| 1641 | Individual/employee, Conservation International | Criterion 8.6: Approaches to assess the viability of mitigation activities | te              | A performance benchmarking approach to additionality (as is proposed under some VCS methodologies as a more robust approach to test additionality), would not specifically be permitted under the current version of the CCP, though the document mentions that, "Where a carbon-crediting program uses other approaches, the Integrity Council will assess these, ensuring a similar level of stringency as for the above approaches." There is evidence that such an approach This approach, such as with dynamic baselines, may provide an improved means of demonstrating additionality.              | Given the importance of VCS to the VCM, the CCP should consider language specifying factors to consider for specific alternative approaches, such as a common practice approach.                                                                                                                                                                                                                                                                                                                              |
| 1642 | Individual/employee, Conservation International | Criterion 8.6: Approaches to assess the viability of mitigation activities | te              | CCP creates a hierarchy of evidence between the different sub-criteria within Criterion 8.6, but there is no justification provided for this hierarchy/weighting.                                                                                                                                                                                                                                                                                                                                                                                                                                         | Provide justification provided for this hierarchy/weighting.                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1644 | Anonymous                                       | Criterion 8.6: Approaches to assess the viability of mitigation activities | te              | The Assessment Framework introduces requirements that would in some cases significantly modify the existing approaches and attempts to impose a one-size fits all approach. The proposed criteria includes qualitative and subjective judgement that, again, would require the panel members to convert a qualitative judgement-based assessment into a statistical percentage. This is very problematic, and instead, we recommend working with Standards to identify a clear path to enhancing and strengthening additionality tests in a manner that aligns with existing Standards and methodologies. | see comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| 1647 | Josiah McClellan                                | Criterion 8.6a) Investment analysis                                        | ge              | 8.2, criterion 8.6a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | The investment analysis is very difficult to apply to SMEs or family enterprises or smallholder farmers. It would also be difficult with aggregate projects that may have multiple SMEs participating, all of which have different economic capabilities. The required resources to conduct the full investment analysis with sensitivity analysis will be greater than any revenue that SMEs gain from carbon credits. This criterion must be revised to feature a streamlined or lighter approach for SMEs. |
| 1648 | Eftimiya Salo                                   | Criterion 8.6a) Investment analysis                                        | te              | Requiring only investment analysis could provide perverse incentives for potential project developers to demonstrate negative profitability which could just be the result of a bad business model.                                                                                                                                                                                                                                                                                                                                                                                                       | Investment analysis, barrier analysis and market penetration analysis should always be conducted together not either/or. Market penetration assessment should be conducted regularly to reflect changes in the market uptake of the climate change mitigation method e.g. commercial timber plantations in Uruguay are already a common practice as this is usually a profitable business, but some projects claim they are not profitable.                                                                   |
| 1649 | Anonymous                                       | Criterion 8.6a) Investment analysis                                        | te              | The type of analysis typically shows that a project represents a lower IRR than baseline alternatives (i.e., logging, leaving land bare, allowing continued degradation). Carbon revenues at current pricing are typically not sufficient to fully "shift" the activity to being financially attractive. Instead they enable recovery of a portion of the costs associated climate mitigation. Even when carbon revenues are paired with other revenue streams they often still present an overall loss in IRR compared to baseline alternatives.                                                         | see comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| 1655 | Eftimiya Salo                                   | Criterion 8.6b) Barrier analysis               | te              | Projects with “medium additionality” are CCP-eligible and they can pass the additionality test by demonstrating low availability of a project activity in a given area and that there are barriers for the project implementation which can be overcome by carbon credit revenues. However, this will only encourage project developers to select the “best” area where there are no similar activities to pass the low availability requirement. Choosing the project location based on commercial interests will have negative impacts on equality, leaving certain regions and their residents at a disadvantage. Similarly, barriers are easy to fudge and difficult to verify especially if VVB bodies don’t have local knowledge. This is too low a threshold which almost any project can pass. | Investment analysis, barrier analysis and market penetration analysis should always be conducted together not either/or. Market penetration assessment should be conducted regularly to reflect changes in the market uptake of the climate change mitigation method.                                                                                                                                                                                                                                                                                                            |
| 1656 | Anonymous                                       | Criterion 8.6c) Market penetration assessments | ge              | · In the Criterion 8.6c) “Market penetration assessments”, we support the use of a penetration rate as a component of the overall additionality assessment. However, it should be evaluated on a project-specific basis (sub national level) rather than with a flat rate that applies to all mitigation activities. We believe the proposed 10% threshold may be too limiting to encourage implementation of emission reducing projects so if a general penetration rate is to be used, we propose 20%.                                                                                                                                                                                                                                                                                               | None                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 1657 | Individual/employee, Perspectives Climate Group | Criterion 8.6c) Market penetration assessments | ge              | If the investment analysis is unsuccessful by a slight margin (IRR < 1% more attractive than threshold) , a combination of institutional barrier test and penetration rate can be applied to prove additionality (penetration rate <5%)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | If the investment analysis is unsuccessful by a slight margin (IRR < 1% more attractive than threshold) , a combination of institutional barrier test and penetration rate can be applied to prove additionality (penetration rate <5%)                                                                                                                                                                                                                                                                                                                                          |
| 1658 | Anonymous                                       | Criterion 8.6c) Market penetration assessments | te              | This section and positive lists are overly limited sub-pieces of standardized approaches, which can include performance benchmarks and positive lists. IC-VCM should review programs current additionality requirements, as they are better fit for purpose than what is recommended here.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | IC-VCM should not set this level of requirements, but ensure programs have robust procedures for appropriate additionality-test setting at the appropriate level (e.g., some sectors and technologies should use performance benchmarks, others cannot). Without getting to the methodology level (which IC-VCM cannot do effectively), it doesn't make sense to have this level of provisions.                                                                                                                                                                                  |
| 1659 | Josiah McClellan                                | Criterion 8.6c) Market penetration assessments | ge              | 8.2, criterion 8.6c                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | The proposed language that a mitigation activity is not additional if market penetration exceeds a set threshold, is one-sided and biased. Some markets experience asymptotic penetration, where some parts of the market face significant barriers and low IRR, so that additional resources are required for late adopters more than early adopters. In fact, we already think about decarbonization of the economy in this way, with easy-to-abate emissions reduced early on, and hard-to-abate emissions reduced at a later date with more significant investment required. |
| 1660 | Max DuBuisson                                   | Criterion 8.6c) Market penetration assessments | te              | c) The mitigation activity shall not be deemed additional if the market penetration surpasses a threshold higher than [5%][X%].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Remove any mention of specific thresholds, instead noting that such thresholds, when used, should be determined in a way relevant for the target sector.                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1660 | Max DuBuisson                                   | Criterion 8.6c) Market penetration assessments | te              | This approach is only effective in sectors where mitigation activities are able to be assessed in terms of rational investment analysis (e.g., industrial and energy related projects). It becomes far less relevant or effective for sectors where implementation costs and benefits are complex, variable, and uncertain, and where other barriers are more important than financial barriers (e.g., social, cultural, etc.).                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 1661 | Eftimiya Salo                                   | Criterion 8.6c) Market penetration assessments | te              | Projects with “medium additionality” are CCP-eligible and they can pass the additionality test by demonstrating low availability of a project activity in a given area and that there are barriers for the project implementation which can be overcome by carbon credit revenues. However, this will only encourage project developers to select the “best” area where there are no similar activities to pass the low availability requirement. Choosing the project location based on commercial interests will have negative impacts on equality, leaving certain regions and their residents at a disadvantage. Similarly, barriers are easy to fudge and difficult to verify especially if VVB bodies don’t have local knowledge. This is too low a threshold which almost any project can pass. | Investment analysis, barrier analysis and market penetration analysis should always be conducted together not either/or. Market penetration assessment should be conducted regularly to reflect changes in the market uptake of the climate change mitigation method e.g. commercial timber plantations in Uruguay are already a common practice as this is a profitable business.                                                                                                                                                                                               |

| 1663 | Anonymous                                       | Criterion 8.6c) Market penetration assessments | te              | We suggest that the IC VCM does not define a penetration rate as it is quite project--type specific and varies by geography. It is important to ensure that the applied penetration rate is well justified, but a blanket rate would not be appropriate.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | see comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 1664 | Javier Castro                                   | Criterion 8.6d) Positive lists                 | ge              | Comment: the approach presented in step 1 above can be called "negative list" and the requirements for positive list should also applied for the "negative list".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | IDEM                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

I                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | C-VCM should review the approaches high-quality standards currently use for setting and updating positive lists, and require improvement, if/when needed, as current approaches may be more robust than this. Standards may have much more sector-appropriate triggers for updating positive lists, and this requirement could take things backwards. More evidence that IC-VCM should not set this level of detailed requirements but rely on program governance.                            |
| 1668 | Anonymous                                          | Criterion 8.6d) Positive lists | ge              | We agree that positive lists should be justified and periodically updated but disagree they must conform to the criteria for investment analysis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1668 | Anonymous                                          | Criterion 8.6d) Positive lists | ge              | Further, updating positive lists for automatic additionality every 3 years will be very burdensome and could create significant uncertainty. Key questions also need to be addressed, including what happens to existing projects when the list is updated? Do they need to undergo a full assessment for additionality if they are no longer on the positive list?                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| 1671 | Anonymous                                          | Criterion 8.6d) Positive lists | ge              | Positive lists can be a useful tool in determining additionality, but so can negative lists. In either case, we agree that they should be updated periodically, but that registries should determine the appropriate timing for these updates. Every three years is likely too frequent.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | see comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 1673 | Javier Castro                                      | 0                              | ed              | The statement: "The requirements in Table 40 shall be fulfilled for the carbon-crediting program to be deemed CCP-eligible" is contradictory with all the proposal. The fact that some project types might be part of the "negative list" does not implied that the Program cannot be CCP-eligible.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | See above                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 1674 | Anonymous                                          | 0                              | ge              | No small project or startup would be approved under this grading approach. Small projects and startups are key to scaling the most innovative approaches to carbon removal and decarbonization in general. Restricting the flow of capital in such a prohibitive manner undercuts the transformative potential of the VCM, which should be designed to supercharge private sector action rather than limit it.                                                                                                                                                                                                                                                                                                                                                                                                  | Remove financial additionality as a barrier.                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1675 | Individual/employee, CLA                           | 0                              | ge              | Aspects of the simplified approach to additionality for the jurisdictional REDD+ ) activity may be appropriate to apply to nature-based carbon credits more broadly.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | As above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 1676 | Darcy Jones                                        | 0                              | ge              | The overall approach currently proposed in Section 8.4 of the AF is not suitable for jurisdictional or nested REDD+ activities. The fundamental criteria underpinning the approach are at odds with the goals of REDD+, which countries and stakeholders have been working towards for many years: namely, the transformation of the economic development pathway in forested countries and a shift to low-carbon development.                                                                                                                                                                                                                                                                                                                                                                                  | The Assessment Framework should revise the additionality criteria so that they are more suitable to jurisdictional-scale REDD+ approaches, and recognize the substantial investments of time, resources, and political will that have been made to lay the foundation for the transformation of the economic development pathway in forested countries and a shift to low-carbon development.                                                                                                 |
| 1676 | Darcy Jones                                        | 0                              | ge              | Although it is good that the Expert Panel has recommended that additionality be treated differently for jurisdictional REDD+ programs than for REDD+ projects, some of the proposed requirements are inappropriate, unnecessary, and/or onerous for developing country governments. The success of REDD+ requires durable, long-term implementation, and incentives. By deeming these past efforts as criteria that would render them ineligible for crediting, the IC-VCM would cast aside these investments and work against its own stated intention of accelerating a just transition to 1.5 degrees C. In reality, these past efforts are essential to this transition and should be supported and amplified.                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 1677 | Darcy Jones                                        | 0                              | ge              | At their core, properly implemented jurisdictional REDD+ programs are additional because developing forested countries, as they undergo economic development, can EITHER participate in REDD+ programs (which involves setting conservative baseline/reference levels and implementing national monitoring and JREDD+ activities), OR not participate in REDD+ and continue the same historical emissions trajectory, which often involves increasing land sector emissions. Properly implemented JREDD+ activities are additional because jurisdictions are actively choosing to participate in a REDD+ program, with the eventual expectation that they will receive some form of payment for their performance, rather than continuing along a development pathway that does not protect or enhance forests. | The Assessment Framework should recognize the unique reasons why properly implemented jurisdictional REDD+ approaches are additional and revise the additionality criteria so that they are more suitable to support these approaches.                                                                                                                                                                                                                                                        |

| 1677 | Darcy Jones                    | 0                   | ge              | The large scale and fundamental governance structure of jurisdictions that participate in jurisdictional REDD+ (i.e., national or sub-national governments such as states) is part of the reason that properly implemented jurisdictional REDD+ activities are additional – jurisdictions already have the power to act and implement JREDD+ activities but have not been doing so historically without the incentive of jurisdictional REDD+. Jurisdictions face conflicting tradeoffs regarding economic development pathways; thus, jurisdictions that make the active choice to make national REDD+ plans, identify drivers of deforestation, implement new or ongoing mitigation activities, monitor, and verify performance, to actually deliver high-scale emissions reductions and removals results are making an additional choice and delivering an action that would not otherwise have happened. By virtue of participating in a jurisdictional REDD+ process, they show intent to generate emissions reductions and removals for payment and/or credits.                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1677 | Darcy Jones                    | 0                   | ge              | Activities are ideally additional if they break the historical link between economic output and emissions. Where economic output from drivers of deforestation (e.g., cattle and soy in the Amazon, oil palm in Indonesia) has been historically linked with increased emissions, and policies and changes in political culture and economy successfully break this link, the resulting emissions reductions are clearly additional and permanent because they represent a new set of actions that were not previously done. For example, Brazil successfully lowered emissions from forest loss while simultaneously increasing cattle and soybean production due to the implementation of a jurisdictional plan for controlling deforestation in the Legal Amazon. (See Schwartzman et. al. Env. Research Letters: <a href="https://iopscience.iop.org/article/10.1088/1748-9326/ac18e8">https://iopscience.iop.org/article/10.1088/1748-9326/ac18e8</a> .)                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1677 | Darcy Jones                    | 0                   | ge              | Typically, high-integrity jurisdictional REDD+ programs set conservative historical baselines against which to measure their performance. Considering that jurisdictional REDD+ program activities are assessed against historical performance, if a jurisdiction implements a REDD+ program and it is successful, then it will have demonstrably reduced emissions compared to its historic baseline and BAU, demonstrating the “additionality” of the emissions reductions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1678 | Darcy Jones                    | 0                   | ge              | Some of the proposed criteria are difficult to assess for certain sectors or activities; this could introduce a selection bias into the process that would discourage the inclusion of otherwise viable mitigation. For example, it may be difficult to assess the financial indicators associated with the social and environmental co-benefits of mitigation activities in the land sector, making such activities appear less attractive or even ineligible under the IC-VCM approach.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Revise criteria to avoid a selection bias or exclusion of the land sector.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 1679 | Darcy Jones                    | 0                   | te              | Additionality is meant to demonstrate whether an activity, reduction, or removal would have taken place under business as usual (BAU) or if it’s “additional” due to a crediting program. Rather than the currently drafted Section 8.4 Additionality for Jurisdictional REDD+ Activities in the AF, a more appropriate approach to assessing the additionality of jurisdictional REDD+ programs is one that is performance based (e.g., performance threshold approach). Only emissions reductions and removals that are below (or above, for removals) historic emissions in the historic reference period are verified and eligible to be issued as credits. The crediting level is required to get more stringent over time (decrease for emissions reductions, or increase for removals), so it gets more conservative, and therefore continues to be additional. In other words, if the reference level goes up for emissions (down for removals) between crediting periods, then the jurisdictional REDD+ activity proponent would not be eligible to participate in the carbon crediting program. This means that the crediting level would reflect any progress as the result of changes in laws or policies as it is based on the average of past emissions. | EDF suggests that a more appropriate approach to assessing the additionality of jurisdictional REDD+ programs is one that is performance based (e.g., performance threshold approach). As part of a performance-based threshold approach to additionality, all jurisdictional REDD+ activity proponents must submit a REDD+ implementation plan outlining new and ongoing REDD+ activities to the carbon-crediting program and define where activities are occurring for transparency, but don’t need to assign explicit emissions reductions and removals per location. Only reported, monitored, and third-party independently verified emissions that are below the historical crediting level, or above the removals crediting level, are eligible to receive credits. The crediting level must be updated prior to the start of any new crediting period, and it must be more stringent (i.e., lower for reductions, higher for removals) than the previous crediting level, to ensure that performance must keep improving to continue to generate credits. |
| 1680 | Individual/employee, Carbonext | 0                   | te              | Although we support the importance of considering a robust legal requirements assessment for additionality, some other aspects may be taken into account in the process. However, it is greatly important to be made clear throughout the consultation document that mitigation activities can be considered additional even when there are legal requirements for preservation, but they are not enforced. It is definitely not clear enough in the document.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | A assesement based on reliable data and information should be requested that demonstrate that in the place in question, despite the legal obligation, deforestation and degradation are the common practice, the business as usual                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| 1680 | Individual/employee, Carbonext                  | 0                                                                  | te              | The tropical forest areas in the Brazilian Amazônia are legally under the Brazilian Forest Code, a legislation that requires that each rural proprieties maintain 80% of its area as native forest intact, i.e., according to the regulation only 20% of the property could be deforested. Though, this scenario is completely far from what is observed in the Brazilian Amazon region. According to the latest MapBiomas study[1], over 40% of the deforestation happens in private owned areas, and 99% of all deforestation detected in the Brazilian Amazon Biome has a degree of illegality. In some region, inside the biome, studies where able to show that over 92% of the deforestation goes beyond the 20% allowed, therefore the legally preserved area also suffers clear cut[2]. | 0                                                                           |
| 1680 | Individual/employee, Carbonext                  | 0                                                                  | te              | Although there is high illegality rate, it is not commonly observed any punishment or penalty for the many who deforest over the legally permitted area. According to the MapBiomas 2021 report4, only 1.2% of the illegal deforestation alerts raised in 2020 resulted in infraction notices.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                           |
| 1680 | Individual/employee, Carbonext                  | 0                                                                  | te              | The overall conclusion demonstrates that the common practice observed in the Amazon region is the non-compliance with the regulatory framework defined by the Brazilian Forest Code, combined with absent enforcement practices. Therefore, if the CCP do not reassess this aspect, it will make the forest carbon crediting impracticable and avoid the development of effective projects that are (and will be) working to change this huge tropical degradation reality. We strongly ask ICVCM to consider areas with low legal enforcement scenarios eligible for CCP credits, or the loss of native vegetation in Amazon Forest (and others) will likely continuously increase.                                                                                                            | 0                                                                           |
| 1680 | Individual/employee, Carbonext                  | 0                                                                  | te              | In summary, if mitigation activities required by legal requirements are not considered additional (even if those legal requirements are not enforced), no carbon finance can be used to counter these trends, and vast areas of native vegetation with high carbon stocks will continue to be at risk of deforestation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                           |

| 1683 | Individual/employee, Perspectives Climate Group | Criterion 8.7: Demonstration of new or enhanced mitigation actions | ge              | Ok                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | N/A                                                                         |
| 1684 | Eftimiya Salo                                   | Criterion 8.7: Demonstration of new or enhanced mitigation actions | te              | Only additional mitigation activities should be credited which go beyond the baseline (incl. NDC and national targets).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | N/A                                                                         |
| 1685 | Individual/employee, Carbonext                  | Criterion 8.7: Demonstration of new or enhanced mitigation actions | te              | Overall, the criteria laid out in the Assessment Framework is more ambitious than most standards available today. It could be more interesting to introduce threshold requirements that reflect practices achievable in developing countries today, as JREDD programs today are nascent and have undergone extensive consultation processes to determine local inclusion and quality assurance.                                                                                                                                                                                                                                                                                                                                                                                                 | We support option 2 of not adding additional requirements for JREDD program |
| 1685 | Individual/employee, Carbonext                  | Criterion 8.7: Demonstration of new or enhanced mitigation actions | te              | It is important to highlight that project-based credits that have being developed since before J-REDD implementation should be considered as eligible CCP credits. The nesting process may not be efficient or viable enough to incorporate all project-based credits that are being properly generated in the area before the jurisdictional operationally takes place.                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                           |

| 1687 | Mark Glossoti        | Rationale                                                                                      | ge              | Jurisdictional programs have a crucial role to play in scaling forest protection activities and furthering environmental activities. We strongly advocate that the CCPs lay our parallel guidance where different criteria are needed vs. project-based approaches. For example, there is a limit to the amount of information to be provided on jurisdictional programs to guarantee smooth operations and monitoring of jurisdictional programs on a day-to-day basis. Excessive information disclosure obligations of jurisdictional programs may threaten their feasibility. Instead, the disclosure of carbon calculation methods and documents and stakeholder engagements could be integrated into the validation and verification reports. This should suffice to provide evidence of conformance with the jurisdiction's chosen methodology and CCPs' standard requirements. The draft AF's emphasis on financial additionality is not suitable for jurisdictional programs. We suggest limiting criterion 8.7 to option 2 and the use of existing performance standards for jurisdictional REDD programs. | -                                                                                                           |
| 1687 | Mark Glossoti        | Rationale                                                                                      | ge              | The restriction placed on the method of nesting seems to be unnecessary in ensuring the integrity of the carbon credit. CIX believes that nesting methodologies that have been established by independent standards organisations (e.g. ART/TREES) should be included in the nesting structures in the CCPs. To ensure integrity, greater emphasis should instead be placed on the monitoring of the implementation and transparency of nesting structures. Nesting arrangements should be neither prescribed nor proscribed, and instead left to the jurisdictions and its stakeholders to determine in line with appropriate, CCP-defined safeguards and guidance.                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                           |
| 1688 | Darcy Jones          | Rationale                                                                                      | te              | Regarding the sentence, "It should be noted, however, that it is sometimes difficult to attribute observed changes in emission to the mitigation actions due to interannual variability and factors outside of the mitigation activity, which can influence emissions," this does not need to be separately stated as a note. It is unclear why this note is included in the Rationale of this section - the note does not impact the identification of a given "mitigation action". Additionally, the fact that "factors outside the mitigation activity" can influence emissions is not specific to just the land sector and should not be isolated as such.                                                                                                                                                                                                                                                                                                                                                                                                                                                      | The specific sentence noting difficulty in attributing changes due to mitigating actions should be removed. |
| 1688 | Darcy Jones          | Rationale                                                                                      | te              | Although it is good that the Expert Panel has recommended that additionality be treated differently for jurisdictional REDD+ programs than for REDD+ projects, some of the proposed requirements are inappropriate, unnecessary, and/or onerous for developing country governments. The rationale for supporting this Criterion should be expanded.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                           |
| 1689 | Anonymous            | Table 41 – Requirements for Criterion 8.7: Demonstration of new or enhanced mitigation actions | ge              | In the Criterion 8.7 "Demonstration of new or enhanced mitigation actions" we support option 2 of not adding additional requirements for JREDD programs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | none                                                                                                        |
| 1690 | Anonymous            | Table 41 – Requirements for Criterion 8.7: Demonstration of new or enhanced mitigation actions | ge              | The last line of this table is confusing as there are no sub-paragraphs a) and b)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Clarify the question                                                                                        |
| 1691 | Anonymous            | Table 41 – Requirements for Criterion 8.7: Demonstration of new or enhanced mitigation actions | te              | We support option 2 of not adding additional requirements for JREDD programmes. It is unlikely that activities today would succeed in demonstrating expected revenues received per credited tCO2e are sufficient to cover expected costs /tCO2e achieved. This requirement would effectively preclude JREDD credits from achieving the CCP certification. This also has the potential for administrative bottle neck and the project developers' willingness or legal rights, to disclose internal financials due to competitiveness implications.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | see above                                                                                                   |
| 1692 | Anonymous            | Table 41 – Requirements for Criterion 8.7: Demonstration of new or enhanced mitigation actions | ge              | Criterion 8.7 and Table 41 require jurisdictional REDD+ to prove the use of new and enhanced mitigation activities. XXXX is uncertain of how this requirement can be met, since forest conservation generally follows tried and tested methods and practices that are several years and generations old. They still meet the additionality requirements based on financial attractive and other elements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Criterion 8.7, Table 41                                                                                     |

