, a reversal is defined as when the annual emissions exceed the crediting level. It is not possible with any degree of accuracy to discern which exact event over the course of a year across an entire jurisdiction caused the exceedance.                                                                                                                                                                                                | Eliminate the requirement for distinction between avoidable and unavoidable reversals for jurisdictional REDD.                                                                                                                                                                                                                                                                                |

| 2705 | ACR ART              | T                   |                 | Requiring insurance for the buffer pool itself seems redundant, given the subsequent requirement for a sufficiently charged buffer pool. There are no insurance mechanisms currently being offered / used.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Clarify that legally-binding agreements are preferred, but not required since this may not be possible in many instances.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2705 | ACR ART              | T                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Eliminate the requirement for an insured buffer pool.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 2706 | ACR ART              | G                   |                 | Temporary crediting (issuing, retiring, and re-compensating credits over time) is not employed by any crediting standard currently in the market. It is questionable to deem such an approach acceptable given the approach was employed in the CDM and found to be ineffective at delivering climate results. Term lengths of 5 – 30 years, followed by administrative burdens of retirement and replacement of credits are not of interest to buyers (or sellers) and an operational challenge to crediting bodies.                                                                                                                                                                                    | Eliminate the option for temporary crediting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 2706 | ACR ART              | G                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2707 | ACR ART              | G                   |                 | Both ACR and ART have in normative program documents plans for Winrock’s administration of the program over time, including upon the dissolution of ART.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Align the minimum project term MRV and reversal compensation requirements (as applicable) with a reasonable timeframe for achievable institutional sustainability.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2707 | ACR ART              | G                   |                 | We agree institutional stability is important to oversee long-term commitments, however, a plan for institutional stability is only as valuable as it’s enforcement mechanism. The likelihood that an organization will exist for 100 years is extremely low (this coincides with only a few of the largest corporations in the U.S.). The ICVCM should be realistic in setting project terms, as legally binding agreements are only valuable if they are enforceable. Programs with 100+ year minimum project terms cannot with any certainty guarantee their existence for 100 years. We firmly suggest minimum project term should coincide with reasonably achievable institutional sustainability. | Incorporate the full threshold requirement as the initial threshold since ICAO approved programs include this requirement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 2708 | ACR ART              | T                   |                 | Similar to other sections, the Robust Quantification section does not follow a systematic, replicable, and transparent assessment framework. Most of the assessments are left to “expert judgement” of the ICVCM review panel, such that crediting programs cannot begin to assess their conformance against the assessment framework with any degree of certainty.                                                                                                                                                                                                                                                                                                                                      | Revise the approach as a process/program-based assessment which does not include expert judgement. For example, ICVCM would consider whether crediting programs have processes and systems in place to account for uncertainty (as applicable), to ensure that baselines are developed using credible and scientifically justified assumptions and models, and to assure that methodologies follow published processes such as the inclusion of public comment and/or peer-review by experts in the field. Assessments should be made based on clear and objective criteria rather than assessing based on degree of acceptable uncertainty or conservatism. |
| 2708 | ACR ART              | T                   |                 | Also similar to other sections, more detail and care needs to be taken to consistently prescribe the hierarchy at which the assessment is performed (program-level vs. project type vs. project level).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Removing expert judgement would also allow programs to evaluate their conformance to ICVCM criteria with reasonable certainty, which is not possible as is.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 2708 | ACR ART              | T                   |                 | The text emphasizes conservatism in all aspects of accounting. Care should be taken to balance conservatism and accuracy, and not unnecessarily penalize and disincentivize climate friendly practices.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2709 | ACR ART              | T                   |                 | Step 1 involves systematic assessment of “aspects” of carbon credit types (i.e., boundary of mitigation activity, determination/quantification of baseline emissions, quantification of emissions from the mitigation activity, etc). Within each aspect, “key elements” are to be systematically assessed for uncertainty, robustness, and conservativeness. Each “element” is assessed according to fraction of mitigation activities affected, degree of over- or underestimation, and variability among mitigation activities. The outcome is presented as Table 48.                                                                                                                                 | We strongly recommend ELIMINATING the Expert Panel systematic assessment of quantification approaches by methodology, which is highly subjective, questions the processes of the crediting bodies and will introduce great market uncertainty.                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2709 | ACR ART              | T                   |                 | The complicated hierarchy of the assessment process makes it difficult to evaluate. And, once again, the evaluations rely on expert judgement to assign categorical rankings (i.e., high, medium, low).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Instead of the two-phased approach, we recommend the ICVCM assess the processes and systems that crediting bodies have in place to account for uncertainty (as applicable), to ensure that baselines are developed using credible and scientifically justified assumptions and models, and to assure that methodologies follow published processes such as the inclusion of public comment and/or peer-review by experts in the field. Assessments should be made based on clear and objective criteria rather than assessing based on degree of acceptable uncertainty or conservatism.                                                                     |
| 2709 | ACR ART              | T                   |                 | A systematic assessment of quantification approaches, by methodology, is a very large endeavor. The scope differs from other CCP assessments (such as additionality) that occur by project type, or at the program level. It will require ongoing assessment as new methodologies are created and methodologies updated on a regular basis.                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2709 | ACR ART              | T                   |                 | We suggest if assessment of quantification is performed, it is done at the program-level only. An assessment is inherently NOT systematic if left entirely to expert judgement, therefore objective assessment criteria should be developed.                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| 2710 | ACR ART              | G                   |                 | Criterion 10.2 and 10.3 assessments are not well defined and heavily left up to expert judgement. The evaluation of uncertainty and conservatism is subjective, and inherently assumes the ICVCM assessment panel are “experts” in baseline setting across all project types and all aspects of carbon quantification. This is not realistic given the myriad of types of carbon projects and the methods available for developing and quantifying a baseline. | See recommendation above (row 116)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2710 | ACR ART              | G                   |                 | In terms of assessing NDC’s, the mandate of the GHG program is to develop approaches to ascertain the impact on the atmosphere of the activities conducted across the geography registered. It is not appropriate nor feasible for the GHG Programs to assess a country’s NDCs across all sectors and make judgements on whether they will achieve the stated goals.                                                                                           | Eliminate the requirement for carbon crediting bodies to assess a country’s NDC commitments and judge whether they will be successful in meeting the goals. This is unrelated to whether the mission reduction or removals being credited is high integrity.                                                                                                                                                                                                                                                                          |
| 2711 | ACR ART              | G                   |                 | TREES uncertainty deductions are based on a program wide tolerance of 66% probability that the credits are not overreported. It is unlikely that ART would approve a higher threshold as the deductions would be punitive at that time. ART may consider a higher threshold once degradation uncertainties are lower as requiring degradation to be included causes overall uncertainties to be significantly higher.                                          | Restate the uncertainty requirement to clarify that, for jurisdictional REDD, a sliding scale deduction approach can be used such that a higher overall uncertainty results in a higher associated deduction.                                                                                                                                                                                                                                                                                                                         |
| 2711 | ACR ART              | G                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 2712 | ACR ART              | G                   |                 | No current method exists for quantifying international leakage and it is not included in any current GHG program of any scale. Additionally, conservative defaults should be permitted for leakage deductions.                                                                                                                                                                                                                                                 | Remove requirement to account for international leakage until such time as better means of quantify the value are obtainable.                                                                                                                                                                                                                                                                                                                                                                                                         |
| 2712 | ACR ART              | G                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 2713 | ACR ART              | G                   |                 | Neither ACR or ART TREES credits activities that are incompatible with net-zero emissions. However, it is unclear how these would be evaluated or verified and how far up and down stream would need to be considered (i.e., a full life cycle assessment for all activities and components?). It seems beyond the mandate of the program to evaluate this aspect activities.                                                                                  | We recommend removing this requirement as it is outside the mandate of carbon crediting programs.                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| 2719 | Anonymous            | te                  |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                              | · Deeply embed gender equality and women’s empowerment in the Governance CCP and corresponding means of assessment (Assessment Framework). Include a requirement and target for significantly increasing women’s participation in community/ local level leadership and decision-making structures/ processes. This would be one of the most significant steps to ensure that women’s voices contribute to decision making which evidence suggests increases carbon/climate integrity as well as enabling greater benefits for women. |

| 2719 | Anonymous            | te                  | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | · Explicitly target women as leaders, decision makers and beneficiaries of mitigation activities as integral to the sustainability and long-term success of mitigation activities, which is also a meaningful way to de-risk projects.             |
| 2719 | Anonymous            | te                  | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | · Message hard on robust & rigorous assessment of gender equality impacts in light of the consistent feedback that current labelling is 'pink washing' and insufficiently robust to signal where projects have genuine positive impacts for women. |
| 2719 | Anonymous            | te                  | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | · Promote specific methodologies to identify, measure and verify impact that do meet the ICVCM's requirements on gender equality and women's empowerment for use in tagging credits in a meaningful way and as a vehicle for buyers.               |
| 2723 | Anonymous            | Te                  | 0               | While we see value in a top-down approach to additionality, we are aware that an approach may require significant resources and procedures in order to be implemented effectively. We would like to ensure that the ICVCM is well resourced to perform ongoing additionality assessments in order to make frequent assessments on a program, methodology, or even project level.                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                  |
| 2723 | Anonymous            | Te                  | 0               | A recommended approach, which in our view has worked in the market to date, would be for the offset programs to continue to apply rigorous additionality tests at the methodology and project levels, and for the ICVCM Expert Panel to assess the additionality rules that these programmes regularly use and update.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                  |
| 2724 | Anonymous            | te                  | 0               | We largely support the guidance and approaches the ICVCM has taken on double counting, double claiming, double issuance and double use. However, we would prefer that the ICVCM engage in a constructive dialogue with jurisdictions such as California which already allow for climate action achieved through voluntary carbon markets to be used for compliance in the California carbon market. The current language in clause 4.4, as described, would not suit the precedent that California has already set for voluntary climate action to be used under its programme.                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                  |
| 2724 | Anonymous            | te                  | 0               | Further, we want the voluntary carbon market to continue innovating with other attribute-tagging schemes that aim to foster net positive biodiversity or circularity in the production and use of plastics. As such, we recommend that the ICVCM engage in a constructive dialogue with the existing offset programmes such as Verra and/or The Gold Standard which have already developed approaches that allow for 'capital stacking' whereby a carbon credit can also be eligible to be claimed under a plastic credit or a biodiversity credit programme. The current language in clause 4.5, as written, would prevent holistic approaches to improving biodiversity, plastic circularity or other environmental and social benefits accrued through the development of voluntary carbon market activities. | 0                                                                                                                                                                                                                                                  |

| 2725 | Anonymous            | te                  | 0               | We do not consider that host country authorisation to ensure corresponding adjustments should be a requirement for voluntary carbon market activities. Corresponding adjustments should only apply when it involves international mitigation outcomes as described by relevant UNFCCC Article 6 decisions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                  |
| 2725 | Anonymous            | te                  | 0               | Voluntary carbon offsets purchased by a private company or organisation are only recorded on a relevant national registry once – in the host country where the voluntary carbon market activity takes place. Voluntary carbon offsets not used for international mitigation purposes are not recorded in any other national registry.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                  |
| 2725 | Anonymous            | te                  | 0               | We support corresponding adjustments being used for any international mitigation outcome related purpose as described under Article 6 of the Paris Agreement and its associated 'rulebook' as adopted at COP 26.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                  |
| 2725 | Anonymous            | te                  | 0               | Requiring corresponding adjustments for voluntary carbon market activities would create undue complexities and would likely suppress corporate demand for voluntary carbon markets which would make the mission of the ICVCM much harder to achieve.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                  |

| 2726 | Anonymous            | 0                   |                 | We do not support the top-down approach of levying a share of proceeds (SoP) as currently drafted in the ICVCM Assessment Framework. Levying a SoP undermines the objective of channelling much needed carbon finance to projects, and it would divert funds that would otherwise be available to maximise emissions reductions or removals and directly benefit communities. We believe that host country governments and the project developer or community group is best positioned to tailor an effective benefit sharing approach for each individual voluntary carbon market activity, rather than a top-down approach as described by the ICVCM. | 0               |
| 2726 | Anonymous            | 0                   |                 | We are also concerned that the carbon crediting programmes may lack the capacity or relevant authorisations required to manage SoP administration. The lack of a global payments system and appropriate authorisation within each host country and carbon crediting programme leaves a top-down SoP approach as proposed by the ICVCM susceptible to potential fraud and manipulation. This approach could stymie investment in voluntary carbon market activities and prevent the flows of capital to projects seeking to reduce or remove emissions.                                                                                                  | 0               |
| 2726 | Anonymous            | 0                   |                 | One option that the ICVCM could instead explore a more straightforward SoP approach whereby fees could be imposed by the relevant carbon crediting programme on the number of credits issued; project developers and community groups could then be involved in selecting the best approaches for channelling adaptation finance at a local, regional and/or national level. These fees could be collected by the programme and be then directed to finance adaptation activities that would be selected and approved by an independent and elected board or established third-party.                                                                   | 0               |

| 2728 | Anonymous            | 0                   |                 | It must be noted that the risks and challenges of requiring carbon crediting programs to introduce and /or strengthen their standards in relation to environmental and social safeguards, include:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0               |
| 2728 | Anonymous            | 0                   |                 | · Clear risk of adopting a fragmented set of standards and associated requirements, all of which can ultimately put people and the environment at risk. Some of the standards already have a fragmented set of requirements, which can lead to an inconsistent and limited application. This fragmentation may well be exacerbated if the carbon programs try to update/strengthen their ESS frameworks following the list of requirements of the draft assessment framework, which in practical terms might lead carbon programs to try to fill gaps by adopting pieces of other standards, without having an integrated and coherent approach.                                                                                                      | 0               |
| 2728 | Anonymous            | 0                   |                 | For example, the Gold standard requires adherence to UNDP standards for the preparation of management plans for displacement and resettlement, but does not use UNDP's screening and assessment process, although they are intended to be used together to ensure their effective application.                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0               |
| 2728 | Anonymous            | 0                   |                 | Disconnection between applicable standard and the associated assessment process can lead to poor/limited application.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0               |
| 2728 | Anonymous            | 0                   |                 | Annex 1 offers a high-level comparative mapping between the requirements of selected certification standards and best- in-class standards, illustrating the current fragmented approach of requirements can lead to their inconsistent and limited application.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0               |
| 2728 | Anonymous            | 0                   |                 | · It might take years for the carbon programs to update/strengthen these standards, which will also be detriment to credibility of the VCM.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0               |
| 2729 | Anonymous            | 0                   |                 | [Comments taken from "Submission to the IC-VCM on the draft Core Carbon Principles, Assessment Framework and Assessment Procedure" document]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0               |
| 2729 | Anonymous            | 0                   |                 | The Integrity Council seeks views from the public on:<br>1. Whether and how IFC risk categorization can help ensure a consistent approach by carbon crediting programs to address safeguards in the draft Assessment Framework in different jurisdictions and activity types.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0               |
| 2729 | Anonymous            | 0                   |                 | We recognize that carbon projects increasingly take place in contexts with significant social environmental, and governance risks. Working in these higher-risk contexts can often present considerable opportunities to catalyse transformational change for climate impact and sustainable development. Therefore, the risk category of the project does not indicate whether a proposed project is "good" or "bad." Instead, the risk category recognizes the inherent risks associated with the project and that adequate assessments and management measures need to be put in place to manage and mitigate these risks appropriately, ensuring the social, environmental and governance integrity of the project throughout its implementation. | 0               |
| 2729 | Anonymous            | 0                   |                 | We recommend that under Criterion 7.1. of the Assessment Framework, carbon programs and standards are required to have in place requirements, guidance and procedures for the screening and risk categorization of projects. This is in alignment with our general recommendation above, whereby by adopting a one of the best-in-class international environmental and social standards frameworks a risk categorization will be applicable.                                                                                                                                                                                                                                                                                                         | 0               |
| 2729 | Anonymous            | 0                   |                 | 2. Should mitigation activities created and managed by Indigenous Peoples and Local Communities (IPLCs) be subject to differentiated safeguards requirements?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0               |
| 2729 | Anonymous            | 0                   |                 | According to emerging best practice on this matter, the same set of safeguards should apply, but through a fit-for-purpose procedure and guidance. This allows IPLCs to identify, assess, manage, monitor and report on both negative and positive environmental and social risk and impacts of projects, in accordance with their context and capacities.                                                                                                                                                                                                                                                                                                                                                                                            | 0               |
| 2729 | Anonymous            | 0                   |                 | 3. If so, how would you recommend that the application of free, prior and informed consent (FPIC) is addressed in carbon crediting program guidance and mechanisms to ensure that relationships with IPLCs are based on informed consultation?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0               |
| 2729 | Anonymous            | 0                   |                 | We recommend considering that best-in-class in standards do not consider 'who' is project proponent, but rather 'when' FPIC is required, which is what should be considered in carbon crediting programs and standards.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0               |
| 2729 | Anonymous            | 0                   |                 | In accordance to best-in-class standards, FPIC is required in specific circumstances, which should still be the only circumstances in which FPIC is required, no matter 'who' requests the project or the 'size' of project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0               |