|------|----------------------|------------------------------------------------------------------------------------------------|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1692 | Anonymous            | Table 41 – Requirements for Criterion 8.7: Demonstration of new or enhanced mitigation actions | ge              | Our concern is that this requirement is subjective to what is new or unique, and it can be limiting rather than encouraging a higher industry standard                                                                                                                                                                                                                                                                                                        | We suggest removing Option 1 on the table for the reason that it would not be achievable by jurisdictions.                                                                                                                                                                                                                                                                                                                                  |
| 1692 | Anonymous            | Table 41 – Requirements for Criterion 8.7: Demonstration of new or enhanced mitigation actions | ge              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                             | We support Option 2 in the table, and it sets a sufficiently good and achievable threshold                                                                                                                                                                                                                                                                                                                                                  |
| 1693 | Anonymous            | Table 41 – Requirements for Criterion 8.7: Demonstration of new or enhanced mitigation actions | te              | With regard to Additionality,XXXX would like to identify areas where the Assessment Framework disadvantages NCS. Criterion 8.7 and Table 41 require jurisdictional REDD+ to prove the use of new and enhanced mitigation activities. Forest conservation generally follows tried and tested methods and customary practices that are several years and generations old.                                                                                       | We suggest removing Option 1 on the table for the reason that it would not be achievable by jurisdictions.                                                                                                                                                                                                                                                                                                                                  |
| 1693 | Anonymous            | Table 41 – Requirements for Criterion 8.7: Demonstration of new or enhanced mitigation actions | te              | While this requirement may incentivize new technology outside of NCS, our concern is that it would disincentive J-REDD.                                                                                                                                                                                                                                                                                                                                       | We support Option 2 in the table, and it sets a sufficiently good and achievable threshold.                                                                                                                                                                                                                                                                                                                                                 |
| 1694 | Carolyn Ching        | Table 41 – Requirements for Criterion 8.7: Demonstration of new or enhanced mitigation actions | te              | Prior consideration of carbon finance is not necessary when there are strong approaches to additionality.                                                                                                                                                                                                                                                                                                                                                     | Criterion 8.7 should be limited to Option 2 and performance standard approaches currently utilized for JREDD should be approved.                                                                                                                                                                                                                                                                                                            |
| 1695 | Ivan VALENCIA        | Table 41 – Requirements for Criterion 8.7: Demonstration of new or enhanced mitigation actions | ge              | Option 2 is the recommended. Option 1 is unnecessary and may hinder many REDD+ activities. Even if the cost of REDD+ activities is higher than the value of the credits received (for instance counting the cost of government enforcement against deforestation) this does not negate the mitigation action.                                                                                                                                                 | Refer to comments on this section                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1696 | Ivan VALENCIA        | Table 41 – Requirements for Criterion 8.7: Demonstration of new or enhanced mitigation actions | ge              | Option 2 is the recommended. Option 1 is unnecessary and may hinder many REDD+ activities. Furthermore, the additionality of Jurisdictional REDD+ is given by the Forest Reference Emission Level as set by a country, and should not be dictated by other parameters, because this would run against the agreements of the Warsaw Framework for REDD+ at the UNFCCC.                                                                                         | Refer to comments of thi section                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1697 | Alexandre Grais      | Table 41 – Requirements for Criterion 8.7: Demonstration of new or enhanced mitigation actions | te              | There may be programs in a JREDD landscape (e.g.: a USAID natural resource management project) that have an impact on emission reductions or removals but do not claim credits. A jurisdiction would be aware of the project and have approved it, but its financing would not come from the carbon market. Distinguishing between these activities and a JREDD's programs activities from a GHG accounting perspective could prove particularly challenging. | We would recommend removing option 1.                                                                                                                                                                                                                                                                                                                                                                                                       |
| 1698 | Darcy Jones          | Table 41 – Requirements for Criterion 8.7: Demonstration of new or enhanced mitigation actions | te              | Considering this part of the guidance is posing a requirement on the carbon-crediting program, rather than on the mitigation activity proponent (i.e., the relevant jurisdiction), the provision would be clearer if it were rewritten to emphasize that the carbon-crediting program documents require a jurisdictional REDD+ implementation plan, rather than requiring specific activities.                                                                | Rewrite part 2) to say: "The mitigation activity proponent (i.e., the relevant jurisdiction) must develop a jurisdictional REDD+ implementation plan, strategy or program document, action plan, or scoping plan, which identifies jurisdictional REDD+ activities that shall include, inter alia, policies, laws, technical assistance programs, enforcement measures, regulations, legal rights frameworks, and/or incentive mechanisms." |

| 1699 | Darcy Jones                                     | Table 41 – Requirements for Criterion 8.7: Demonstration of new or enhanced mitigation actions | te              | Financial additionality is not applicable to jurisdictional REDD+ programs, but rather is a relic of project-based activities. Also, it may be difficult to assess the financial indicators associated with the social and environmental co-benefits of mitigation activities in the land sector, making such activities appear less attractive or even ineligible under the IC-VCM approach.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | EDF supports Option 2 in the Full threshold of Table 41, Criterion 8.7, that is “Option 1 is not necessary.” (i.e., suggest deleting Option 1 in Table 41 and keep Option 2.) Clarify that it is sub-sections (1) and (2) above that are sufficient. They are currently drafted under sub-paragraph a), so the way that “Option 2” is phrased does not align with the preceding list options, as there is no sub-paragraph b) in Table 41. |
| 1700 | Anonymous                                       | Table 41 – Requirements for Criterion 8.7: Demonstration of new or enhanced mitigation actions | ge              | Criterion 8.7 (Option 1), Additionality                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | na                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1700 | Anonymous                                       | Table 41 – Requirements for Criterion 8.7: Demonstration of new or enhanced mitigation actions | ge              | It is unclear why the expected revenues should be larger than the expected costs per tonne. Lower returns can also still result in additional activities/programs. It is not clear why this should impact additionality on a jurisdictional scale.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 1703 | Anonymous                                       | Table 41 – Requirements for Criterion 8.7: Demonstration of new or enhanced mitigation actions | te              | On 'initial' requirements: The initial phase effectively requires either the offset standard or the jurisdiction to meet the full threshold requirement immediately, which does not constitute an actual initial phase. We suggest that the initial phase allows existing frameworks currently approved in the two JREDD Standards to be applied to JREDD. Considering the incipient nature of the JREDD market, imposing new rules before the already-approved rules have been applied could harm the progress made to date by JREDD jurisdictions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | see comments                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 1703 | Anonymous                                       | Table 41 – Requirements for Criterion 8.7: Demonstration of new or enhanced mitigation actions | te              | On 'full requirements': We support OPTION 2. Jurisdictions must use finance from non-carbon funding sources and budgets towards aspects of their REDD strategy, and they will include and leverage existing policies and initiatives, in addition to implementing new initiatives that are financed through carbon offset sales. Attempting to link every aspect of a well-developed, cross cutting REDD+ Strategy to carbon finance will not only be difficult, but it is also doesn't add value to the additionality argument. Deforestation is increasing throughout the tropics (and semi-tropics) primarily due to extensive pressure from alternative agricultural land uses. Carbon finance is urgently needed to fund many critical aspects of a successful REDD+ strategy. These include; articulating a REDD+ Strategy itself, development and implementation of benefit sharing mechanisms, participatory processes and consultation work, implementing a safeguards system, setting up or enhancing MRV systems, developing communications platforms, building internal capacity, developing project nesting requirements, and many other activities associated with carbon Standard documentation and validation and verification. Creating incentives for private forest owners to stop or reduce deforestation relies on robust and well-capitalized benefit schemes, and carbon finance will play a critical role in the success of these schemes. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| 1707 | Carolyn Ching        | Criterion 8.8: Evidence showing expectation of carbon credits                             | te              | Prior consideration of revenue for jurisdictional programs is not necessary.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Please remove this requirement for jurisdictional programs.                                                                           |
| 1708 | Darcy Jones          | Criterion 8.8: Evidence showing expectation of carbon credits                             | te              | While the AF has included the expectation of results-based finance (and not just carbon credits) as a test of additionality, the criteria do not sufficiently consider the unique history of REDD+. The current approach to assessing additionality is not appropriate for jurisdictional-scale REDD+ programs as it does not recognize the wide-ranging, long-standing, multilateral efforts that have contributed to the development of REDD+ policies and mechanisms, could present challenges to low-capacity countries, and could introduce a selection bias against the land sector, including forests.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Revise financial viability indicators in the context of jurisdictional REDD+. Also see specific proposals provided in other comments. |
| 1708 | Darcy Jones          | Criterion 8.8: Evidence showing expectation of carbon credits                             | te              | Proposing financial viability as an indicator to assess additionality is not appropriate in the context of a jurisdictional REDD+ program, and not necessarily reflective of credit quality. Rather, it is an artifact of additionality tests typically applied to projects and misunderstands how governments make decisions as it is focused primarily on how commercial entities make decisions. While at a smaller scale, financial analysis may correspond to barriers to entry, and therefore additionality, at jurisdictional scales the same cost-benefit logic does not apply.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                     |
| 1708 | Darcy Jones          | Criterion 8.8: Evidence showing expectation of carbon credits                             | te              | The approach to assessing financial viability as an indicator of additionality is unduly complex and, as such, could present significant challenges to low-capacity countries, which already face several options and complex processes for crediting their mitigation contributions. Rather than leading to quality, these criteria could burden the beneficiaries in a way that limits the delivery of benefits, restricts scale, and potentially leads to inequitable outcomes, since the poorest and most vulnerable will find these obstacles the most challenging to overcome.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                     |
| 1709 | Anonymous            | Criterion 8.8: Evidence showing expectation of carbon credits                             | ge              | Criterion 8.8,                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | na                                                                                                                                    |
| 1709 | Anonymous            | Criterion 8.8: Evidence showing expectation of carbon credits                             | ge              | Can there be conflicts between the requirements listed in this section and the regulatory additionality discussed in earlier sections? In other words, should jurisdictional programs be viewed as regulations and mandatory policy or merely as proposed activity plans?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                     |
| 1711 | Richard Tipper       | Table 42 – Requirements for Criterion 8.8: Evidence showing expectation of carbon credits | te              | Judgements regarding expectation of carbon credits are likely to be highly subjective, difficult to substantiate and of limited value in determining additionality for REDD activities. There has been so much hype surrounding REDD finance of various kinds that almost any forest department, NGO or local authority could claim that it had some expectation or hope. The principal determination of additionality should be made on an assessment of the extent / severity of risk of forest loss and whether those risks are being addressed by the project. My suggestion is for forest risk levels to be determined regionally by experts with knowledge of the region and for those risk levels to be applied for all projects within a region.                                                                                                                                                                                                                                                                                                                                                                                                     | Delete the section requiring "expectation of credits" as it is both subjective and pretty meaningless.                                |
| 1712 | Anonymous            | Table 42 – Requirements for Criterion 8.8: Evidence showing expectation of carbon credits | te              | Full requirements must be eliminated. If a program started with readiness money under FCPF, for example, it clearly has anticipated carbon revenue. Requiring evidence that occurred before that is likely impossible for many countries. This also doesn't make sense when considering jurisdiction-wide deforestation. "Evidence of consideration" ... of which activity? These programs are complex and consistent of many different policies, strategies, incentives and regulations. Any one of these could be used to establish prior consideration- making this fairly meaningless. Also a country with forests in the developing world would have to be living under a rock to not have considered carbon markets at this point, as most are already part of FCPF, UN REDD or other REDD programs. Requiring this at a jurisdictional level would be like asking a country to prove prior consideration under Article 6.2. It doesn't make sense. National emission reductions are against a base-year, just as deforestation is based on historical deforestation and improvements against that "reference level". This requirement is meaningless. | Remove "prior consideration" requirement from JREDD.                                                                                  |
| 1713 | Ivan VALENCIA        | Table 42 – Requirements for Criterion 8.8: Evidence showing expectation of carbon credits | ge              | The value of this criterion is not clear, and it may on the contrary be an onerous burden and an additional impediment for REDD+ countries, and go contrary to additionality requirements of the Warsaw Framework for REDD+. The recommendation is to delete it altogether.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Refer to comments on this section                                                                                                     |

They make an ex-ante assessment of the non-permanence risk either across the portfolio or (as in the case of the VCS) in each project and stipulate a credit buffer amount in percentage on this basis. Whenever the project issues credits, the buffer share will be deducted by the standard and moved into a standard-wide buffer account. All credits – those issued to the project developer and those issued into the buffer account – are permanent credits. If a project faces a reversal event (and an associated release of GHG), the buffer account will compensate for this release through a retirement of credits in this amount. | Voluntary standards have gone a different way. It was a disaster under the CDM. No one wants a unit that needs to be tracked over time and replaced at an uncertain future cost. This is a useless distraction that would significantly impair market functioning with the heavy administrative burden of tracking such units.                                                                                                                                                                                                                                                                                                                                                                                    | Do not set a sector-wide approach to permanence using outdated provisions. Instead, focus on program governance. Review the existing standards and identify a work program for improvements over time, if needed. This could include, for example, a future requirement for re-insuring the buffer pools (noting that this cannot be required now as the products don't exist).                                                                                                                                                                                                                                                                                                                |
| 1721 | Anonymous                                       | 0                                                                                         | te              | Tonne year accounting could easily require a minimum duration. This is unnecessarily limited and offers no good justification of why this approach shouldn't be used. The discount approach suggested further down appears to a form of tonne-year accounting.                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

Already, the media have an advantage in the news wars about carbon projects and non-permanence risk given salient topic of forest fires and the technical complexity of GHG crediting programs' safeguards and assurances. Introducing temporary crediting would be a disservice, given the safe assumption that media will easily distort any technical benefits.                                                                                                                                                             |

| 1723 | Individual/employee, Agreena ApS                                     | 0                   | te              | Agreena ApS: When examining Permanence, we foresee that the recognition of the different solutions for carbon removals and emission reductions could bring added value to the wide applicability/utilization of the CCPs. As we are approaching this from an agricultural perspective, we agree that it is crucial to ensure permanence, and also that there should be recognition of the natural biological limitations related to the permanence of carbon storage in particular types of NbS. For instance, it would be necessary to understand the differences in duration of permanence between different types of projects, i.e. agricultural soils. Making existing requirements for Permanence more rigid may have implications for NbS projects that are already adhering to well-recognized global standards. The CCPs should provide more clarity surrounding NbS credit permanence in comparison with other types of crediting projects; and consider allowing programs to set their permanence period through the use of a permanence assessment tool that can be tailored to the different project types. | N/A                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 1724 | Anonymous                                                            | 0                   | ge              | Regarding mitigation measures to address the risk of permanence, classification of types by material, low, and no is reasonable. Is it correct to assume that if the required mitigation measures are taken, the three types of risk will be equivalent? It is practical to divide mitigation activities into CCS and land use change when permanence is reviewed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | No specific language proposed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| 1724 | Anonymous                                                            | 0                   | ge              | It is a requirement to impose a long-term monitoring obligation on operators for 50-100 years beyond the credit issuance period. For private companies, such a long-term legal obligation is an excessive burden, and there are no credits available at this time. It is not a realistic requirement. Alternative approaches such as buffer reserve should be allowed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| 1725 | Phil Cryle                                                           | 0                   | te              | Consideration should be given to how the maintenance of the carbon stock can be achieved on an ongoing basis that will achieve truly permanent reductions in global atmospheric carbon concentrations. The issue with using specific time limits for the monitoring and maintenance of carbon stocks such as 50 or 100 years, is that this does not ensure the long-term / permanent locking up of carbon in sinks (i.e., the carbon could be released after 50 or 100 years). Given this issue is mostly relevant for natural-climate solutions that are subject to pressures (e.g., land use change, wildfires etc.), consideration should be given to how technology, such as high resolution Earth Observation data, can support the monitoring of carbon stocks over time (i.e., for vegetation cover) with red flags being raised when losses occur (e.g., due to land use change).                                                                                                                                                                                                                               | Consideration should be given to how the maintenance of the carbon stock can be achieved on an ongoing basis that will achieve truly permanent reductions in global atmospheric carbon concentrations. The issue with using specific time limits for the monitoring and maintenance of carbon stocks such as 50 or 100 years, is that this does not ensure the long-term / permanent locking up of carbon in sinks (i.e., the carbon could be released after 50 or 100 years). | 1725 | Phil Cryle                                                           | 0                   | te              | The exact operation and governance arrangements for the use of technology would need to be worked out, but it's likely that it would need to be globally co-ordinated. Advantages to having a centrally co-ordinated approach to monitoring permanence include consistency in assessment and the opportunity for cost efficiencies. The costs of acquiring and using such data to ensure permanence could be recovered through levying a small additional cost to each transaction, which would likely be equivalent to or less than requiring ongoing monitoring over 50 to 100 years (i.e. the current CCP requirements). The use of such technology / information could also (potentially) be used to track leakage, although this is harder to do as the connection between carbon offset activities in one geographic location and emitting activities in another location can be challenging to establish with certainty.                                                                                                                                                                                         | The exact operation and governance arrangements for the use of technology would need to be worked out, but it's likely that it would need to be globally co-ordinated. | 1726 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | 0                   | ge              | The first two proposed options in the Assessment Framework for assuring permanence require either 1) a 50- year legally binding project monitoring and reversal compensation term, or 2) a 25 year legally binding minimum MRV term with discounted crediting (e.g., 25% credits per year). The 100 years as “permanent” is proposed based on the 100-year GWP’s, which have no scientific basis in relation to the permanence of carbon emissions reductions or removals in the atmosphere. In the “full threshold” stage, 100 year legally binding commitment is required. Insurance of the buffer pool is also required, which no crediting programs currently have.                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1726 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | 0                   | ge              | The ICVCM should define option 3 for jurisdictional REDD+ aligned with the approaches currently used by Standards. This includes ART’s legally binding approach to requiring a risk-based buffer pool contribution that is non-refundable, requirements to monitor, report and compensate for reversals during the crediting period and to replenish the buffer pool for reversal volumes beyond what the program has contributed as well as requiring the retirement of buffer pool credits when exiting the program.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1726 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | 0                   | ge              | We agree institutional stability is important to ensuring long-term permanence. However, the likelihood that an organization, much less a government, will persist for 100 years is extremely low. We also sincerely hope that the carbon market and the world look different in 100 years.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1726 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | 0                   | ge              | RECOMMENDATION: Define Option 3 for Jurisdictional REDD+ to incorporate compensation mechanisms such as those used by ART to ensure permanence. Eliminate the requirements for legally binding multidecadal commitments to MRV for REDD+ as well as for insurance of the buffer pool.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1727 | Luzia Bieri                                                          | 0                   | ge              | We recommend that IC-VCM focus its assessment on the crediting programs’ existing approaches to assess and address non-permanence rather than creating a new standard.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | We recommend that IC-VCM focus its assessment on the crediting programs’ existing approaches to assess and address non-permanence rather than creating a new standard.                                                                                                                                                                                                                                                                            |
| 1728 | Individual/employee, Conservation International                      | 0                   | ge              | The document correctly identifies the temporary nature of biosphere carbon storage, yet it makes no suggestion to reevaluate the use of the term “permanence” and its replacement with a more suitable alternative.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | The CCP can continue to evaluate programs’ rules, requirements, and accounting of “permanence” while also encouraging a transition to a more appropriate term, as is being discussed more widely within the space.                                                                                                                                                                                                                                |

| 1730 | Trevor Paul                                                          | 0                   | te              | Viresco Solutions believes that the proposed framework is too detailed and prescriptive. The primary review should focus on assessing existing approaches to addressing non-permanence in each program, rather than by prescribing a one-size fits all approach and requiring the same criteria across the board. The current approach does not provide sufficient flexibility to address different risk profiles associated with specific activity types or regions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 1730 | Trevor Paul                                                          | 0                   | te              | Project types, such as nature-based solutions, that require a lengthy commitment to monitor or compensate for reversals will be challenging to bring forward under the current approach. In particular, the 100-year monitoring and compensation commitment could deter participation in crediting programs. The net result may be the implementation of crediting systems that favours technology solutions. Therefore, the IC-VCM should consider the use of buffer pools and other schemes that manage risk and compensate for reversals.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| 1732 | Individual/employee, Carbon Engineering/1PointFive                   | 0                   | ed              | Permanence, or rather durability, over a climate relevant time period (i.e. 100 years) will be critical to maintaining environmental integrity for the voluntary carbon market. We are strongly supportive in recognizing that project proponents must be required to prove the durability of their projects over the long term. We would also like to emphasize that the approach for determining the long-term climate durability of a given project should be based on a well-thought-out risk assessment framework. For example, the existing standards for secure geologic carbon storage in the United States (US EPA Class VI Rule 40 CFR § 146.84(c)(1) & (2) provide an excellent process for identifying, quantifying, and mitigating risks to geologic storage sites. Based on this work, there is currently ample evidence to show that the long-term reversal risk for geologic sequestration projects is incredibly small and these prudent and practical risk assessment frameworks are incredibly effective. | We believe that the IC-VCM has a unique opportunity to provide guidance within the CCPs to help define a similar risk assessment framework that could be used to equate the permanence of varying carbon projects across the abatement to removal spectrum. We implore the IC-VCM to take advantage of this opportunity and lay a truly permanent foundation for environmental integrity upon which to build the future voluntary carbon markets. |

| 1733 | Carolyn Ching        | 0                   | te              | The AF has two components to addressing permanence. It asks for projects to make long-term commitments and it requires a mechanism to compensate for reversals. The recommendations provided in both of these sections are difficult for NCS mitigation activities to achieve. GHG crediting programs currently use the buffer pool to assess reversal risk and set aside credits to compensate for reversals. This approach has the same effect as the requirements under criterion 9.2, but it doesn't require GHG crediting programs to implement structural changes that will have a ripple effect in the marketplace. The buffer pool approach incentivizes projects to set long-term commitments (e.g., projects and programs can earn a lower risk rating). It also provides an incentive to landowners to maintain projects and either maintain or lower the risk of reversal (e.g., Option 2 a shorter commitment period with incentives). Finally, it includes a buffer pool which serves as a compensation mechanism in the case of reversals.                                                                                                                                                                                                                                                                                                                                                   | We recommend ICVCM adjust the requirements for permanence to align with current best practice used by the GHG programs and recognize that some of the key criteria are addressed by the buffer pool approach.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| 1734 | Ivan VALENCIA        | 0                   | ge              | First of all there is a conflation of the risk of reversals in forest activities between removals and emission reductions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 1734 | Ivan VALENCIA        | 0                   | ge              | For removals from forestry activities, there is a reversal risk if the GHG reservoir burns or is destroyed by a hurricane.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 1734 | Ivan VALENCIA        | 0                   | ge              | However, emission reductions from Reduced Deforestation have a different risk profile than removals from forestry. Emission reductions from avoided deforestation in x hectares in each year obtained in years 1 and 2 (total: 2x) are a benefit to the atmosphere. The reversal risk materializes in year 3 if and only if deforestation in year 3 exceeds 3x hectares, so that the avoided deforestation in years 1 and 2 is reversed. If there is no reduced deforestation in year 3 but deforestation does not exceed x ha there is no reversal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 1734 | Ivan VALENCIA        | 0                   | ge              | Similarly, it is not true that there is Zero risk of reversals for activities leading to lower demand for fossil fuels. There can be indeed cases when reversals occur. Let's take as an example the establishment of a solar farm and batteries on an island that replaces a diesel power plant for electricity generation. The solar power works on Year 1 and Year 2 but is destroyed by a hurricane at the end of year 2 and the island therefore reverts to the diesel power plant for electricity in year 3. If electricity demand in the island has risen, the use of fossil fuels in year 3 may soon generate emissions that not only annul the previously expected reductions from year 3, but also the reductions actually obtained in years 1 and 2, annulling those savings and therefore causing a reversal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 1734 | Ivan VALENCIA        | 0                   | ge              | The point made here is that the classification of permanence risk should be deemed LOW for all emission reduction activities, including reduced deforestation. Otherwise, reduced deforestation activities will be less attractive for project and program developers, at the time when there is an urgency to reduce deforestation using all tools.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 1734 | Ivan VALENCIA        | 0                   | ge              | That point was asserted on para 22. of the Annex to Decision 2/CMA.3 when discussing reversals, demanding full compensation only for reversals of emission removals (not for emission reductions from REDD+): 22 a) Ensures environmental integrity, including: (...) "(iii) By minimizing the risk of non-permanence of mitigation across several NDC periods and when reversals of emission removals occur, ensuring that these are addressed in full;                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 1735 | Darcy Jones          | 0                   | ge              | The likelihood of permanence depends fundamentally on spatial and temporal scale. Research has shown that large scale approaches are less impacted by the risk of reversals. (See Schwartzman et. al. 2021. Env. Research Letters: <a href="https://iopscience.iop.org/article/10.1088/1748-9326/ac18e8">https://iopscience.iop.org/article/10.1088/1748-9326/ac18e8</a> .) The larger the spatial scale of reductions and the longer the program persists, the more risks of shocks (e.g., fires, fraud, policy reversals) can be pooled across locations, actors, and time periods; anticipated risks can also be factored into a conservative jurisdictional baseline at a large enough scale. The pertinent threshold for JREDD+ is the level of administrative boundary, i.e., the level at which political decisions are made; we support either national or one-level-down subnational jurisdictions as the relevant threshold. This pooling reduces the likelihood that idiosyncratic reversals at any one place or time will impact the net climate benefits recognized under a program. The crux for assessing the permanence of any net emissions reduction over time is whether it brings a risk that emissions will later rebound above expected business-as-usual (BAU) levels, providing a temporary climate benefit but reversing all or part of the cumulative gains over a longer period. | The permanence criteria do not adequately consider the impacts of scale, both temporal and spatial, on the risk of reversals. The permanence criteria need to recognize that the robustness of net emission reductions critically depends on scale of actions and policies. The criteria should recognize that scale, including jurisdictional administrative boundary and duration in time, as well as sectoral coverage, should be central to evaluating environmental robustness of any emissions reductions. Therefore, at minimum, jurisdictional approaches to implementation (which include nested site-scale activities) should be recognized for reducing risk or reversals, and there should be explicit consideration of the role of jurisdictional implementation, monitoring, and accounting to both mitigate and address the risk of reversals. |

| 1735 | Darcy Jones          | 0                   | ge              | Reducing emissions at large scales and over longer timeframes while still meeting underlying economic demands may generate hysteresis at the system level, locking in socioeconomic and technological changes. Reducing large-scale deforestation while meeting underlying economic demand requires new production systems and social/institutional infrastructure—more intensive agriculture, public and media awareness, enforcement institutions, protected areas and indigenous territories, participatory processes and trust building among stakeholders—that once created are not easily undone. Such systemic changes reduce the chance of reversals and increase the chances of progressively larger net cumulative benefits compared to BAU. Moreover, the longer a change persists, the less likely it is to be reversed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1735 | Darcy Jones          | 0                   | ge              | According to the assessment of the IPCC Special Report on Land Use, Land Use Change and Forestry, emissions reductions where economic output from previous sources of emissions is maintained or increased are permanent, even if emissions subsequently increase. (See Watson et. al. "IPCC, 2000: Special Report on Land Use, Land-Use Change and Forestry" (Publication 9780521804950, Cambridge University Press, UK. pp 375; <a href="http://www.ipcc.ch/ipccreports/sres/land_use/index.php?idp=73">http://www.ipcc.ch/ipccreports/sres/land_use/index.php?idp=73</a> ). This is the case for Brazil's reductions of deforestation from 2004 - 2012 while soy production and cattle herd grew. (See Schwartzman et. al. 2021. Env. Research Letters: <a href="https://iopscience.iop.org/article/10.1088/1748-9326/ac18e8">https://iopscience.iop.org/article/10.1088/1748-9326/ac18e8</a> .) In addition, jurisdictional approaches avoid "adverse selection", where participants in offsets programs self-select, favoring reductions that would have occurred without incentives. (See DeFries et al 2022. <a href="https://www.science.org/doi/abs/10.1126/science.abo0613">https://www.science.org/doi/abs/10.1126/science.abo0613</a> and van Benthem A and Kerr S 2013 J. Public Econ. 107 31–46 Scale and transfers in international emissions offset programs – ScienceDirect.) | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1736 | Darcy Jones          | 0                   | ge              | The permanence criteria fail to adequately consider the long-standing government and local stakeholder partnerships as well as policy and legal reforms fundamental to jurisdictional REDD+ programs, and the buffer and deductions requirements of jurisdictional REDD+ standards on the risk of reversals. As a result, the criteria fail to explicitly recognize the role of jurisdictional REDD+ as a legitimate alternative approach. Jurisdictional REDD+ programs that shift landscape level systems and reduce broad deforestation pressure and increase food provision are more likely to be permanent.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | As detailed in further comments, the Assessment Framework should recognize jurisdictional scale efforts as legitimate "alternative approaches" which take an approach more fitting to their circumstances in the assessment of permanence requirements and should consider alternative incentives for compensation mechanisms other than a time-bound approach.                                                                                                                                                                                                                                                                                                                                    |
| 1737 | Darcy Jones          | 0                   | te              | EDF would not support a 100-year requirement for monitoring and compensation as it is unrealistic for several activity types, including agricultural activities requiring consistent practices for the 100-year period, coastal wetlands, and JREDD+. The 50-100-year requirement for the compensation mechanism (i.e., buffer) is not realistic for jurisdictional REDD+ programs; governments will not, and in some cases cannot, sign an obligation for 100 years; nor does tying a buffer pool to a timeframe, as opposed to a percent of total credits, indicate high-quality.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | To guarantee permanence, the Assessment Framework should recognize the impact that appropriate incentives can have on mitigating reversal risk, and their role in providing a pathway for continued performance. The focus should be on providing governments with the incentives they need to continue performing (e.g., recouping uncertainty deductions over time, increasing removals credits over time) so that there is a clear pathway for them to reduce emissions, increase removals, and ultimately move to high-forest, low-deforestation (HFLD) status that will be supported by the market, thereby motivating them to continue performing under their jurisdictional REDD+ programs. |

| 1738 | Anonymous            | 0                   | ge              | Permanence is critically important for enhanced sequestration based or other carbon removal carbon credit projects, and less so for avoided emissions (with the caveat of avoided emissions based on deferred actions). Permanence must be equated based on equivalent radiative forcing of the emission and the counterbalancing carbon credit, otherwise there is an imbalance in the overall global warming impact. As carbon accounting is based on standardizing radiative forcing to carbon dioxide equivalence on a 100 year GWP timescale, it is appropriate to ensure the equivalence of 100 years of permanence. That said, there are still highly valuable and legitimate carbon projects where 100 years of permanence is unachievable or impractical. For these projects, there must be significant work done to evaluate the risk of reversal, and there must be risk mitigation and reversal compensation measures enacted at both the project and programmatic levels.                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1739 | Darcy Jones          | 0                   | te              | The Assessment Framework assumes that suppliers of carbon credits bear the reversal risk and that monitoring and compensation with buffer reserves and temporary crediting are what should be used.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | There should be a clear justification for sellers to solely bear reversal risk. Either buyers or suppliers of credits could bear reversal risk.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 1739 | Darcy Jones          | 0                   | te              | If buyers bear none of the risk, there is no incentive for due diligence to choose an asset that fits its preferences for risk, and the buyer will buy credits independent of reversal risk.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| 1739 | Darcy Jones          | 0                   | te              | If sellers bear all of the reversal risk, then the costs of producing credits with any reversal risk will be high, and there will be less supply. Credits with some reversal risk have value but placing the risk on the seller means those credits will never make it to market.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 1740 | Darcy Jones          | 0                   | te              | The Assessment Framework states that approaches to addressing non-permanence that do not require replacement of credits or compensation for reversals are not CCP-eligible, for example, tonne-year accounting under which there are no minimum requirements for the duration of carbon storage. Based on this section as currently written, it is unclear if tonne-year accounting could be a CCP-eligible approach.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Clarify if, and under what circumstances, tonne-year accounting could be a CCP-eligible approach. There should be a justification for why tonne-year accounting, under some conditions, is not eligible. Suggest rewording this sentence as follows: "Such mechanisms to be excluded may include, for example, various forms of tonne-year accounting under which there are no minimum requirements for the duration of carbon storage." |

| 1741 | Anonymous            | 0                   | ge              | As several members of the International Emissions Trading Association (IETA) have noted the concept of temporary credits to be replaced by other temporary or permanent credits at a later date should be avoided. One of the many points of feedback that XXX receives from clients is the voluntary offset market can seem daunting due to the heterogeneity of it – different standards, protocols, geographies, co-benefits, etc. Replacing a temporary credit with a permanent credit at a later date also adds to the confusion around double counting, where two credits (the temporary one and permanent one) represent the same tonne of emissions reduction. Temporary credits would create a significantly new element of confusion and risk, without providing material upside. They could potentially be deleterious to the integrity of the voluntary market, such as if the issuer of a temporary credit went under prior to providing a permanent credit, or if the temporary credit were replaced with another temporary credit.                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| 1742 | Seoyi Kim            | 0                   | ge              | The MDB WG considers that the CCP requirements on permanence are too detailed, which limits innovation in this space, and it is largely based on common misconceptions regarding non-permanence risk.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 1742 | Seoyi Kim            | 0                   | ge              | Regarding the requirements on the degree of reversal risk, it is assumed that any mitigation activity related to the management of carbon stocks has a material risk of reversals, and that projects that would lead to a lower demand of fossil fuel have a zero risk. However, as experience shows with recent trends, the fossil fuels that were saved and left in the ground, could be extracted again in the future if economic conditions are adequate for it (e.g., electricity prices), reverting the mitigation process. This is not different from a jurisdictional REDD+ program where the carbon saved could be released in the future if economic conditions make this to be favorable (e.g., commodity prices). Therefore, we would suggest revisiting the concept of non-permanence and looking at this with a different perspective.                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 1742 | Seoyi Kim            | 0                   | ge              | The assessment framework provides two recommended approaches for addressing non-permanence risk, which are prescriptive, not backed by science, and limit the possibility of using other approaches and options. On the requirements on monitoring and compensation for reversals approaches, requirements are applicable to any kind of intervention regardless of the inherent risk of the intervention, which is incorrect. A large-scale jurisdictional program or a national policy to increase use of wood harvested products might not have the risks that exist in a small-scale Afforestation/Reforestation project, but all these are conflated. Moreover, the commitment to monitor and compensate reversals for more than 50-100 years would not justify the actual risk of reversals and would be extremely costly, making unfeasible for projects to generate emission reduction credits. On the use of temporary crediting, this approach was proposed under the CDM, but it was demonstrated that there are more pragmatic approaches, and that this represents a very significant barrier for scaling up of markets as these temporary units would not be fungible with other units. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 1742 | Seoyi Kim            | 0                   | ge              | GHG Programs and Standards have followed science-backed robust processes to define the approaches to manage reversals at GHG Program level, and there should be more trust on these processes, instead of prescribing approaches.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 1743 | Spencer Meyer        | 0                   | ge              | We recommend that IC-VCM more seriously consider the value of temporary storage and eliminate the requirement to replace credits, under the condition that methodologies provide a high standard of proof for demonstrating impact.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Please see above.                                                                                                                                                                                                                                                                                                                                                                                                                        |

| 1743 | Spencer Meyer        | 0                   | ge              | We agree that the value of temporary carbon storage or reversible mitigation depends on “a policy choice rather than a purely scientific one.” Valuing finite storage does require setting an economic equivalence—not a physical one—between the benefits of stored carbon and the cost of emissions. We disagree, however, on IC-VCM’s assertion that any high-integrity approach must maintain carbon stocks in perpetuity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0               |
| 1743 | Spencer Meyer        | 0                   | ge              | First, IC-VCM’s focus on maintaining carbon over “the most extended time horizon feasible” ignores the real value to society created by temporary storage, even if only for one year. Temporary solutions create quantifiable value by storing carbon in a terrestrial sink rather than in the atmosphere, for some fixed time period. By temporarily preventing carbon from entering the atmosphere, we reduce the overall level of atmospheric carbon for some period of time, as compared to a baseline scenario. This also temporarily reduces the total radiative forcing of carbon in the atmosphere. Consequently, temporary storage averts—or postpones—the negative effects to society that would flow from that increased temperature.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0               |
| 1743 | Spencer Meyer        | 0                   | ge              | Authors from Carbon Direct describe this process as follows: “Temporary carbon storage does have value,” they write. “It can expand the pool of available carbon removal through short-term contracts” as well as “delay climate impacts, reduce peak warming, avoid climate tipping points, buy time for technology advances, and generate co-benefits like ecosystem services.” ( <a href="https://www.carbon-direct.com/insights/accounting-for-short-term-durability-in-carbon-offsetting">https://www.carbon-direct.com/insights/accounting-for-short-term-durability-in-carbon-offsetting</a> ) Studies show that temporary carbon storage can slow the rate of warming and decrease peak warming if it’s implemented alongside ambitious emissions reductions to net zero. ( <a href="https://www.nature.com/articles/s43247-022-00391-z">https://www.nature.com/articles/s43247-022-00391-z</a> ). This is why all scenarios leading to limiting warming to 1.5-2C increases rely in part on mitigation via nature-based solutions, alongside rapidly decarbonizing the economy. | 1743 | Spencer Meyer        | 0                   | ge              | Second, IC-VCM’s division between long-term commitments and short-term storage ignores the fact that any fixed time frame for carbon storage - one, 40, 60, or 100 years - is also temporary and reversible. Let’s say a project developer commits to monitor and compensate for reversals for 100 years. Even if it maintains those stocks for 100 years, it still has no responsibility to compensate for reversals in year 101. If an entire forest is conserved for 100 years, but burns down in year 101, has there been no benefit at all? Practically and mathematically, this is the same question as asking what happens if trees burn down in year 6 after a 5-year temporary credit.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0               |
| 1743 | Spencer Meyer        | 0                   | ge              | If the IC-VCM were genuinely committed to maintaining carbon stocks in “forever permanence,” then by its own logic 100 years of storage should also be classified as temporary storage, and should also be subject to replacement to count as a valid offset. As discussed in Comment 7, 100 years of storage does not create physical equivalence to the thousands of years that a tonne of emitted carbon will spend in the atmosphere. It does not represent a full neutralization of emitted carbon.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0               |
| 1743 | Spencer Meyer        | 0                   | ge              | And so, even in this case, the choice of duration for carbon storage is a policy choice—not a purely scientific one. The 100-year maintenance of carbon storage has some climate benefit that we care about and are willing to pay for. This is exactly the same type of value as is created by short-term storage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0               |
| 1743 | Spencer Meyer        | 0                   | ge              | Third, as currently written, this Assessment Framework will both exclude legitimate methodologies that attempt to capture the value of temporary storage, and retain the same risks inherent in conventional long-term storage that allow buyers to pay up front for future climate promises under the guise of long-term storage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0               |
| 1743 | Spencer Meyer        | 0                   | ge              | We recommend that IC-VCM alter its requirements to reflect the inherent value that carbon storage provides at any duration, without replacement. It should also include a clause or chapter acknowledging the economic framing inherent in any temporary carbon scheme—even ones with 100 year commitments. To be clear, there is no categorical difference between long- and short-term storage. There is only a continuum of quantifiable climate benefit at any duration.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0               |

| 1744 | Anonymous            | 0                   | te              | Once again, the ICVCM seeks to substitute its own judgment for that of program methodology developers. We repeat that these methodologies are developed by experts in a broad consultation process, and are appropriate to the activities and places they address. We also repeat that as stated, these requirements effectively exclude all forms of NCS/NBS projects. If that is the goal of the ICVCM, it should say so publicly.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | See above.        |
| 1744 | Anonymous            | 0                   | te              | This section also offers the IC the opportunity to consider that temporary carbon storage or avoided emissions do have climate benefits. They can be very significant, especially in helping us bend the curve over the next 10-15 years when action is so critical. Disincentivizing or disallowing temporary storage right now is exactly the wrong approach, especially when the counterfactual is not permanent storage, but no storage at all.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                 |
| 1745 | Spencer Meyer        | 0                   | ge              | NCX (the Natural Capital Exchange) recommends that IC-VCM more seriously consider the value of temporary storage and eliminate the requirement to replace credits, under the condition that methodologies provide a high standard of proof for demonstrating impact.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Please see above. |
| 1745 | Spencer Meyer        | 0                   | ge              | We agree that the value of temporary carbon storage or reversible mitigation depends on “a policy choice rather than a purely scientific one.” Valuing finite storage does require setting an economic equivalence—not a physical one—between the benefits of stored carbon and the cost of emissions. We disagree, however, on IC-VCM’s assertion that any high-integrity approach must maintain carbon stocks in perpetuity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                 |
| 1745 | Spencer Meyer        | 0                   | ge              | First, IC-VCM’s focus on maintaining carbon over “the most extended time horizon feasible” ignores the real value to society created by temporary storage, even if only for one year. Temporary solutions create quantifiable value by storing carbon in a terrestrial sink rather than in the atmosphere, for some fixed time period. By temporarily preventing carbon from entering the atmosphere, we reduce the overall level of atmospheric carbon for some period of time, as compared to a baseline scenario. This also temporarily reduces the total radiative forcing of carbon in the atmosphere. Consequently, temporary storage averts—or postpones—the negative effects to society that would flow from that increased temperature.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                 |
| 1745 | Spencer Meyer        | 0                   | ge              | Authors from Carbon Direct describe this process as follows: “Temporary carbon storage does have value,” they write. “It can expand the pool of available carbon removal through short-term contracts” as well as “delay climate impacts, reduce peak warming, avoid climate tipping points, buy time for technology advances, and generate co-benefits like ecosystem services.” ( <a href="https://www.carbon-direct.com/insights/accounting-for-short-term-durability-in-carbon-offsetting">https://www.carbon-direct.com/insights/accounting-for-short-term-durability-in-carbon-offsetting</a> ) Studies show that temporary carbon storage can slow the rate of warming and decrease peak warming if it’s implemented alongside ambitious emissions reductions to net zero. ( <a href="https://www.nature.com/articles/s43247-022-00391-z">https://www.nature.com/articles/s43247-022-00391-z</a> ). This is why all scenarios leading to limiting warming to 1.5-2C increases rely in part on mitigation via nature-based solutions, alongside rapidly decarbonizing the economy. ( <a href="https://www.sciencedirect.com/science/article/abs/pii/S0961953421001987?via%3Dihub">https://www.sciencedirect.com/science/article/abs/pii/S0961953421001987?via%3Dihub</a> ) | 0                 |
| 1745 | Spencer Meyer        | 0                   | ge              | Second, IC-VCM’s division between long-term commitments and short-term storage ignores the fact that any fixed time frame for carbon storage - one, 40, 60, or 100 years - is also temporary and reversible. Let’s say a project developer commits to monitor and compensate for reversals for 100 years. Even if it maintains those stocks for 100 years, it still has no responsibility to compensate for reversals in year 101. If an entire forest is conserved for 100 years, but burns down in year 101, has there been no benefit at all? Practically and mathematically, this is the same question as asking what happens if trees burn down in year 6 after a 5-year temporary credit.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                 |
| 1745 | Spencer Meyer        | 0                   | ge              | If the IC-VCM were genuinely committed to maintaining carbon stocks in “forever permanence,” then by its own logic 100 years of storage should also be classified as temporary storage, and should also be subject to replacement to count as a valid offset. As discussed in Comment 7, 100 years of storage does not create physical equivalence to the thousands of years that a tonne of emitted carbon will spend in the atmosphere. It does not represent a full neutralization of emitted carbon.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                 |
| 1745 | Spencer Meyer        | 0                   | ge              | And so, even in this case, the choice of duration for carbon storage is a policy choice—not a purely scientific one. The 100-year maintenance of carbon storage has some climate benefit that we care about and are willing to pay for. This is exactly the same type of value as is created by short-term storage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                 |