| 2729 | Anonymous            | 0                   |                 | If IPLCs are the project proponents, they would still be subject to a screening and a social and environmental assessment to determine if the proposed activities could lead to risks and impacts that require the application of FPIC. If the screening and/or assessment determines the activities do not pose risks/impacts through which FPIC is required, then what is still required is ensuring meaningful engagement of all relevant stakeholders (even within Indigenous Peoples' (IP) groups- according to their decision-making processes), which should be evidenced in the project documents.                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| 2740 | Anonymous            | 0                   |                 | We welcome the Integrity Council's requirement that carbon programs and their standards require that Jurisdictional REDD+ activities conform to Cancun safeguards, in alignment with UNFCCC decisions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <ul style="list-style-type: none"> <li>Carbon programs and their standards require Jurisdictional REDD programmes to submit annual monitoring reports</li> </ul>                                                                                                                                                                                                                                                                                   |
| 2740 | Anonymous            | 0                   |                 | However, we recommend that the Integrity Council does NOT compel carbon programs and their standards to require that Jurisdictional REDD+ activities also conform to best-in-class international environmental and social standards frameworks, which are designed and applicable for project level activities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 2740 | Anonymous            | 0                   |                 | The series of substantial and procedural Decisions under the UNFCCC with regards to the adoption of the Cancun Safeguards and associated information and reporting requirements, namely the Safeguard Information System (SIS) and Summaries of Information (SOIs), are the result of over a decade of negotiations under the UNFCCC. Said Decisions reflect a common ground in the context of the broad array and diverging views and concerns revolving around the adequacy, transparency and robustness of implementing, monitoring and reporting on safeguards in the context of REDD+. In contrast to traditional project-scale interventions, effective REDD+ implementation would generally entail policy transformations that are both cross-sector and cross-scale. Accordingly, as large-scale and cross-sectoral policy programmatic interventions, REDD+ national strategies or action plans are required to adhere only to the Cancun Safeguards in accordance with each country's unique national context and circumstances. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 2740 | Anonymous            | 0                   |                 | The experience of Jurisdictional REDD carbon programmes <sup>16</sup> offer insights over the significant challenges and shortcomings of imposing safeguards requirements beyond those stipulated by the UNFCCC to Jurisdictional REDD+ activities. Drawing from these experiences, some Jurisdictional REDD+ carbon programmes have focused on ensuring the highest standard of application of the Cancun safeguards, primarily through the adoption of qualitative assessments and accompanying validation and verification procedures to adequately and comprehensively assess the extent to which the REDD+ activities were carried out in consistency with the Cancun safeguards (see 'b' below).                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| 2740 | Anonymous            | 0                   |                 | As noted above, a key lesson from Jurisdictional REDD+ carbon programmes are the adoption a clear qualitative assessment and accompanying validation and verification procedure, to adequately and comprehensively assess the extent to which the REDD+ activities were carried out in consistency with the Cancun safeguards.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2740 | Anonymous            | 0                   |                 | The requirements in section 7.9 of the draft assessment framework do not stipulate the need for carbon programs and standards to specify 'how' conformance with the Cancun safeguards will be assessed (including what evidence needs to be provided). Without this specification, the Integrity Council will not ensure transparency and predictability for the Jurisdictions participating in the Jurisdictional carbon programs. Moreover, is important the Integrity Council considers that some of the carbon programs and standards generally refer to compliance with the UNFCCC and the Cancun safeguards, but DO NOT specify 'how' conformance with the Cancun safeguards will be assessed. If the above is not incorporated into the requirements for Criterion 7.9, there is a clear risk the Integrity Council will not address the most important gaps of certain Jurisdictional REDD programs and standards. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2740 | Anonymous            | 0                   |                 | Finally, the draft assessment framework does not spell out the need for carbon programs and standards to specify clear requirements over the 'design and quality of the SIS' and how the SIS will be assessed. Effectively demonstrating compliance with safeguards and being able to provide participatory and quality assured information on a continual basis requires the adoption of tools, systems and/or procedures for the SIS. Carbon programs and standards should offer clarity over the parameters against which the SIS will be assessed, in alignment with UNFCCC guidance ("transparency, consistency, comprehensiveness and effectiveness when informing on how all the safeguards referred to in decision 1/CP.16, appendix I, are being addressed and respected").                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| 2741 | Anonymous            | 0                   |                 | The design considerations are different at these two scales.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2743 | Anonymous            | Ge                  |                 | XXXX believes that the most important principles and requirements are included in the draft CCPs and the draft Assessment Framework. We recommend that the CCPs clearly define a commitment period for credit and risk buffers. In particular, it would be a positive development to achieve more alignment in the treatment of buffer pools across frameworks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2743 | Anonymous            | Ge                  |                 | We see however the need for improvement as to the assessment framework's criteria and requirements regarding the principles of sustainable development, additionality and permanence. In our opinion, some of the criteria proposed lack practicability. See other XXXX comments for more detail under the dedicated questions on sustainable development, additionality and permanence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| 2744 | Anonymous            | Ge                  |                 | XXXX does not necessarily agree with the broad statement that the carbon market is fraught with outstanding integrity concerns. Today, there are carbon-crediting programs in existence which result in the issuance of high-quality carbon credits that are used by corporates to perform their mitigation activities. XXXX supports the concept of an initial threshold requirement that reflects current best practice in the market. This threshold with which high quality carbon credit programmes can comply with from the start will have an immediate impact in the markets, thereby further enhancing the integrity of carbon markets and encouraging the development of projects. However, we think it is problematic that applicants of the initial threshold under the IC-VCM framework are required to commit to take all reasonable steps to meet the more stringent requirements of the assessment framework in a timely manner. The requirements of the initial threshold will already be challenging for carbon credit programmes to meet. It will also be difficult for programmes /credit types to commit to the full threshold from the outset as future steps needed may not be foreseen yet. Those steps might even be outside of the control of applicants, which impairs applicants' ability to make a serious commitment. Accordingly, to require carbon credit programmes to make a commitment to take all necessary steps to comply with the full stringency threshold would, in our view, overburden such programmes and discourage applicants | We thus recommend that applicants be allowed a limited timeframe to apply for the initial threshold. After expiry of the initial threshold, only applications for the full stringency threshold would be allowed, whilst at the same time programmes having been assessed before expiry would be grandfathered in.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 2745 | Anonymous            | Ge                  |                 | As explained above, we believe that the Integrity Council should not conduct its own assessment for every programme type but rather focus on standards and processes established at the program level.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2745 | Anonymous            | Ge                  |                 | At the same time, XXXX recommends the Integrity Council draw on assessments conducted by other well respected bodies. The assessment framework of the IC-VCM is quite comprehensive. Synergies should hence be pursued in order to avoid duplicative or even replicative work. This applies in particular to the work of ICAO's Technical Advisory Body, ICROA Standards Assessment Procedure and the California Air Resources Board Offset Protocols. In addition, standardization of assessment criteria across the different bodies would not only help the IC-VCM, but also applying credit programmes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2746 | Anonymous            | Ge                  |                 | XXXX is concerned that including in the Assessment Framework's requirements all the Sustainable Development Goals (SDGs) would prove challenging for many credit programmes. Our concern is heightened because IC-VCM proposes to apply almost all the criteria in the initial threshold (only the criterion "ensuring net positive SDG impacts" distinguishes between initial and full threshold requirements). We are concerned that not all these requirements can be achieved immediately, which would hamper mitigation activities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | We therefore suggest that the IC-VCM apply a risk-based approach, which would cater to the specific circumstances of a carbon credit programme, instead of applying a "one size fits all" approach, whereby all the requirements need to be met in all circumstances. Alternatively, a gradual implementation could be pursued instead of applying all requirements at the initial threshold. In this context, transition periods should be granted. Such an approach would avoid the potential that no single credit programme in the market is eligible until programs fully comply. We also suggest removing proposed requirements regarding regulatory requirements that fall outside of the scope of mitigation activities, or that are covered by existing regulatory compliance requirements in Standards (e.g., pollution laws, labor laws). All credible project standards require compliance with existing applicable regulations and laws. Imposing regulatory requirements that exceed local regulations and that are in many cases not related to the underlying carbon mitigation activity, falls well outside of the remit and scope of a carbon crediting programme. |

The SDG regime was not designed to measure net positive impacts. A more sensitive and realistic approach would be to require that the activity not cause significant harm (see also e.g. EU taxonomy). Moreover, it is not clear whether the requirement applies to various SDGs or is only limited to the most relevant one                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| 2747 | Anonymous            | Ge                  |                 | XXXX agrees with IC-VCM that emission reductions or removals not be deemed additional if those reductions or removals are required under existing law to be implemented. Likewise, emission reductions or removals should no longer be deemed additional if, during crediting periods, the mitigation activity must be implemented due to applicable legal requirements. As suggested by IC-VCM, carbon-crediting programs should thus have sound assessment procedures in place to ensure that the mitigation activity is not required under legal requirements. Furthermore, ongoing monitoring regarding new legal requirements is necessary to ensure additionality is maintained. We also welcome the criterion that non-enforced regulations in developing countries are not considered to prevent a project from being additional. | We note that the Integrity Council correctly identifies that “no approach to demonstrating additionality is simple” and therefore our recommendation would be to focus on atmospheric additionality only and dispense with the concept of financial additionality. We make this recommendation based on the utility of a carbon credit being an economic tool which values the positive externality of a reduction or removal of a tonne of CO2e. Whether or not a project meets the thresholds of financial additionality should not be a factor in the economic value of the reduction or removal of a tonne of CO2e which is achieved. Rather, the value of the externality should be based on the supply and demand fundamentals of the relevant project type. The externality will always hold some value provided there is demand for it. Applying financial additionality to the carbon credit market means that a project with more revenue streams than just a carbon credit is somehow less additional and is neither economically nor atmospherically sound. Nor is it economically sound to dispense with the tool (i.e., the credit) that values the externality once the project is “at the money” or “in the money” using an economic model which doesn’t value externalities. The best example of this is carbon credits issued for renewable energy projects which are now not deemed to be financially additional and therefore do not qualify as a carbon credit. Yet the supply demand imbalance of renewable energy is currently significant (circa. 20% of the world’s electricity comes from renewable sources, whilst we need to at least double the amount of electricity we produce and produce it from renewable sources). It is not economically sound to remove the value of this externality nor is it economically sound to reduce the profitability of projects which are clearly additional from an atmospheric perspective i.e. renewable electricity does not contribute to the atmospheric carbon budget and therefore this positive externality should attract a value. We also believe that the Integrity Council should look closely at the renewable electricity protocol and remove it as a protocol that qualifies under the core carbon principles. The generation of renewable electricity does not emit carbon. There are existing Environmental Attribute Certificate (EAC) protocols which measure the positive externality of renewable electricity using instruments such as a Renewable Electricity Certificate (REC) or Guarantee of Origin (GoO). These are in widespread use across the world. The purpose of an EAC is to represent the environmental attributes of the generation of one megawatt hour (MWh) of energy supplied by renewable sources. Regardless of the solid logic of not turning something that has no carbon footprint in the generation of electricity into a tonne of CO2 it would also solve two issues inherent in the current crediting protocols, as follows: |

| 2748 | Anonymous            | Ge                  |                 | On the other hand, the approach risks to be overlooking important features of the project at hand as it focusses on the typical characteristics of such a project type. Each project is however unique and has project-specific elements that need to be looked at.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| 2749 | Anonymous            | Ge                  |                 | XXXX believes the permanence principle to be of high importance for the integrity of carbon credit programmes. Given that there is a large variety of approaches to permanence, we suggest the IC-VCM assessment framework be less prescriptive. It would be more helpful to provide high level key criteria that need to be achieved instead of going too much into detail. There is no need for an entirely new standard, and instead should be consistent with best practice in the market                                                                                                                                                                                                                                                                                                                                             | We think that it would be better for the Integrity Council to review the process to assess and address permanence used by the program, instead of making specific decisions about permanence, see for instance the detailed example on page 60 of the draft assessment framework.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| 2750 | Anonymous            | Ge                  | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Additionally, we see merit in the introduction of an attribute stating that the carbon credit's associated mitigation activity quantifies its claimed substantive net positive significant contribution to Sustainable Development Goals beyond mitigation. We however suggest this to be an optional rather than a mandatory attribute. Also, as stated above, it is not clear, whether this requires positive impact on one or various SDGs.                                                                                                                                                                                                                            |

| 2751 | Anonymous            | Ge                  |                 | In response to a) No. The majority of countries do not have the accounting, legal and regulatory frameworks in place to be able to accord corresponding adjustments. Therefore, requiring host country authorisation runs the risk of slowing down transactions in the VCM.                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

Administering such a contribution would be costly and difficult to enforce in a voluntary setting and thus may pose a barrier to entry to the market                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 2754 | Anonymous            | Te                  |                 | XXXX does not believe that the Integrity Council should assess programs unsolicited. Rather, the IC-VCM should aim to incentivise programs to apply for assessment because they see added value in it. The starting point of the Initiative of the Integrity Council should remain that it is voluntary. Conducting unsolicited assessments would be a top-down approach that is in addition contrary to the inclusive, dialogue approach of the assessment framework. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| 2759 | Gold Standard        | TE                  | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | The existing VCM projects should be allowed to receive CCP label provided that the project can demonstrate compliance with the CCP requirements. Expert Panel (EP) may consider setting minimum threshold. We encourage EP to consider criteria such as Crediting period start date for eligibility – similar to CORISA to maintain consistency across the initiatives and adopting a vintage start date for CCP labelling for example starting from 1/1/2021. Programmes may design a transition process to facilitate CCP labelling to existing project as separate procedure or integrate within the existing certification cycle for efficient and faster transition. |
| 2760 | Gold Standard        | GE                  |                 | Question: Are the requirements appropriately balanced between the initial and full stringency thresholds to address outstanding integrity concerns affecting the trust in the voluntary carbon market?                                                                                                                                                                                                                                                                 | Refer to cover statement                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 2761 | Gold Standard        | GE                  |                 | Question: What timeframe would you recommend for the duration of the initial threshold, taking into account the time needed for carbon-crediting programs to revise standards, processes and procedures; carbon-crediting periods; issues related to legal contracts etc.?                                                                                                                                                                                             | Six to nine months from publications, however where needed AF may include forward actions with timebound implementation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 2762 | Gold Standard        | GE                  |                 | Is this different for different areas of the draft Assessment Framework?                                                                                                                                                                                                                                                                                                                                                                                               | Refer to preceding GS comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2763 | Gold Standard        | GE                  |                 | Should the Integrity Council draw on assessments by the Technical Advisory Body under CORSIA or any other comparable body?                                                                                                                                                                                                                                                                                                                                             | Yes, IC should consider CORSIA approval to avoid duplication of work and reduce timelines.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| 2764 | Gold Standard        | GE                  |                 | If so, for which criteria and requirements would previous assessments of carbon crediting programs and carbon credits be most relevant?                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Programme governance assessment is very comprehensive and elaborative under CORSIA and may be considered where overlap exists.                                                                 |
| 2765 | Gold Standard        | GE                  |                 | Programmes are expected to ensure the competence to have robust governance and operations across its all functions. This requirement doesn't not seem to have much relevance.                                                                                                                                                                                                                                                                                                                                                                                                                                       | Should be removed from AF                                                                                                                                                                      |
| 2766 | Gold Standard        | TE/GE               |                 | In addition to above comment, it is not clear how this would be demonstrated. The stated requirement would be an outcome of requirements included in initial threshold therefore it is not needed to be repeated here.                                                                                                                                                                                                                                                                                                                                                                                              | Should be removed from AF                                                                                                                                                                      |
| 2767 | Gold Standard        | TE/GE               |                 | This is critical to ensure the robustness of governance and should be part of the initial threshold.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Should be included in the initial threshold                                                                                                                                                    |
| 2768 | Gold Standard        | ED                  |                 | Following requirements are not practical to address as stated                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Should be excluded from initial threshold and could be included in full threshold requirements with further clarity. Refer to the comments on specific requirements in later sections as well. |
| 2768 | Gold Standard        | ED                  |                 | - transition towards net-zero emissions; This shall by default be the goal for Paris Agreement (PA). However, this concept is evolving and procedures for effective implementation at activity level are to be established. A generic statement doesn't add any value.                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                              |
| 2768 | Gold Standard        | ED                  |                 | - benefit-sharing arrangements; EP should clarify for which activity type it is required or should be made mandatory – considering that it is not relevant or practical to implement for all activities.                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                              |
| 2769 | Gold Standard        | GE                  |                 | As included in PA, this requirement is critical for robust and transparent governance system                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Should be included in the initial threshold. Refer to the comments on specific requirements in later sections as well.                                                                         |
| 2770 | Gold Standard        | GE                  |                 | As included in PA, this requirement is critical and shall be included in initial threshold to uphold the SDG and PA intent and ensure the quality of carbon credits and mitigation activities.                                                                                                                                                                                                                                                                                                                                                                                                                      | Should be included in the initial threshold. Refer to the comments on specific requirements in later sections as well.                                                                         |
| 2771 | Gold Standard        | TE                  |                 | GS welcomes the requirements and agree with the intention to have public disclosure of source of funding. However, it is not being practiced widely across the Programme. The initial threshold may have a requirement to have procedure in place rather as stated in current draft to allow Programme established a procedure with clear scope on what is to be included in the reporting. Also, requirement shall clearly outline the scope excluding the usual operation related fee applicable to other certification activities beyond registration and issuance for example methodology review and approvals. | Should be included in full threshold with further clarity on scope as suggested in the comment.                                                                                                |
| 2772 | Gold Standard        | ED                  |                 | The scope of declarations should be limited to the carbon credit related activities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Should be further clarified                                                                                                                                                                    |
| 2773 | Gold Standard        | ED                  |                 | The requirement is too broad and doesn't clearly outline which aspects are to be considered. Further requirements address this requirement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Should be removed                                                                                                                                                                              |
| 2774 | Gold Standard        | TE                  |                 | The Programme should be allowed to limit the scope of decisions that can be challenged along with mechanism that allow Programme to establish the procedure for allocating the responsibilities to different entities within the system as per the needs.                                                                                                                                                                                                                                                                                                                                                           | Should be further refined along with limiting the scope of decisions                                                                                                                           |
| 2775 | Gold Standard        | ED                  |                 | This requirement may discourage participants to have open discussion on critical issues. Since the decisions are implemented and are publicly available for stakeholder, it is recommended to be removed.                                                                                                                                                                                                                                                                                                                                                                                                           | Should be removed                                                                                                                                                                              |
| 2776 | Gold Standard        | TE                  |                 | The VVB audit report capture this information and are made publicly available. It should be noted that consistency and comparability is managed via different set of requirements part of multiple of standard documents. This requirement will add unnecessary administrative burden without much value add.                                                                                                                                                                                                                                                                                                       | Should be removed                                                                                                                                                                              |
| 2777 | Gold Standard        | TE                  |                 | The requirement outlines documents that should be available for consultation. It should be noted that there are different project stages where consultations are required. Practically, it is not possible to have design documents ready for all consultations and may not even be helpful due to the stakeholders understanding of technical details captured in the design documents.                                                                                                                                                                                                                            | Suggest to remove it as already captured under req e) and f) not make it mandatory to have consultation on design documents for all stakeholder consultations                                  |
| 2777 | Gold Standard        | TE                  |                 | For example, GS requires stakeholder consultation prior to start of the project development so that the stakeholder can influence the project design and provide feedback on all aspects of the project including likely positive impacts and potential risks, as needed. It is not practical to have design document ready for 1st stage of consultation which is conducted on project key information.                                                                                                                                                                                                            | 0                                                                                                                                                                                              |
| 2778 | Gold Standard        | GE                  |                 | Key requirement and should be included in initial threshold                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Should be included in initial threshold                                                                                                                                                        |

| 2779 | Gold Standard        | TE                  |                 | This is not feasible to ensure the receipt of grievance by the independent committee. The Programme should be able to facilitate the grievance procedure via its governance system. We suggest EP to have a look at the Gold Standard's grievance resolution designed following the best practices approaches, available here <a href="https://globalgoals.goldstandard.org/000-8-gov-grievanceapproval-procedure/">https://globalgoals.goldstandard.org/000-8-gov-grievanceapproval-procedure/</a> | Should be refined further considering the practicality aspect for efficient implementation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2780 | Gold Standard        | TE                  |                 | Gold Standard recommends clear expectations and procedures are set out for when and how corrective action by the scheme for over-issuance occurs. This does not always mean the scheme must itself cancel credits, for example, but the scheme should ultimately be responsible for ensuring over-issuance is dealt with. To our knowledge Gold Standard is the only market participant to have taken such action to date.                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 2781 | Gold Standard        | TE                  |                 | Note that credits once issued can not be cancelled to ensure the transparency of registry system. However, credits may be retried with remark.                                                                                                                                                                                                                                                                                                                                                      | Refine the requirements with more clarity                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2782 | Gold Standard        | TE/ED               |                 | The Programme with other requirements outlined in AF ensures the transparency and accountability across its functions and governance system. The requirement is not practical and would add unnecessary administrative burden.                                                                                                                                                                                                                                                                      | Should be removed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 2783 | Gold Standard        | TE                  |                 | The requirement of having an example project is not practical as example project is not always available for methodology development.                                                                                                                                                                                                                                                                                                                                                               | Requirement to have an example project should be removed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2784 | Gold Standard        | GE                  |                 | The frequency of methodology review and update shall be reduced to three years.                                                                                                                                                                                                                                                                                                                                                                                                                     | Requirement should be revisited.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 2785 | Gold Standard        | TE                  |                 | AF should clarify that the methodology suspension also includes application by registered project/Programme that has applied the given methodology and where overestimation is above x% threshold.                                                                                                                                                                                                                                                                                                  | Should be further clarified as suggested in the comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 2785 | Gold Standard        | TE                  |                 | AF should also include clear requirements on how to treat issued credits that has already been issued applying a methodology.                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 2786 | Gold Standard        | TE                  |                 | EP should outline the accounting principle and technical guidance for methodologies to ensure the consistency and conservativeness across the methodologies and Programme. EP may consider refinement to Technical guidance on methodologies for adjustments under Article 5, paragraph 2, of the Kyoto Protocol or similar document including IPCC 2019 refinements.                                                                                                                               | Should strive for setting the common accounting principle with technical guidance to ensure consistency and conservativeness. The EP is requested to consider the previous work developed under Kyoto protocol and latest IPCC 2019 guidelines. It will ensure consistency across the methodologies and with general accounting approaches across the programmes and reduce the need for reassessing each methodology as outlined in the credit type assessment section. The EP may review the methodology during the development or at anytime as needed to ensure the compliance with the guidance. |
| 2787 | Gold Standard        | TE                  |                 | AF should clarify the GHGs that can be considered for carbon credit issuances. PA doesn't outline the eligible GHGs as was the case with Kyoto protocol.                                                                                                                                                                                                                                                                                                                                            | Should be revisited as per the comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2787 | Gold Standard        | TE                  |                 | AF should clarify if Short-lived climate pollutants such as black carbon may be included in the eligible list of GHGs for issuance of carbon credits considering the significant contribution of such pollutant. AF should clarify what time horizon should be applied for GWP for short lived climate pollutants.                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 2787 | Gold Standard        | TE                  |                 | AF should adopt the requirement outlined under e) with respect to GWP and time horizon for initial threshold to ensure the consistency across the Programme and to align with PA.                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 2788 | Gold Standard        | TE                  |                 | AF shall define the length of crediting period and set the maximum limits in line with the PA A6.4RMPs for initial threshold to ensure consistency across the frameworks.                                                                                                                                                                                                                                                                                                                           | Should be revisited as per the comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 2789 | Gold Standard        | TE                  |                 | AF should define typical range of uncertainty threshold for type of mitigation activity and generic options to address the uncertainties to ensure the consistency across the programmes.                                                                                                                                                                                                                                                                                                           | Should be revisited as per the comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 2789 | Gold Standard        | TE                  |                 | AF should clearly outline the procedure for determining the emission factor and level e.g. default IPCC or lower or upper bound to ensure conservative and consistent application across the accounting approaches.                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 2790 | Gold Standard        | ED/TE               |                 | AF should outline the adjustment factors to be applied for different level of magnitude of uncertainty. Refer to general comment above.                                                                                                                                                                                                                                                                                                                                                             | Should be revisited as per the comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 2791 | Gold Standard        | TE                  |                 | AF should reconsider this requirement as the requirements as stated would lead to major disruption of existing and future projects and create further confusion as it is proposed only for carbon credits authorised for Article 6 purposes. It is not practically possible to implement different crediting period requirements for part project.                                                                                                                                                  | Should revisit the requirement considering the practicality and complexity with implementation of this requirement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 2792 | Gold Standard        | GE                  |                 | The requirement as stated will lead to complexity and significant administrative burden.                                                                                                                                                                                                                                                                                                                                                                                                            | Should consider a simplified alternative approach where the methodology should include provisions for shorter crediting period for technology types/measures, where, for example;                                                                                                                                                                                                                                                                                                                                                                                                                     |