| 1745 | Spencer Meyer        | 0                   | ge              | Third, as currently written, this Assessment Framework will both exclude legitimate methodologies that attempt to capture the value of temporary storage, and retain the same risks inherent in conventional long-term storage that allow buyers to pay up front for future climate promises under the guise of long-term storage.                                                                                                                                                                                                                                                                                                                                                                                                | 0                 |
| 1745 | Spencer Meyer        | 0                   | ge              | We recommend that IC-VCM alter its requirements to reflect the inherent value that carbon storage provides at any duration, without replacement. It should also include a clause or chapter acknowledging the economic framing inherent in any temporary carbon scheme—even ones with 100 year commitments. To be clear, there is no categorical difference between long- and short-term storage. There is only a continuum of quantifiable climate benefit at any duration.                                                                                                                                                                                                                                                      | 0                 |
| 1746 | Spencer Meyer        | 0                   | ge              | NCX (the Natural Capital Exchange) also recommends that IC-VCM both clarify its definition of tonne-year accounting, and modify or take out the explicit reference to tonne-year accounting as CCP-ineligible .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Please see above. |
| 1746 | Spencer Meyer        | 0                   | ge              | We recommend that IC-VCM modify this section to reflect the real value of temporary crediting solutions that use tonne-year accounting. As discussed in comments 7 and 15, we urge the Expert Panel to reconsider the value that stand-alone temporary crediting can create to society, and to provide an option for such credits as long as they are rigorously supported by scientific evidence.                                                                                                                                                                                                                                                                                                                                | 0                 |
| 1746 | Spencer Meyer        | 0                   | ge              | Standards like this one should acknowledge that no nature-based solution is permanent. Instead of pursuing “forever permanence,” we should more explicitly account for the volume and duration of storage reflected in different carbon credits. Tonne-year accounting adds the element of time to the volume accounting of carbon, just like kilowatt-hours does for kilowatts. Tonne-year accounting can be, and should be, used for carbon storage of any duration, whether one year or 100 years.                                                                                                                                                                                                                             | 0                 |
| 1746 | Spencer Meyer        | 0                   | ge              | As IC-VCM themselves acknowledges, even projects with commitments to monitor & compensate for 100 years are not “forever permanent;” these carbon stocks will enter the atmosphere at some point in the future But we all agree that 100 years of storage—though not forever—is still valuable. This value comes from the economic benefits to society of delaying those emissions. Similar value is, therefore, quantifiable over any time frame.                                                                                                                                                                                                                                                                                | 0                 |
| 1746 | Spencer Meyer        | 0                   | ge              | Tonne-year accounting is useful because it is the most rigorous and transparent method for calculating the value of carbon storage over variable time frames. Tonne-year accounting offers three critical improvements over current methods: 1) Reducing or eliminating risk of reversals; 2) Dramatically increasing the scale of uptake; and 3) More accurately calculating baseline scenarios by enabling shorter term projects.                                                                                                                                                                                                                                                                                               | 0                 |
| 1746 | Spencer Meyer        | 0                   | ge              | An additional risk to the VCM is the risk of non-additionality, especially over long project periods. As IC-VCM itself points out, it is important to ensure that crediting periods for emissions reductions are “not excessively long” (10.1.3b) and that credits should only be issued “as long as it continues to generate emission reductions or removals compared to a realistic and plausible baseline.” (10.1.3, a) Using tonne-year accounting to support short-term crediting can help reach these laudable goals. Using tonne-year accounting, partial crediting, and/or temporary crediting can enable more accurate baselining at more frequent intervals, and result in higher-confidence, higher-integrity credits. | 0                 |
| 1746 | Spencer Meyer        | 0                   | ge              | Finally, we would like to remind the Expert Panel that if short term projects are credited truly “ex-post” and issue credits only after their climate benefit has been fully delivered, they have no risk of reversal and therefore do not require compensation. In addition, we remind the Expert Panel that tonne-year accounting can be used for any length of project, and would indeed facilitate the “partial crediting” approach that they have proposed in Table 44, Option 2.                                                                                                                                                                                                                                            | 0                 |
| 1747 | Anonymous            | 0                   | te              | Temporary credits are not a viable path for ensuring permanence. It has not worked in the past with CDM tCERs, and will not work in the future. No one will buy them. Please remove this entire section. Do not confuse the market with unworkable options for permanence.                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Please remove.    |

| 1749 | Spencer Meyer                                   | 0                                      | ge              | We are concerned about IC-VCM's choice to use a two year requirement to ensure institutional stability as a solution to risks of reversal. IC-VCM states, "To achieve 1.5 degrees, we need every tool available working at full speed." If we exclude any programs less than two years of age, we box out innovation and throw out potentially legitimate solutions for years to come.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1749 | Spencer Meyer                                   | 0                                      | ge              | First, we would like to see more detail on IC-VCM's decision making process for choosing this two year minimum. If there is evidence that existing programs two or more years old consistently deliver real and additional credits, successfully administer decades-long projects without risk of reversal, and rigorously and conservatively issue credits in an ex-post fashion, in a way that programs less than two years old cannot, then we would be glad to see it. Failing that, this two year minimum is an arbitrary rule that will reward incumbents at the expense of innovation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1749 | Spencer Meyer                                   | 0                                      | ge              | Second, by excluding new participants, this rule would calcify the status quo modes of carbon crediting that have been shown to have real problems. It would also eliminate the possibility for credible and innovative approaches to become CCP-approved. At minimum, IC-VCM should provide provisional approval or an alternative pathway for those programs that are under two years old but that meet all other criteria.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1749 | Spencer Meyer                                   | 0                                      | ge              | As it stands, we are concerned that this two year minimum both creates serious negative consequences and fails to solve the problem of reversal risk/institutional stability that it claims to address.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1750 | Individual/employee, Perspectives Climate Group | Criterion 9.1: Degree of reversal risk | ge              | Suggestion to include "DAC in geological formations" or "(Direct Air) Carbon capture and storage in geological formations", as reversal risk depends on storage type, not the capture process                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Suggestion to include "DAC in geological formations" or "(Direct Air) Carbon capture and storage in geological formations", as reversal risk depends on storage type, not the capture process                                                                                                                                                                                                                                                               |
| 1751 | Anonymous                                       | Criterion 9.1: Degree of reversal risk | te              | Doing this up front doesn't make sense. It should be assessed if the standard includes sufficient provisions. If so, this is unnecessary. This step isn't needed up front.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Do not set detailed provisions on permanence; ensure program governance and procedures include a means to set, manage, mitigate and ensure the long-term health of permanence approaches.                                                                                                                                                                                                                                                                   |
| 1751 | Anonymous                                       | Criterion 9.1: Degree of reversal risk | te              | Setting out these examples could be perceived as a pre-judgement of the degree of reversal risk for certain project types, with a tendency to favour technological project types over natural climate solutions (NCS) project types. Much of this assessment depends on the specific activity or technology, and therefore we have concerns with these three broad risk categories that seem to gloss over the nuance of risk associated with specific activities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Many of the provisions in this section are steps backward, and reflect a lack of ability of the IC-VCM to set reasonable rules, and this will unnecessarily limit innovation and progress.                                                                                                                                                                                                                                                                  |
| 1751 | Anonymous                                       | Criterion 9.1: Degree of reversal risk | te              | The IC-VCM would be better placed to review the process to assess and address permanence used by the programme, versus making specific decisions about permanence. Guidance in the form of an overall risk framework, and not a predetermined risk profile would be more useful to compare different projects in different sectors. For example, the form of storage for direct air capture determines the risk of reversal, risk cannot be determined without knowing the form of storage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Or, as suggested by others, handle permanence as an attribute- with transparent information required in registries to identify the number of years permanence is assured. This could include a minimum number of years (e.g., 30) with transparent information that displays permanence assurance where it is longer than 30 years.                                                                                                                         |
| 1752 | Anonymous                                       | Criterion 9.1: Degree of reversal risk | ge              | "Reversal" should be clearly defined as biogenic carbon released into the atmosphere can be part of the natural process and harvesting biomass for food, fiber and fuels is part of human activities. As long as biogenic carbon stock accumulated in the ecosystem of a certain area is maintained (or enhanced), no addition of CO2 concentration in the atmosphere would occur from any nature-based activities in that area. Taking an example of an improved forest management project carried out in the production forest, when a single plot for which carbon removals were calculated for credit issuance is now cut down for producing industrial roundwood, the standard carbon accounting rule obliges loss of carbon stock in that particular plot to be treated as emissions. Nevertheless, when the total carbon stock at the project-wide level is maintained, i.e. the uptake of carbon in the remaining plots within the project boundary is bigger than the loss of carbon in the harvested plot, the project can be a net sink and hence it does not make any sense to treat such emissions as "removals". | To add a text explaining that compensation for reversals is only necessary when a project in its entirety produce net emissions irrespective of whether it is human- or nature-induced.                                                                                                                                                                                                                                                                     |
| 1753 | Luzia Bieri                                     | Criterion 9.1: Degree of reversal risk | ge              | Criterion 9.1: It is not clear how the overall degree of reversal risk per mitigation activity would be defined. The reversal risk not only depends on the type of mitigation activity but also on the specific activity and technology.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1754 | Individual/employee, Conservation International | Criterion 9.1: Degree of reversal risk | ge              | Description and rationale regarding degree of reversal risk are selective and inherently biased against activities that include the management of natural processes. The "Assessment" is crude and inadequate; the degree of risk associated with each category is highly subjective and fails to recognize the many mechanisms for managing and addressing such risks, as well as the provisions to address reversals, which are already built into existing standards. This is perhaps the weakest component of the framework.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Consult experts on approaches applicable to managing risks of land-sector mitigation activities. Revise entire section to reflect real-world experience, eliminating aspects based on speculation, assumptions, and misunderstanding of basic concepts like stocks and flows. After this is revised, rework language in other related sections, such as Section 10, to reflect this improved understanding and articulation of basic aspects of accounting. |

The form of storage for direct air capture determines the risk of reversal, and risk cannot be determined without knowing the form of storage.                                                                                                                                                                                                                        |
| 1757 | Darcy Jones                                        | Criterion 9.1: Degree of reversal risk                                                   | ge              | Large-scale nature-based activities are not as risky as currently proposed in the draft guidance. The permanence criteria unduly single out the land sector as having significant material risk of reversals. However, the risk of reversals is not unique to the land sector. Mitigation outcomes from all sectors are vulnerable to risks of "reversals" – the resumption of emissions after a period of reduced or stopped emissions that may release some or all of the previously avoided emissions. These reversal risks can include political risks, project management risks, financial risks, market risks, as well as risks from both human actions and impacts beyond human control (e.g., natural disturbances). The risk of reversals is not unique to the land sector. The current criteria imply unique or unparalleled risk that could deter buyers from investing in nature-based mitigation and would have devastating implications for the world's ability to achieve a safe climate future. | The Assessment Framework should acknowledge that all sectors are subject to risk of reversals, instead of singling out the land sector as being particularly vulnerable to reversals. Acknowledging that risks are a reality in every sector; what matters is how they are managed. In the context of REDD+, best practices for managing the risk of reversals have been in place for more than a decade.                                                                                                                                                                                                                                                             |

Projects that reduce or avoid emissions, by contrast, slow the rate of degradation, which is a permanent contribution to the climate. If one rewets a drained peatland for 10 years, for instance, the area will not release emissions during this time except for a short period at the start, providing greater benefits than letting the peatland degrade (Günther et al. 2020). Even if drainage restarts from year 11, the benefit of an emissions-free decade will continue to weigh in on the atmosphere. |

Projects that reduce or avoid emissions, by contrast, slow the rate of degradation, which is a permanent contribution to the climate. If one rewets a drained peatland for 10 years, for instance, the area will not release emissions during this time except for a short period at the start, providing greater benefits than letting the peatland degrade (Günther et al. 2020). Even if drainage restarts from year 11, the benefit of an emissions-free decade will continue to weigh in on the atmosphere.                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| 1767 | Stephanie Sargeant   | Table 43 – Degrees of non-permanence risk based on screening process under Criterion 9.1 | ge              | Table 43:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Note that the permanence of emission reductions is ultimately the same across economic sectors. Installing a filter in an industrial production facility – for example to produce fertilizer, a process that releases a potent GHG, nitrous oxide (N2O) – may generate emission reductions for a number of years (always seen against the baseline of unfiltered production). When emissions go back to baseline at the end of the filter’s lifecycle the reductions achieved up to that point are rightly considered permanent, as the benefit of temporary low-carbon production is felt in the atmosphere in continuity. Despite the equivalence between the land sector and other economic sectors, carbon standards have come to treat them differently, i.e. the same as removals. Virtually all standards define the risk of reversal as implicit in all land-use projects. |

| 1769 | Molly Brown          | Table 43 – Degrees of non-permanence risk based on screening process under Criterion 9.1 | ge              | The table at 9.1 should clarify that cookstoves and other emissions avoidance projects are classed as “zero risk” of non-permanence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1771 | Darcy Jones          | Table 43 – Degrees of non-permanence risk based on screening process under Criterion 9.1 | te              | The current guidance only includes Nature-based Solutions (Nbs) as activities with material/significant reversal risks while other types of carbon crediting programs/projects also face reversal risks. Perception of the land sector as particularly impermanent is based on availability bias and a misunderstanding of carbon stocks vs. carbon flows.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | The AF should recognize the inherence conservativeness of jurisdictional REDD+, which are not fully credited for the many additional climate benefits that standing forests provide, in addition to immediate emissions storage. (See Lawrence et al (2022) The Unseen Effects of Deforestation: Biophysical Effects on Climate. Frontiers in Forests and Global Change. <a href="https://doi.org/10.3389/ffgc.2022.756115">https://doi.org/10.3389/ffgc.2022.756115</a> ) It should be noted that the impact of deforestation changes albedo, evapotranspiration, and surface roughness — all of which significantly amplify the global warming effects of released CO2 alone.                                                                                                                                                                                                    |
| 1771 | Darcy Jones          | Table 43 – Degrees of non-permanence risk based on screening process under Criterion 9.1 | te              | It is important to acknowledge that risks are a reality in every sector; however, what matters is how they are managed. The table incorrectly characterizes credit-generating activities into three categories and fails to include significant impacts of scale on the risk of reversals.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | The AF should require an independent and regularly updated estimation of these probabilities, and they should be made known to market participants.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 1771 | Darcy Jones          | Table 43 – Degrees of non-permanence risk based on screening process under Criterion 9.1 | te              | Reversal risk corresponds to the probability of a reversal in any year, and this varies by mitigation activity, location, stakeholders, scale, and context.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1771 | Darcy Jones          | Table 43 – Degrees of non-permanence risk based on screening process under Criterion 9.1 | te              | Finally, the typical jurisdictional REDD+ approach entails requiring deductions from what’s eligible for crediting, to reinforce the integrity of what’s issued as a conservative volume of credits. However, only the immediate emissions storage is quantified, meaning that JREDD+ credits are inherently conservatively estimating climate impacts, and thus not as risky.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1772 | Darcy Jones          | Table 43 – Degrees of non-permanence risk based on screening process under Criterion 9.1 | te              | According to EDF research, there are key accounting issues for carbon credits from agricultural soil carbon sequestration. Different MRV approaches for these credit types pose a risk of nonequivalent credit creation and as a result, agricultural soil carbon offsets are not a sure investment. (see Oldfield et al. 2021. Realizing the potential of agricultural soil carbon sequestration requires more effective accounting. Science 375 (6586): 1222-1225.)                                                                                                                                                                                                                                                                                                                                                                                                              | Based on the current science and uncertainty on measurement, permanence, and leakage, EDF does not think soil carbon credits should be considered for offsets for now and should only be considered for Scope 3 supply chain accounting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1773 | Anonymous            | Criterion 9.2: Monitoring and compensation approaches                                    | ge              | (also for section 9 in general)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| 1773 | Anonymous                                          | Criterion 9.2: Monitoring and compensation approaches                         | ge              | There are very few credits addressing these requirements as of now. Are there proposed/possible remediation pathways to support project owners in implementing those and ensuring that credits can continue to be issued (and trusted) for ongoing projects? What does "sufficient incentives" mean?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 1774 | Individual/employee, Carbon Engineering/1PointFive | Criterion 9.2: Monitoring and compensation approaches                         | te              | While we recognize and agree with the need for project operators to have monitoring, verification, and reporting commitments that help ensure environmental integrity, we do not believe a default monitoring period length of 100 years achieves this goal. Indeed, the monitoring period length should reflect the security of the storage type chosen for the project and the risk of potential reversal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | We strongly recommend not defining a minimum monitoring period of 100 years for secure geologic storage projects, but rather allow the carbon standards, regulators, and subject matter experts to be responsible for determining and then meeting a project specific set of circumstances to show long term durability.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 1774 | Individual/employee, Carbon Engineering/1PointFive | Criterion 9.2: Monitoring and compensation approaches                         | te              | For example, in geologic storage the point at which the CO2 plume has become predictable and reliably contained in line with reservoir modeling results is an important site closure condition that must be proved by the storage site operator prior to receiving a site closure ruling. Depending on the site and the circumstances, such a state could be reached in a matter of a few years after injection is complete, or in an extreme case could take hundreds of years. (Working Group III of the Intergovernmental Panel on Climate Change (UNEP) 2005). Permanence and the associated monitoring commitments should not be defined as a set number of years, as some subnational jurisdictions in the U.S. have done – in particular, 100 years does not constitute permanence in and of itself (California Air Resources Board 2018). Instead, permanence should be defined as a condition or set of conditions where safe and secure storage can be demonstrated. | As for reversal compensation, we are not advocates for buffer accounts as a mechanism to insure climate projects. We do not believe buffer accounts, as currently structured in carbon capture protocols and standards, accurately reflect the risk profile of geologic storage projects. We have found that these “catch-all” risk assessment approaches typically overestimate the potential risk of non-permanence by three to four orders of magnitude larger than the empirically determined reversal risk for geologic storage projects over a set evaluation period. However, we are strongly supportive of third-party insurance providers for CDR projects and believe this is an industry which will help support the rapid growth and scale of CDR globally. Insurance providers have recently been creating specific climate liability policies that can be purchased by either a project proponent, credit purchaser, or voluntary registry to help address the long-term financial liability associated with both traditional carbon offsets and CDRs. |
| 1776 | Anonymous                                          | Criterion 9.2: Monitoring and compensation approaches                         | ge              | It is unclear what documentation is required to meet Criterion 9.2. There are no specific requirements about how to provide the evidence of meeting the requirements in Table 44.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Please provide more information about how to provide evidence to meet Criterion 9.2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1777 | Darcy Jones                                        | Criterion 9.2.a: Length of commitment to monitor and compensate for reversals | te              | N/A                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Regardless of whether the buyer or seller are responsible for reversal risks, mitigation activities must be monitored by an independent third-party for reversals for their entire duration.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| 1779 | Anonymous                                          | Rationale                                                                     | te              | The 100-year commitment seems to be founded on the 100-year global warming potential (GWP) however this has no scientific basis in relation to the permanence of a carbon emission reduction or removal in the atmosphere. This 100-year monitoring and compensation commitment will deter participation in carbon-crediting programmes which may leave gaps in the much-needed financing of these critical activities. We strongly suggest reconsidering the 100-year commitment, and suggest instead shorter, multi-decadal project commitments.                                                                                                                                                                                                                                                                                                                                                                                                                             | See above suggestions to evaluate the success and robustness of existing permanence approaches and keep the level of review at the program. These requirements are both incomplete and vague, and programs will do a better job of establishing full requirements and robust permanence management.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1779 | Anonymous                                          | Rationale                                                                     | te              | We also request clarity on the rationale behind the 50-year commitment under Option 1 of the initial threshold requirements; what is the 50-year commitment period based upon, and why couldn't this threshold equally be justified as 40 years, 30 years, or some other commitment period that better aligns with existing and widely used carbon market standards?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | IC-VCM could set an absolute threshold (e.g., 30 year minimum), plus transparent information on registry systems for the length of permanence; while ensuring that whatever means programs use; and the rules they have in place, are robust (e.g., by requiring modelled assessments of buffers; or buffer performance to be made public on a periodic basis by all standards).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 1779 | Anonymous                                          | Rationale                                                                     | te              | All programmes ought to have provisions in place to address the risk of reversal, potential losses and a multi-decadal management plan related to both. We would also like to reiterate the possibility of labeling years of permanence assured in registries.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 1779 | Anonymous                                          | Rationale                                                                     | te              | "Partial crediting" implies a form of tonne-year accounting, when that approach has been deemed insufficient. There is a contradiction here.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 1779 | Anonymous                                          | Rationale                                                                     | te              | We are concerned that crediting under tonne-year accounting, rather than measured project performance, will disincentivize project participation due to the duration between project development and recouping associated costs. There is no existing and consistent basis in the market for this practice. Further, tonne-year accounting is not an acceptable substitute for the real, enforceable risk mitigation mechanisms such as buffer pools or insurance mechanisms.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| 1780 | Darcy Jones          | Rationale                                                                                                       | te              | This criterion implies that quality is tied to a timeframe, which is not necessarily true. While jurisdictional programs may have shorter commitment periods due to the fact that permanence is ensured in other ways (e.g., through scale, buffer pools), governments are arguably longer lasting compared to private sector entities and therefore this point is null.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | The criteria should acknowledge that government and stakeholder partnerships and long-term legal and policy reforms that are fundamental to jurisdictional REDD+ contribute to permanence; they do not hinder it. |
| 1780 | Darcy Jones          | Rationale                                                                                                       | te              | Additionally, safeguard requirements of jurisdictional REDD+ programs, which include getting buy-in from stakeholders over entire national areas or jurisdictions, increase likelihood that activities will be permanent.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                 |
| 1781 | Spencer Meyer        | Rationale                                                                                                       | ge              | NCX (the Natural Capital Exchange) encourages IC-VCM to reconsider its division between temporary crediting and the monitoring & compensation pathway. We point out that according to the logic in this section, 100-year methodologies would also be subject to replacement. 100-year and shorter term carbon storage both create value through the same mechanism - by mitigating economic damages to society.                                                                                                                                                                                                                                                                                                                                                                                                                                             | Please see above.                                                                                                                                                                                                 |
| 1781 | Spencer Meyer        | Rationale                                                                                                       | ge              | We would like to respond to IC-VCM's "Rationale" section of the "monitoring & compensation" requirements on page 100. In this section, the Expert Panel raises valid concerns about the difficulties of long-term carbon storage. They point out that while "the longevity of carbon dioxide in the atmosphere could span several centuries," commitments to store, monitor, and compensate "will at best convey a high likelihood of permanence over a much shorter time horizon, such as a few decades or a century." In effect, "permanent" does not mean "forever" for carbon crediting programs.                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                 |
| 1781 | Spencer Meyer        | Rationale                                                                                                       | ge              | Facing this reality, IC-VCM makes three conclusions. First, there is an "open-ended liability" for reversals after the end of any finite carbon project. Second, society is forced to "leave the management of this liability to future decision-makers." And third, the best response to this quandary is to extend time horizons for carbon storage for as long as possible, using incentives like "partial crediting."                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                 |
| 1781 | Spencer Meyer        | Rationale                                                                                                       | ge              | NCX agrees that "forever" storage is not possible. And we agree with IC-VCM that finite carbon credits still hold value. But there is a better solution than pretending these 40 or 100 year projects will last forever, and handing off the liability to future decision makers. Instead, IC-VCM should sincerely attempt to calculate the value created to society by finite periods of storage- whether that be 100 years, 40 years, or one year.                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                 |
| 1781 | Spencer Meyer        | Rationale                                                                                                       | ge              | IC-VCM does recognize that while long-term guarantees of carbon storage cannot actually last forever, such commitments can "approximate the cost of indefinite carbon storage, leading to efficient pricing of carbon credits and mitigation investments that reflect a balancing of cost and climate risks." We believe that what the Assessment Framework is trying to express here is as follows: the price of a carbon credit effectively converts future climate risks into current costs, and helps us pay to abate those. This is an economic framing. We are converting future damages into present-day value. A new peer-reviewed paper published in Forest Policy and Economics provides a framework for doing exactly this. (Parisa et al., 2022. The time value of carbon storage. <a href="https://bit.ly/3r1S7wM">https://bit.ly/3r1S7wM</a> ) | 0                                                                                                                                                                                                                 |
| 1781 | Spencer Meyer        | Rationale                                                                                                       | ge              | As the Expert Panel has recognized elsewhere, assigning a value to any finite period of carbon storage is a policy choice. It would be helpful for IC-VCM to clarify this issue with a disclaimer, either in this Rationale section or in the Summary for Decision Makers. We hope the Expert Panel can explain to interested readers that it is not only short-term or temporary crediting that relies on an economic damages framing, but also conventional project lengths of 40 or 100 years, since they are also finite and reversible.                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                 |
| 1782 | Anonymous            | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | te              | Full threshold Option1 is the only "easy" option and fully compliant for a credit is to be credibly neutralizing 1tonCO2e (GWP100). Option2 seem complex and costly to orchestrate.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | We suggest to delete initial threshold Option 1+2+3, and replace with Full threshold Option 2, p101/102                                                                                                           |

| 1783 | Anonymous            | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | ge              | In the criterion 9.2 “monitoring and compensation approaches”, the 100-year commitment seems to be founded on the 100-year global warming potential (GWP), however this has no scientific basis in relation to the permanence of a carbon emission reduction or removal in the atmosphere. This 100-year monitoring and compensation commitment will deter participation in carbon-crediting programs which may leave gaps in the much-needed financing of these critical activities. We strongly suggest reconsidering the 100-year commitment, and suggest instead shorter, multi-decadal project commitments. We also request clarity on the rationale behind the 50-year commitment under Option 1 of the initial threshold requirements. We also request clarity on the Option 2 proposals under the initial and full thresholds. Indeed, Option 2 relies on a form of tonne-year accounting. We are concerned that crediting under tonne-year accounting, rather than measured project performance, will disincentivize project participation due to the duration between project development and recovery associated costs. | None                                                                                                                                                                                                                                                                                                                                                                                                |
| 1784 | Anonymous            | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | te              | This table is hard to understand.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Substantial revision required on this table                                                                                                                                                                                                                                                                                                                                                         |
| 1785 | Josiah McClellan     | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | ge              | 9.2, table 44                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | The scientific considerations behind these options should be revealed. What risk management threshold is the guidance trying to pursue? Does the ICVCM have data evidence that shows the likelihood of reversals past a certain point in time? Data for existing NBS mitigation activities would suggest shorter commitment periods are needed to significantly reduce the likelihood of reversals. |
| 1786 | Anonymous            | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | ge              | In order to achieve maximum program uptake and climate impact, it is essential to establish a minimum project length that imposes sufficient emissions reduction durability, while allowing for substantial numbers of project proponents to accept the temporal constraints of the project commitment. The 40-year minimum project term strikes such a balance and is aligned with scientific reports that have assessed the critical role of the AFOLU sector in all 1.5°C-consistent pathways to achieve Paris Agreement targets and reach net zero emissions by mid-century to avoid the catastrophic effects of climate change.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | n/a                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1786 | Anonymous            | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | ge              | Option 3 is preferred. For project-level crediting, a multi-decadal commitment (40 years for ACR) to monitoring and compensation for reversals is in line with achieving Paris Agreement targets. We would not support a 100-year requirement, which will only deter participation in the market by large groups of forest dwellers, private landowners, IPLCs and governments. For project-level crediting, legally binding commitments should be preferred options as should a clear differentiation between intentional and unintentional reversals.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                   |
| 1786 | Anonymous            | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | ge              | Of the compensation mechanisms outlined in the AF, monitoring and buffers/insurance are the best practice approaches for addressing reversals, should they occur. The alternative compensation mechanisms presented--discounting and temporary crediting--are highly undesirable approaches. Both approaches undervalue nature's role in providing rigorous climate action and multiple co-benefits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                   |
| 1786 | Anonymous            | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | ge              | It is unclear how tonne-year accounting will be viewed as eligible under the CCPs. We strongly advocate that the CCPs explicitly prohibit tonne-year accounting due to the lack of scientific consensus on that approach, and the vast difference in crediting that result from different approaches that have been proposed and applied by Standards. Furthermore, discounting credits from nature-based activity types does not capture their worth as a rigorous and demonstrated climate solution, while also failing to capture the other benefits they provide for biodiversity, climate adaptation, food security, and other areas.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                                                                                                                                                   |

| 1788 | Anonymous                                       | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | ge              | It is hard to understand what a 100-year commitment means. It is even hard for any legal entity to make a 100-yr commitment to survive. For practical reason, crediting period plus ten-year commitment is rational to ensure the permanency.                                                                                                                                                                                                       | As for the commitment period, crediting period plus ten years should be an realistic option.                                                                                                                                                                              |
| 1789 | Individual/employee, Finnwatch                  | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | ge              | We support option 1 on both initial and full requirements.                                                                                                                                                                                                                                                                                                                                                                                          | n/a                                                                                                                                                                                                                                                                       |
| 1790 | Eftimiya Salo                                   | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | te              | Overall, very good requirements for length of commitment period, monitoring responsibility and compensation for reversal. However, in both initial and full threshold, there is “Option 3” - alternative approaches to the length of commitment period that, in combination with stringent requirements on sufficiency of compensation mechanisms and institutional stability, to reach a similar level of assurance of compensation for reversals. | Option 3 is too vague and leaves a loophole for projects to be CCP-eligible without adhering to the same level of stringency as required in Options 1 and 2. Leaving Option 3 will also create additional work for the reviewers and slow down the process of assessment. |
| 1791 | Anonymous                                       | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | te              | Criteria 9.2a Length of commitment period to monitor and compensate for reversals                                                                                                                                                                                                                                                                                                                                                                   | We suggest adopting a solution where the statute of limitations is practical. Ideally, this time period would be more than the project crediting period and but not so long (such as 100+ years) that it is impractical for the standard to monitor.                      |
| 1791 | Anonymous                                       | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | te              | XXXX understands the ambition to have robust insure against reversal risks. But we are wary that 100+ year-timelines are practically not feasible, and nearly impossible to model from a financial standpoint. We cannot strive to insure and compensate in perpetuity across generations and centuries                                                                                                                                             | 0                                                                                                                                                                                                                                                                         |
| 1792 | Individual/employee, Conservation International | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | te              | Requiring a 100-year commitment is not considered to be reasonable or practical. There are uncertainties as to the long-term existence of organizations to continue activities during a period of this length, and there is also a risk of excluding organizations and groups that are not legally permitted to enter into 100-year contracts.                                                                                                      | Consider reducing the length of the period, providing exceptions for entities that cannot enter agreements lasting 100 years, or proposing alternative approaches to maintain long-term monitoring and compensation for reversals.                                        |

| 1793 | Individual/employee, Conservation International | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | te              | It is not clear from the text what degree of monitoring would be required and what monitoring activities would be acceptable (e.g., remote sensing vs. site visits), and there could be potential issues related to changes to landownership as well as accessibility of the land for monitoring due to safety, legal, or other reasons, especially once the project crediting period has ended.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Include text to reflect such considerations and provide a more detailed description of CCP eligibility criteria regarding this approach to ensuring “permanence”. |
| 1794 | Anonymous                                       | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | ge              | Permanence is a key consideration for projects with a risk of reversal. While it is important that a minimum timeframe for monitoring and reporting be scientifically justifiable, a permanence timeframe is ultimately a policy decision with tradeoffs. Extremely short minimum timeframes (e.g., 1-year harvest deferrals) are attractive to landowners due to the minimal commitment, but bring about questionable climate impacts. Longer commitments (e.g., 100-year crediting periods with 100-year MRV following the crediting period) may have larger climate benefits for a given project, but will ultimately be viewed as an insurmountable barrier for signing up landowners for such climate action and is difficult to guarantee that the registry will even exist in 100-200 years to provide oversight for such a long period of time. While these two examples represent extremes, both are real case studies in the carbon market. We recommend that IC-VCM consider these types of trade-offs, and look to registries' justifications for different MRV timeframes. 25, 50, and 100 years are arbitrary choices made by IC-VCM, with seemingly no relation to most existing programs. Furthermore, the same timeframe may not be universally appropriate for all projects with a risk of reversal (e.g. a soil carbon sequestration project may persist and be able to guarantee permanence for a different timeframe than an improved forest management project). We strongly suggest IC-VCM consider what registries are already doing related to permanence, what is appropriate for specific sectors and ecosystems - rather than implementing a blanket requirement across the board, and to consider potential barriers that may be created by infeasibly long MRV periods. | see comment                                                                                                                                                       |
| 1795 | Anonymous                                       | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | ge              | The CCPs do not clearly indicate endorsement of tonne-year accounting (TYA), but it is mentioned in passing in Section 9 and alluded to with option 2 (“XX+ commitment period...with a path...to 100 years”). We recommend IC-VCM proceed with extreme caution if considering TYA. Tonne-year accounting is still a relatively new mechanism for the carbon market. While it is possible to use tonne-year accounting well (with appropriate multi-decadal permanence periods, appropriate consideration for leakage and additionality, and conservative accounting approaches - CAR's Mexico Forest Protocol is an example of this), some proponents of TYA have incorrectly used it as justification for cutting corners on permanence and leakage, which should be avoided. It is not possible to set a requirement for permanence in a vacuum, as it has implications for nearly all other aspects of creating a high-quality carbon project. Leakage looks different over a shorter time period than a longer one. Additionality and baselines that span one year will reflect very different behavior than a baseline that spans multiple decades of forest management. We recommend IC-VCM refer to the public comments raised recently when Verra considered incorporating TYA into their program ( <a href="https://verra.org/wp-content/uploads/2022/06/VCS-2022-Q2-Public-Consultation-Summary-of-Comments-22-Jun-2022.pdf">https://verra.org/wp-content/uploads/2022/06/VCS-2022-Q2-Public-Consultation-Summary-of-Comments-22-Jun-2022.pdf</a> ).                                                                                                                                                                                                                                        | see comment                                                                                                                                                       |
| 1796 | Alexandre Grais                                 | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | te              | Projects should provide a robust justification on permanence, as well as a buffer deduction but monitoring beyond the project's crediting period (e.g.: 30 years) should be undertaken by the standard/program. Also, we would discourage the use of temporary credits as it has not been proven effective on the CDM AR market.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | See above                                                                                                                                                         |

| 1797 | Vega Tapia           | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | ge              | Repsol Foundation believes, this 100-year monitoring and compensation commitment seems excessive to us and can disincentivize the use of carbon-crediting programmes. The length of commitment should be reconsidered to a shorter one.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Specific criteria should be set for assessing NCS reversal-risk and the considerations of what is an avoidable or unavoidable reversal in this sector.                                    |
| 1797 | Vega Tapia           | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | ge              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Risk Buffers seem to be a good alternative for compensations o reversal risks as well as assurance, once this option is available in the market.                                          |
| 1800 | Anonymous            | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | te              | We assume that the 100 years is based on the 100-year GWP’s that are commonly applied to account for the differing warming potential amongst GHGs. However, applying this same 100-year rationale to carbon offset permanence does not have a clear scientific basis. We recommend that for project-based offsets that are subject to non-permanence risk, the minimum commitment period be set at 30 years. This represents a multi-decadal commitment that aligns with mid-century climate goals as well as many net-zero initiatives that seek to phase out the use of offsets. This permanence period is also workable for project owners, including IPLCs. We believe that this commitment period must be combined with a robust risk buffer, clear responsibilities for compensating reversals, and robust MRV requirements. We do not support the proposal for ton-year-accounting to be adopted across the market. While we do support the need for ton-year accounting in unique circumstances (e.g., to support forest conservation by Ejidos in Mexico), we do not think it is an approach that is sufficiently accepted by the scientific community to warrant such broad adoption across all Standards and all project types. In fact, Verra has recently completed a public consultation of ton-year-accounting which was not adopted due to very broad stakeholder push-back of the approach. | see comment                                                                                                                                                                               |
| 1800 | Anonymous            | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | te              | Jurisdictional REDD+: This proposal is not workable for JREDD. REDD+ jurisdictions (i.e., governments) will be unable to commit to periods greater than 5 or 10 years for the foreseeable future. However, Jursidictional ambition is so critical to support. We recommend that the commitment period requirements do not apply to jurisdictional REDD+. This allows jurisdictions to enter the market, build capacity and develop the needed political will to commit to longer periods in the future.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                         |
| 1804 | Darcy Jones          | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | te              | The permanence criteria do not adequately consider the impacts of scale on the risk of reversals. Research has shown large-scale approaches are less impacted by the risk of reversals because risk is spread across wider pool of actors and activities. Jurisdictional programs, specifically, are backed by long-lived political entities (i.e., governments) as opposed to shorter-lived private sector entities that support smaller-scale projects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Section 9.2a should explicitly recognize the role of JREDD+ in Table 44, Option 3 as a legitimate alternative approach.                                                                   |
| 1804 | Darcy Jones          | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Clarity is needed around how “stringent requirements on sufficiency of compensation mechanisms and institutional stability” are assessed and how “similar level of assurance” is defined. |

| 1804 | Darcy Jones          | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Suggest removing Options 1 & 2, and keeping Option 3: “Alternative approaches to the length of commitment period that, in combination with stringent requirements on sufficiency of compensation mechanisms and institutional stability, to reach a similar level of assurance of compensation for reversals.” Jurisdictional-scale approaches that operate at the national or one-level-down subnational level offer a sufficient threshold of an administrative political boundary to account for risk. |
| 1805 | Anonymous            | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | ge              | Option 1 in Table 44: We believe that requiring a commitment to monitor for 50 years would be impractical. COuld this be 30 years instead?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Please see above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1806 | Anonymous            | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | te              | What is the scientific and/or market basis for the choice of year-based thresholds in this table? Many organizations may be unable to enter into 100-year monitoring contracts. This does not mean that their mitigation activities lack integrity or should be disincentivized.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | The IC should fully consider the implications of its threshold timelines, and should explain why they have been chosen.                                                                                                                                                                                                                                                                                                                                                                                   |
| 1807 | Spencer Meyer        | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | ge              | NCX (the Natural Capital Exchange) recommends that Option 2 in this table become the new standard for quality for long-term commitments to monitor and compensate, and that the IC-VCM consider other creative ways to incorporate tonne-year accounting and other tools to value storage of different durations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Please see above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1807 | Spencer Meyer        | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | ge              | In table 44, the Expert Panel proposes three options for programs to meet the “monitoring and compensation” criteria for permanence. We are not in support of Option 1 as it is written today, but we are intrigued by the possibilities that Options 2 and 3 could create for increasing integrity and minimizing risk in the market.                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1807 | Spencer Meyer        | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | ge              | First,we struggle to see why Option 1 (conventional long-term commitments to monitor & compensate) would be permitted by the CCPs, in either the Initial or Full thresholds, as it represents no real departure from the status quo. The long-term commitments that it relies on would allow incumbent programs to become CCP-approved with no significant changes to risk and liability. Despite this document’s attempts to enforce reasonable creation of buffer pools, these pools are simply not likely to be sufficient - even if further capitalized by the “Full” Threshold.                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1807 | Spencer Meyer        | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | ge              | For example, a recent Carbon Plan paper on the CARB market shows how its buffer pool is inadequate to keep up with risks of non-delivery for 100-year projects. The risks of non-delivery could be even higher for programs in the VCM market that use 40 year contracts, which still presume 100 years of permanence, but require no enforcement beyond year 40. And as the authors write, the same problems “likely also affect buffer pools used by voluntary offset protocols, such as the Climate Action Reserve’s forest offsets protocol.” (Badgley et al. (2022), California’s forest carbon offsets buffer pool is severely undercapitalized. <a href="https://www.frontiersin.org/articles/10.3389/ffgc.2022.930426/full">https://www.frontiersin.org/articles/10.3389/ffgc.2022.930426/full</a> ) | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| 1807 | Spencer Meyer        | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | ge              | Second,we recommend that the Expert Panel further explore the “partial crediting” scheme proposed by “Option 2,” and make this arrangement the new standard for any methodology issuing credits assumed to be 100 years permanent. Option 2 would let programs commit only 25 years (in the initial threshold) or 50 years (in the full threshold) to monitor and compensate for reversals, as opposed to 50 or 100 years as in Option 1. But programs would also need "sufficient incentives" to extend that commitment further. For instance, instead of issuing all credits for a 100-year project up-front, a project might issue just 1% every year for 100 years, or some other delivery rate.                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1807 | Spencer Meyer        | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | ge              | As we have written elsewhere, we do not support the assumption that only 100 years of storage is valuable to climate solutions. However, given the dominance of this notion, we believe that this “Option 2” could be a viable pathway for conventional long-term projects to continue existing, but better mitigate their risk of reversal and non-delivery. To be effective, this approach would need to use tonne-year accounting to ensure that only the portion of the credit that has actually been delivered is issued. (For example, five years of storage in a 100 year project would reflect five tonne-years, and therefore 1/20th of the overall credit). This approach is already approximated by the example provided by the Expert Panel, which proposes to deliver 1% of the stated climate benefit each year. If this Option 2 is expanded, we also recommend IC-VCM delete the arbitrary minimum number of years and instead demand standards and methodologies justify through robust quantification of the temporary benefits they produce. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1807 | Spencer Meyer        | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | ge              | The Expert Panel could require that all new projects—especially those 20 years or longer—refrain from issuing credits up front. Instead, they could require that all such projects begin delivering credits slowly over time as proposed in Option 2. This delivery rate could be linear, applying tonne-year accounting to issue credits each year. Alternatively, it could incorporate a time preference for earlier storage by delivering a decreasing percent of credits over time. This could work by applying a discount rate, which would provide the incentives for landowners to continue to enroll, satisfying the apparent intent of Option 2 as drafted.                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1807 | Spencer Meyer        | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | ge              | NCX strongly supports the use of Option 2 to shift long-term projects towards true ex-post crediting, but believes this approach should be applied to projects of any duration.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1807 | Spencer Meyer        | Table 44 – Requirements for Criterion 9.2a: Length of commitment period to monitor and compensate for reversals | ge              | Finally,the Expert Panel also opens the door to “Option 3,” where any incentives that create similar stringency to Options 1 and 2 may be considered. For this section, we encourage the Expert Panel to think about ways that shorter-term crediting could work as a suitable alternative to Options 1 and 2. As we have written earlier, ex-post crediting of short term credits is an effective way to mitigate risk of reversal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1808 | Anonymous            | Criterion 9.2.b: Sufficiency of the compensation mechanism                                                      | te              | On part a: It is unclear what type of insurance the IC is considering. We note that insurance approaches have not been adopted in the market, and currently no Standard has a re-insurance mechanism in place despite various attempts to consider this as an option. We strongly suggest removing this as a requirement until it is clear that this is a viable option.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | see comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1809 | Darcy Jones          | Criterion 9.2.b: Sufficiency of the compensation mechanism                                                      | ge              | If the seller is responsible to compensate the buyer in the case of reversals, compensation mechanisms must be legally robust and enforceable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | The AF needs to be very specific on how to identify when a reversal is avoidable or unavoidable. This may be difficult in practice, but mirrors that of insurance policy coverage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1812 | Josiah McClellan     | Table 45 – Requirements for Criterion 9.2b: Sufficiency of the compensation mechanism                           | ge              | 9.2.b, table 45                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Legal agreements binding for 100 years will be difficult if not impossible, and directly violates the Rule against Perpetuities in American common law. This requirement has the potential to exclude NBS as an option in the voluntary carbon market. ICVCM should be transparent about its intent here to exclude NBS mitigation activities from CCP eligibility. It is unrealistic to expect that 100-year legal binding agreements could be managed, or to expose carbon crediting programs to significant insurance and legal costs if they attempt to enforce these agreements with much larger organizations that are mitigation activity proponents. |