| #    | Comment submitted by | Para/Fig/Table/Note | Type of comment | Submitted comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Proposed change                                                                                                                                                                                                                                                                                                                                                                        |

| 2794 | Gold Standard        | ED                  | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Also it should be clarified if a new version is introduced should existing accreditation be valid or accreditation reapproval is needed.                                                                                                                                                                                                                                               |
| 2795 | Gold Standard        | TE                  |                 | As long as the Programme has provisions to ensure double issuance, it should be fine if the project is actively registered with other compliance Programme. For example – deregistration with CDM takes months to year and may cause risk of discontinuation for vulnerable project.                                                                                                                                                                                                                                                                                                                        | Deregistration should not be mandatory conditions as long as double issuance is avoided with robust provisions.                                                                                                                                                                                                                                                                        |
| 2796 | Gold Standard        | ED                  |                 | AF should clarify what does “All” refer to. It should be final versions of the validation report. Assume it is not referring to all versions of validation/verification reports.                                                                                                                                                                                                                                                                                                                                                                                                                            | Clarification is needed.                                                                                                                                                                                                                                                                                                                                                               |
| 2797 | Gold Standard        | GE                  |                 | Practically it is not possible make all information available where confidentiality is needed for certain aspects of input data.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | A provision should be added to ensure the confidentiality where needed.                                                                                                                                                                                                                                                                                                                |
| 2798 | Gold Standard        | GE                  |                 | The parameter level information is captured in design document, validation report, monitoring report and verification report and these documents are made publicly available. A search functions to parameter level check is not practically possible.                                                                                                                                                                                                                                                                                                                                                      | Should be removed as information is available in activity documents.                                                                                                                                                                                                                                                                                                                   |
| 2799 | Gold Standard        | TE                  |                 | Requirement to create a non-technical summary document is not practical when the information is captured and reflected through different means and documents. For example Gold Standard registry project page captures the required information for non technical stakeholder while for details documents are available.                                                                                                                                                                                                                                                                                    | Scope and mandatory requirements for information requested should be revisited to avoid administrative burden to accommodate all info in one document.                                                                                                                                                                                                                                 |
| 2800 | Gold Standard        | TE                  |                 | The info requested under each of the option, for example option 1a – median price to be made public is not feasible and practical considering that it is outside the scope of certification. Similar other options are requiring information that would not be available at the time of certification for a given period.                                                                                                                                                                                                                                                                                   | Should be removed                                                                                                                                                                                                                                                                                                                                                                      |
| 2801 | Gold Standard        | GE                  |                 | The compliance with IFC as minimum standard would increase the scope of assessment and thus will be too wide.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | The scope should be limited to the requirements outlined in AF or program’s own standard requirement to have clear set of requirements for project developer.                                                                                                                                                                                                                          |
| 2802 | Gold Standard        | GE/ED               |                 | Comprehensive and written guidance from Programme is not always needed as third party best practices guidance can be referred without duplicating such info. For example IFC principles comes with associated guidance. To avoid duplication, the mandatory requirements to have written guidance can be avoided.                                                                                                                                                                                                                                                                                           | Should be revisited as per the comments.                                                                                                                                                                                                                                                                                                                                               |
| 2803 | Gold Standard        | GE                  |                 | Considering the scale and project boundary of the activities, requiring workers to monitor the workers employed by third parties and supply chain is practically not feasible.                                                                                                                                                                                                                                                                                                                                                                                                                              | Should reconsider the scope of the requirements.                                                                                                                                                                                                                                                                                                                                       |
| 2804 | Gold Standard        | GE/TE               |                 | Imposing legal and regulatory procedure is not practically feasible and may lead to unnecessary legal burden.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Should be guidance as purpose is to promote the efficient and sustainable use. Legal and regulatory requirement is not feasible.                                                                                                                                                                                                                                                       |
| 2805 | Gold Standard        | GE/TE               |                 | The requirement is redundant as documentary evidence is needed for validation/verification and crossed checked by the auditors                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Should be removed                                                                                                                                                                                                                                                                                                                                                                      |
| 2806 | Gold Standard        | TE                  |                 | Welcome the inclusion of dedicated gender policy. It should be extended to VVBs as VVBs are also key stakeholder of the process.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Should be revisited as per comment.                                                                                                                                                                                                                                                                                                                                                    |
| 2807 | Gold Standard        | TE                  |                 | The requirement should be revisited as purpose of risk assessment is to ensure unbiased participation, equal opportunities and avoid negative impact. Activity indeed should have measure in place to avoid any risk and ensure equal opportunities are created. Comprehensive gender impact assessment by qualified expert should be needed where activity targets and implement specific impact to make positive impact. The detailed gender impact assessment should be required where activity intend to make and claim positive impact as an outcome of the actions thus considered under SDG impacts. | Should be revisited as per the comment.                                                                                                                                                                                                                                                                                                                                                |

| 2808 | Gold Standard        | TE                  |                 | To ensure the alignment with SDG framework, the AF requirements should require quantified SDG impacts aligned with SDG targets.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Should be revisited as per the comment.                                                                                                                                                                                           |
| 2808 | Gold Standard        | TE                  |                 | The minimum SDG contributions should be in addition to SDG 13, for example SDG 13+ two other SDGs. AF should look into setting minimum requirements to claim SDG contributions to avoid SDG washing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                 |
| 2808 | Gold Standard        | TE                  |                 | Robust monitoring and verification of SDG benefits should be included as requirement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                 |
| 2808 | Gold Standard        | TE                  |                 | Also note that all referred framework doesn't provide a framework to quantify the SDG impact quantification and monitoring. A few of these are only provides mapping thus any recommended tools/framework must have clear link of impact with indicators, targets and SDGs for effective quantification and monitoring and to avoid SDGwashing.                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                 |
| 2809 | Gold Standard        | GE                  |                 | The SDG framework is designed to make positive impacts via identified targets and monitoring indicators. Safeguards are designed to identify the risk and potential negative impact and avoid, minimise and mitigate where avoidance is not feasible. The activity could indeed have positive and negative impacts, however identification and monitoring of negative impacts via SDG framework is not feasible and practically appropriate when risk assessment against the safeguards is required. The negative impact assessment via SDG framework would complicate the entire assessment when considered. AF should not mix negative and positive impact assessment under SDG framework rather have clear distinction between positive and negative impacts. | Should be revisited as per the comment                                                                                                                                                                                            |
| 2810 | Gold Standard        | TE                  |                 | The requirement is not feasible as the scope of certification ends with registered crediting period.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Should be removed                                                                                                                                                                                                                 |
| 2811 | Gold Standard        | GE                  |                 | AF should require programme to ensure consistency across the tools where allowed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Should be revisited                                                                                                                                                                                                               |
| 2812 | Gold Standard        | TE                  |                 | AF should clearly state for which mitigation activity type/under what conditions for example where IPLCs are involved, access and benefits sharing requirements apply.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Further clarification is needed.                                                                                                                                                                                                  |
| 2813 | Gold Standard        | TE/ED               |                 | The requirements are too elaborative requiring info that is considered confidential in general business terms. A Programme may not be able to certify the total carbon revenue, project developer business arrangement with its buyers and effective implementation of access and benefit sharing including third party verification.                                                                                                                                                                                                                                                                                                                                                                                                                            | Suggest to revisit the information and consider voluntary adoption with reduced scope of such mechanism.                                                                                                                          |
| 2814 | Gold Standard        | ED                  |                 | The draft requirement as it is doesn't exclude non-deserving technology types, mitigation options for example treatment of GHGs industrial gases which could likely be nonadditional. The EP should develop a list of mitigation options which are not in line with 1.5C targets and exclude from the eligibility list rather using blanket criteria a) for additionality justification.                                                                                                                                                                                                                                                                                                                                                                         | Suggest excluding the step1                                                                                                                                                                                                       |
| 2815 | Gold Standard        | ED                  |                 | The draft approach is cumbersome and time consuming and will lead to more confusion without much value addition. The step1 should be replaced with a list of negative technologies, measures considering the status and geographic spread and set principles to exclude such mitigation options to avoid locking in emission trajectory that doesn't align with 1.5C target. EP may also set an prescheduled frequency to update the negative list going forward to ensure consistency.                                                                                                                                                                                                                                                                          | Suggest to replace the step 1 with a list of negative technologies/mitigation options. EP should conduct a background assessment and seek stakeholder views before adoption of negative list.                                     |
| 2816 | Gold Standard        | ED                  |                 | The draft requirement adds uncertainty and should not be included. Similar to b)2 for initial threshold, an assessment shall be conducted prior to registration and prior to the renewal of the crediting period to confirm that no enforced legal requirements exist that might require the partial or full implementation of the mitigation activity;                                                                                                                                                                                                                                                                                                                                                                                                          | Suggest to revisit the requirements                                                                                                                                                                                               |
| 2817 | Gold Standard        | TE                  |                 | The practical implementation of design requirements i.e., ensuring the publication of document prior to start date is not feasible and would add more confusion. Also, it is not clear if credible third party attestation includes validation by the VVB or not.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Suggest to revisit the requirements. For example the activity that conducts the consultation with stakeholder prior to start dater (clearly referring to carbon revenue) may be exempted from need to demonstrate carbon revenue. |
| 2818 | Gold Standard        | ED                  |                 | The requirement shall be "to submit" the document for listing rather confirmed listing prior to start date.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | This would ensure that project implementation is not put on hold until the listing process is completed, or implementation is limited/subject to certain certification stage.                                                     |
| 2818 | Gold Standard        | ED                  |                 | Also it should be option a) or b) or c)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                 |
| 2818 | Gold Standard        | ED                  |                 | The conditions for gap between date of certification stages should be linked to submission rather completion of certification stage. For example submission of mitigation activity for registration rather registration of activity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                 |
| 2818 | Gold Standard        | ED                  |                 | The conditions pertaining to date of proof of prior consideration is doesn't add much value and may not cause unnecessary confusion and complexity with project planning and implementation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                 |

| 2819 | Gold Standard          | ED                            |                 | AF should outline the high level requirements outlining the options and safeguards where needed. The detail requirements included for additionality assessment are well established and refined based on two decade of industry experience and would create more confusion. AF may consider alignment with PA especially A6.4 RMPs to ensure consistency across the mechanisms.                                                                                                                                                                                                                                                                      | Suggest to revisit the requirement as per the comment.                                                                                                                                                                                                                                                                                                                                                        |
| 2820 | Gold Standard          | ED                            |                 | a) step 1 is to add a lot of complexity and regulatory burden. As suggested above, step 1 can be replaced with a negative list of project activities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Suggest to remove step 1 from requirements and replaced with negative list.                                                                                                                                                                                                                                                                                                                                   |
| 2821 | Gold Standard          | ED                            |                 | AF should clarify if the permanence requirement for sequestration activities for example Soil organic carbon. The proposed monitoring approaches are not practical for such activities.                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Suggest to add more clarity.                                                                                                                                                                                                                                                                                                                                                                                  |
| 2822 | Gold Standard          | TE                            |                 | "The GHG emission reductions or removals from the mitigation activity shall be permanent, or if they have a risk of reversal, any reversals shall be fully compensated." The compensation guarantee from project developers may not work in certain cases such as the proponent abandoning the project without declaring so. This has happened in AR CDM projects                                                                                                                                                                                                                                                                                    | Suggest to revisit the requirement                                                                                                                                                                                                                                                                                                                                                                            |

| 2824 | Gold Standard          | GE                            |                 | The crediting standard's buffer reserve shall be insured (e.g., through a "reinsurance" policy).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2825 | Gold Standard          | GE/TE                         |                 | The buffer reserve is sufficiently capitalized for a 50-to-100-year period. Is this through the credits eligible to cover reversal losses? If so, does this mean that the capitalization would go beyond the commitment period?                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2826 | Gold Standard          | GE                            |                 | Mitigation activity proponents to sign legal agreements obligating them to monitor, report and compensate for avoidable reversals for the full commitment period. Commitment period is different from the crediting period and would be in excess to crediting period in some cases. It may not be practical for project proponents to have such a long-term arrangement / legal agreement in place.                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2827 | Gold Standard          | GE                            |                 | To demonstrate sufficiency of compensation mechanism the contributions to the buffer reserve should always be based on a robust assessment of non-permanence risk, and there should be clear scientific evidence to support the % contributions that are decided. Expectation on Robust assessment of risk is not clear. Scientific evidence on risk propensity may not be available in cases. In absence of credible evidence, the risk assessment would be a checkbox exercise. Thus, in cases where quantification of risk is not possible, an appropriate contribution to buffer should be fixed to ensure consistency for given activity types. | 0                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2828 | Gold Standard          | ED                            |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Suggest to remove the requirements for step 1 considering it would be time consuming and longer process. Rather EP should provide the technical guidance with high level principles for all methodologies and applicable requirements including for example requirements including range of uncertainties applicable adjustments etc. PA alignment must be ensured to have consistency across the frameworks. |
| 2829 | Gold Standard          | TE                            |                 | AF shall define the maximum duration of all crediting periods to ensure consistency and alignment with PA – particularly A6.4RMPs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2830 | Gold Standard          | GE                            |                 | Welcome the requirements for alignment with net zero emissions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | The proposed requirements are high level and should be further substantiated with example and must consider the host country, technology specific circumstances to avoid conflict with right to development principle.                                                                                                                                                                                        |
| 2831 | Gold Standard          | GE/ED                         |                 | Agree with the proposal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | However we recommend that EP consider the established approaches rather reinventing the wheel and disrupting ongoing development. GS has an established approach designed and developed with input from various stakeholders including developers and expert stakeholders.                                                                                                                                    |
| 2840 | Climate Action Reserve | p.3 under Double counting     |                 | Text: "Double counting covers double issuance, double claiming, and double use." Double claiming should not be included here; it is embedded in the major overlap between national level inventories and corporate inventories. A major portion of national emissions is comprised of the activities by companies within the country. Companies are locked into a public-private partnership with the host country to help achieve its climate targets.                                                                                                                                                                                              | Recognize that double claiming between national governments and companies is inherent to the challenge. Companies are to support host countries in achieving a net zero future, not compete with them.                                                                                                                                                                                                        |
| 2841 | Climate Action Reserve | p.6, No Double Counting       |                 | This definition should not include double claiming. See comment right above this one.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | See above.                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2842 | Climate Action Reserve | p. 2, Purpose, last paragraph |                 | The initial stringency threshold is identified for carbon credits with "consistent atmospheric, environmental and social integrity in line with current good practice." The four major crediting programs meet this definition but would not be able to meet all the initial stringency criteria.                                                                                                                                                                                                                                                                                                                                                    | Revise initial thresholds as noted in comments for Part 4.                                                                                                                                                                                                                                                                                                                                                    |
| 2843 | Climate Action Reserve | p.5, Table 1, c               |                 | Calls for oversight by a Governing body. Does a Board qualify? It should.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Clarify that oversight by a Board of Directors is satisfactory.                                                                                                                                                                                                                                                                                                                                               |

| 2844 | Climate Action Reserve | p.5, Table 1, e       |                 | Notes the need for “Competence requirements” for Board, staff, etc. What does that mean? Who hires incompetent people? IC should not be micro-managing our operations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Delete                                                                                                    |
| 2845 | Climate Action Reserve | p.5, Table 1, h       |                 | Same comments as above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Delete                                                                                                    |
| 2846 | Climate Action Reserve | p.5, Table 1, i       |                 | Text: “The carbon-crediting program shall have a formal, rigorous, and transparent procedure for appointing new members to the governing body.” There are a multitude of considerations that go into Board composition for a NGO, considerations that are often changing. Overly intrusive as currently framed. What problem are you trying to address? We don’t need to be distracted with trying to compose lengthy, formal documents on Board composition and selection procedures.                                                                                                                                                                                                                                                                                                                                           | Either delete or specify more clear, limited objectives.                                                  |
| 2847 | Climate Action Reserve | P.6, Table 2, a       |                 | Calls for “transition towards net-zero emissions.” What does this mean? All of our credits fit this definition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Delete                                                                                                    |
| 2848 | Climate Action Reserve | p.6, Table 2, a       |                 | Calls for “benefit-sharing arrangements.” Not a registry’s responsibility; infringement on confidential commercial arrangements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Delete                                                                                                    |
| 2849 | Climate Action Reserve | p.7, Table 2, a       |                 | Calls for “public availability of documentation.” Does this include Board minutes? Seems onerous and definitely should not include closed sessions operating under Chatham House rules.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Delete or limit to open session minutes.                                                                  |
| 2850 | Climate Action Reserve | p.7, Table 2, a       |                 | Calls for “accreditation and oversight of validation and verification bodies.” The Reserve does not use validation bodies as these objectives are achieved directly by our protocols, largely through the use of standardized baselines.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Change to “validation and/or verification bodies”                                                         |
| 2851 | Climate Action Reserve | p.7, Table 2, Full, b |                 | Calls for publishing normative documents on “sustainable development net-positive impacts.” What does this mean? We already have a discussion of these impacts in our Program Manual, plus project developers can report on their alignment with the UN SDGs. Is this sufficient?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Clarify the expectations around this item.                                                                |
| 2852 | Climate Action Reserve | p.7, criterion 1.3    |                 | Calls for “regular updating of all normative program documents.” We update based on program and market needs. Don’t specify a defined time period. Not all documents need to be updated regularly, e.g., a protocol not extensively in use by the market. We don’t need arbitrary deadlines not based on the need to do so. Don’t commit programs to an exhaustive schedule of regular updates that may or may not be needed.                                                                                                                                                                                                                                                                                                                                                                                                    | Don’t specify a time period for updating. Allow programs to define an appropriate schedule based on need. |
| 2853 | Climate Action Reserve | p.8, Table 4, a       |                 | Text says: “It shall not receive any form of funding which could imply undue influence of competing interests.” What is intended here? How is undue influence defined? For example, the Reserve may accept funding from a project developer for developing a new protocol. The Reserve believes that our protocol development process ensures no undue influence, e.g., no project developer can have more than one person on a Technical Working Group, the Technical Working Group needs to be balanced, process is very transparent and open to all, etc. Other programs allow external parties to bring fully-developed methodologies to them for approval. The Reserve owns all of our protocols and everyone goes through a rigorous, transparent development process whereby all stakeholders are welcome to participate. | Some clarification of what constitutes “undue influence” should be provided.                              |
| 2854 | Climate Action Reserve | p.8, Table 4, g       |                 | What does “detailed declaration of financial interests relevant to potential COI” mean? The Reserve has solid COI procedures in place already. What level of detail is implied?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Delete requirement for detailed declarations, but require COI procedures.                                 |
| 2855 | Climate Action Reserve | p.9, Table 5, g       |                 | Text says: “Minutes of governing body meetings shall be publicly available on the carbon-crediting program’s website.” Public is already invited to our Board meetings. Closed session portion of Board meeting operates under Chatham House rules, necessary for any entity discussing competitive issues, executive compensation, etc.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Delete                                                                                                    |
| 2856 | Climate Action Reserve | p.9, Table 5, i       |                 | Text says: “The carbon-crediting program shall have guidelines on the management reporting and use of proceeds from issued carbon credits to facilitate the tracking of funds.” This is not a registry’s responsibility. Furthermore, it intrudes into the public release of confidential commercial information. Total overreach.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Delete                                                                                                    |
| 2857 | Climate Action Reserve | p.9, Table 6, h       |                 | Text says: the program “shall identify and prioritize key stakeholders for engagement in designing and improving its normative program documents.” The programs should have the independence to develop its own rules and procedures for implementing its programs. Public consultation is the appropriate level of engagement for programmatic updates. Requiring further engagement is impractical for implementing changes efficiently.                                                                                                                                                                                                                                                                                                                                                                                       | Delete.                                                                                                   |
| 2858 | Climate Action Reserve | p.10, criterion 1.7   |                 | Text says: “Independent” may consist of an external entity or individual convened by the carbon crediting program to which it provides logistical support, a third-party entity, or other similar                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Delete                                                                                                    |