The definition of avoidable and unavoidable is based on 'intention'. NCS does not clearly distinguish between what was avoidable and what was unavoidable. Further, in jurisdictional programs, intention is not easy to attribute, for example, to land transitions.                                         | 0                                                                                                                                                                                                                                                                                                                                                                                         |
| 1819 | Individual/employee, Conservation International | Table 45 – Requirements for Criterion 9.2b: Sufficiency of the compensation mechanism | te              | The requirement that “...there should be clear scientific evidence to support the % contributions that are decided,” will likely cause many standards to fail, since references to scientific literature are scarce in standard documents.                                                                                                                                                                          | The requirement is sensible, but there will be a need to work with standards to ensure they strengthen the scientific basis and provide explicit references to evidence-based criteria or processes in their rules and requirements, which have, in some cases, been determined subjectively. There may be a need to roll this in over time if the largest standards are to pass the CCP. |
| 1820 | Individual/employee, Conservation International | Table 45 – Requirements for Criterion 9.2b: Sufficiency of the compensation mechanism | te              | There is no process for allowing new standards to grow their buffer pool to the level specified under the “full” threshold, given that they will start with 0 credits in a buffer account.                                                                                                                                                                                                                          | Provide evaluation criteria for such a situation.                                                                                                                                                                                                                                                                                                                                         |

| 1821 | Anonymous            | Table 45 – Requirements for Criterion 9.2b: Sufficiency of the compensation mechanism | ge              | Adequate permanence mechanisms are paramount to high-quality offset credits. Programs should require buffer pool contributions (or similar insurance mechanisms) to compensate for unintentional reversals. Contributions should be based on appropriate project-specific risk assessments. In the case of intentional reversals, legally binding mandates should be in place, requiring the replacement of all reversed credits.                                        | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 1824 | John Holler          | Table 45 – Requirements for Criterion 9.2b: Sufficiency of the compensation mechanism | ed              | It is not elaborated how sufficient capitalization of the buffer reserve will be assessed. Please refer to the Carbon Credit Quality Initiative for an example.                                                                                                                                                                                                                                                                                                          | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 1825 | Darcy Jones          | Table 45 – Requirements for Criterion 9.2b: Sufficiency of the compensation mechanism | te              | EDF does not support a 100-year requirement for monitoring and compensation as at a jurisdictional scale it does not make sense to require permanence for this long. Governments will not, and in some cases, cannot, sign obligations for this long.                                                                                                                                                                                                                    | To guarantee permanence, the AF should recognize appropriate incentives (such as recouping uncertainty deductions over time) aligned with reversal risks that are needed to guarantee a pathway for continued performance. It is unclear how this criterion would be implemented in practice. It should be considered that setting a buffer pool to correspond to a volume of buffered credits, rather than to a timeframe, could more effectively address large-scale permanence risks. Suggest amending this time period requirement to more accurately reflect the characteristics of jurisdictional REDD+ programs. |
| 1825 | Darcy Jones          | Table 45 – Requirements for Criterion 9.2b: Sufficiency of the compensation mechanism | te              | Additionally, the drafted requirements around robust quantification of a sufficiently capitalized buffer pool do not consider the many climate benefits of standing forests that are not fully quantified but proven to exist. (See Lawrence et al (2022) The Unseen Effects of Deforestation: Biophysical Effects on Climate. Frontiers in Forests and Global Change. <a href="https://doi.org/10.3389/ffgc.2022.756115">https://doi.org/10.3389/ffgc.2022.756115</a> ) | Additionally, the AF should recognize the inherent conservativeness of jurisdictional approaches.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 1825 | Darcy Jones          | Table 45 – Requirements for Criterion 9.2b: Sufficiency of the compensation mechanism | te              | Models of US temperate forest projects demonstrate that the likelihood of fire, drought and pest losses in forests mean that the current buffer pools (generally 10%) may not be sufficient to cover likely losses (See Anderegg et al 2022 Ecology Letters; Anderegg et al 2022 Science). Given these risks, we see the need for more realistic buffers.                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 1826 | Anonymous            | Table 45 – Requirements for Criterion 9.2b: Sufficiency of the compensation mechanism | te              | It is not feasible for NCS/NBS activities to enter into 100+ year contracts. If the aim is to exclude these critically important mitigation activities from the VCM, it would be better for the IC to be transparent about that.                                                                                                                                                                                                                                         | See above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 1827 | Spencer Meyer        | Table 45 – Requirements for Criterion 9.2b: Sufficiency of the compensation mechanism | ge              | NCX (the Natural Capital Exchange) recommends a more specific and objective treatment of the compensation mechanism sufficiency. The bar needs to be raised on both the initial and full threshold requirements.                                                                                                                                                                                                                                                         | Please see above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 1827 | Spencer Meyer        | Table 45 – Requirements for Criterion 9.2b: Sufficiency of the compensation mechanism | ge              | We appreciate the attempt of the IC-VCM to increase stringency in the use of buffer pools. However, as we have cited earlier, multiple studies have shown that buffer pools are not likely to be sufficient for the significant risk of reversals over the next century. Unfortunately, this risk would not be mitigated by the proposed criteria.                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 1827 | Spencer Meyer        | Table 45 – Requirements for Criterion 9.2b: Sufficiency of the compensation mechanism | ge              | We do support the mention of "clear scientific evidence" as a requisite for buffer pool deductions. However, the Expert Panel needs to make this criterion much more explicit and to create a meaningful threshold for the necessary quantitative method used to calculate buffer pool requirements. Existing tools that use only subjective attestations are clearly not sufficient.                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| 1827 | Spencer Meyer        | Table 45 – Requirements for Criterion 9.2b: Sufficiency of the compensation mechanism | ge              | Finally, the requirement for buffer pools to be “sufficiently capitalized” for 50-100 years should be an absolute minimum for any methodology that is relying on long-term contracts for delivery of credits that have already been issued. As such, this requirement should be reflected in the initial as well as full threshold.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1828 | Mark Glossoti        | Criterion 9.3: Temporary crediting approaches                                         | ge              | The assessment framework requires either a 100-year legally binding project monitoring and reversal compensation term or an equivalent crediting adjustment with a minimum term of 25 years. Today, this is highly challenging for most NBS mitigation projects due to uncertainties, such as difficulty of financial modelling across centuries and volatility of underlying legal framework in host countries. Moreover, there is currently a lack of tailored insurance products that would help project developers to hedge against reversal risk (including natural disasters, fraud, jurisdictional/expropriation risks). While CIX supports the notion of ensuring low risk tolerance for results, we encourage IC-VCM to consider engaging project developers, including jurisdictional REDD+, to understand how this can be done. In addition, the IC-VCM should reconsider section 9.3. We suggest explicitly allowing buffer pools that compensate for reversals instead of using temporary crediting labels. A number of new, unproven technologies have been classified as having low or zero reversal risk while NBS projects are characterised as having a material risk which creates an unnecessary bias. | -                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1829 | Anonymous            | Criterion 9.3: Temporary crediting approaches                                         | ge              | · In the criterion 9.3 “Temporary crediting approaches”, we do not support the temporary credits approach as they clearly showed to be unsuccessful in the context of the Clean Development Mechanism. Indeed, tCERs never gained widespread acceptance by the buyers for the reason that they created an open-ended obligation to replace the temporary credit when it expired. Additional concerns are:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | none                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| 1830 | Anonymous            | Criterion 9.3: Temporary crediting approaches                                         | te              | Do not promote nor allow temporary crediting. This was a previous approach taken under the Clean Development Mechanism (CDM), called a temporary certified emissions reduction (tCER). tCERs were “credits given for emission removals certified for an afforestation or reforestation CDM project (to be replaced upon expiry at the end of the second commitment period)”. The tCER approach was a failure. tCERs never gained widespread acceptance by the buyers for the reason that they created an open-ended obligation to replace the temporary credit when it expired a decade or more hence. Even the most willing and ambitious user of such a credit were not ready to manage this risk and were therefore deeply concerned with the prospect of reintroducing a concept that had already proven to be unworkable. There were a number of specific concerns raised:                                                                                                                                                                                                                                                                                                                                            | Potential alternatives/solutions:                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1830 | Anonymous            | Criterion 9.3: Temporary crediting approaches                                         | te              | · The administrative burden of tracking these credits is significant, as there will be many more credits, expiry dates, cancellations, and then replacements that must be tracked                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | · From a demand-side perspective, there is likely more appetite to pay more for a robust, quality credit that is purchased once, and can account for the claims made for that credit (instead of purchasing a temporary credit that must be replaced). Therefore, solutions that address permanence through enhanced existing mechanisms (i.e., buffer pools), and an understanding of associated claims that can be made with these credit types. |

| 1832 | Anonymous                                 | Criterion 9.3: Temporary crediting approaches | ge              | From an administrative perspective, tracking the replacement is cumbersome and costly. Buyers would also be less inclined to purchase, if they knew they had to replace tons in the future, especially if they assume prices are going up in the future.                                                                                                                                                                                                                                                                                                                                                                                   | n/a                                                                     |
| 1832 | Anonymous                                 | Criterion 9.3: Temporary crediting approaches | ge              | It is unclear how tonne-year accounting will be viewed as eligible under the CCPs. We strongly advocate that the CCPs explicitly prohibit tonne-year accounting due to the lack of scientific consensus on that approach, and the vast difference in crediting that result from different approaches that have been proposed and applied by Standards. Furthermore, discounting credits from nature-based activity types does not capture their worth as a rigorous and demonstrated climate solution, while also failing to capture the other benefits they provide for biodiversity, climate adaptation, food security, and other areas. | 0                                                                       |
| 1832 | Anonymous                                 | Criterion 9.3: Temporary crediting approaches | ge              | It is also surprising to see the proposal of temporary crediting as an option to address permanence. Experience from the CDM suggests that this was not a successful mechanism, as it failed to attract finance or buyer interest at scale. Specifically, it has been shown that temporary crediting reduces demand for these credits and thus hampers long-term sequestration efforts. This perception resulted in their exclusion from the EU ETS, further impacting action in this sector.                                                                                                                                              | 0                                                                       |

| 1834 | Individual/employee, Finnwatch            | Criterion 9.3: Temporary crediting approaches | ge              | We do not support accepting temporary credits that buyers must replace when they expire. As carbon credits are typically used to offset fossil emissions that stay hundreds of years in the atmosphere, it is unlikely that responsibility to replace expired credits could be enforced for a similar time period.                                                                                                                                                                                                                                                                                                                         | n/a                                                                     |
| 1835 | Individual/employee, Meo Carbon Solutions | Criterion 9.3: Temporary crediting approaches | ge              | This concept needs to be further clarified in detail, highlighting the potential benefits and risks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | See above.                                                              |
| 1836 | Anonymous                                 | Criterion 9.3: Temporary crediting approaches | ge              | XXXX recalls that Temporary Crediting is not a preferred choice for compensating reversal risks. The industry has witnessed the failure of Temporary Crediting under the Clean Development Mechanism. It does not work from the demand side of credits because buyers are hesitant to buy credits that they would have to replace.                                                                                                                                                                                                                                                                                                         | We suggest the removal of this option from the Assessment Framework.    |
| 1837 | ANdi Stanner                              | Criterion 9.3: Temporary crediting approaches | ge              | We do not recommend the integration of temporary crediting into CCP eligibility, as the concept introduces friction and complexity to demand-side accounting and assessment, slowing down market activity rather than increasing it. Earlier experiments within the CDM regime have not been met with market success, which should be a signal considered.                                                                                                                                                                                                                                                                                 | Our recommendation is not to consider temporary credits as CCP eligible |
| 1838 | Anonymous                                 | Criterion 9.3: Temporary crediting approaches | ge              | Temporary crediting was attempted under the CDM and it was not a successful approach. Temporary crediting would create more confusion than it would solve, and we do not recommend entertaining this as a viable option. Clear and consistent permanence timeframes and use of buffer pools or insurance mechanisms are the best way to approach permanence.                                                                                                                                                                                                                                                                               | see comment                                                             |
| 1838 | Anonymous                                 | Criterion 9.3: Temporary crediting approaches | ge              | The CCPs do not clearly indicate endorsement of tonne-year accounting (TYA), but it is mentioned in passing in Section 9 (Permanence). We recommend IC-VCM proceed with caution if considering TYA. Tonne-year accounting is still a relatively new mechanism for the carbon market. While it is possible to use tonne-year accounting well (with appropriate multi-decadal permanence periods, appropriate consideration for leakage and additionality, and conservative accounting approaches), some proponents of TYA have incorrectly used it as justification for cutting corners on permanence and leakage, which should be avoided. | 0                                                                       |

| #    | Comment submitted by           | Para/Fig/Table/Note                           | Type of comment | Submitted comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Proposed change                                                                                                                                                                                                                       |

| 1839 | Individual/employee, Carbonext | Criterion 9.3: Temporary crediting approaches | te              | Based on the similarity of the Clean Development Mechanism (CDM) temporary certified emissions reduction and the approaches presented to temporary crediting on the AF, we do not believe that it is an efficient and interesting measure to be encouraged. Temporary credits under the CDM were not well received by buyers, as they created an open-ended obligation to replace the temporary credit when it expired a decade or more. Even the most willing and ambitious user of such a credit were not ready to manage this risk. It would not be interesting to re-foment in the carbon market a concept that had already proven to be unworkable.                                                                                                                                      | Solutions that address permanence through enhanced existing mechanisms (i.e., buffer pools), and an understanding of associated claims that can be made with these credit types, should be considered to deal with permanence issues. |
| 1841 | Anonymous                      | Criterion 9.3: Temporary crediting approaches | te              | It is surprising to see the proposal of temporary crediting as an option to address permanence. Experience from the CDM suggests that this was not a successful mechanism, as it failed to attract finance or buyer interest at scale. Specifically, it has been shown that temporary crediting reduces demand for these credits and thus hampers long-term sequestration efforts. This perception resulted in their exclusion from the EU ETS, further impacting action in this sector. There are a number of papers written about the efficacy of this mechanism, and it will be important to consider the various views before proposing this in the CCPs. We suggest reviewing the BioCarbon Fund's insights after implementing 21 CDM A/R projects as it discusses this topic in detail. | see comment                                                                                                                                                                                                                           |
| 1842 | Darcy Jones                    | Criterion 9.3: Temporary crediting approaches | ed              | As written, it appears that temporary crediting still requires independent monitoring for reversals and a robust and enforceable compensation mechanism.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | It should be made clearer in the text if and how temporary crediting approaches address reversal risk.                                                                                                                                |
| 1843 | Anonymous                      | Criterion 9.3: Temporary crediting approaches | te              | Buffer pools with appropriate accounting for reversals, and possibly reinsurance, handle this issue better than temporary credit issuance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | We do not recommend temporary credits as a mechanism.                                                                                                                                                                                 |
| 1844 | Spencer Meyer                  | Criterion 9.3: Temporary crediting approaches | ge              | NCX (the Natural Capital Exchange) points out that IC-VCM needs to significantly clarify its requirements for replacement for temporary credits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Please see above.                                                                                                                                                                                                                     |
| 1844 | Spencer Meyer                  | Criterion 9.3: Temporary crediting approaches | ge              | According to this document, any methodology that uses temporary crediting must also require buyers to replace these credits periodically. As written earlier, we do not agree with this requirement. Instead, IC-VCM should require robust and defensible quantification of the impact of credits of any duration so that buyers of credits will know what the true value of their credits are. Leaving the draft as-is would be inconsistent, since the IC-VCM has already established that 100-year credits are also inherently temporary and IC-VCM does not require replacement of those credits after 100 years.                                                                                                                                                                         | 0                                                                                                                                                                                                                                     |
| 1844 | Spencer Meyer                  | Criterion 9.3: Temporary crediting approaches | ge              | In any case, we ask IC-VCM to clarify how long they believe this obligation to replace should last. Is it proposing that buyers have to retire and replace credits indefinitely? Or only until they meet the equivalent of 100 years of storage? Or until a buyer purchases a "permanent" credit?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                     |
| 1844 | Spencer Meyer                  | Criterion 9.3: Temporary crediting approaches | ge              | If it is one of the latter, we would strongly discourage IC-VCM from requiring buyers to purchase any credits that rely on long-term commitments to monitor and compensate, as this would replicate the large amounts of liability for reversal that temporary crediting methodologies seek to avoid.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                     |
| 1845 | Anonymous                      | Description                                   | ge              | "When a credit expires at the end of its validity period, it shall be replaced by a permanent credit." The text in the following paragraph under "Rationale" seems to indicate that the credit can also be replaced by another temporary credit                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Please clarify and adjust text                                                                                                                                                                                                        |
| 1846 | Emma van de Ven                | Description                                   | te              | See below                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Please rephrase "permanent credit" since this seems inconsistent with further descriptions of replacement credits.                                                                                                                    |
| 1847 | Carolyn Ching                  | Description                                   | te              | This criterion requires GHG programs to "hold users of those credits liable for replacing them." But temporary credits create an unnecessary burden on projects and GHG programs and are not practicable to implement. The buyer does not have a contract with the GHG program, so this would not be possible to enforce. Further, the use of temporary credits should be the responsibility of the buyer, not the GHG program.                                                                                                                                                                                                                                                                                                                                                               | We recommend removing temporary credits as an option.                                                                                                                                                                                 |

| 1848 | Anonymous                      | Rationale                                     | ge              | We understand this way of thinking. However, if the buyer is obligated to replace a retired temporary credit, what is the merit for the buyer to buy such credit? Also, temporary crediting could result in several temporary credits at risk of reversal not being appropriately cancelled in the registry, and timing lags and delays could inflate the registry pool significantly.                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                     |

| 1849 | Richard Tipper                                  | Table 46 – Requirements for Criterion 9.3: Duration of validity of credit | te              | There should be a minimum time threshold for VC projects as very short term removals or avoided emissions (<25 years) is of very limited value.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Set a cut-off minimum of between 25 and 50 years                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 1850 | Josiah McClellan                                | Table 46 – Requirements for Criterion 9.3: Duration of validity of credit | ge              | 9.3, table 46                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Legal agreements binding for 100 years will be difficult if not impossible, and directly violates the Rule against Perpetuities in American common law. This requirement has the potential to exclude NBS as an option in the voluntary carbon market. ICVCM should be transparent about its intent here to exclude NBS mitigation activities from CCP eligibility. It is unrealistic to expect that 100-year legal binding agreements could be managed, or to expose carbon crediting programs to significant insurance and legal costs if they attempt to enforce these agreements with much larger organizations that are mitigation activity proponents. |
| 1851 | Eftimiya Salo                                   | Table 46 – Requirements for Criterion 9.3: Duration of validity of credit | te              | Suggested length of term is 5-10 years for temporary carbon credits. The lower range of 5 years is too low, 10 years is a good period for soil carbon credits for example.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Even in the lower range of 5-10, there should be the same requirement to monitor for reversals and replace credits when reversals occur. One suggestion is to leave in the final draft only the 10-30 years period for the temporary carbon credits.                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1852 | Spencer Meyer                                   | Table 46 – Requirements for Criterion 9.3: Duration of validity of credit | ge              | NCX recommends that IC-VCM modify or eliminate the 5 year minimum for temporary crediting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Please see above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1852 | Spencer Meyer                                   | Table 46 – Requirements for Criterion 9.3: Duration of validity of credit | ge              | We recommend that IC-VCM either eliminate or modify the 5-10 year minimum for temporary credits to permit credits of any duration, as long as they are adequately accounted for. We are interested to see any evidence supporting the claim that shorter term storage cannot create real climate benefits, while projects five years or longer are proven to do so. If IC-VCM has a scientific justification for five years as the minimum, please clearly state it.                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1852 | Spencer Meyer                                   | Table 46 – Requirements for Criterion 9.3: Duration of validity of credit | ge              | More broadly, we would like to see IC-VCM take an approach to temporary crediting that is less prescriptive and more evidence-based. If a project can rigorously show its impact - with support from empirical analysis, environmental economics, atmospheric science, or other relevant sources - then the minimum year requirement should be irrelevant. Otherwise, the draft Assessment Framework could allow low-quality five year, or 10 year, or 40 year credits to pass the test, while leaving out high-quality, evidence-based shorter credits. Regardless of whether projects have a duration of one, five, or 100 years, it would be more useful for IC-VCM to put the burden of evidence on project developers to demonstrate the impact of their credits. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| 1856 | Darcy Jones                                     | Description                                                               | ge              | Institutional stability should not be limited only as a criterion for permanence, as it has implications for other areas such as governance, sustainable development impacts and safeguards. The term “sufficient institutional strength and stability” is not clearly defined in qualitative or quantitative terms, leaving considerable room for debate when assessing this criterion.                                                                                                                                                                                                                                                                                                                                                                               | Institutional stability should be considered throughout the AF and CCPs once clearly defined.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 1857 | Anonymous                                       | Table 47 – Requirements for Criterion 9.4: Institutional sustainability   | te              | Regarding "b) In addition, the carbon-crediting programs shall have been continuously governed and operated for two years, as demonstrated by normative program documentation.", this criterion implies that any carbon crediting program with projects with even low reversal risk will not be able to trade with credits meeting the CCP within the first 2 years of operation. This could be a barrier to entry for new market entrants                                                                                                                                                                                                                                                                                                                             | Reconsider, or provide alternative arrangements for new programs. For example, a percentage of revenues need to be ringfenced and not spent for the first two years of operation                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| 1858 | Individual/employee, Conservation International                                             | Table 47 – Requirements for Criterion 9.4: Institutional sustainability | te              | This requirement may effectively limit creation of new crediting programs-- it would likely slow adoption of a new standard if the CCP label becomes meaningful to purchasers. If possible, it's best to allow for more competition to improve the quality of standards but there's also a risk that increased competition could incentivize standards to cut corners to produce more credits.                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                 |
| 1859 | Individual/employee, Conservation International                                             | Table 47 – Requirements for Criterion 9.4: Institutional sustainability | te              | The CCP require that a program have a, “plan for long-term administration of multi-decade program elements,” and, “a plan for possible responses to the dissolution of the program.” There are no criteria describing the requirements for these plans and their contents. Does the existence of a plan suffice regardless of its contents?                                                                                                                                                                                                                                                                                                                                                          | Provide specific guidance on the contents and rigor of said plans in order for a program to substantiate its “institutional sustainability” in a credible manner. |
| 1861 | Anonymous                                                                                   | 0                                                                       | ed              | The last sentence of this section ("Section 10 provides the criteria for assessing the Robust Quantification CCP at the type of carbon credit level.") appears redundant.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Consider removing this sentence.                                                                                                                                  |
| 1862 | Individual/employee, Zero Emissions Platform and the Carbon Capture and Storage Association | 0                                                                       | ge              | ZEP and CCSA welcome the consideration of system/accounting boundaries in the assessment of the quantification methodologies. However, we emphasize that the achievement of carbon dioxide removals or reductions should be verified through a robust full life-cycle analysis (LCA) – this is the only way to ensure that real removals or reductions are occurring, and it must be a high integrity criterion in the ICVCM Assessment Framework.                                                                                                                                                                                                                                                   | See comment above.                                                                                                                                                |
| 1862 | Individual/employee, Zero Emissions Platform and the Carbon Capture and Storage Association | 0                                                                       | ge              | Furthermore, underpinning a full LCA must be a clear definition of carbon emissions reductions and removals. ZEP has highlighted in its report <sup>1</sup> that four principles must be met for activities to be considered as achieving removals:                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                 |

| 1863 | Anonymous                                                                                   | 0                                                                       | te              | The proposed approach seems to assert that the expert panel will judge the robustness of protocols/methodologies, which directly substitutes the expertise of the expert panel for the expertise of the carbon credit programs, validators and stakeholders. This type of subjective assessment also adds uncertainty to the market which will hinder the ability of the market to scale. Given the sheer numbers and frequent updates to methodologies currently available this approach is unlikely to be feasible. The leading programmes have built up expertise and capacity over decades, it is unclear that a renewed review of methodologies by the expert panel would lead to new insights. | See above.                                                                                                                                                        |

| 1863 | Anonymous                                                            | 0                   | te              | The IC-VCM review should address high-level requirements for methodology development, assessment and update. This could include provisions on the number of experts involved in the development, a science-based approach, requirements relating to peer-review, transparency of the consultation and a publication of the scientific basis behind decision, as well as provisions relating to the review cycle and robustness of the review.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 1864 | Josiah McClellan                                                     | 0                   | ge              | With the requirements set forth in section 2 for expert review and public stakeholder comment, section 10 is superfluous and redundant. The guidance suggests that the ICVCM generalist expert group will have greater expertise on a specific methodology than a focused expert group that was created specifically for the methodology in question, and this is unrealistic.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Section 10 should be deleted in favor of Section 2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1865 | Phil Cryle                                                           | 0                   | te              | The avoidance of leakage is not explicitly set out as one of the Core Carbon Principles, although it does feature under the “robust quantification of emission reductions and removals” principle, which states “indirect impacts must also be included (‘leakage’) where emissions increase outside the boundary of the activity”, and in “Criterion 10.4 Quantification of leakage emissions”. The title of the principle “robust quantification of emission reductions and removals” suggests that it is primarily concerned with quantifying the gross reduction / removal of emissions from offsetting projects rather than the net reduction / removal after leakage is accounted for. Given the importance of the issue of leakage avoidance to the actual and perceived integrity of carbon offsetting as a mechanism to reduce global carbon emissions, it could be given greater prominence in the CCPs, even if this is simply by amending the title of the principle to reflect leakage avoidance. | The avoidance of leakage is not explicitly set out as one of the Core Carbon Principles, although it does feature under the “robust quantification of emission reductions and removals” principle, which states “indirect impacts must also be included (‘leakage’) where emissions increase outside the boundary of the activity”, and in “Criterion 10.4 Quantification of leakage emissions”. Requiring GHG programs to stipulate that ERRs must be estimated conservatively rather than accurately undermines any incentive projects and programs have to continue to invest in new and improved monitoring systems. The goal of any carbon methodology or Standard should be to reflect the impact of the activities on the atmosphere as fully and accurately as possible, not to simply be conservative for the sake of being conservative. If conservativeness is the ultimate goal, simple defaults could be used for all parameters instead of more complex accounting methods. Standards and methodologies should promote the collection of increasingly better data to improve confidence in the results.                                                                                                                                                                                                                                                                                        | · Strengthen the focus on accuracy over conservatism to incentivize ongoing MRV improvements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

We are confused about how underreporting by a jurisdiction has a negative impact on the market and why deductions must be taken or provisions made to prevent underreporting. This especially seems to contradict earlier sections which stress that conservativeness is the main objective.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | · Ensure the focus is on overreporting rather than including underreporting as well since underreporting does not affect the integrity of the credits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1866 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | 0                   | ge              | 3. International leakage should be removed from consideration. It is not currently accounted for, including under the UNFCCC, because not only is it challenging to accurately quantify, but also because it is perverse to discount credits from a good actor for bad actions happening beyond its borders. As more national accounting areas are included in the carbon market, international leakage will be captured in the annual emissions reporting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | · Remove the inclusion of international leakage until such time as better means of quantifying the value are obtainable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

Crediting periods should not be required to align with NDC reporting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | · Do not require crediting periods to align with NDC reporting to permit crediting periods to begin when the project or program is ready and to be of a duration that is appropriate to the nature of the activity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1866 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | 0                   | ge              | 6. It is not practical nor helpful to require a jurisdiction to attribute a specific number of ERRs achieved to specific mitigation activities. One of the many benefits of scale is the ability to enact multiple overlapping or intertwined programs and policies. This increases success across the landscape but also makes it almost impossible to accurately attribute specific quantities of ERRs to each activity. Quantifying the total reductions or removals as well as listing the activities conducted provides the same level of assurance as to the drivers of the reductions or removals.                                                                                                                                                                                                                                                                                                                                                                                                      | · Remove the requirement for emission reductions and removals to be attributed to specific activities for jurisdictional programs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| 1867 | Luzia Bieri                                                          | 0                   | ge              | The AF foresees a very detailed assessment of individual methodologies with the objective to exclude methodologies which may lead to a potential overestimation of emission reductions or removals. This detailed review of individual methodologies and even different versions thereof will take too long, and it is not clear based on which criteria the final expert judgement would be made. In addition, it might not be possible to assess at the methodology level, whether the emission reductions will be under- or over-estimated, but only when applying the methodology to a specific project activity. The IC-VCM review should focus on the high-level requirements for methodology development, assessment and update (as already covered by section 2 of the Assessment Framework), rather than reassess every single methodology. | Delete section 10 (robust quantification) of the AF. The IC-VCM review should focus on the high-level requirements for methodology development, assessment and update (as already covered by section 2 of the Assessment Framework), rather than reassess every single methodology.                                                                                                                                                                                                                                                               |
| 1868 | Individual/employee, Conservation International                      | 0                   | te              | Robustness (not defined in the document) and conservativeness are the primary evaluation criteria for quantification procedure, whereas accuracy, reduced uncertainty, and use of best present scientific understanding are not mentioned. The guidance provided by the CCP to favor conservativeness over accuracy could lead to unintended consequences, such as the use of default IPCC values that do not adequately represent conditions at the project scale or, in the worst-case scenario, leading to ERR estimates that are too conservative to make projects financially feasible.                                                                                                                                                                                                                                                         | Consider evaluating other important aspects of quantification procedures such as those suggested here. Place an emphasis on reducing error and uncertainty rather than favoring conservative estimates that do not accurately reflect real-world conditions. Require programs to use evidence-based justification of quantification methods and employ best available scientific methods and practices. Encourage the use of site-specific and species-specific data rather than default values that may not be appropriate at the project scale. |
| 1869 | Individual/employee, Conservation International                      | 0                   | te              | There does not appear to be any requirement that programs develop quantification procedures based on the best available scientific knowledge and understanding. It is common for programs to provide methods, equations, and parameter values without citing said values or providing any references as to the source of said methods or values.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Require programs and their methodologies to provide sources and justifications as well as citations and references for methods, equations, parameters, models, and other tools used in the quantification of GHG emissions.                                                                                                                                                                                                                                                                                                                       |
| 1870 | Individual/employee, Conservation International                      | 0                   | ge              | Quantification approach does not recognize the deductions already taken under most standards, including jurisdictional REDD+. Additional penalties or eligibility criteria to address the same issues are redundant and only serve to exclude valid credits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Reformulate quantification criteria to take into account the penalties, deductions, and eligibility criteria that already exist in standards.                                                                                                                                                                                                                                                                                                                                                                                                     |

| 1872 | Individual/employee, INUK                                            | 0                   | te              | Inuk has developed a robust methodology in order to guarantee the most reliable quantification of emissions reductions, based on our low-carbon blockchain technology and on renewable energy projects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | NA                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 1872 | Individual/employee, INUK                                            | 0                   | te              | Before adding a new project to our portfolio, we conduct a life cycle analysis of the structure and then calculate the emissions actually avoided by the project, compared to a baseline scenario (using the Clean Development Mechanism methodology). We then connect to the meter of the power plant of our partner, and add real-time production data on our blockchain, allowing us to convert them into avoided CO2e emissions (based on a avoided emissions factor). Each avoided ton of CO2e is then tokenized on our blockchain (as a carbon credit), and destroyed when sold (to guarantee the uniqueness of credits).                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1872 | Individual/employee, INUK                                            | 0                   | te              | This methodology allows us to guarantee the robust quantification of emission reductions, based on real-time production data, as well as a high level of transparency and traceability of carbon credits. Hence, we believe at Inuk that this blockchain-based methodology has a high potential to bring more measurability, transparency and traceability on the carbon credits market.                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| 1873 | Carolyn Ching        | 0                   | te              | Balancing conservativeness with accuracy – Throughout the section on robust quantification, the criteria focus on conservative estimates. This is another topic that has long been discussed and deliberated in the VCM. Focusing on choosing conservative parameters can lead to an underestimation of emission reductions or removals and it undermines movement towards improved monitoring and data collection. The GHG crediting programs tend to balance this with accuracy. If the estimates are more accurate, projects shouldn't always be forced to make the most conservative estimations.                                                                    | We recommend that ICVCM consider Verra's approach to conservativeness and accuracy: "Accuracy should be pursued as far as possible, but the hypothetical nature of baselines, the high cost of monitoring of some types of GHG emissions and removals, and other limitations make accuracy difficult to attain in many cases. In these cases, conservativeness may serve as a moderator to accuracy in order to maintain the credibility of project and program GHG quantification." |

| 1874 | Ronan Carr           | 0                   | ge              | However, at a credit-level, over-crediting risk is a point of contention. BeZero views it a risk factor contributing to credit quality, while under the current CCPs it is also a potential component of eligibility. Without allowing for local or project level nuances the framework may lead to inaccurate assessments of specific projects. Importantly the CCPs can and do mandate strong levels of information provision on all aspects of baseline setting, emissions monitoring and quantification. This enables other participants in the market including ratings agencies to better assess quality and value at a detailed level if required.                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| 1875 | Seoyi Kim            | 0                   | ge              | The MDB WG considers that ensuring a high level of security for the marketplace will only increase trust in the market. Therefore, any new technology (e.g., digital) increasing the safety, reliance, and transparency of the MRV process should be welcome. The draft CCPs do not mention the use of new technologies to support monitoring, reporting, and verification (MRV) processes for projects under the standard, nor the need for programs to update protocols and methodologies to accommodate new solutions. While not a requirement for a program to be eligible, the draft CCPs could reference the need for eligible programs to move in this direction. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 1875 | Seoyi Kim            | 0                   | ge              | In terms of quantification, there is a problematic requirement from the assessment framework that overlays the use of conservative methods over accurate and most precise approaches, which undermines the efforts of programs and projects to make progress towards improving MRV methods. Therefore, care should be taken when relating conservativeness versus accuracy to ensure that programs and projects use the best available methods and approaches.                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 1875 | Seoyi Kim            | 0                   | ge              | Also, in terms of rules for accounting carbon credits inside REDD+ jurisdictional programs, it is important to clarify that the rules for nesting are often defined by sovereign governments, and projects and programs need to comply with them. Therefore, rather than requiring having specific procedures in place for aligning baselines at the standard level, the standards should look at how projects/programs are aware of their responsibilities to comply with the local legislation, and such compliance should be validated and verified by third-party entities, which is currently the normal approach under most internationally recognized standards.  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 1876 | Anonymous            | 0                   | te              | This section should be reevaluated in its entirety. It suggests that the Expert Panel's non-specialist judgment should be substituted for that of the expert multistakeholder groups who developed the methodologies, and that even if that were a desirable outcome, that it would be possible to do so at a pace that would not choke off investment and create uncertainty.                                                                                                                                                                                                                                                                                           | We reiterate that the ICVCM should scale back its mandate to focus on the governance and standards of carbon crediting programs, rather than attempt to validate every methodology and credit type.                                                                                                                                                                                                                                                                                  |

| 1877 | Spencer Meyer        | 0                   | te              | First, we recommend that the Expert Panel clarify what they mean by aspect e) measurability. Perhaps by “measurability,” the Expert Panel means the degree to which a certain quantitative approach can be tested or falsified. Or perhaps they mean the use of sample measurements. Regardless, it needs to be clarified.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0               |
| 1877 | Spencer Meyer        | 0                   | te              | Second, we’d like to point out to the Expert Panel that baseline scenarios are by definition not measurable; they must be projected or estimated using various other probabilistic models. The elements that are combined to estimate baseline scenarios—such as starting carbon, growth, or financial factors—are all determined using probabilistic models. And each of these elements has uncertainty associated with it. Some of these models may incorporate sample measurements taken on-site, but they are not “measurements” per se. To result in an accurate estimate of baseline scenarios and achieved removals/reductions, each of these models should be well calibrated and appropriately applied.                                                                                                                                                                                                                                                          | 0               |
| 1877 | Spencer Meyer        | 0                   | te              | Validation and calibration of models does require measurements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0               |
| 1877 | Spencer Meyer        | 0                   | te              | Given this reality, the expert panel should be prepared to assess three important parts of the quantification approach: 1) the models used to estimate components of the baseline scenario, 2) the method by which these component models are combined to estimate the baseline, and 3) whether the measurements used for validation and calibration of quantitative models are done appropriately.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0               |

| 1877 | Spencer Meyer        | 0                   | te              | We are concerned that this high/medium/low/unknown treatment is overly qualitative and subjective, instead of giving the expert panel the tools to rigorously assess the ways that uncertainty propagates through quantitative models. As we have suggested throughout, IC-VCM should provide a framework for standards and methodologies to demonstrate their impact with more quantitative approaches, rather than vague qualitative statements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0               |

| 1877 | Spencer Meyer        | 0                   | te              | IC-VCM text: “The outcome from section 10.1 shall be used by the Expert Panel to form an expert judgment on the overall robustness and conservativeness of the estimation of emission reductions or removals for the type of carbon credit. This expert judgment shall be based on the likelihood that the emission reductions or removals are not over-estimated. The degree of conservativeness shall reflect the degree of uncertainty of the emission reductions and removals. Conservativeness shall apply to both assumptions and data used in the quantification.”                                                                                                                                                                                                                                                                                                                                                                                                 | 0               |
| 1877 | Spencer Meyer        | 0                   | te              | First, from the description of criterion 10.2 Step 2: Overall Assessment, we understand that the Expert Panel will evaluate a methodology’s quantitative components. However, this criterion is lacking any meaningful quantitative guidelines about how to develop the probabilities and levels of uncertainty that will be used in the Expert Panel’s assessment. This leaves project developers without sufficient guidance on how to meet CCP approval, and also creates the danger of the Expert Panel performing an “apples to oranges” comparison of different heuristics. The Expert panel should specify how programs would calculate, for instance, a “probability of more than 66%” and “uncertainty up to ± 10%.” Or, they should release a disclaimer that they plan to estimate these probabilities and levels of uncertainty on a case by case basis, and will release their methods during the review period of each methodology applying for CCP status. | 0               |
| 1877 | Spencer Meyer        | 0                   | te              | Second, we are concerned that the guidelines shared in Table 49 do not reflect the actual process of quantifying emissions reductions or removals, or estimating a baseline scenario. As written, the guidance claims to be quantitative but is actually highly subjective, which will create serious problems for the evaluation of different methodologies. This expert review process should have the same level of transparency that IC-VCM is prescribing for standards and methodology developers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0               |

| 1877 | Spencer Meyer                                   | 0                   | te              | As described in comment 29a, any estimation of emissions reductions/removals relies on a joint probabilistic model of impact, with multiple component models. The Expert Panel review of the robustness of quantification should focus on : 1) The rigor of the component models; 2) The rigor of the joint model; 3. Propagation of uncertainty in both of these models; and 3) How the project developer comes to a final number of tonnes CO2e from the joint model of impact.                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 1877 | Spencer Meyer                                   | 0                   | te              | Instead of enforcing one probability threshold, as is laid out in Table 49, perhaps a better approach could be for project developers to present the full probability statement that describes project impact, and for the Expert Panel to evaluate the validity of that statement on a case by case basis. Therefore, better guidance in this section could include something like: "once a joint model of impact is developed, project developers shall use a conservative estimate of impact such that there is 90% probability that the true impact equals or exceeds the stated estimate."                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 1877 | Spencer Meyer                                   | 0                   | te              | If project developers are able to make such a probability statement, we propose IC-VCM allow project developers to use the 10th percentile to meet Full Threshold, but that a lower tier—perhaps 20th percentile—be allowable under the Initial Threshold. However, estimates as low as 66% (i.e., 37th percentile), as proposed in the draft, would result in extremely dubious results and should be avoided. If enforcing a higher percentile means that few programs can meet CCP-approval, then the market would acquire the important insight that a large portion of credits may not be accurately quantified.                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 1877 | Spencer Meyer                                   | 0                   | te              | The role of the Assessment Framework should be to describe the criteria of a reasonable joint probability statement about project impact. They should describe what such a full probability statement means, identify its component parts, and refer to more in-depth literature on the subject. Updated guidance on this topic could look like the following:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 1877 | Spencer Meyer                                   | 0                   | te              | 1. Component models: Are the component models appropriate? Are they well-calibrated? Do they have a good understanding of uncertainties? Do they result in conservative estimates?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 1877 | Spencer Meyer                                   | 0                   | te              | 2. Joint model of project impact: Have you developed the joint model correctly? Have you propagated uncertainty correctly? Has it resulted in a conservative distribution?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 1877 | Spencer Meyer                                   | 0                   | te              | 3. Conservativeness with respect to true impact: Is there at least 90% probability that the true impact equals or exceeds the stated estimate?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 1877 | Spencer Meyer                                   | 0                   | te              | This approach may not provide a simple chart, but it would allow the Expert Panel to make a much more meaningful determination about the rigor of a carbon crediting methodology. To make these determinations, the Expert Panel may need to bring on other experts experienced in this type of probabilistic analysis, even if they do not operate exclusively in the carbon space.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 1878 | Anonymous                                       | 0                   | te              | From the sentence "For each element, the Expert Panel shall identify the following information, where possible." to the end of Table 48. It is not clear how this information is to be used. Furthermore, the value of this information is considered questionable, as the fraction of projects and average degree of under- and over-estimation do not take into account the size of the projects - so a very small emissions savings project will be placed on equal footing with one that saves large volumes of emissions                                                                                                                                                                                                                                                                                                                                                                         | Consider removing or provide clarity on how this information will be used.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1879 | Individual/employee, Perspectives Climate Group | 0                   | ge              | i) Besides just determining the "Fraction" it would be important to determine the volume of emission reductions/potential ER impacted by the uncertainty. It makes a difference if a portfolio of 3 activities is impacted ("Medium" if 1 or 2 activities are impacted) or a portfolio with 30 activities ("Medium" if 10-20 activities are impacted") and much higher credit volume. In addition, it could be important to address which activities would be impacted as this may have impacts on credits resulting from such activities.p69: "Some quantification methodologies include both ex-ante and ex-post methods to determine emission reductions or removals. In these instances, only the ex-post methods (i.e., those used to issue carbon credits) shall be part of the evaluation. " Please provide explanation why this is as ex-ante methods often have higher risk for uncertainty. | i) Besides just determining the "Fraction" it would be important to determine the volume of emission reductions/potential ER impacted by the uncertainty. | 1880 | Anonymous                                       | 0                   | te              | It is not possible to estimate "fraction of potential over- or under-estimation". Methodologies already include parameters for assessing uncertainty, and that uncertainty is accounted for and emission reductions discounted appropriately to ensure conservativeness. If there is any further improvements that can be made to accuracy, they would be embedded in the methodologies already, or should be updated to include them. No methodology is designed to over- or under-estimate emission reductions and beyond quantifying uncertainty, it is ludicrous to think there is a credible method for assessing potential over-estimation. On what basis would this be determined? Using what evidence? How is it known that the approach being used compare is any more/less credible than the approach already used in the methodology (which has undergone rigorous assesment by experts, the standard and auditors)? | Do not assess methodologies. Assess programs and the system of developing and approving methodologies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 1880 | Anonymous                                       | 0                   | te              | Variability is also highly subjective and ill-defined here. It is unclear how it would be estimated.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 1881 | Anonymous                                       | 0                   | te              | IC-VCM is not in any way equipped with the expertise to review the detail of every methodology. The methodologies are developed by technical experts with review by additional experts, stakeholders and validation/verification bodies that accredited for the work and also hold technical expertise in the relevant sector. This is an innappropriate role for IC-VCM to take.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | IC-VCM should focus on the governance and procedure for developing and updating methodolgoies. If the IC-VCM wants to review them, it should do so during the process of program methodology development and updating, along with any other stakeholders, so that such comments can be taken into account as part of the highly rigorous process such methodologies undergo. There is no way IC-VCM can do a technical review of all methodologies, and keep this up to date as new methods come online, without seriously undermining the market, and the process the standards undergo. There is no evidence this group would have anywhere near the required technical expertise to do so. |
| 1882 | Emma van de Ven                                 | 0                   | te              | When benchmarking the methods, it's key to specify what is assumed to be "truth". For NBS credits for example, the truth of carbon content can be an allometric equation with DBH and height as input. This is still an approximation of truth, and will never be fully accurate.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Release the superficial benchmarks for models and invite experts to assess their quality on a much more profound level.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 1882 | Emma van de Ven                                 | 0                   | te              | Methodologies using emote sensing to assess the standing carbon stock of thousands of hectares of forest, compared to methodologies analysing the yearly delta in biomass of diverse and complex agroforestry on 0,1 Ha plots, require a very different assessment approach.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| 1883 | Anonymous                                       | 0                   | ge              | There is no 10.1.1. Therefore, this makes it hard to understand the structure of 10.1.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1884 | Anonymous                                       | 0                   | te              | XXXX agrees with the general approach in 10.1. Step 1, in that equal opportunity for identification of over and under-estimation is allowed. However, this step does not appear to be consistent with criterion 2.2, which stipulates that conservativeness should override accuracy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | We suggest, in accordance with our comments under Criterion 2.2, to maintain consistency in the Assessment Framework with regard to supporting accuracy over conservativeness, and apply conservativeness only when accuracy is not achievable                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 1884 | Anonymous                                       | 0                   | te              | We have also included in a comment under Criterion 2.2 that conservartiveness should not override accruacy in the interest of supporting science-based results.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 1885 | Individual/employee, Conservation International | 0                   | te              | Regarding the inclusion of emission sources and sinks, there is no definition of what is considered to be "significant" under the CCP.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Define what is considered "significant" under the CCP (e.g., 5% of total emissions); consider definitions of significance in the context of those provided by existing programs and their methodologies and robust statistical methods.                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 1886 | Individual/employee, Conservation International | 0                   | te              | There is no reference to relevant boundaries other than those of the mitigation activity (i.e., "project area"), despite said boundaries being essential components of ERR quantification, especially for nature-based projects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Include an assessment of other boundaries relevant to quantification of emissions and ERRs, e.g., leakage management areas, leakage belts, reference areas/regions, accounting areas, etc..                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 1887 | Carolyn Ching                                   | 0                   | te              | Please clarify if an expert panel convened by ICVCM will conduct this assessment or if the GHG program is supposed to convene the expert panel. The requirements set out here could take time for the GHG programs to carry out, and any changes that will be necessary to make to a methodology must be accompanys with a grace period for projects to make the necessary changes. These quantification requirements have the potential to slow down the carbon market while buyers wait for CCP credits to be issued.                                                                                                                                                                                                                                                                                                                                                                                                         | We encourage ICVCM to draw from CORSIA to identify methodologies that result in high-quality credits today. This will ensure that CCP eligible credits will be available immediately. If necessary, the ICVCM can add additional criteria or create a pathway for projects to move forward with eligibility overtime.                                                                                                                                                                                                                                                                                                                                                                         |

| 1888 | Anonymous                                  | 0                                                                  | ge              | <p>Examples of 'elements' must be provided as they are very critical to this assessment. Regarding the 'duration of crediting period', it is unclear how this could impact uncertainty or lead to under/over estimation of ERs or how this could 'materialise'.</p> <p>Regarding project boundaries, projects have indeed been found with inaccurate project boundaries, but they are almost always corrected since it is discovered during verification and/or registry reviews. Is the fact that projects have been found with this issue constitute this element being materialised even if the issue is consistently discovered and rectified? Regarding leakage, we are curious how an expert panel will assess whether leakage is contributing to over /under estimation of ERs. This would seem to require the experts to either attempt to estimate or quantify leakage themselves, (which is largely not workable), opine on the default applied in the methodology (if so, what are the criteria for this judgement based on?), or assess the application of a leakage tool (which is already done by verifiers).</p> | see comments                                                                                                                                                                                               |
| 1889 | Anonymous                                  | 0                                                                  | te              | <p>Examples of 'elements' must be provided as they are very critical to this assessment. Regarding the 'duration of crediting period', it is unclear how this could impact uncertainty or lead to under/over estimation of ERs or how this could 'materialise'. Regarding project boundaries, projects have indeed been found with inaccurate project boundaries, but they are almost always corrected since it is discovered during verification and/or registry reviews. Is the fact that projects have been found with this issue constitute this element being materialised even if the issue is consistently discovered and rectified? Regarding leakage, we are curious how an expert panel will assess whether leakage is contributing to over /under estimation of ERs. This would seem to require the experts to either attempt to estimate or quantify leakage themselves, (which is largely not workable), opine on the default applied in the methodology (if so, what are the criteria for this judgement based on?), or assess the application of a leakage tool (which is already done by verifiers).</p>        | see comments                                                                                                                                                                                               |