|------|------------------------|---------------------|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2858 | Climate Action Reserve | p.10, criterion 1.7 |                 | configurations.” What problem is being addressed here? All of our major deliberations are transparent and held in public. The Reserve has not received grievances, other than from project developers who think they deserve more credits. This would be costly to implement and unnecessary. Who is supposed to pay for it? Critics who don’t like crediting could overwhelm us with unfounded “grievances.”                             | 0                                                                                                                                                                               |
| 2859 | Climate Action Reserve | p.11, Table 7, e    |                 | Text says: “An independent committee shall receive and address information on the status of complaints, which shall be publicly available. When necessary, the committee may request a third-party opinion.” See comments above. Plus, you are already specifying an independent committee—they need to get a third party opinion to their third party opinion? Seems silly all around.                                                   | Delete                                                                                                                                                                          |
| 2860 | Climate Action Reserve | p.11, Table 7, h    |                 | Text says: “The carbon-crediting program shall publicly disclose information on grievances received and processed.” As noted, this whole process is unnecessary. So if someone/some group decides to launch some type of gaslighting campaign against the Reserve, we have to respond to each baseless complaint?                                                                                                                         | Delete                                                                                                                                                                          |
| 2860 | Climate Action Reserve | p.11, Table 7, h    |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                               |
| 2861 | Climate Action Reserve | p.11, Table 7, i5   |                 | Text says: “sufficient resources (i.e., independent budget and competent staff.” The Reserve is supposed to pay for an independent grievance mechanism? We don’t have the budgetary resources.                                                                                                                                                                                                                                            | Delete this entire grievance mechanism idea.                                                                                                                                    |
| 2862 | Climate Action Reserve | p.12, Table 9, a    |                 | Text says: “The carbon-crediting program’s governing body shall undertake a formal and rigorous annual evaluation of its performance and that of any committees and individual directors. Performance-related criteria shall be transparent and rigorously applied.” The Reserve has a volunteer, uncompensated Board. Why is this needed? What problem is being addressed? Who is going to pay for this?                                 | Delete                                                                                                                                                                          |
| 2863 | Climate Action Reserve | p.13, Table 9, c    |                 | Text talks about the carbon crediting program’s ownership information. What is this supposed to be? We are a non-profit operating under the laws of the State of California. No one “owns” the Reserve.                                                                                                                                                                                                                                   | Delete                                                                                                                                                                          |
| 2864 | Climate Action Reserve | p.13, Table 9, f    |                 | Text says: “The carbon-crediting program shall have procedures for publishing, at least annually, an organisational governance report that, inter alia, describes how it has implemented organisational governance practices recommended in any governance code that applies to the program or any code that the                                                                                                                          | Delete                                                                                                                                                                          |
| 2864 | Climate Action Reserve | p.13, Table 9, f    |                 | program has voluntarily adopted.” This is an enormous burdensome requirement on a small NGO. Why is it needed? We are not a multi-national corporation.                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                               |
| 2865 | Climate Action Reserve | p.15, Table 10, e   |                 | Text says: “Proposed new quantification methodologies shall be accompanied by documentation in which the proposed methodology is applied to an example project.” What is meant by an example project and what level of detail is needed? Is the purpose just to spoon feed example calculations to any interested party? We do already train verifiers on each protocol and host regular webinars on how our protocols are to be applied. | Clarify intent and level of effort.                                                                                                                                             |
| 2866 | Climate Action Reserve | p.15, Table 10, f   |                 | Text says: “The carbon-crediting program shall require all quantification methodologies to be reviewed and updated at least every five years to verify that they continue to ensure environmental integrity.” The Reserve updates most of its protocols more frequently than every five years, but some protocols may not need it and/or are not used sufficiently to warrant an update. Programs need more flexibility.                  | Change to “review and/or updated.” Allow review process to be minimal if an update is not deemed appropriate, e.g., a basic internal assessment that updating is not warranted. |
| 2867 | Climate Action Reserve | p.17, Table 11, k   |                 | Text says: “For carbon credits authorised for Article 6 purposes, the carboncrediting program shall require that, from 2031 onwards, crediting periods are aligned with the common time frames for NDCs under the Paris Agreement.” Specifying crediting periods based on bureaucratic desires is not consistent with important considerations raised during the development of each protocol.                                            | Delete                                                                                                                                                                          |
| 2868 | Climate Action Reserve | p.17, Table 11, m   |                 | Requires development of various indicators. Purpose is not clear and potentially burdensome. The Reserve’s protocols specify calculations rigorously vetted with all stakeholders in a very transparent, public process. Verifiers are trained to ensure accuracy. Reserve staff consistently review to ensure conservative issuances. This specification is not needed.                                                                  | Delete                                                                                                                                                                          |

| #    | Comment submitted by   | Para/Fig/Table/Note      | Type of comment | Submitted comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Proposed change                                                                                                                                                                         |
|------|------------------------|--------------------------|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2869 | Climate Action Reserve | p.17, criterion 2.3      |                 | Text says "In such instances, only carbon credits issued ex-post are CCP-eligible." The Reserve understands the general rationale for specifying ex ante crediting. Unfortunately, excluding all ex ante applications eliminates some very important opportunities from the market. For example, reforestation projects will never be attractive for crediting since the major project costs are upfront costs and many years are needed to achieve the substantial benefits. Likewise, efforts to reduce megafires initially require the removal of excess carbon from the forest (e.g., dead/diseased trees, non-native species removal, etc.). An outright prohibition on ex ante crediting prevents consideration of these project types.                                                                                     | Consider ex ante crediting under very limited applications necessary to achieve the environmental benefits.                                                                             |
| 2870 | Climate Action Reserve | p. 18                    |                 | Section requires third party validation. As noted earlier, the Reserve's protocol development procedures build the objectives of validation into our process, which allows all stakeholders to participate in our very transparent, public development process. Third party validation is duplicative. Of course, third party verification is a key hallmark of our program.                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Clarify that third party validation can be achieved in different ways, not just use of a third party verifier at the project level, but also at the protocol development stage.         |
| 2871 | Climate Action Reserve | p.18, criterion 3.1      |                 | Requires third party validation at the project level. As noted above, the Reserve's procedures, including the use of standardized baselines, eliminates the need for this step.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Require only for projects not based on standardized baselines.                                                                                                                          |
| 2872 | Climate Action Reserve | p.21, Table 15, a, 1     |                 | Text says: "General requirements related to contract management." What does this mean and what is its purpose? We already train verifiers in general verification procedures and on each protocol.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Clarify intent and/or delete. Do not get programs into the business of specifying contract provisions.                                                                                  |
| 2873 | Climate Action Reserve | p.21, Table 15, a, 3     |                 | Text says: "management systems covering internal management systems of VVB for checks and balances on audits, internal audits, management reviews, etc." Is the intent here to require programs to oversee the internal management systems of VVBs? What is intended here and why? Seems to be excessive overreach. We do have extensive requirements for how VVBs are to conduct their business.                                                                                                                                                                                                                                                                                                                                                                                                                                 | Clarify intent and extent of this criterion. Do not ask programs to get involved in the internal management of VVBs.                                                                    |
| 2874 | Climate Action Reserve | p.23, No Double Counting |                 | As noted earlier, double claiming should not be included here. Companies and the countries in which they operate largely share the same pool of emissions. Moreover, companies should be viewed as partners with the host country to achieve the national goals. Countries should be allowed to count all voluntary actions, which represent one type of mitigation option available to the country, not some separate pool of activity. No CAs. CAs put companies in a double jeopardy situation. If a country can't count voluntary actions, companies run the risk of being required to undertake compliance actions in the future if the country views the voluntary actions as no benefit to them. Most companies will not want to mitigate voluntarily while leaving themselves open to further requirements in the future. | Delete references to double claiming. No mandatory CAs for the voluntary market.                                                                                                        |
| 2875 | Climate Action Reserve | p.24, criterion 4.2      |                 | Text says: "Eligible credits shall only be issued for emission reductions or removals from sources and sinks that are not included within the accounting boundaries of any other mitigation activities." As written, this could be interpreted as requiring CAs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Add language clarifying that it is limited to project-level mitigation activities.                                                                                                      |
| 2876 | Climate Action Reserve | p.25, criterion 4.4      |                 | Text says: "For example, an energy efficiency project in an industrial facility is issued a carbon credit, and an emissions trading system covers the facility where the project is located." Credits should never be granted to any activity included under a compliance program, especially cap-and-trade.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Perhaps the intent was to demonstrate a situation where credits should never be granted, but if so, that intent is not clear. If there is a different purpose, use a different example. |
| 2877 | Climate Action Reserve | p.26, criterion 4.5      |                 | Text says: "Carbon-crediting programs shall have provisions in place that require project proponents to clearly disclose the sources and types of financing used for a project . . ." Information not currently required by any programs and asks for disclosure of confidential information regarding private sector financing. What's the need for many project types, such as N2O control at a nitric acid plant, where emission control costs may be embedded within a larger capital project?                                                                                                                                                                                                                                                                                                                                | Delete preferably, or limit to specific project types.                                                                                                                                  |
| 2878 | Climate Action Reserve | p.27, Table 23, d        |                 | Text says; "require identification of the entity by whom and/or on whose behalf the credit was retired." CAR requires account holder to retire credits. Many do it on behalf of clients. We don't track downstream commercial transactions where the credit may be bought and sold more than once. Key objective here is to assure credit is only used once and retired permanently.                                                                                                                                                                                                                                                                                                                                                                                                                                              | Project developer/account holder is sufficient to act at the entity for whom the credit was retired.                                                                                    |
| 2879 | Climate Action Reserve | p.29, Table 25, a)2      |                 | Text says: "all validation reports relating to the mitigation activities." CAR does not require validation reports at the project level since, as noted earlier, validation objectives are achieved during the protocol development process.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Note only needed for programs not addressing validation during protocol development.                                                                                                    |
| 2880 | Climate Action Reserve | p.29, Table 25, a)5      |                 | Text says: "all necessary information to enable third parties to replicate the emission reduction calculations (including baseline quantification) and assess the social and environmental impacts of the activity." Function already provided by verifiers and registries during QA/QC process. Amount of information required to meet this criterion is enormous.                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Delete                                                                                                                                                                                  |

| #    | Comment submitted by   | Para/Fig/Table/Note                | Type of comment | Submitted comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Proposed change                                                                                   |
|------|------------------------|------------------------------------|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|
| 2881 | Climate Action Reserve | p.30, Table 25, a)12               |                 | Text says: 'information on benefit sharing arrangements, where applicable.' What does "where applicable" mean? Why is this required at all?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Delete                                                                                            |
| 2882 | Climate Action Reserve | p.30, Table 25, b)1                |                 | Text says: "identification and management of environmental and social impacts and associated risks benefit-sharing arrangements." What are "associated risks benefit-sharing arrangements?" Clarify. Is it sharing of proceeds? As noted, not needed for many project types, e.g., we don't need to know how a PD and industrial company are sharing proceeds.                                                                                                                                                                                                                                                                                         | Delete, or limit to specific project types.                                                       |
| 2883 | Climate Action Reserve | p.30, Table 25, c)1                |                 | Text says: "The carbon-crediting program shall require disclosure of the spreadsheets used for calculations of emission reductions and assessment of additionality." CAR does not allow additionality to be defined at the project level; it is specified in our protocols through the use of standardized baselines.                                                                                                                                                                                                                                                                                                                                  | Delete or limit to programs allowing project-specific additionality.                              |
| 2884 | Climate Action Reserve | p.30, Table 25, c)4                |                 | Text says: "The carbon-crediting program shall require disclosure of information to assess the compatibility of the mitigation activity with achieving net-zero emissions by mid-century." All high-quality credits by design should contribute to net zero emissions. How would one prove this?                                                                                                                                                                                                                                                                                                                                                       | Delete                                                                                            |
| 2885 | Climate Action Reserve | p.30, Table 25, Options 1a, 2a, 2b |                 | Text says: "The carbon-crediting program requires periodic reporting by the mitigation activity proponents on the credit volume sold and average and median price." We don't track commercial terms of credit transactions, including how many times a credit might be traded before it gets used. This is a downstream activity in the market and is typically confidential information.                                                                                                                                                                                                                                                              | Go with Option 1(b).                                                                              |
| 2886 | Climate Action Reserve | p.33, Criterion 7.2 and Table 27   |                 | Text says: "The carbon-crediting program shall have guidance and procedures that enable mitigation activity proponents to effectively assess, manage and monitor labour-related impacts and risks and ensure labour rights and working conditions." Registries are not enforcers of national labor policies. It is far beyond our capabilities and responsibilities to be enforcing such requirements. Table 27 is full of requirements overstepping boundaries. We are not enforcers of local/national laws.                                                                                                                                          | Delete or limit to identifying/addressing known issues raised during public consultation process. |
| 2887 | Climate Action Reserve | p.34, Table 27, e                  |                 | Text says: "The carbon-crediting program shall have a procedure requiring mitigation activity proponents to allow workers to join or form workers' organisations or participate in collective bargaining and to avoid retaliation against workers who organize, including provision of documentary evidence." Local laws at times prohibit/limit such practices, e.g., "right to work" laws. Registries are not labor rights enforcers. What does "provision of documentary evidence" mean?                                                                                                                                                            | Delete                                                                                            |
| 2888 | Climate Action Reserve | p.34, Table 27, f                  |                 | Text says: "The carbon-crediting program shall have a procedure requiring mitigation activity proponents to provide evidentiary documentation that children (any person under the age of 18) are not employed in any manner that is economically exploitative or harmful to children's health, education, or social development." Child labor laws are not a registry's responsibility. Moreover, ignores agricultural situations. Family-run farms often have their kids working the farm. My vacation growing up was being sent to my uncle's dairy farm to help with baling hay. Was that economic exploitation? Some of the best times of my life. | Delete or limit to issues raised during public consultation process.                              |
| 2889 | Climate Action Reserve | P.34, Table 27, i                  |                 | Text says: "The carbon-crediting program shall have a procedure requiring mitigation activity proponents to monitor supply chains to identify and reduce the risks of child and forced labour or significant safety concerns, including violence against women workers, and requires provision of documentary evidence." Incredible overreach to monitor entire supply chains and provide evidence. Entire governments arguably don't do a very good job at this.                                                                                                                                                                                      | Delete                                                                                            |
| 2890 | Climate Action Reserve | p.37, Table 31, c                  |                 | Text says: "The carbon-crediting program shall require mitigation activities to avoid negative impacts to the use of land, territories and resources claimed by IPLCs." Is a claim sufficient to trigger this requirement, or documented ownership of some sort? Native people in the US, Canada, and elsewhere often continue to claim lands are theirs. Is the intent to get registries involved in the adjudication of such issues? Complete overreach.                                                                                                                                                                                             | Limit to circumstances where claims to the land are not in dispute, or delete.                    |
| 2891 | Climate Action Reserve | P.38, Table 32, a                  |                 | Text says: "The carbon-crediting program shall have a procedure in place to ensure that mitigation activities avoid discrimination including documental evidence and reports." Overreach to expect programs to provide evidence that discrimination has not occurred. We are not social justice police.                                                                                                                                                                                                                                                                                                                                                | Limit to issues raised during public consultation process, or delete.                             |

|------|------------------------|--------------------------------|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2892 | Climate Action Reserve | p. 39, Criterion 7.8           |                 | Text says: "The guidance shall include methods for assessing, managing and monitoring the equal participation of women, men, non-binary or gender non-conforming people throughout the project cycle of a mitigation activity." Registries should not be required to actively address the important social issues. We don't have the resources or the expertise. Moreover, what does "throughout the project cycle" mean? That is a very lengthy period for monitoring this issue.                                                                                                                                                         | Limit to issues raised during public consultation process, or delete.                                                                                                                                                                                                                          |
| 2893 | Climate Action Reserve | p.39, Table 33, b              |                 | Text says: ". . .comprehensively address gender                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Limit to issues raised during public consultation process, or delete.                                                                                                                                                                                                                          |
| 2893 | Climate Action Reserve | p.39, Table 33, b              |                 | Considerations." What does this mean? Major overreach.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                              |
| 2894 | Climate Action Reserve | p. 39, Table 33, c             |                 | Text says: "The carbon-crediting program shall have a procedure that requires mitigation activities to have tailored and targeted mechanisms to ensure that equal opportunities are available . . ." What does tailored and targeted mean? This is major overreach; we don't have the resources or expertise.                                                                                                                                                                                                                                                                                                                              | Limit to issues raised during public consultation process, or delete.                                                                                                                                                                                                                          |
| 2895 | Climate Action Reserve | p.40, Table 33, e              |                 | Text says: "The carbon-crediting program shall have a procedure that requires the collection data on mitigation activities, disaggregated by gender, and provide documentary evidence of using these data to monitor, assess and report on gender impacts." This is activist overreach. We don't have the resources or the expertise                                                                                                                                                                                                                                                                                                       | Delete                                                                                                                                                                                                                                                                                         |
| 2896 | Climate Action Reserve | P.40, Table 34, b              |                 | Text says: "The carbon-crediting program shall require that jurisdictional REDD+ activities operate under transparent and effective forest governance structures including procedures for providing access to information and justice, respect for land tenure rights, and prevention of corruption." The Reserve does not have REDD+ projects. However, this is significant overreach. Registries are supposed to accomplish what the host government cannot?                                                                                                                                                                             | Delete                                                                                                                                                                                                                                                                                         |
| 2897 | Climate Action Reserve | P.41, Table 35, e              |                 | Text says: "The carbon-crediting program shall have provisions for monitoring, reporting and verification in accordance with these criteria that enables SDG impact tracking for no less than three no longer needed issuance periods." Major overreach; we don't have the resources or expertise. And ongoing M&V on these issues for three extra issuance periods?! This is unworkable.                                                                                                                                                                                                                                                  | Delete                                                                                                                                                                                                                                                                                         |
| 2898 | Climate Action Reserve | p.42, Table 36, Criterion 7.11 |                 | This entire criterion is a major overreach and infringement on the confidentiality of commercial terms. Moreover, it is downstream from the current role programs play in the market. We don't have the resources or expertise to monitor and collect such information. This concern is probably only relevant for nature-based concerns, not all project types. Moreover, the Reserve ensures that all stakeholders, including IPLCs, have a seat at the table during both protocol development and project activities affecting one's ownership concerns in a project. Concerns can be raised at these times.                            | Limit guidance to nature-based solutions only and do not required disclosure of confidential business terms. Assure that program has mechanisms in place to ensure that IPLCs will be heard.                                                                                                   |
| 2899 | Climate Action Reserve | p. 45, Section 8.1, Step 1     |                 | Text says: "In this step, the Expert Panel evaluates the overall likelihood of additionality of the type of mitigation activity. This step does not entail an assessment of the approaches used in the relevant methodologies or other rules of the carbon-crediting program but informs the assessment in the second step." Excluding an assessment of the approaches used in the relevant methodologies overlooks how the Reserve has successfully defined additionality in its program. We don't allow project developers to make their own independent assessment, they have to follow our specifications for achieving additionality. | Delete reference to the exclusion of how additionality is defined in specific methodologies. Ensure that standardized baseline approaches as employed by the Reserve are recognized for their superior assessment of additionality, including removing discretion from project developers.     |
| 2900 | Climate Action Reserve | p. 46, Criterion 8.1           |                 | CAR specifies additionality in its protocols, not at the project level. Detailed financial additionality is not needed at the project level. Moreover, as the CDM process has shown, a focus on financial additionality allows games to be played with whatever type of financial analysis is employed at the project level.                                                                                                                                                                                                                                                                                                               | Delete financial additionality requirements. Recognize CAR's use of standardized baselines to circumvent need for any project-level additionality assessment beyond the question of whether the applicable protocol was followed correctly.                                                    |
| 2901 | Climate Action Reserve | p.46, point 1                  |                 | Text says: "One potential data source is investment analyses of mitigation activities registered under carbon-crediting programs." CAR does not require project-specific investment analyses to be provided, as explained above. We don't have a collection of such analyses.                                                                                                                                                                                                                                                                                                                                                              | Don't require investment analyses to be provided. Recognize CAR's use of standardized baselines to circumvent need for any project-level additionality assessment beyond the question of whether the applicable protocol was followed correctly.                                               |
| 2902 | Climate Action Reserve | p. 47, iii                     |                 | Text says: "The transaction costs for the relevant type of carbon credit shall be deducted. Information on the transaction costs may be sourced from the same sources or relevant literature." We don't collect such data and it is our understanding that there is very limited data and it is not comprehensive.                                                                                                                                                                                                                                                                                                                         | Delete requirement.                                                                                                                                                                                                                                                                            |
| 2903 | Climate Action Reserve | p.47, Criterion 8.2, a         |                 | Text says: "Does the type of mitigation activity face considerable non-financial barriers that can be identified in an objective and verifiable manner and do these barriers convincingly prohibit the implementation of the mitigation activity?" Exactly how is "objective and verifiable" to be defined? These factors can often be subjective by nature. CAR addresses these concerns during the protocol development process.                                                                                                                                                                                                         | Don't require non-financial barriers to be addressed at such an unreasonable level of analysis. Recognize CAR's use of standardized baselines to circumvent need for any project-level additionality assessment beyond the question of whether the applicable protocol was followed correctly. |

| #    | Comment submitted by   | Para/Fig/Table/Note      | Type of comment | Submitted comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Proposed change                                                                                                                                                                                                                                                                                                                        |
|------|------------------------|--------------------------|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2904 | Climate Action Reserve | p.48, Table 37           |                 | The use of I1, I2, and I3 is not clear here. More critically, the attempt to define a specific threshold value for a good vs. bad project is fraught with uncertainty, as noted earlier. Also need to recognize the programs like CAR do not allow projects to undertake project-specific additionality analyses.                                                                                                                                                                                                                                                                                                                                                        | Do not rely on overly prescriptive “values” to decide if a project is additional or not. Recognize programs like CAR that dispense with project-specific additionality analyses and embed such considerations directly into its protocols, thereby preventing gaming with financial information.                                       |
| 2905 | Climate Action Reserve | p.49, Criterion 8.4      |                 | Text states: “Furthermore, emission reductions or removals will no longer be additional if, during the crediting periods, the mitigation activity would be implemented due to legal requirements.” A legal requirement test is necessary, but do not prescribe disallowing crediting immediately since laws are not implemented immediately and may be reversed. Also, projects are evaluated based on crediting period assumptions that are not tied to future legal/regulatory actions. Need to recognize that capital investments require some period to recoup their costs.                                                                                          | Do not specify that crediting has to cease immediately upon passage of a law or regulation. Allow programs some leeway, e.g., crediting continues for the remainder of the current crediting period.                                                                                                                                   |
| 2906 | Climate Action Reserve | p.51, Table 39           |                 | Text says: “The mitigation activity’s proponents shall provide documented evidence that they considered carbon credits prior to the start date of the mitigation activity. This evidence shall be either publicly available prior to the start of the mitigation activity or supported by a credible third-party attestation.” Different protocols and projects often need different timeframes to address a wide variety of market factors—do not specify a rigid, one-size-fits-all approach for all projects. This information is also often confidential, so allow crediting programs to conduct their own evaluations of evidence without third party interference. | Do not propose time limitations that apply to all projects; allow programs to utilize some flexibility. Allow programs to evaluate confidential information on intent to pursue carbon credits, not third parties, due to confidentiality considerations of the information.                                                           |
| 2907 | Climate Action Reserve | p.51, Table 39, c        |                 | Text says: “The carbon-crediting program shall require that a period of not more than [1/2/3/x] years may pass between the date of proof of prior consideration of carbon credits and the registration of the mitigation activity, unless delays occur on the side of the program, which are duly justified.” Different emission source categories often need to consider different timeframes, so don’t specify one time period for all project types.                                                                                                                                                                                                                  | Allow programs flexibility based on the project type.                                                                                                                                                                                                                                                                                  |
| 2908 | Climate Action Reserve | p.52, Criterion 8.6, a-d |                 | These requirements are applicable to project-level additionality assessments. CAR does not allow this, instead we employ standardized baselines in our protocol development process.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Allow programs such as CAR to skip these requirements as additionality is addressed at the protocol level.                                                                                                                                                                                                                             |
| 2909 | Climate Action Reserve | p.53, Item 3             |                 | Text says: “consistent with the information presented to the company’s board of directors (or other decision-making bodies) and to any banks or equity holders financing the mitigation activity or company.” Highly confidential information and not easy to obtain. Also, not needed by CAR where additionality is specified at the protocol level.                                                                                                                                                                                                                                                                                                                    | Do not require such level of detail as it is confidential and virtually possible to obtain. As previously noted, one can also adjust analyses to give a specific result at the project. Most importantly, recognize that programs like CAR’s embed additionality considerations into our protocols and such information is not needed. |
| 2910 | Climate Action Reserve | p.53, g                  |                 | Text says: “The financial benchmark used in the investment analysis shall be consistent with the weighted average cost of capital (or the cost of equity, as applicable) that is commonly                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Do not overly specify the cost of capital, which can vary for many reasons. Most importantly, recognize that programs like CAR’s embed additionality considerations into our protocols and such information is not needed.                                                                                                             |
| 2910 | Climate Action Reserve | p.53, g                  |                 | applicable to the country, sector, and type of mitigation activity.” There is no singular value for the cost of capital. Often varies by company. Not needed for programs like CAR’s that do not permit project-level additionality games.                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                      |
| 2911 | Climate Action Reserve | p.54, Criterion 8.6c, c  |                 | Text says: “The mitigation activity shall not be deemed additional if the market penetration surpasses a threshold higher than [5%][X%].” Market penetration rates often vary across sectors, project types, etc. Do not specify one penetration rate for all projects/protocols.                                                                                                                                                                                                                                                                                                                                                                                        | Do not specify one penetration rate for all projects/protocols. Allow programs to adjust for market considerations, e.g., farmers are an independent lot who often don’t follow the “mainstream.”                                                                                                                                      |
| 2912 | Climate Action Reserve | p.59                     |                 | Text says: “To address reversal risk, two approaches should be used: monitoring and compensation with appropriate buffer reserves, or temporary crediting . . .” Temporary crediting does not work. Companies will not invest in temporary credits.                                                                                                                                                                                                                                                                                                                                                                                                                      | Eliminate temporary crediting.                                                                                                                                                                                                                                                                                                         |
| 2913 | Climate Action Reserve | p.59                     |                 | Text says: “Such mechanisms may include, for example, various forms of tonne-year accounting under which there are no minimum                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | There needs to be a minimum storage period, e.g., 30 years. Tonne-year accounting works fine for any commitment of less than 100 years. Only allow full crediting for a 100 year commitment. Anything less is prorated based on the length of the commitment period to 100 years.                                                      |
| 2913 | Climate Action Reserve | p.59                     |                 | requirements for the duration of carbon storage.” There has to be a minimum storage requirement, e.g., 30 years. Do not allow short time frames, such as one year.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                      |
| 2914 | Climate Action Reserve | p.59                     |                 | Text says: “It is unrealistic, for example, to expect compensation mechanisms to be maintained in perpetuity.” Perpetuity is not needed. CO2 has a residence time of about 120 years in the atmosphere. Use of 100 year GWPs weights the climate benefit for that period.                                                                                                                                                                                                                                                                                                                                                                                                | Mandate clear use of 100 year GWPs. Require compensation for 100 years after crediting if full 100 year benefits are issued. Use tonne-year accounting to prorate downward.                                                                                                                                                            |
| 2915 | Climate Action Reserve | p.61                     |                 | Text states: “The longevity of carbon dioxide in the atmosphere could span several centuries.” CO2 has an atmospheric residence time of about 120 years (check latest IPCC assessment). The world is using 100 year GWPs and if we don’t solve this issue long before then, perpetuity may not matter.                                                                                                                                                                                                                                                                                                                                                                   | Delete sentence.                                                                                                                                                                                                                                                                                                                       |
| 2916 | Climate Action Reserve | p.62, Table 44, Initial  |                 | Do not offer options for using a timeframe of less than 100 years if full crediting using 100 year GWPs are used. It encourages cheating and a race to the bottom. 100-year commitments can work, e.g., California’s compliance program, and if one is not willing to commit to 100 years, use tonne-year accounting.                                                                                                                                                                                                                                                                                                                                                    | Do not offer options for using a timeframe of less than 100 years if full crediting using 100 year GWPs are used. It encourages cheating and a race to the bottom. 100-year commitments can work, e.g., California’s compliance program, and if one is not willing to commit to 100 years, use tonne-year accounting.                  |

|------|------------------------|-------------------------------------|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2917 | Climate Action Reserve | P.64, Table 45                      |                 | Text says: "The crediting standard's buffer reserve shall be insured (e.g., through a "reinsurance" policy)." The market does not offer robust options for reinsurance. A well-run buffer pool can address the risks.                                                                                                                                                                                                           | Do not require reinsurance.                                                                                                                                              |
| 2918 | Climate Action Reserve | p.64, Table 45                      |                 | Text says: "Contributions to the buffer reserve should always be based on a robust assessment of nonpermanence risk, and there should be clear scientific evidence to support the % contributions that are decided." What does "clear scientific evidence" mean? Buffer reserves account for a variety of factors that don't necessarily lend themselves to quantification.                                                     | Do not require "clear scientific evidence." Require programs to assess the reliability of its buffer pool as time goes on.                                               |
| 2919 | Climate Action Reserve | p.68                                |                 | Very specific percentage estimates of variability are provided. Do not take a one-size-fits-all approach. Programs need to address protocol-specific and jurisdiction specific factors that can alter the percentage.                                                                                                                                                                                                           | Do not provide absolute percentage value to address variability.                                                                                                         |
| 2920 | Climate Action Reserve | p.68, Table 48                      |                 | Table 48 appears to apply to project-level assessments. CAR does not allow projects to specific project economics to justify additionality. CAR specifies robust quantification at the protocol level.                                                                                                                                                                                                                          | Acknowledge that programs like CAR assess quantification at the protocol, not project, level. Such requirements are not needed for our program.                          |
| 2921 | Climate Action Reserve | p.71                                |                 | Text says: "whether, to the extent that specific targets and actions in the nationally determined contribution (NDC) and any long-term low emissions development strategy (LEDS) of the host country are explicit and quantifiable." NDCs are aspirational and nothing more than hot air until they become law/regulations. NDCs can also be reversed (e.g., see US climate policy). Inappropriate to use for any benchmarking. | Do not use NDCs as proof of anything. NDCs need to be converted to actionable laws/regulations before they have any serious implications.                                |
| 2922 | Climate Action Reserve | p.78                                |                 | Text says: "mitigation activity proponents may want to quantify their net positive contribution to SD of their mitigation activity as a relevant decision-making element for potential buyers." Quantification is often impossible to achieve. This clause would require enormous resources and expertise that programs do not have.                                                                                            | Allow for qualitative information on SDGs, not quantitative assessments.                                                                                                 |
| 2923 | Climate Action Reserve | p.76                                |                 | Text says: "The carbon crediting program shall require that quantified net positive impacts are monitored, reported, and validated by a VVB." As noted, these impacts are notoriously difficult to quantify. Asking a VVB to get involved is an unnecessary step.                                                                                                                                                               | Do not require quantification and don't involve a VVB beyond basic checking of whether or not SDGs have been qualitatively considered.                                   |
| 2924 | Climate Action Reserve | p.78, Criterion 13.1                |                 | Programs do not track market prices and do not have the resources to do so. Even if based on percentage of credits, added complexity for any program with the limited resources they have.                                                                                                                                                                                                                                      | Recommend Option 2.                                                                                                                                                      |
| 2925 | Climate Action Reserve | p.78, Criterion 13.2                |                 | All high-quality credits contribute to global mitigation. Requiring demonstration of such makes no sense.                                                                                                                                                                                                                                                                                                                       | Recommend Option 2                                                                                                                                                       |
| 2926 | Climate Action Reserve | p.78, Criterion 13.3                |                 | No corresponding adjustments! Voluntary corporate actions are part of any country's available strategies. Host countries and companies operating within their borders are participating in a public-private partnership—sharing many of the same emissions and the same goals to work together to achieve net zero.                                                                                                             | Recommend Option 2                                                                                                                                                       |
| 2927 | Winrock ACR ART        | 0                                   |                 | <ul style="list-style-type: none"> <li>• transition towards net-zero emissions;</li> </ul>                                                                                                                                                                                                                                                                                                                                      | Consider the appropriateness of these two as may be addressed elsewhere (in safeguards) or may not be applicable to all project types.                                   |
| 2927 | Winrock ACR ART        | 0                                   |                 | <ul style="list-style-type: none"> <li>• benefit-sharing arrangements;</li> </ul>                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                        |
| 2928 | Winrock ACR ART        | Independent Grievance mech          |                 | ACR and ART have grievance mechanisms managed by the standards, which we believe is independent. Winrock/ART will not be subject to an external mechanism.                                                                                                                                                                                                                                                                      | There should not be an independent grievance mechanism as defined as an external third-party, taking appeals on program-related decisions.                               |
| 2929 | Winrock ACR ART        | 0                                   |                 | It is unclear how to implement this provision.                                                                                                                                                                                                                                                                                                                                                                                  | ACR/ART recommend shifting net positive SDG reporting to be an attribute rather than a mandatory CCP as no standard means of documenting net positive SFGs is available. |
| 2930 | Winrock ACR ART        | Disclosure of financial information |                 | ART is currently funded by the government of Norway, and this is publicly disclosed. In the future, ART will be funded by fees from the issuance of credits. As the ART Secretariat is hosted at Winrock, ART's financials roll up into Winrock's, but are not separately reported or disclosed. Funding from sources that could imply undue influence of competing interests are prohibited by Winrock's code of conduct.      | Recommends financial reports of parent organizations in lieu of stand-alone disclosure statements.                                                                       |
| 2930 | Winrock ACR ART        | Disclosure of financial information |                 | ACR is funded by fee-based revenue and ACR financials roll-up into Winrock. Funding from sources that could imply undue influence of competing interests are prohibited by Winrock's code of conduct.                                                                                                                                                                                                                           | 0                                                                                                                                                                        |
| 2931 | Winrock ACR ART        | 0                                   |                 | The scope of "all aspects of its program" is a broad remit, and it is unclear how this is defined in practice. Decisions are made by ART Secretariat Management, ART Board and the Winrock Board as well as by the ACR program management team, but not all are published. Key decisions such as those surrounding the development of the Standards and methodologies are documented and published on the website.              | Clarify the scope of the phrase "all aspects of its program".                                                                                                            |
| 2932 | Winrock ACR ART        | 0                                   |                 | As noted above, key decisions on TREES are documented and published. The definition and scope of "program decisions" makes it unclear whether this is sufficient.                                                                                                                                                                                                                                                               | Clarify the intended scope of "program decisions" and how to evaluate this criterion.                                                                                    |

| #    | Comment submitted by | Para/Fig/Table/Note | Type of comment | Submitted comment                                                                                                                                                                                                                                                                                                                                                                                               | Proposed change                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| 2933 | Winrock ACR ART      | 0                   |                 | It is unclear how broad the scope of program decisions to be made public implies.                                                                                                                                                                                                                                                                                                                               | Clarify what decisions are intended to be included and which stakeholders the CCP is concerned with.                                                                                                                                                                                                                                                                                                                                            |
| 2934 | Winrock ACR ART      | 0                   |                 | Crediting programs are not involved in the transactional aspects of carbon markets. This is well beyond our remit. ART, and ACR as appropriate, requires VVBs to ensure that benefit sharing agreements have been implemented as agreed upon, but we do not ask for the end recipient to specify what they did with the funds they received.                                                                    | Delete this criterion as it is beyond the scope of a GHG crediting program.                                                                                                                                                                                                                                                                                                                                                                     |
| 2935 | Winrock ACR ART      | 0                   |                 | ACR and ART can clarify that grievances will be responded to in a certain reasonable timeframe. However, the time to investigate and resolve a grievance is highly dependent on the nature of the grievance. The time bound resolution may be outside of ACR and ART's control.                                                                                                                                 | Either delete "time-bound" from the criterion or clarify that the initial response must be "time-bound" but that a resolution's timeframe may vary based on the nature of the issue.                                                                                                                                                                                                                                                            |
| 2936 | Winrock ACR ART      | 0                   |                 | Any grievances received that are evaluated as part of the program verification public comment process will be public. There may be circumstances in which grievances will not be made public though at the request of the submitter or the legal system.                                                                                                                                                        | ACR and ART suggest allowing exceptions based on the request of the submitter, legal considerations, and other cases where a grievance should remain confidential.                                                                                                                                                                                                                                                                              |
| 2937 | Winrock ACR ART      | 0                   |                 | We will not be able to demonstrate conformance with these requirements unless they are streamlined as they imply a lot of downstream monitoring.                                                                                                                                                                                                                                                                | We recommend eliminating requirement i) as resolution / redress of the grievance is addressed in our process.                                                                                                                                                                                                                                                                                                                                   |
| 2938 | Winrock ACR ART      | 0                   |                 | The ACR and TREES Validation and Verification Standard outlines what actions will be taken to address any errors identified in previous validations and verifications. It does not identify liability however.                                                                                                                                                                                                  | GHG Crediting programs should have rules to address errors found. However, assigning a liability is not the mandate of the GHG Crediting program. These terms would be included in the ERPA.                                                                                                                                                                                                                                                    |
| 2939 | Winrock ACR ART      | 0                   |                 | The ACR and TREES Validation and Verification Standard outlines what actions will be taken to address any errors identified in previous validations and verifications.                                                                                                                                                                                                                                          | We recommend eliminating cancellation of previously issued as an option for recourse. Methods of addressing past errors should be identified and clearly outlined. However, cancelling credits should not occur as this causes significant uncertainty and risks to the market. Instead, compensation methods should be employed.                                                                                                               |
| 2940 | Winrock ACR ART      | 0                   |                 | Winrock has internal procedures for evaluation of ACR and ART management and staff. Organizational and staff KPIs are not public nor are performance evaluations, nor do we think this is appropriate.                                                                                                                                                                                                          | We support performance reviews and evaluation; however, we recommend eliminating the clause requiring making the outcomes of such processes public. This will not add to the integrity of the credit achieved and is likely to result in a less rigorous internal process. Deeper reflection is likely to occur when the results are to be discussed internally only.                                                                           |
| 2941 | Winrock ACR ART      | 0                   |                 | Winrock is annually audited according to GAAP, which includes ACR and ART, and the results of the Winrock audit are published in its annual report. However, there are no " Formal and transparent arrangements for determining how to apply the corporate reporting, risk management and internal control principles." .... Neither ACR nor ART have separate financials.                                      | We recommend designing the criteria in this section to be more flexible as each GHG crediting program has a different structure and a single approach to high integrity governance is unlikely to fit all structures. Providing additional information as to the concern the criterion is attempting to address will help programs identify and suggest alternative approaches more easily.                                                     |
| 2942 | Winrock ACR ART      | 0                   |                 | We do not understand what this means or what it has to do with organizational or credit integrity.                                                                                                                                                                                                                                                                                                              | Please clarify the intent of this criterion. Providing additional information as to the concern the criterion is attempting to address will help programs identify and suggest alternative approaches more easily.                                                                                                                                                                                                                              |
| 2943 | Winrock ACR ART      | 0                   |                 | We do not understand what this means or what it has to do with credit integrity.                                                                                                                                                                                                                                                                                                                                | Please clarify the intent of this criterion. Providing additional information as to the concern the criterion is attempting to address will help programs identify and suggest alternative approaches more easily.                                                                                                                                                                                                                              |
| 2944 | Winrock ACR ART      | 0                   |                 | We do not understand what this means or what it has to do with credit integrity.                                                                                                                                                                                                                                                                                                                                | Please clarify the intent of this criterion. Providing additional information as to the concern the criterion is attempting to address will help programs identify and suggest alternative approaches more easily.                                                                                                                                                                                                                              |
| 2945 | Winrock ACR ART      | 0                   |                 | Development of management systems and/or verification against them would be prohibitive for a small staff. ACR and ART's operations are covered under Winrock's operations and guidelines.                                                                                                                                                                                                                      | We recommend designing the criteria in this section to be more flexible as each GHG crediting program has a different structure and a single approach to high integrity governance is unlikely to fit all structures. Providing additional information as to the concern the criterion is attempting to address will help programs identify and suggest alternative approaches more easily.                                                     |
| 2946 | Winrock ACR ART      | 0                   |                 | Why is this necessary and what does it contribute to credit integrity? For ART developing an example for a jurisdictional approach would not likely be helpful given the wide variability of programs that will join.                                                                                                                                                                                           | We suggest removing this requirement. Providing additional information as to the concern the criterion is attempting to address will help programs identify and suggest alternative approaches more easily.                                                                                                                                                                                                                                     |
| 2947 | Winrock ACR ART      | 0                   |                 | This would be captured in the periodic review.                                                                                                                                                                                                                                                                                                                                                                  | This criterion is not necessary if there are processes in place to periodically review and assess the methodologies as is required elsewhere.                                                                                                                                                                                                                                                                                                   |
| 2948 | Winrock ACR ART      | 0                   |                 | ART allows a maximum 4-year lookback period from the time the Participant joins ART if the jurisdiction can meet all MRV and safeguard requirements for the previous years. Participants are required to identify the new and ongoing activities conducted during the timeframe as part of the REDD+ program.                                                                                                   | We would recommend permitting a lookback period for jurisdictional REDD+ subject to data and safeguards requirements to reflect the reality that programs must often begin initial efforts prior to joining a GHG crediting program. It is appropriate to allow start dates to align with calendar years rather than specific dates to simplify accounting and provide flexibility when multiple activities are beginning around the same time. |
| 2948 | Winrock ACR ART      | 0                   |                 | ACR has time bound requirements for listing and validating projects from the start date.                                                                                                                                                                                                                                                                                                                        | Project-level safeguards must be in place to allow flexibility for different project start dates and implementation.                                                                                                                                                                                                                                                                                                                            |
| 2949 | Winrock ACR ART      | 0                   |                 | This is a requirement of TREES for the TREES Crediting Approach. The removals crediting approach is based on the area being restored in the reference period and therefore, it is allowed to increase over time as this is more conservative. The HFLD Crediting Approach permits increases which would reflect improved performance of the Participant at mitigating drivers of deforestation and degradation. | We recommend either removing this requirement or modifying it to both reflect different types of activities and to reflect changing conditions. It would be helpful to understand why this requirement is in place for jurisdictional REDD but not project REDD however to better suggest alternatives.                                                                                                                                         |

|------|----------------------|---------------------|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2950 | Winrock ACR ART      | 0                   |                 | This is already in place for ACR, however under ART, TREES requires the Participant to use the same GWP included in its UNFCCC reporting to align reporting as much as possible. If the transition to the 5th IPCC report has not yet occurred, we require a plan for transitioning to be presented. We do not have a date associated with it however.                                                                                                                                                                  | The deadline for the transition should be permit more flexibility as long as baseline and annual emission calculations are consistent. Full transition to the 5th AR is required under the Paris Agreement so we will see countries making that change.                                                                                                                                     |
| 2951 | Winrock ACR ART      | 0                   |                 | We fundamentally disagree with conservativeness being more important than accuracy. We also do not require that each input parameter use the most conservative value and then require an uncertainty deduction to also be taken. The overall uncertainty of over-reporting is identified, and an appropriate deduction is required. This ensures the integrity of the credit without being punitive to programs. Under-reporting of credits does not harm the market or negatively impact the integrity of the credits. | We recommend this phrasing “emission reductions or removals be determined in a conservative manner (rather than striving to use the most accurate estimate)” be revised to reflect the importance of both conservativeness and completeness in line with the principles of most GHG programs. Strengthen the focus on accuracy over conservatism also incentivizes ongoing MRV improvements |
| 2952 | Winrock ACR ART      | 0                   |                 | While projects incorporate legal requirements (regulatory additionality) and government policies in the baseline determination, this is not a concept that can be operationalized for jurisdictional REDD+ and does not allow activities to contribute to NDC achievement.                                                                                                                                                                                                                                              | We recommend clarifying that performance threshold crediting levels automatically incorporate this requirement and the requirement to specifically list all non-REDD+ actions and legal requirements that may impact performance is not possible.                                                                                                                                           |
| 2952 | Winrock ACR ART      | 0                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                           |
| 2952 | Winrock ACR ART      | 0                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                           |
| 2953 | Winrock ACR ART      | 0                   |                 | We do not see how alignment of the crediting periods and NDC reporting promotes integrity. Reporting on progress towards NDCs may occur at any time during a crediting period. Also, does this suggest that crediting periods may be of different lengths depending on when a program begins?                                                                                                                                                                                                                           | We recommend not requiring alignment of the crediting period and NDC reporting to allow consistent crediting periods across programs.                                                                                                                                                                                                                                                       |
| 2954 | Winrock ACR ART      | 0                   |                 | ACR requires a new baseline and additionality assessment for a new crediting period (but does not agree with the financial additionality test as being the only one).                                                                                                                                                                                                                                                                                                                                                   | For projects we recommend clarifying that additionality will be re-assessed using the test in place.                                                                                                                                                                                                                                                                                        |
| 2954 | Winrock ACR ART      | 0                   |                 | TREES requires reassessment of the crediting level every 5 years to ensure that any changes in business as usual are captured and to drive ambition. However, TREES does not and will not require financial additionality as it is an inappropriate test for JREDD (as evidenced by all three Standards using the same performance threshold test).                                                                                                                                                                     | We recommend permitting the use of the performance threshold additionality test for JREDD programs in line with the best practice for this scale exemplified by all jurisdictional programs currently.                                                                                                                                                                                      |
| 2955 | Winrock ACR ART      | 0                   |                 | For projects, this is captured in the accounting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | We recommend removing this requirement for JREDD as it is not possible nor useful at a jurisdictional scale.                                                                                                                                                                                                                                                                                |
| 2955 | Winrock ACR ART      | 0                   |                 | This is not possible to define at a jurisdictional scale and would not add more information regarding performance and integrity than simply providing data demonstrating that the emissions have been reduced and removals have increased.                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                           |
| 2956 | Winrock ACR ART      | 0                   |                 | Neither ACR nor ART see a reason to require issuance requests of verified credits at certain intervals as this will depend on when credits are contracted for sale. It is unclear how this requirement ensures quality and integrity for previously issued credits. If an activity ceases to operate, it will either not generate credits in the future or experience a reversal which will be compensated for in line with the requirements of the Standard.                                                           | We recommend removing this requirement as it does add to the integrity of an already verified emission reduction or removal.                                                                                                                                                                                                                                                                |
| 2957 | Winrock ACR ART      | 0                   |                 | ART allows an exception for the use of credits as issued ONLY for use in a domestic compliance scheme. These are not recognized by ART or subtracted from TREES issuance                                                                                                                                                                                                                                                                                                                                                | We recommend permitting the exclusion of domestic compliance schemes, such as tax obligations, where no GHG claim is being made. This is not widely used now but will enable governments to use a wider variety of schemes to incentivize financing of REDD+ programs without reducing integrity.                                                                                           |
| 2958 | Winrock ACR ART      | 0                   |                 | ART allows an exception for the use of credits as issued ONLY for use in a domestic compliance scheme. These are not recognized by ART or subtracted from TREES issuance. Otherwise, the robust provisions in TREES protect against the double issuance, double use, or double claiming of ERRs.                                                                                                                                                                                                                        | We recommend permitting the exclusion of domestic compliance schemes, such as tax obligations, where no GHG claim is being made. | 2961 | Winrock ACR ART      | 0                   |                 | Errors in previous validation and verifications are addressed as outlined in the VVS. The process identified in the requirement is not the process required by ACR or by TREES, as this would lead to the potential cancellation of already transacted credits which is not workable in the market. ACR and TREES requires the next verification to be adjusted as appropriate to compensate for the error.                                                                                                             | We recommend eliminating cancellation of previously issued credits as an option for recourse. Methods of addressing past errors should be identified and clearly outlined. However, cancelling credits should not occur as this causes significant uncertainty and risks to the market. Instead, compensation methods should be employed.                                                   |

This is not widely used now but will enable governments to use a wider variety of schemes to incentivize financing of REDD+ programs without reducing integrity. |
| 2964 | Winrock ACR ART      | 0                   |                 | TREES requires ownership to be defined and supporting evidence to be provided for all ERRs claimed. ART does not require a legal attestation however.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | We recommend maintaining the requirement in A that requires documentation and evidence of ownership. If this requirement is met, a legal attestation does not add additional value.                                                                                                               |
| 2965 | Winrock ACR ART      | 0                   |                 | Both ACR and ART require many of these items to be publicly available through the associated Registry. However, neither ACR or ART will require all this information to be publicly available. The quantity of evidence and data listed here is tremendous (especially at a national scale). It appears designed to ensure that any individual to be able to replicate the VVB process. If the integrity of the VVB process is ensured through the above requirements, it is not necessary for outside individuals to attempt to replicate the review. Outside individuals would not meet the competency requirements ACR and ART place on VVBs nor be subject to the training and oversight ACR and ART provide. Therefore, they should not conduct their own reviews and the detailed data is not required. | We recommend revising the requirement to reflect key program documentation rather than all supporting evidence.                                                                                                                                                                                   |
| 2966 | Winrock ACR ART      | 0                   |                 | This requirement is unclear. What is an "associated risks benefit sharing arrangement" and what is "informed public endorsement"? ACR and ART will continue to allow some of these documents to be deemed commercially sensitive information. For example:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | We recommend clarifying the intent of this requirement to allow suggestions to be made for alternative approaches and for an evaluation of the appropriateness of all these requirements to be made. Legitimate scenarios exist where information should be confidential.                         |
| 2966 | Winrock ACR ART      | 0                   |                 | 1) Benefit sharing arrangements may be deemed confidential in case such as agreements with project developers who do not wish the terms they negotiated to be public knowledge as the arrangement is part of the proprietary business model (Noting that confidential information must be available to the VVBs)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                 |
| 2966 | Winrock ACR ART      | 0                   |                 | 2) If a grievance was resolved through the judicial system and the outcome is confidential for whatever reason, ART is unable and unwilling to attempt to force disclosure of the resolution.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                 |
| 2966 | Winrock ACR ART      | 0                   |                 | We do not feel that allowing the confidentiality when appropriate undermines the credibility of the credits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                 |
| 2967 | Winrock ACR ART      | 0                   |                 | 1) ACR and ART require basic information to be publicly available. It is unclear what the extent of this requirement entails. For a national program, there may be dozens of workbooks leading up to the final calculations. We do not feel it is necessary for every underlying data point to be publicly accessible. If a buyer wishes to request it, they may do so from the ART Participant.                                                                                                                                                                                                                                                                                                                                                                                                              | We recommend clarifying the requirements as discussed in the comment, evaluating whether the requirement is appropriate and necessary, and selecting option 1b which eliminates all the requirements regarding revenues received and how the money is spent.                                      |
| 2967 | Winrock ACR ART      | 0                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                 |
| 2967 | Winrock ACR ART      | 0                   |                 | 2) This requirement is unclear. Guidelines for whom to respond to missing documentation inquiries and what is meant by missing documentation?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                 |

|------|----------------------|---------------------|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2969 | Winrock ACR ART      | 0                   |                 | For ACR, national and local laws and regulations, including for labor, are required.                                                                                                                                                                                                                                                                                                                                                                                                              | Environmental and social safeguards should be included in all crediting frameworks; however, the implementation will depend on geography and sector. As proposed by ICVCM the safeguards are excessive and impractical, too prescriptive to be broadly applied, VVBs are not currently accredited for these scopes (and it may be beyond current competencies), and thus this is an over-reach for the CCPs and AF. We suggest a more generic framework that includes assurances that applicable environmental and social safeguards have been addressed. |
| 2969 | Winrock ACR ART      | 0                   |                 | All these items fall outside the Cancun Safeguards and as such are not covered by the TREES requirements explicitly.                                                                                                                                                                                                                                                                                                                                                                              | ESG safeguards for jurisdictional REDD+ should be based on the Cancun Safeguards and their operationalization including building on current reporting to the UNFCCC. Requirements that go beyond this are inappropriate.                                                                                                                                                                                                                                                                                                                                  |
| 2969 | Winrock ACR ART      | 0                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Furthermore, for projects and JREDD, SDG monitoring and IFC safeguard conformance should be considered as optional attributes rather than as mandatory. This will provide a pathway for inclusion and market differentiation and allow programs to implement on a timeframe that is achievable.                                                                                                                                                                                                                                                           |

| 2970 | Winrock ACR ART      | 0                   |                 | All these items fall outside the Cancun Safeguards and as such are not covered by the TREES requirements explicitly. They may be addressed by the environmental laws of the country, but TREES does not require this specifically.                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 2971 | Winrock ACR ART      | 0                   |                 | ACR requires evidence of no relocation or resettlement (voluntary or involuntary).                                                                                                                                                                                                                                                                                                                                                                                                                | Same as row 43.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2971 | Winrock ACR ART      | 0                   |                 | TREES does not explicitly address economic vs physical relocation but does require "no involuntary relocations without FPIC." TREES does not detail legal protection or compensation requirements.                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 2972 | Winrock ACR ART      | 0                   |                 | TREES does not explicitly state this, but it is reasonable to assume it is part of "THEME 5.2 Protect natural forests and other natural ecosystems, biological diversity, and ecosystem services."                                                                                                                                                                                                                                                                                                | Same as row 43.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2973 | Winrock ACR ART      | 0                   |                 | Many of these state that a "procedure" must be defined by the carbon crediting program. ART will not define a single procedure that must be used by all jurisdictions for all IPLC.                                                                                                                                                                                                                                                                                                               | The procedures developed should be designed in conjunction with the IPLCs and specific to each jurisdiction to respect the decision-making structures and processes of each IPLC community.                                                                                                                                                                                                                                                                                                                                                               |
| 2974 | Winrock ACR ART      | 0                   |                 | ACR's requirements are stated, but less prescriptive.                                                                                                                                                                                                                                                                                                                                                                                                                                             | FPIC is usually defined as appropriate based on the nature and impact of the activities, not based on who the project or program proponent is. We recommend FPIC rather than consultation be used when appropriate in line with best practices (as defined by UNDP and other similar organizations) across all proponents and in line with the legal framework of the country where the activity occurs.                                                                                                                                                  |
| 2974 | Winrock ACR ART      | 0                   |                 | TREES does not define when FPIC must occur but does require the "Theme 4.2: Outcome indicator: Design, implementation, and periodic assessments of REDD+ actions were, where relevant, undertaken with the participation of indigenous peoples and/or local communities, or equivalent, including if applicable through FPIC..." TREES does not define a procedure for this however.                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 2975 | Winrock ACR ART      | 0                   |                 | ACR's requirements are stated, but less prescriptive.                                                                                                                                                                                                                                                                                                                                                                                                                                             | The procedures developed should be designed in conjunction with the IPLCs and specific to each jurisdiction to respect the decision-making structures and processes of each IPLC community.                                                                                                                                                                                                                                                                                                                                                               |
| 2975 | Winrock ACR ART      | 0                   |                 | TREES requires "THEME 4.2. Promote adequate participatory procedures for the meaningful participation of indigenous peoples and local communities, or equivalent." with reference specifically to the need to work with the respective decision-making structures and processes. TREES does not define a procedure for doing so nor specifically define inclusive or culturally appropriate.                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 2976 | Winrock ACR ART      | 0                   |                 | This requirement is unclear. Negative social or environmental impacts? This would be addressed through THEME 2.3 Respect, protect, and fulfill land tenure rights, THEME 4.2. Promote adequate participatory procedures for the meaningful participation of indigenous peoples and local communities, or equivalent, THEME 3.3 Respect, protect, and fulfill rights of indigenous peoples and/or local communities, or equivalent and THEME 5.3 Enhancement of social and environmental benefits. | Same as row 43.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2977 | Winrock ACR ART      | 0                   |                 | TREES does not define when FPIC must occur but does require the "Theme 4.2: Outcome indicator: Design, implementation, and periodic assessments of REDD+ actions were, where relevant, undertaken with the participation of indigenous peoples and/or local communities, or equivalent, including if applicable through FPIC..."                                                                                                                                                                  | Same as row 43.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2978 | Winrock ACR ART      | 0                   |                 | TREES does not require conformance with UN DRIP or ILO 169 unless the Participant or the Participant's host country have ratified the agreements or otherwise committed to adhering to the requirements. A carbon standard does not have the sovereignty to require a government to adhere to international laws it has not otherwise agreed to.                                                                                                                                                  | Same as row 43.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| 2979 | Winrock ACR ART      | 0                   |                 | TREES does not explicitly address uncontacted Indigenous groups. However, THEME 3.1 Identify indigenous peoples and local communities, or equivalent and THEME 3.3 Respect, protect, and fulfill rights of indigenous peoples and/or local communities, or equivalent could reasonably be expected to lead to the identification of areas where uncontacted communities live and respecting their rights to remain uncontacted.                                                                                                                                           | Same as row 43.                                                                                          |
| 2979 | Winrock ACR ART      | 0                   |                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                        |
| 2980 | Winrock ACR ART      | 0                   |                 | TREES does not have specific provisions regarding UNESCO Cultural Heritage conventions but THEME 3.3 Respect, protect, and fulfill rights of indigenous peoples and/or local communities, or equivalent would likely cover cultural heritage as well.                                                                                                                                                                                                                                                                                                                     | Same as row 43.                                                                                          |
| 2981 | Winrock ACR ART      | 0                   |                 | TREES does not explicitly require this although it is discussed in the guidance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Same as row 43.                                                                                          |
| 2982 | Winrock ACR ART      | 0                   |                 | Many of these state that a "procedure" must be defined by the carbon crediting program. ART will not define a single procedure that must be used by all jurisdictions for all IPLC. The procedures developed should be designed in conjunction with the IPLCs and specific to each jurisdiction to respect the decision-making structures and processes of each IPLC community.                                                                                                                                                                                           | Same as row 43.                                                                                          |
| 2983 | Winrock ACR ART      | 0                   |                 | This is not specified in the Cancun Safeguards, so TREES does not explicitly have this requirement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Same as row 43.                                                                                          |
| 2984 | Winrock ACR ART      | 0                   |                 | THEME 3.3 requires Participants to "Respect, protect, and fulfill rights of indigenous peoples and/or local communities, or equivalent.". TREES requires this to be done in line with universal instruments ratified by the host country but does not specify the International Bill of Rights or use the phrase "core human rights". TREES does not define a procedure for this however.                                                                                                                                                                                 | Same as row 43.                                                                                          |
| 2985 | Winrock ACR ART      | 0                   |                 | TREES has numerous themes regarding consultations, access to information, and respecting traditional knowledge. Evidence is required to complete validation and verification. We do not define a procedure to do this however and as such, it is unclear whether these provisions meet the entirety of this requirement.                                                                                                                                                                                                                                                  | Same as row 43.                                                                                          |
| 2986 | Winrock ACR ART      | 0                   |                 | This is not specified in the Cancun Safeguards, so TREES does not explicitly have this requirement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Same as row 43.                                                                                          |
| 2987 | Winrock ACR ART      | 0                   |                 | TREES requires that "Participants have in place procedures for guaranteeing nondiscriminatory and non-cost prohibitive access to dispute resolution mechanisms at all relevant levels". TREES does not define the procedure that must be used however and does not specify a timeline for resolution as that depends entirely on the nature of the dispute and the resolution process in place.                                                                                                                                                                           | Same as row 43.                                                                                          |
| 2987 | Winrock ACR ART      | 0                   |                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                        |
| 2988 | Winrock ACR ART      | 0                   |                 | This is not specified in the Cancun Safeguards, so TREES does not explicitly have this requirement. Our Safeguards Guidance Document discusses how gender is a cross cutting issue that should be addressed in each theme however.                                                                                                                                                                                                                                                                                                                                        | Same as row 43.                                                                                          |
| 2989 | Winrock ACR ART      | 0                   |                 | This is not specified in the Cancun Safeguards, so TREES does not have this requirement. TREES does require Participants to discuss how the REDD+ activities have contributed to sustainable development but does not require this type of detail. Expert review and public consultation would be needed to evaluate whether these requirements are possible or appropriate for a jurisdictional program.                                                                                                                                                                 | Same as row 43.                                                                                          |
| 2990 | Winrock ACR ART      | 0                   |                 | TREES includes themes requiring the full and effective participation of all stakeholders and IPLCs as well as themes regarding access to information and access to justice which support the participation. It is unclear whether these will fulfill the requirement however as no theme specifically defines the responsibility for benefit sharing arrangements.                                                                                                                                                                                                        | Same as row 43.                                                                                          |
| 2991 | Winrock ACR ART      | 0                   |                 | Carbon crediting programs must recognize the differences in legal frameworks in different jurisdictions and the variable nature of benefit sharing arrangements (for example: a benefit sharing agreement with an organization that owns the carbon rights and is transferring them will inherently be different than a benefit sharing agreement with an organization that is receiving benefits in return for implementing activities). As such, it is not appropriate for a crediting program to define a single set of requirements for benefit sharing arrangements. | Same as row 43.                                                                                          |
| 2992 | Winrock ACR ART      | 0                   |                 | There may be instances in which stakeholders such as project developers wish the content of the benefit sharing arrangements to be confidential to protect their financial information. ACR and ART would respect this and not require them to make the documents publicly available.                                                                                                                                                                                                                                                                                     | Same as row 43.                                                                                          |
| 2993 | Winrock ACR ART      | 0                   |                 | Carbon crediting programs should remain neutral and should not be involved in consultation processes or in distribution of benefit sharing agreements. Proper consultation processes should be evaluated as part of the safeguards and not be a requirement for the carbon crediting program.                                                                                                                                                                                                                                                                             | We recommend revising the criteria to reflect the role that Standards can and should play in the market. |

|------|----------------------|---------------------|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2994 | Winrock ACR ART      | 0                   |                 | There may be valid reasons to not have the agreements be public as discussed earlier. In addition, if the local language is not English, why would the agreements need to be translated into English? VVBs are required to have team members that speak local languages as appropriate, so their work does not require the document to be translated.                                                                                                                                                                                                                                                                                                                | We recommend revising the requirements to eliminate this unnecessary and potentially burdensome requirement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 2995 | Winrock ACR ART      | 0                   |                 | The carbon crediting programs should recognize that plans and agreements must be developed in line with the legal framework of the jurisdiction in which they are developed and in line with the nature of the agreement. Such prescriptive requirements are not appropriate for a jurisdictional carbon crediting program to define as there may be many, widely different models that can be developed.                                                                                                                                                                                                                                                            | We recommend revising this requirement to reflect the difference in nature between JREDD and projects and to permit benefit sharing agreements for JREDD to be developed in line with the Cancun Safeguards without further requirements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 2996 | Winrock ACR ART      | 0                   |                 | Carbon crediting programs are not involved in transactions and are unable to define terms for agreements. This is well beyond the remit of the carbon crediting programs and stakeholders should be able to negotiate the terms that they desire.                                                                                                                                                                                                                                                                                                                                                                                                                    | We recommend eliminating any requirements relating to the secondary market for carbon crediting programs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 2997 | Winrock ACR ART      | 0                   |                 | TREES requires VVBs to confirm that all safeguards are met including anti-corruption indicators. It is unclear if this is a "performance system".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | We recommend revising this to clarify that full implementation of the Cancun Safeguards for JREDD meet this requirement due to the anti-corruption themes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 2998 | Winrock ACR ART      | 0                   |                 | 8.1 proposes an IRR approach to assessing the first-tier additionality threshold for ICVCM eligibility - "financial attractiveness". It is unclear how an IRR threshold approach would be conducted across an entire project category (as well as whether it would even be appropriate), whether from sample data, literature, or expert judgement.                                                                                                                                                                                                                                                                                                                  | We do not agree with the proposed structure for assessing additionality, which would impose new requirements on crediting bodies and on project developers. It is unclear what problem these new requirements are solving, how they were developed, if/how they will add value and if they are even practical in terms of implementation and verifiability.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2998 | Winrock ACR ART      | 0                   |                 | In our experience, IRR thresholds are typically proprietary and vary from project to project, and therefore are more relevant to a specific project, rather than applied to an entire project type/category.                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Over two decades of analysis and consideration of additionality testing has resulted in a variety of new approaches to assess additionality that are currently applied across the market. This includes performance standards that are used in combination with legal/regulatory additionality tests, such as employed by ACR (and the California Air Resources Board) as well as requirements for regulatory additionality combined with a barriers test. In our view, these do not need to be replaced, and we therefore recommend that the Expert Panel and ICVCM Board carefully analyze commonly applied approaches to additionality such as performance standards that do NOT include financial assessments or the need to demonstrate intent for carbon revenues.                                                                                                                                                                                                                                                       |
| 2998 | Winrock ACR ART      | 0                   |                 | The financial attractiveness parameters (I1, I2, I3) are not adequately defined (what's the basis of the 1, 0.7, and 0.3 values?) and requiring "no income", "very poor", or "relatively poor" financial attractiveness will ultimately disincentivize credible climate action. Embedded assumptions on benchmark IRR and carbon credit pricing further undermine the credibility of this approach.                                                                                                                                                                                                                                                                  | Specifically with regard to financial additionality, the IRR test has multiple challenges including the inability to standardize an approach across sectors, geographies and financing structures; the inability to obtain benchmark IRR in certain sectors (such as forestry); the need to disclose confidential financial information on project returns and internal hurdle rates; the ability to easily game the numbers and the difficulty in verifying the results.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 2998 | Winrock ACR ART      | 0                   |                 | The assessment becomes even more problematic if IRR is required to shift from negative to positive (i.e., "achieve financial attractiveness") based on carbon finance alone. Carbon finance is often one of several revenue sources that are "stacked" with other management efforts and funding sources needed to fully develop a project. In IFM, for example, carbon finance will never fully compensate for forgone timber revenues. The low uptake of A/R, grassland, and wetland projects is further evidence that carbon projects are not always (and often aren't) a standalone profitable endeavor, when compared to other potential management strategies. | Furthermore, we disagree with the sentiment that the investment analysis must show that carbon revenues must specifically raise the financial feasibility above a yet to be defined financial benchmark. The sensitivity analysis even further complicates the approach. Such complexities require significant amounts of research and time to even determine whether a project is eligible, which ultimately could narrow participation to all but the largest carbon offset developers. The barrier analysis and market penetration analysis provide a good alternative to the financial analysis, but we disagree that the market penetration assessment must be combined with one of the other viability assessments rather than stand-alone and disagree with the subjective nature of applying "medium", "high", or "relatively low" assessment categories. Similarly, we agree that positive lists should be justified and periodically updated but disagree they must conform to the criteria for investment analysis. |
| 2998 | Winrock ACR ART      | 0                   |                 | AFOLU projects face inherently large initial investment costs to entering the carbon market, as well as tradeoffs between commodity production and carbon sequestration. Recognizing only mitigation activities with negative or low IRR's will inherently disincentivize entire classes of mitigation activities, many of which are highly scalable.                                                                                                                                                                                                                                                                                                                | Therefore we suggest that the methodology-by-methodology, sector or project-type phased assessments of additionality and baselines should NOT be conducted by the Expert Panel as proposed in the draft Assessment Framework. This duplication of work will not only create a massive bottleneck in the process, but also intends to supplant the processes that standards already have in place to ensure consultation and expert input to the approved methodologies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 2998 | Winrock ACR ART      | 0                   | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | The ICVCM Assessment Framework should instead include high-level principles to support objective program-level evaluations of approaches at the program level for assurance of additionality, safeguards, robust quantification and non-permanence. This can also build on the extensive work done by the ICAO TAB to benchmark crediting programs and allow flexibility in appropriate region and sector-based compliance with the criteria (a functional equivalency among different approaches).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2998 | Winrock ACR ART      | 0                   | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | The development of a negative list of project types that are deemed non-additional / non eligible for the CCP label (grid connected renewables in non-LDC countries, fossil fuel switch etc) could facilitate an on-ramp for eligibility of other crediting types / sectors without the need for a methodology-by-methodology review.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| #    | Comment submitted by | Para/Fig/Table/Note | Type of comment | Submitted comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Proposed change                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| 2999 | Winrock ACR ART      | 0                   |                 | The implementation barriers test is qualitative and subjective. It relies on expert judgement as to whether the project faces “considerable”, “convincingly”, “likely”, or “decisive” barriers to implementation, somehow ultimately requiring a qualitative expert judgement ranking in the form of a percentage (how can a qualitative assessment determine thresholds as to whether an implementation barrier falls above 90% = very high; greater than 67% = medium; or less than 67% = low?). The market is accustomed to quantifying project attributes based on quantitative data (e.g., financial indicators, penetration rates, uncertainty, and others). Broadly subjective and qualitative characterizations of project attributes undermine the validity of this approach. | The barrier analysis and market penetration analysis provide a good alternative to the financial analysis, but we disagree that the market penetration assessment must be combined with one of the other viability assessments rather than stand-alone and disagree with the subjective nature of applying “medium”, “high”, or “relatively low” assessment categories. Similarly, we agree that positive lists should be justified and periodically updated but disagree they must conform to the criteria for investment analysis. |
| 2999 | Winrock ACR ART      | 0                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Therefore we suggest that the initial tier 1 additionality assessment by the ICVCM be eliminated. The methodology-by-methodology, sector or project-type phased assessments of additionality and baselines should NOT be conducted as proposed in the draft Assessment Framework. This duplication of work will not only create a massive bottleneck in the process, but also intends to supplant the processes that standards already have in place to ensure consultation and expert input to the approved methodologies.          |
| 2999 | Winrock ACR ART      | 0                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | The ICVCM Assessment Framework should instead include high-level principles to support objective program-level evaluations of approaches at the program level for assurance of additionality, safeguards, robust quantification and non-permanence. This can also build on the extensive work done by the ICAO TAB to benchmark crediting programs and allow flexibility in appropriate region and sector-based compliance with the criteria (a functional equivalency among different approaches).                                  |
| 2999 | Winrock ACR ART      | 0                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | The development of a negative list of project types that are deemed non-additional / non eligible for the CCP label (grid connected renewables in non-LDC countries, fossil fuel switch etc) could facilitate an on-ramp for eligibility of other crediting types / sectors without the need for a methodology-by-methodology review.                                                                                                                                                                                                |
| 3000 | Winrock ACR ART      | 0                   |                 | The market penetration test may be a useful for some project activities (perhaps solar), but seemingly less so for AFOLU. For example, while we expect market penetration would be quite low for wetland and grassland mitigation, A/R, and IFM, we are concerned there isn’t adequate data available to draw concrete conclusions across entire project types. It is further complicated by a subjective and qualitative assessment of the uncertainty of financial attractiveness parameters.                                                                                                                                                                                                                                                                                        | we suggest that the initial tier 1 additionality assessment by the ICVCM be eliminated. The methodology-by-methodology, sector or project-type phased assessments of additionality and baselines should NOT be conducted as proposed in the draft Assessment Framework. This duplication of work will not only create a massive bottleneck in the process, but also intends to supplant the processes that standards already have in place to ensure consultation and expert input to the approved methodologies.                    |
| 3000 | Winrock ACR ART      | 0                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | The ICVCM Assessment Framework should instead include high-level principles to support objective program-level evaluations of approaches at the program level for assurance of additionality, safeguards, robust quantification and non-permanence. | 3001 | Winrock ACR ART      | 0                   |                 | Step 2 assesses additionality based on regulatory surplus, consideration of carbon revenues, and the viability of the mitigation activity (i.e., investment analysis, barrier analysis, market penetration, and positive lists). The section would benefit from a clear statement as to the hierarchy of the assessment (is it program level, project type, or project level?). ACR rules contain many of these same tests of additionality – which are assessed at the project level.                                                                                                                                                                                                                                                                                                 | Eliminate the tiered additionality assessment by the ICVCM. The methodology-by-methodology, sector or project-type phased assessments of additionality and baselines should NOT be conducted as proposed in the draft Assessment Framework. This duplication of work will not only create a massive bottleneck in the process, but also intends to supplant the processes that standards already have in place to ensure consultation and expert input to the approved methodologies.                                                |
| 3001 | Winrock ACR ART      | 0                   |                 | We are generally in agreement that projects should exceed legal requirements. However, we are concerned if the expectation is that evidence of carbon intent must predate project start. ACR PP’s typically engage with ACR at listing, and may not be familiar with such a requirement prior to engaging with a registry.                                                                                                                                                                                                                                                                                                                                                                                                                                                             | The ICVCM Assessment Framework should instead include high-level principles to support objective program-level evaluations of approaches at the program level for assurance of additionality, safeguards, robust quantification and non-permanence. This can also build on the extensive work done by the ICAO TAB to benchmark crediting programs and allow flexibility in appropriate region and sector-based compliance with the criteria (a functional equivalency among different approaches).                                  |
| 3001 | Winrock ACR ART      | 0                   |                 | A continued fatal flaw in the ICVCM approach is its threshold approach. In the 8.6a investment analysis, carbon revenues must “shift” IRR from negative to positive. In barrier analysis carbon revenues must overcome each identified barrier. Market penetration must surpass a blanket % threshold across all project types. As elaborated below, carbon revenues by themselves (especially at current pricing) often are not fully capable of shifting these circumstances. Rather, they are used as a revenue supplement, or are combined with other revenue streams. Carbon sequestration is a distinct commodity amongst other potential revenue streams and should be considered as such.                                                                                      | The development of a negative list of project types that are deemed non-additional / non eligible for the CCP label (grid connected renewables in non-LDC countries, fossil fuel switch etc) could facilitate an on-ramp for eligibility of other crediting types / sectors without the need for a methodology-by-methodology review.                                                                                                                                                                                                |

| 3001 | Winrock ACR ART      | 0                   |                 | Our other general comment is similar to step 1. Developing qualitative rankings based on expert judgement only adds subjectivity and confusion to the market.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 3002 | Winrock ACR ART      | 0                   |                 | We are generally in agreement that projects should exceed legal requirements and should be periodically reevaluated. However, requiring an assessment of regulatory surplus prior to registration is problematic, as they inherently have not yet enrolled in our program and we do not review projects prior to listing.                                                                                                                                                                                                                                                                                                                                                                                            | Clarification of requirement.                                                                                                                                                                                                                                                                                                                                                                                            |
| 3003 | Winrock ACR ART      | 0                   |                 | In some, but not all cases, we agree it's reasonable to demonstrate that carbon credits were considered in developing the project – assuming listing submittal, board resolutions, land acquisition date, establishment of carbon inventory, and other reasonable demonstrations would qualify. However, a requirement that the evidence must pre-date the carbon project start date is problematic. ACR project start dates typically COINCIDE with an actionable/measurable activity (examples above; most often listing submittal).                                                                                                                                                                               | Clarification of requirement.                                                                                                                                                                                                                                                                                                                                                                                            |
| 3003 | Winrock ACR ART      | 0                   |                 | We suggest the ICVCM reconsider the requirement to provide evidence of intent PRIOR to the project start date and, where applicable allow listing submittal as acceptable evidence of intent, and that such formal documentation of intent can occur COINCIDENT with project start date.                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 3003 | Winrock ACR ART      | 0                   |                 | Since project start date coincides with an actionable engagement with the registry, we contend that setting a timeframe between project start date and validation provides similar assurance of additionality as setting a timeframe between “proof of prior consideration” (as set out in the CCP’s) and registration of the mitigation activity (please define “registration”).                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 3003 | Winrock ACR ART      | 0                   |                 | In cases of a performance standard (exceeding a BAU baseline), intent of carbon revenues is not part of the additionality test.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 3004 | Winrock ACR ART      | 0                   |                 | The ACR 3-prong additionality test addresses the approaches mentioned in 8.6.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Remove requirement for carbon revenues to fully “shift” financial performance per IRR.                                                                                                                                                                                                                                                                                                                                   |
| 3004 | Winrock ACR ART      | 0                   |                 | The majority of ACR AFOLU projects do perform investment analysis at the project level. The analysis typically shows the project/investment represents a lower IRR than baseline alternatives (i.e., logging, forgoing revegetation and mitigation efforts, allowing continued degradation). Carbon revenues at current pricing are most always not sufficient to fully "shift" the activity to being financially attractive. Rather, they recover a portion of the cost associated with managing for climate benefits. Even when carbon revenues are paired with other revenue streams (e.g., habitat, recreation, conservation) they often still present an overall loss in IRR compared to baseline alternatives. | 0                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 3005 | Winrock ACR ART      | 0                   |                 | See response below.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | We recommend the elimination of the financial additionality requirements for JREDD+ as well as the demonstration of impacts of new policies and measures and of advanced consideration of carbon credits.                                                                                                                                                                                                                |
| 3005 | Winrock ACR ART      | 0                   | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 3005 | Winrock ACR ART      | 0                   | 0               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | We also recommend that a performance threshold approach for additionality for REDD+ such as currently employed by ART and other major jurisdictional programs be an approved additionality test for jurisdictional REDD+ without other requirements. This approach has been tested through multiple peer review and public consultation processes and was selected as best suited to the scale and nature of activities. |
| 3006 | Winrock ACR ART      | 0                   |                 | TREES requires Participants to share a REDD+ Implementation Plan that outlines new and ongoing activities to achieve emission reductions and removals. It is not clear how "that are explicitly designed and reasonably expected to sufficiently address key drivers of deforestation and degradation at scale" is to be demonstrated or evaluated. No jurisdiction is going to put forth a plan it does not believe will achieve results, so this requirement seems unnecessary and very subjective.                                                                                                                                                                                                                | Same as row 111                                                                                                                                                                                                                                                                                                                                                                                                          |
| 3007 | Winrock ACR ART      | 0                   |                 | Option 2. It is unlikely that such a calculation could be conducted in a meaningful manner, and it is unclear how such information supports the integrity of the resulting credit.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Same as row 111                                                                                                                                                                                                                                                                                                                                                                                                          |
| 3008 | Winrock ACR ART      | 0                   |                 | TREES does not require evidence of carbon credits being considered prior to the crediting period beginning. Jurisdictions have had no market access historically and could not reasonably be expected to have publicly stated that they intended to obtain carbon financing from credits prior to a clear pathway being established.                                                                                                                                                                                                                                                                                                                                                                                 | Same as row 111                                                                                                                                                                                                                                                                                                                                                                                                          |

| 3010 | Winrock ACR ART      | 0                   |                 | TREES does not include this requirement. It may take a significant amount of time for some jurisdictions to move forward with a program successfully and we do not feel this requirement adds to the integrity of the credits generated.                                                                                                                                                                                                                                                                                                                                           | We recommend that no maximum timeframe be included for JREDD given the potentially long design and implementation timeframes required.                                                                                                                                                                                                                                                        |
| 3011 | Winrock ACR ART      | General comments    |                 | It doesn't make sense to have a step to determine the degree of reversal risk. This is something that happens at the crediting program level and should be able to pass the sniff test without an Expert Panel evaluation.                                                                                                                                                                                                                                                                                                                                                         | Eliminate the initial step to evaluate the degree of reversal risk and instead ensure that programs have appropriate reversal risk mitigation mechanisms in place for any project type that has this risk (less stringent mechanisms for projects with lower risks).                                                                                                                          |
| 3011 | Winrock ACR ART      | General comments    |                 | For projects with "material" non-permanence risk (all AFOLU), the framework is largely built around either a 100+ year project monitoring and compensation term, or an equivalent crediting adjustment (e.g., 1% credits per year for 100 years). The 100 years is seemingly built around 100 GWP's, which have no relevance to permanence of carbon emissions reductions or removals.                                                                                                                                                                                             | Option 3 should be deemed as equally viable as other options and defined as what programs are currently doing: multi-decadal commitments for projects with enforcement for MRV during that period, a robust reversal risk mechanisms including a buffer pool and no buffer pool refunds. The mechanism should ensure reporting and compensating in real time (during the verification cycle). |
| 3011 | Winrock ACR ART      | General comments    |                 | The 100-year permanence threshold is not realistically enforceable, does not coincide with the known near-term actions that are needed to combat climate change, and should be removed/revised. The market and climate will not benefit from ICVCM shaming projects that refuse to undertake unachievable and unenforceable project commitments.                                                                                                                                                                                                                                   | For JREDD, option 3 should be defined as enforcement for MRV and compensation for reversals in real time (during the verification cycle) and retirement of cumulative buffer pool contributions when the Participant leaves the program to compensate for future potential reversals                                                                                                          |
| 3011 | Winrock ACR ART      | General comments    |                 | ICVCM should also remove the option 2 ("XX+ commitment period...with a path...to 100 years"). This is ton-year accounting and is not a commonly employed or accepted practice in the carbon market to date. In fact, ACR has rejected ton year accounting, and Verra recently rejected ton-year accounting as a practice after public consultation and widespread non-consensus on the validity of the approach (see pages 45 – 97 of their public comment responses).                                                                                                             | In cases in which reversal reporting and compensation is required immediately (within the verification cycle), and in which the buffer pool is robust (no refunding of credits), the buffer pool may be able to adequately compensate for future reversals many decades past the end of MRV.                                                                                                  |
| 3011 | Winrock ACR ART      | General comments    |                 | ICVCM should focus on ensuring functioning and robust risk mitigation mechanisms that safeguard permanence over clearly stated, realistic, measurable, and (for projects) enforceable timeframes. This is illuded to in option 3 (alternative approaches), which will be important to define in a way that is clear and workable.                                                                                                                                                                                                                                                  | While being implemented by some project-level crediting programs, differentiation between intentional and unintentional reversals is not appropriate for jurisdictional REDD+. To date, no program has an insured buffer pool and only a few have enforceable legally-binding agreements for long-term MRV, which is likely unattainable in many contexts.                                    |
| 3011 | Winrock ACR ART      | General comments    |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                             |
| 3012 | Winrock ACR ART      | 0                   |                 | It doesn't make sense to have a step to determine the degree of reversal risk. This is something that happens at the crediting program level and should be able to pass the sniff test without an Expert Panel evaluation.                                                                                                                                                                                                                                                                                                                                                         | Eliminate the initial step to evaluate the degree of reversal risk and instead ensure that programs have appropriate reversal risk mitigation mechanisms in place for any project type that has this risk (less stringent mechanisms for projects with lower risks).                                                                                                                          |
| 3012 | Winrock ACR ART      | 0                   |                 | Table 43 alludes that all AFOLU projects have "Material" non-permanence risk if they are subject to natural disturbance..."over a specified time horizon (100 years)". The assessment framework should be clearer that 100 years is an example of a specified time horizon as other time horizons are seemingly considered as minimum MRV and compensation under criterion 9.2a option 2 and alternative approach 3.                                                                                                                                                               | Clarify that options are flexible for demonstration of requirements for programmatic elements for meeting multi-decadal reversal risk mitigation measures.                                                                                                                                                                                                                                    |
| 3013 | Winrock ACR ART      | 0                   |                 | Table 44 initial threshold option 1 requires commitment to monitor and compensate for a minimum of 50 years. What is 50 years based upon, and why couldn't this threshold equally be justified as 40, 30, or some other threshold that better aligns with existing carbon market project terms?                                                                                                                                                                                                                                                                                    | Consider alternative options to the 50 year minimum MRV and reversal compensation period for projects such as ACR's 40-year term.                                                                                                                                                                                                                                                             |
| 3013 | Winrock ACR ART      | 0                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                             |
| 3014 | Winrock ACR ART      | 0                   |                 | Table 44 initial threshold option 2 requires a 25+ year duration, paired with incentives to a path towards full crediting after 100 years (ton-year accounting). Requiring both a 25-year project duration and 1% over 100 years will disincentivize investment in climate mitigation, as the timeframe for recouping initial investment is beyond the acceptable return timeframe for literally any organization. Ton-year accounting is not a commonly applied or accepted approach in the existing carbon market, so it is puzzling and concerning that ICVCM would propose it. | Reconsider the viability of option 2. If ton year accounting is to be allowed, clarify the requirement for MRV and compensation over a multi-decadal timeframe (not naked ton year accounting).                                                                                                                                                                                               |
| 3015 | Winrock ACR ART      | 0                   |                 | Table 44 option 3 (both initial and full thresholds) suggests alternative approaches that may suffice to reach equivalent assurance of permanence. This flexibility is great and necessary. The approach should avoid subjectivity and expert judgement in favor of a systematic assessment framework.                                                                                                                                                                                                                                                                             | Option 3 should be defined as multi-decadal commitments for projects with enforcement for MRV during that period, a robust reversal risk mechanisms including a buffer pool and no buffer pool refunds. The mechanism should ensure reporting and compensating in real time (during the verification cycle).                                                                                  |
| 3015 | Winrock ACR ART      | 0                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | For JREDD, option 3 should be defined as enforcement for MRV and compensation for reversals in real time (during the verification cycle) and retirement of cumulative buffer pool contributions when the Participant leaves the program to compensate for future potential reversals.                                                                                                         |

| 3017 | Winrock ACR ART      | 0                   |                 | While at the project level ACR does differentiate between avoidable and unavoidable reversals, ART does not. At the jurisdictional scale, a reversal is defined as when the annual emissions exceed the crediting level. It is not possible with any degree of accuracy to discern which exact event over the course of a year across an entire jurisdiction caused the exceedance.                                                                                                                                                                                                                                                                                                                      | Eliminate the requirement for distinction between avoidable and unavoidable reversals for jurisdictional REDD.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 3017 | Winrock ACR ART      | 0                   |                 | Requiring insurance for the buffer pool itself seems redundant, given the subsequent requirement for a sufficiently charged buffer pool. There are no insurance mechanisms currently being offered / used.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Clarify that legally-binding agreements are preferred, but not required since this may not be possible in many instances.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 3017 | Winrock ACR ART      | 0                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Eliminate the requirement for an insured buffer pool.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 3018 | Winrock ACR ART      | 0                   |                 | Temporary crediting (issuing, retiring, and re-compensating credits over time) is not employed by any crediting standard currently in the market. It is questionable to deem such an approach acceptable given the approach was employed in the CDM and found to be ineffective at delivering climate results. Term lengths of 5 – 30 years, followed by administrative burdens of retirement and replacement of credits are not of interest to buyers (or sellers) and an operational challenge to crediting bodies.                                                                                                                                                                                    | Eliminate the option for temporary crediting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 3019 | Winrock ACR ART      | 0                   |                 | Both ACR and ART have in normative program documents plans for Winrock’s administration of the program over time, including upon the dissolution of ART.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Align the minimum project term MRV and reversal compensation requirements (as applicable) with a reasonable timeframe for achievable institutional sustainability.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 3019 | Winrock ACR ART      | 0                   |                 | We agree institutional stability is important to oversee long-term commitments, however, a plan for institutional stability is only as valuable as it’s enforcement mechanism. The likelihood that an organization will exist for 100 years is extremely low (this coincides with only a few of the largest corporations in the U.S.). The ICVCM should be realistic in setting project terms, as legally binding agreements are only valuable if they are enforceable. Programs with 100+ year minimum project terms cannot with any certainty guarantee their existence for 100 years. We firmly suggest minimum project term should coincide with reasonably achievable institutional sustainability. | Incorporate the full threshold requirement as the initial threshold since ICAO approved programs include this requirement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 3020 | Winrock ACR ART      | General             |                 | Similar to other sections, the Robust Quantification section does not follow a systematic, replicable, and transparent assessment framework. Most of the assessments are left to “expert judgement” of the ICVCM review panel, such that crediting programs cannot begin to assess their conformance against the assessment framework with any degree of certainty.                                                                                                                                                                                                                                                                                                                                      | Revise the approach as a process/program-based assessment which does not include expert judgement. For example, ICVCM would consider whether crediting programs have processes and systems in place to account for uncertainty (as applicable), to ensure that baselines are developed using credible and scientifically justified assumptions and models, and to assure that methodologies follow published processes such as the inclusion of public comment and/or peer-review by experts in the field. Assessments should be made based on clear and objective criteria rather than assessing based on degree of acceptable uncertainty or conservatism. |
| 3020 | Winrock ACR ART      | General             |                 | Also similar to other sections, more detail and care needs to be taken to consistently prescribe the hierarchy at which the assessment is performed (program-level vs. project type vs. project level).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Removing expert judgement would also allow programs to evaluate their conformance to ICVCM criteria with reasonable certainty, which is not possible as is.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 3020 | Winrock ACR ART      | General             |                 | The text emphasizes conservatism in all aspects of accounting. Care should be taken to balance conservatism and accuracy, and not unnecessarily penalize and disincentivize climate friendly practices.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 3021 | Winrock ACR ART      | 0                   |                 | Step 1 involves systematic assessment of “aspects” of carbon credit types (i.e., boundary of mitigation activity, determination/quantification of baseline emissions, quantification of emissions from the mitigation activity, etc). Within each aspect, “key elements” are to be systematically assessed for uncertainty, robustness, and conservativeness. Each “element” is assessed according to fraction of mitigation activities affected, degree of over- or underestimation, and variability among mitigation activities. The outcome is presented as Table 48.                                                                                                                                 | We strongly recommend ELIMINATING the Expert Panel systematic assessment of quantification approaches by methodology, which is highly subjective, questions the processes of the crediting bodies and will introduce great market uncertainty.                                                                                                                                                                                                                                                                                                                                                                                                               |
| 3021 | Winrock ACR ART      | 0                   |                 | The complicated hierarchy of the assessment process makes it difficult to evaluate. And, once again, the evaluations rely on expert judgement to assign categorical rankings (i.e., high, medium, low).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Instead of the two-phased approach, we recommend the ICVCM assess the processes and systems that crediting bodies have in place to account for uncertainty (as applicable), to ensure that baselines are developed using credible and scientifically justified assumptions and models, and to assure that methodologies follow published processes such as the inclusion of public comment and/or peer-review by experts in the field. Assessments should be made based on clear and objective criteria rather than assessing based on degree of acceptable uncertainty or conservatism.                                                                     |
| 3021 | Winrock ACR ART      | 0                   |                 | A systematic assessment of quantification approaches, by methodology, is a very large endeavor. The scope differs from other CCP assessments (such as additionality) that occur by project type, or at the program level. It will require ongoing assessment as new methodologies are created and methodologies updated on a regular basis.                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| 3021 | Winrock ACR ART      | 0                   |                 | We suggest if assessment of quantification is performed, it is done at the program-level only. An assessment is inherently NOT systematic if left entirely to expert judgement, therefore objective assessment criteria should be developed.                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                            |
| 3022 | Winrock ACR ART      | 0                   |                 | Criterion 10.2 and 10.3 assessments are not well defined and heavily left up to expert judgement. The evaluation of uncertainty and conservatism is subjective, and inherently assumes the ICVCM assessment panel are "experts" in baseline setting across all project types and all aspects of carbon quantification. This is not realistic given the myriad of types of carbon projects and the methods available for developing and quantifying a baseline. | See recommendation above (row 127)                                                                                                                                                                                                                           |
| 3022 | Winrock ACR ART      | 0                   |                 | In terms of assessing NDC's, the mandate of the GHG program is to develop approaches to ascertain the impact on the atmosphere of the activities conducted across the geography registered. It is not appropriate nor feasible for the GHG Programs to assess a country's NDCs across all sectors and make judgements on whether they will achieve the stated goals.                                                                                           | 0                                                                                                                                                                                                                                                            |
| 3022 | Winrock ACR ART      | 0                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Eliminate the requirement for carbon crediting bodies to assess a country's NDC commitments and judge whether they will be successful in meeting the goals. This is unrelated to whether the mission reduction or removals being credited is high integrity. |
| 3023 | Winrock ACR ART      | 0                   |                 | TREES uncertainty deductions are based on a program wide tolerance of 66% probability that the credits are not overreported. It is unlikely that ART would approve a higher threshold as the deductions would be punitive at that time. ART may consider a higher threshold once degradation uncertainties are lower as requiring degradation to be included causes overall uncertainties to be significantly higher.                                          | Restate the uncertainty requirement to clarify that, for jurisdictional REDD, a sliding scale deduction approach can be used such that a higher overall uncertainty results in a higher associated deduction.                                                |
| 3024 | Winrock ACR ART      | 0                   |                 | No current method exists for quantifying international leakage and it is not included in any current GHG program of any scale. Additionally, conservative defaults should be permitted for leakage deductions.                                                                                                                                                                                                                                                 | Remove requirement to account for international leakage until such time as better means of quantify the value are obtainable.                                                                                                                                |
| 3025 | Winrock ACR ART      | 0                   |                 | Neither ACR or ART TREES credits activities that are incompatible with net-zero emissions. However, it is unclear how these would be evaluated or verified and how far up and down stream would need to be considered (i.e., a full life cycle assessment for all activities and components?). It seems beyond the mandate of the program to evaluate this aspect activities.                                                                                  | We recommend removing this requirement as it is outside the mandate of carbon crediting programs.                                                                                                                                                            |
| 3026 | Winrock ACR ART      | 0                   |                 | Neither ACR or ART TREES includes SDG net positive impact monitoring.                                                                                                                                                                                                                                                                                                                                                                                          | We recommend this be an optional practice once methodologies to do so and verify the claims are developed.                                                                                                                                                   |
| 3026 | Winrock ACR ART      | 0                   |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                            |
| 3027 | Winrock ACR ART      | 0                   |                 | ACR and ART recommend that attributes labeled in the Registries be limited to quantification approach, corresponding adjustments and perhaps a general box where other items can be noted. There are an endless number of possible attributes that may be of interest to the market and requiring each to be similarly defined and labeled across all programs is impossible.                                                                                  | We recommend inclusion of labels for quantification approach, corresponding adjustments and perhaps a general box where other items can be noted.                                                                                                            |

| 3036 | Anonymous            | 0                   |                 | XXXX agrees with the laudable intent of these subsections, but the requirements listed within are often inflexible when needing to be applied to the wide spectrum of NCS project and program activities. The IFC safeguards were not designed for carbon credit programs and may not be the best choice to impose. Alternatives should be considered to ensure biodiversity and human rights are protected and these co-benefits are also prioritized.        | 0                                                                                                                                                                                                                                                            |
| 3036 | Anonymous            | 0                   |                 | • Climate change is not the only crisis we face today -- nature is also at a precipice and the two cannot be separated. Seventy percent of the land-based environment and close to 66 percent of the marine environment has been significantly altered by human actions. Ambitious concrete action is now required to stave off the worst effects of climate change and biodiversity loss, in order to ensure a livable future for all.                        | 0                                                                                                                                                                                                                                                            |

The Draft AF's over-reliance on financial additionality tests is too limiting for NCS mitigation activities in general and is completely inappropriate for Jurisdictional REDD.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Criterion 8.7 should be limited to Option 2 and performance standard approaches currently utilized for JREDD should be approved.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 3038 | Anonymous            | Te                  |                 | <p>The Draft AF's requirement of 100 years exceeds the existence of most companies and many countries and is not a feasible standard for many mitigation activities. including but not limited to NCS (protection, sustainable management, and restoration). This requirement also raises the level of risk for investment in NCS by Companies that wish to contribute to the development of a high-integrity pipeline and will direct much-needed investment away from NCS.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | As an alternative, the IC-VCM should explicitly allow the use of buffer pools and other schemes that compensate for reversals and prevent the use of temporary crediting labels (which have failed in the past), thus effectively eliminating Section 9.3. These mechanisms have been developed under extensive consultation processes and are more appropriately suited to NCS. Further, the Draft AF labels certain unproven or novel technologies as having zero or low reversal risk, while labelling NCS (proven over the course of centuries and millennia) as having material risk, despite evidence to the contrary on both accounts. |

We suggest that the existence of regulation alone should not determine if activities are credited. Effectiveness of regulation, governance trends and public budget all need to be considered. At present, where projects do consider regulatory backdrop, assessments of additionality are qualitative, and lack auditor detail. The CCPs currently only consider governance for developing countries and their approach to this is by setting a fixed time period, however defined project lifetimes already achieve this.                                                         |
| 3042 | Anonymous            | 0                   |                 | <ul style="list-style-type: none"> <li>XXXX supports new thresholds that drive high-quality credits and agree that financial feasibility is not the only aspect of additionality assessments.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | XXX also recommends amending the stipulation that activities which hold insufficient likelihood of additionality are immediately not eligible. This overlooks how a methodology is applied and specific barriers associated with a project's location, and by extension disregards the many nuances around additionality. The current approach creates binary labels which risks removing entire sections of the market from the CCPs' eligibility criteria.                                                                                                                                                                                  |

| 3042 | Anonymous            | 0                   |                 | <p>Additionality is a crucial determinant of carbon credit quality, and XXXX endorses several of the current CCPs' requirements. We welcome new thresholds which drive high-quality credits, but consider that assessment of financial additionality in isolation is not reliable in all cases - it is important to consider other aspects of additionality for any given project (e.g. common practice, barrier analysis). XXXX advocates the view that additionality is a range, and that common practice analysis needs defined thresholds to estimate penetration, geographical boundaries and installation of recent stock. In relation to this and on the note of performance standards, whilst defined thresholds are useful, the context of these thresholds must also be specified. For example, national penetration rates of various technologies may not adequately address the regional barriers they face in their uptake and deployment.</p> | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 3042 | Anonymous            | 0                   |                 | <p>Regarding financial disclosure, we agree with the CCPs' full threshold which mandates public reporting on total carbon revenues, without relying on third-party sources. This is because pricing transparency in the market is currently limited, and pricing data for key players within the VCM is inconsistent.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| 3043 | Anonymous            | 0                   |                 | Additionality for J-REDD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | However, we identify some omissions from the current framework which should be addressed. Specifically, we recommend providing guidance regarding leakage, specifically for market leakage across borders. We also recommend that the CCP endorse disclosure on how leakage is calculated (ie. underlying assumptions provided) and what safeguards are employed. Similarly, we find a lack of guidance for the governance of J-REDD. It is notably unclear how monitoring and reporting will be overseen at a national level, but also at a project level in the case of nested schemes. |

| 3043 | Anonymous            | 0                   |                 | <ul style="list-style-type: none"> <li>• We recommend further guidance beyond additionality, to address issues around leakage and governance of J-REDD.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 3043 | Anonymous            | 0                   |                 | XXXX supports the current CCPs' views regarding J-REDD on a number of points. First, we endorse the stance that Cancun safeguards should be a minimum integration and enables permanence and stakeholder engagement. We also agree that, in the case of J-REDD activities, the baseline for second and subsequent crediting periods shall not be higher than the baseline for the previous crediting period. Meanwhile, we endorse the view that evidence demonstrating results-based payments is made available prior to the start of the first crediting period (which would indicate prior reliance on carbon finance). | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 3044 | Anonymous            | 0                   |                 | Mitigation activity information                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | We suggest the inclusion of a requirement that shapefiles are provided by nature-based project developers, as this facilitates external Earth Observation interrogation of project assumptions. These should not be limited to the project area, but all associated regions such as the reference and leakage management areas.                                                                                                                                                                                                                                                           |

| 3045 | Anonymous            | 0                   |                 | XXX aligns with the CCPs' view that instances of double counting are not conducive to the integrity of the VCM, and safeguards should therefore be put in place against it. Measures should be introduced to avoid double registration, overlapping claims and double usage.                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 3046 | Anonymous            | 0                   |                 | Permanence                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Therefore, we recommend that improved standardisation and disclosure requirements regarding buffer pool calculations are introduced. This will provide clarity on which risks are covered by a given contribution, affording greater confidence to buyers in the market and promoting its expansion. The establishment of more stringent transparency guidelines will also enable other parties to enter the market with more sophisticated insurance products, to cover areas where current risk buffer mechanisms do not adequately insure the risk.                                    |
| 3046 | Anonymous            | 0                   |                 | <ul style="list-style-type: none"> <li>• XXXX endorses the requirement for buffer pool contributions to be project-specific, and the three key components of the CCPs' analytical assessment framework of non-permanence risks.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                 | One specific aspect of buffer pools to consider is a requirement for project reported buffer allocations to match and reconcile with registry reported buffer allocations for the same project. Relatively straightforward improvements in data provision and transparency of this nature are essential to facilitate better information discovery and innovation in support services such as aforementioned insurance solutions.                                                                                                                                                         |

Information risk refers to the reliability of the data used to report carbon performance, which is significantly linked to a project's commitment and enforceability. Although it is particularly relevant for projects with no technical risks of reversal, it remains important across every sector since many projects employ national datasets for credit issuance calculations and when determining non-permanence risks. As the CCPs and other initiatives lead to rising standards of disclosure and transparency across the market, it should contribute to lower information risks over time. |

| 3046 | Anonymous            | 0                   |                 | Considering how commitment periods vary from sector to sector, a key issue for non-permanence is ensuring fungibility across credit types, i.e. allowing comparative assessments for different project types with different commitment periods. This can be achieved by making assessments of the likelihood that a project's carbon benefits will remain for the duration of its commitment period, using both top-down and bottom-up analyses.                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 3046 | Anonymous            | 0                   |                 | XXXX advocates three key elements of the CCPs' analytical assessment of non-permanence: the consideration of commitment periods, the strength of mechanisms to compensate for reversals, and institutional stability when assessing non-permanence. In addition, we support the requirement for pooled buffer reserve contributions to be based on project-specific risk assessments.                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 3046 | Anonymous            | 0                   |                 | However, we also identify a number of key flaws in the CCPs current approach to non-permanence. Crucially, the CCPs do not address the lack of standardized terminology pertaining to commitment periods across accreditors. There is no common definition in the market of what constitutes a project's lifetime and what a credit is committing to, which we deem more important than mandating specific permanence periods. This is particularly problematic for nature-based and removals projects, where understanding the carbon storage dynamics is key to integrating credits into a broader carbon accounting framework. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 3046 | Anonymous            | 0                   |                 | Moreover, there are similarly disparate methods for calculating and managing buffer pool contributions across the main accreditors. Not only do the extent of calculated buffer pools differ, but registries also diverge in how contributions are managed once a crediting period ends. In addition, buffer reserves are not sector-specific and do not account for differences in credit quality, allowing scope for reversals of high-quality credits to be compensated using those of lower quality. This can undermine the mechanism's compensatory function.                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

Currently, project developers choose and pay for auditors, which can create incentives for auditors to validate and verify projects less scrupulously. One way to counteract this is to introduce more stringent transparency requirements on auditor performance, which would allow buyers to make more informed decisions. A lesson could also be learned from compliance markets, where a rotation system ensures that projects are audited by different VVBs.                                                                                                                                                             |

| 3048 | Anonymous            | 0                   |                 | Auditors are known as verification/verification bodies (VVBs), and act as independent third-parties to assess carbon projects against the rules set out by the relevant registry. Despite the common underlying principle that carbon projects must be verified to demonstrate measurable additionality and permanence, there are differences in auditing protocols across various accreditors and methodologies within the VCM.                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 3048 | Anonymous            | 0                   |                 | There are two key points of alignment between the current CCPs and XXXX' stance. First, third-party auditing is key for ensuring consistency, transparency and integrity in the VCM. Second, validation should be completed before the first issuance.                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