| 1892 | Individual/employee, KOKO Networks Limited      | Table 48 – Summary of evaluation findings on robust quantification                                            | te              | c) The project developer's primary responsibility is ensuring smooth operation of the project. This kind of quantitative approach towards uncertainty will require collection of a large set of data through primary research. These primary research are expensive, time consuming and difficult to implement.                                                    | 0                                                                                                                                                                                                                                                                                                                                                |
| 1892 | Individual/employee, KOKO Networks Limited      | Table 48 – Summary of evaluation findings on robust quantification                                            | te              | In summary, the excessive quantification approach of risks is extremely difficult to implement, assess and perhaps counter-productive. The quantification of less tangible aspects shall be avoided wherever possible. Instead, simplified, easy-to-understand guidelines shall be designed.                                                                       | 0                                                                                                                                                                                                                                                                                                                                                |
| 1893 | Individual/employee, Conservation International | Table 48 – Summary of evaluation findings on robust quantification                                            | ed              | The document refers to a list of “aspects” (a-g) and then refers to the “elements” that will be assessed. It is not clear what is meant by “elements”, whether this refers to the same list as the “aspects” listed previously or whether the “elements” are factors that influence each “aspect”.                                                                 | Edit the text to clarify what is being assessed.                                                                                                                                                                                                                                                                                                 |
| 1894 | Individual/employee, Conservation International | Table 48 – Summary of evaluation findings on robust quantification                                            | te              | The assessment of “elements” as a means of rating the level of uncertainty and risk of overestimating or underestimating emissions reductions is abstract and indirect. It is not clear how this method has been developed or whether it has been used before, and there are no references or evidence cited as to its ability to produce a meaningful assessment. | Describe the logic and justification for this approach. Cite relevant sources and examples of its successful implementation.                                                                                                                                                                                                                     |
| 1895 | Individual/employee, Conservation International | Table 48 – Summary of evaluation findings on robust quantification                                            | te              | The description of “Fraction of mitigation activities affected by this element” is not clear, and its relevance and importance in assessing the quality of a program’s quantification methods is therefore also unclear.                                                                                                                                           | Clarify the meaning, relevance, and importance of assessing this specific factor.                                                                                                                                                                                                                                                                |
| 1896 | Anonymous                                       | Criterion 10.2<br>Determination of the baseline scenario and quantification of baseline emissions or removals | te              | the degree of conservativeness of the calculation of baseline emissions or removals in light of uncertainties and taking into account the choice of assumptions, models, parameters, data sources, measurements methods, and other factors (e.g., whether sound science is applied);                                                                               | We suggest to put constrains for actors to comply with quantification and reporting of the degree of conservativeness. i.e. including in table 49 p109 a standard codification of the degree of certainty with regard to mitigation outcomes, including the full clarifiacion on how uncertainty is factored in mitigation outcomes calculation. |
| 1897 | Javier Castro                                   | Criterion 10.2<br>Determination of the baseline scenario and quantification of baseline emissions or removals | te              | The approach presented implies a methodology assessment. Considering that only in CDM there are more than 200 methodologies available, it is not understandable what kind of activity will be performed here neither if there is any prioritization of methodologies and if so on under which approach.                                                            | The applicability of such approach seems not realistic, but more important it is not clear how will be this assessment applied.                                                                                                                                                                                                                  |

| 1900 | Anonymous                                       | Criterion 10.2<br>Determination of the baseline scenario and quantification of baseline emissions or removals | te              | Many methodologies in existence today do not require a baseline "selection". Baselines are standardized (performance benchmarks) and determined through exhaustive methodology development processes subject to expert review. In these cases, it would not be possible for the expert panel to conduct a meaningful assessment of uncertainty between scenarios.                                                                                                                                   | Do not review methodologies. See other comments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| 1901 | Anonymous                                       | Criterion 10.2<br>Determination of the baseline scenario and quantification of baseline emissions or removals | te              | Requiring GHG programmes to stipulate that ERRs must be estimated conservatively rather than accurately undermines any incentive projects and programmes have to continue to invest in new and improved monitoring systems.                                                                                                                                                                                                                                                                         | IC-VCM should not assess methodologies. It would undermine the integrity and process to re-litigate technically developed and robustly reviewed methodologies. IC-VCM should focus on the process, and could submit comments to any new methodology or revision, but should not recreate the entire methodology review process. There are hundreds of available methodologies and it would seriously impact market functioning to wait for this process to be completed, and updated everytime there is a new methodology or a revision. |
| 1901 | Anonymous                                       | Criterion 10.2<br>Determination of the baseline scenario and quantification of baseline emissions or removals | te              | The principle of conservativeness does not stipulate adjustment of results in either direction either based on measured accuracy, nor as an a-priori decision preceding measurement of accuracy. Rather, it requires a lower estimate (i.e., conservative) if results show that measurement accuracy cannot be achieved or if results are considered incomplete. To this end, this criterion is considered counterintuitive to the concept of "Robust Quantification".                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 1901 | Anonymous                                       | Criterion 10.2<br>Determination of the baseline scenario and quantification of baseline emissions or removals | te              | The goal of any carbon methodology or standard should be to reflect the impact of the activities on the atmosphere as fully and accurately as possible, not to simply be conservative for the sake of being conservative. If conservativeness is the ultimate goal, simple defaults could be used for all parameters instead of more complex accounting methods. Accuracy is an important principle in the                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| 1905 | Anonymous                                       | Criterion 10.2<br>Determination of the baseline scenario and quantification of baseline emissions or removals | te              | ICVCM must also acknowledge in their assessments cases where the conservativeness of quantification may rely heavily on choices and data selection by the activity proponent. For certain cookstove projects, for instance, the conservativeness of quantification is highly dependent on the data sources used by the activity proponent and their propensity for applying their monitored data in a conservative manner, rather than the underlying program or methodology rules, per se. If ICVCM does not acknowledge these important granularities, it risks highlighting entire activity types as unworthy of investment, which would punish those activity proponents that are doing the right thing in ensuring the conservativeness of quantification in their own projects.             | na                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 1907 | Anonymous                                       | Criterion 10.2<br>Determination of the baseline scenario and quantification of baseline emissions or removals | te              | In part b, 1,4, and 5 are written in a way that suggests that project specific baselines are being assessed, but in the introduction to section 10.1, step 1, it indicates that quantification approaches are being assessed. This will need to be clarified.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | see comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1908 | Individual/employee, Conservation International | Criterion 10.3<br>Quantification of emissions from the mitigation activity                                    | te              | The description of the assessment is too vague to understand whether it will encourage programs to improve the rigor and quality of quantification methods.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Consider providing a more detailed description of the assessment process. Place emphasis on reducing both error and uncertainty.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| 1911 | Anonymous                                       | Criterion 10.4<br>Quantification of leakage emissions                                                         | te              | XXXX recommends distinguishing the assessment of leakage criteria between project-based and jurisdictional methodologies. Leakage has a very different connotation and measurability for each. As it is nearly impossible to accurately measure leakage for a jurisdiction, jurisdictional crediting programs have moved away from leakage calculation and deductions. For example, the FCPF's methodological framework assumes that leakage is prevented through best-practice identification of deforestation / degradation drivers and enactment of robust risk mitigation strategies. It does not require calculation of, and deduction for, displacement. However, all project methodologies that we are aware of do require activity-shifting and market leakage calculation and deduction. | -                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1912 | Individual/employee, Conservation International | Criterion 10.4<br>Quantification of leakage emissions                                                         | te              | If assessment of leakage, "shall not be limited to a particular boundary," there would be few if any programs that would currently be eligible for the CCP label. Activity-shifting leakage is typically accounted for using a distance-based boundary, and market leakage is typically accounted for at the scale of domestic/national markets. In principle, all types of leakage identified in the CCP are relevant and important, but the IC-VCM must walk through the process of how such processes can be applied given the limited resources, data, and understanding available to project proponents at the time of implementing activities.                                                                                                                                              | Consider the practical implications of assessing global-scale leakage for every category of leakage and for every mitigation activity across all contexts, including the types and reliability of assumptions required for such assessments and whether the leakage assessment could be reasonably expected to be accurate in light of such assumptions. Limit the required scope of leakage emission quantification to that which is knowable and can be quantified with a reasonable degree of certainty. Since the CCP document specifies what must be considered in leakage analyses but does not specify how such analyses should be performed, there is a high degree of subjectivity as to what may be deemed "acceptable" and "sound science"; however, this is the case with many criteria as assessed by the CCP. |

| 1913 | Individual/employee, Grantham Research Institute, London School of Economics and Political Science | Criterion 10.4 Quantification of leakage emissions | ge              | Overall, we recommend that Criterion 10.4 is replaced or complemented with a design-based approach, whereby eligibility criteria for projects are used to prevent leakage from occurring, rather than attempting to accurately issue credits where leakage is a problem. The explanation for this recommendation is as follows.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Overall, we recommend that Criterion 10.4 is replaced or complemented with a design-based approach, whereby eligibility criteria for projects are used to prevent leakage from occurring, rather than attempting to accurately issue credits where leakage is a problem. |
| 1913 | Individual/employee, Grantham Research Institute, London School of Economics and Political Science | Criterion 10.4 Quantification of leakage emissions | ge              | Leakage is a serious problem for prominent types of voluntary offsets (e.g. forestry and land use). Including leakage as a sub-criterion risks minimising its importance, and (as here) reinforcing an approach to leakage management that relies on accurately measuring it at the project level. Measurement of leakage at the project level faces barriers to accuracy that are probably insurmountable (Filewod & McCarney, working paper – copy available from b.filewod@lse.ac.uk). Leakage can be understood as a consequence of meeting the additionality criterion, and 'positive lists' for additional projects should therefore be created to exclude additional-but-leaky project types.                                                                                                                                                              | 0                                                                                                                                                                                                                                                                        |
| 1913 | Individual/employee, Grantham Research Institute, London School of Economics and Political Science | Criterion 10.4 Quantification of leakage emissions | ge              | The inclusion of all sources of leakage (i.e., not limited to a particular boundary, such as a national boundary) is commendable. Likewise, the leakage classification under 'step a' is appropriate. The assessment of inherent risks in 'step a' should be extended to avoid leakage by design. Put simply, if project types are deemed to have an inherently high risk of leakage, they should be excluded. To avoid excluding priority project classes, the Integrity Council could offer guidance to redesign projects to reduce leakage risks to an acceptable level.                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                        |
| 1913 | Individual/employee, Grantham Research Institute, London School of Economics and Political Science | Criterion 10.4 Quantification of leakage emissions | ge              | For example, a project that establishes a park in an area of smallholder forest conversion is at unacceptable leakage risk. If the same project can be amended such that the foregone supply is replaced on a functional basis (for example, by increasing agriculture yields elsewhere within the project area), leakage risk can be reduced. However, this must occur without a time lag and at a plausible scale for leakage to be reduced (for example, excluding 100 farmers from a forest and employing 10 in a high yield agricultural scheme does not plausibly avoid leakage; reskilling farmers as artisans does not plausibly avoid leakage because they still have to purchase food; etc...).                                                                                                                                                         | 0                                                                                                                                                                                                                                                                        |
| 1913 | Individual/employee, Grantham Research Institute, London School of Economics and Political Science | Criterion 10.4 Quantification of leakage emissions | ge              | 'Step b' is based on sensible notions but faces serious implementation concerns. Firstly, the requirements to minimise leakage in many existing standards are incomplete (i.e., proposed measures will only partially reduce leakage – for example, substituting foregone income does not reduce leakage because consumers demand goods elsewhere). Secondly, measuring leakage emissions is very difficult; academic economists have not yet found a robust and low-cost formula for doing so. Thirdly, claims about 'robustness' and 'conservativeness' are difficult to verify. If these are desired, quantitative targets should be set. To operationalise 'step b' it will be necessary to raise the general level of understanding of leakage dynamics, measurement, and avoidance. This is an active research area, and ICVCM could play a convening role. | 0                                                                                                                                                                                                                                                                        |
| 1914 | Carolyn Ching                                                                                      | Criterion 10.4 Quantification of leakage emissions | te              | International leakage should not be a requirement. None of the GHG programs require this, including under the UNFCCC. It is challenging to accurately quantify, and it penalizes good projects for bad actions happening beyond its borders. As more national accounting areas are included in the carbon market, international leakage will be captured in the annual emissions reporting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | We recommend removing this requirement, over time, ICVCM can consider cross border adjustments.                                                                                                                                                                          |
| 1915 | Anonymous                                                                                          | Criterion 10.4 Quantification of leakage emissions | te              | There is currently no accepted way to quantify international leakage, and no standard currently includes it for that reason. Further research is needed before including international leakage accounting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | see comment                                                                                                                                                                                                                                                              |

| 1920 | Carolyn Ching                                   | 0                                                     | te              | NCS projects reduce emissions and sequester carbon through a suite of activities. It can be very challenging for NCS projects and programs to attribute a specific number of emission reductions and removals achieved to specific mitigation activities. In particular for Jurisdictional programs, one of the many benefits of scale is the ability to enact multiple overlapping or intertwined programs and policies. This increases success across the landscape but also makes it almost impossible to accurately attribute specific quantities of emission reductions to each activity. Quantifying the total reductions or removals as well as listing the activities conducted provides the same level of assurance as to the drivers of the reductions or removals. | We recommend removing this requirement, in particular for NCS projects.                                                                                                                                                                                                                                                                                                                                                                                    |
| 1921 | Individual/employee, Conservation International | 0                                                     | te              | The CCP provides no description of how frequently baselines must be reevaluated or what should be considered reasonable lengths for crediting periods for each mitigation activity type. Nor does the CCP describe how the IC-VCM would assess programs’ rules and justifications for such decisions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Describe how the IC-VCM would assess the rules, requirements, and justifications of programs regarding the duration of crediting periods as defined by the assessment criteria listed (a-c).                                                                                                                                                                                                                                                               |
| 1922 | Anonymous                                       | 0                                                     | te              | whether the approaches related to use of measurements, sampling, data from third parties (e.g., studies, statistics, satellite data) or default values are robust, scientifically sound and statistically representative, where applicable;                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | We suggest to put constraints for actors in term of justification for the use of default value, i.e. explaining why the establishment of a primary data database was unfeasible. We suggest to automatically disqualify approaches with no measurements, relying 100% on third party data, non-specific to project area and timeframe.                                                                                                                     |

| 1925 | Anonymous                                       | 0                                                     | te              | Part (d) assess “whether the choice of the approaches, data, measurement methods or default values appropriately addresses uncertainty and leads to a conservative estimate of the emission reductions or removals;”                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 10.1.4 (d)                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1925 | Anonymous                                       | 0                                                     | te              | In support of science and accuracy, XXXX suggests a general policy change in the Assessment Framework’s approach towards conservativeness.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | We strongly suggest rephrasing section 10.1.4(d) “whether the choice of the approaches, data, measurement methods or default values appropriately addresses uncertainty through the most accurate estimate of the emission reductions or removals based on science.”                                                                                                                                                                                       |
| 1926 | Peter Hurrell                                   | 0                                                     | te              | 10.1.4 Monitoring approaches) whether the carbon-crediting program requires the establishment of an operational and management plan for monitoring, including the assignment of responsibilities of various parties, and the operational process of monitoring.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | It is our view that the only robust monitoring approach is continuous and data driven. In the case of nature based solutions this will require a combination of sensor technology, satellite imagery, and AI/ML drone monitoring. In the case of technology based solutions this can easily be established by acquiring data from the devices that are being used for the removal. It should also be possible to monitor mineralisation in similar manner. |
| 1926 | Peter Hurrell                                   | 0                                                     | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | The commercial entities developing these technologies are all well advanced in leveraging sensor technology in order to optimize their operations so the data is already available.                                                                                                                                                                                                                                                                        |
| 1926 | Peter Hurrell                                   | 0                                                     | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Here again there are parallels with the energy industry. The optimization of a power plant is driven by IoT data. Wind farms deliver Scada data.                                                                                                                                                                                                                                                                                                           |

| 1926 | Peter Hurrell        | 0                                                                                           | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                | We view carbon removal and sequestration operations very similarly to a power plant but instead of burning fuel to generate electricity and sell mega watts on the market they are removing CO2 to generate certificates and sell metric tonnes on the market.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1926 | Peter Hurrell        | 0                                                                                           | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                | A technology and data driven approach to monitoring will also enable accurate forecasting of the development of the market as well as the progress in terms of real CO2 removal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 1926 | Peter Hurrell        | 0                                                                                           | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                | If the Integrity Council is to be successful, we believe it needs to gain a better understanding of financial markets and how other industries have solved similar issues of trust.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 1926 | Peter Hurrell        | 0                                                                                           | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                | We envision a world where the global economy is driven by a carbon-digital-currency instead of a petro-dollar although sadly probably not our lifetimes. None the less, we should be paving the way and learning from other industries and academic disciplines.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 1927 | Molly Brown          | 0                                                                                           | ed              | Numbering in this section is confusing                                                                                                                                                                                                                                                                                                                                                                                                           | Change it                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 1928 | Josiah McClellan     | 0                                                                                           | ge              | 10.2                                                                                                                                                                                                                                                                                                                                                                                                                                             | Many times the methodologies used by carbon crediting programs are developed by other groups and consortiums, so this section reflects on their work more than the carbon crediting program governance and processes. A significant amount of subjective evaluation will go into the assessment of quantification. The guidance is clear that a subjective low/med/high assessment will determine CCP eligibility. (For literally hundreds of methodologies it is unlikely the ICVCM will be able to conduct quantified assessments of all of them, so there will be some high level subjective assessments made) For this reason, it is imperative to preserve the appeal process outlined in Part 6, so that the groups/consortiums that create a methodology can appeal any subjective assessments by ICVCM. |
| 1929 | Eftimiya Salo        | 0                                                                                           | te              | Robust baseline scenario is critical in order for the offset claim to be grounded in truth. In the current draft, the term "conservative baseline" is too vague and can be misused. For example some baselines could be more or less conservative than others.                                                                                                                                                                                   | Changing from "conservative baseline" to "most conservative" baseline and adding baseline criteria fo show what it means in practice would avoid such misinterpretation or "baseline shopping".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1930 | Eftimiya Salo        | 0                                                                                           | te              | In the Initial threshold there are two different requirements - for the first one, it is enough that emission reductions and removals are quantified with more than 66% certainty and for the sedon more than 90% certainty.                                                                                                                                                                                                                     | "Likely" with probability of 66% is not robust enough and should not be eligible for CCP or offset claims. In case this is left in the final draft, it should be transparently communicated e.g. in the form of attributes whether the project has 66% robust baseline or 90% so that the companies can make informed purchasing decisions knowing exactly how good or how bad the project quantification is. This will help avoid the situation where corporate buyers zare misled and unknowingly buy low quality credits.                                                                                                                                                                                                                                                                                    |
| 1931 | Molly Brown          | Table 49 – Requirements for robustness of quantification of emission reductions or removals | te              | Why are there no options here for under or overestimated credits?                                                                                                                                                                                                                                                                                                                                                                                | Fix this table                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1931 | Molly Brown          | Table 49 – Requirements for robustness of quantification of emission reductions or removals | te              | What happens if a credit IS found to be over/under estimated? Is there a correction mechanism?                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 1932 | Anonymous            | Table 49 – Requirements for robustness of quantification of emission reductions or removals | te              | It will not be possible to estimate if a methodology is "more than 60% likely" to overestimate ERRs-- it would never be approved that way! And anyone telling you otherwise is basing that assesment on assumptions that haven't been through anywhere near the rigorous assesment required of the methodologies themselves! These are assumptions lacking anywhere near the technical rigor being asked for in the standards and methodologies! | Do not assess the methodologies. Work to improve the process to design and update them instead.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1933 | Josiah McClellan     | Table 49 – Requirements for robustness of quantification of emission reductions or removals | te              | 10.2, table 49, full b                                                                                                                                                                                                                                                                                                                                                                                                                           | As described, the methodology gives "low" variability assessments at around 10% of over/under estimation or variability (see 10.1.3.ii). Therefore, it is impossible for any quantification to have a probability greater than 90% that the credited emission reductions or removals are not overestimated. Since 90% is already the threshold for the initial level, it is impossible for the full level to increase the requirement. The initial level requirement should be revised down to 66%, and the full level requirement should be set at 90% (maximum possible value).                                                                                                                                                                                                                               |

| 1934 | Eftimiya Salo                            | Table 49 – Requirements for robustness of quantification of emission reductions or removals | te              | In the current draft, different requirements apply for different annual volumes of credits in terms of MtCO2 per year.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Annual volumes per year are not relevant, as long as the credits are used for making offset claims, all projects regardless of their size and volumes per year should meet the requirements for robustness of emission reductions or removals.  |
| 1935 | Anonymous                                | Table 49 – Requirements for robustness of quantification of emission reductions or removals | te              | The Initial Threshold Requirements in Table 49 appear to allow for an accurate measurement of mitigation activities that claim emission reductions, and require a conservative result for “other mitigation activities.” This approach seems to apply the principle of conservativeness correctly and fairly.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 10.2, Table 49                                                                                                                                                                                                                                  |
| 1935 | Anonymous                                | Table 49 – Requirements for robustness of quantification of emission reductions or removals | te              | However, the Full Threshold requires a conservative result, which appears to incorrectly apply the principle of conservativeness (i.e. no consideration of accuracy), and therefore does not appear to be science-based.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | We strongly advocate for the approach under Initial Threshold of Table 49 to be adopted throughout the Assessment Framework, as it allows for science and accuracy where possible, and encourages conservativeness where they are not possible. |
| 1936 | Darcy Jones                              | Table 49 – Requirements for robustness of quantification of emission reductions or removals | te              | The currently framed guidance is biased against large-scale approaches and fails to account for an alternative methodology to deal with uncertainty. While smaller projects can be assumed to have more robust quantification and thus are evaluated based on likelihood of overestimating ERR results (with the goal being to minimize any overestimation of impact), there is a proven alternate way that JREDD+ deals with issues of uncertainty. JREDD+ activities are required to take extra deductions that account for leakage, exceeding reference period emissions, and equal to uncertainty. All these deductions reduce the final volume of credits that are issued to a JREDD+ activity, thus contributing to conservative estimates of ERR results. The fact that the crediting program deducts credits from issue based on uncertainty serves as an incentive for the mitigation activity proponent to reduce uncertainty.                                                                                                                                                                                                                                                                                                | This table should be amended to require carbon crediting programs to deduct issued-credit volumes based on uncertainty estimates.                                                                                                               |
| 1937 | Paul Renaud                              | 0                                                                                           | te              | Caution needs to be applied when defining lock-in. A strict interpretation of this clause might eliminate a step-wise transition because it employs technologies that are inconsistent with a net-zero outcome.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Completely change the phrase to something with positive instead of negative statement of intent. For example, "The mitigation activity shall contribute to a meaningful transition to net-zero by mid-century".                                 |
| 1937 | Paul Renaud                              | 0                                                                                           | te              | E.G. replacing a fossil fuel appliance with a more carbon-friendly fossil fuel appliance is a positive short term step in transition because it results in a net reduction in current emissions. The replacement appliance may need to be replaced again prior to attaining a net-zero posture, but that does not diminish the benefit from attaining a positive transitional step along that path.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                               |
| 1938 | Individual/employee, NBS Brazil Alliance | 0                                                                                           | ge              | Considering the importance of Natural Climate Solution (NCS) projects for a transition towards net-zero emissions, it is frustrating that their approach has not been more expressive in the texts available for public consultation. The Assessment Framework places conditions that could not be met by most NCS projects, mainly with regard to additionality and permanence. In other words, NCS projects, which are so important for us to reach the net-zero emissions target, would probably not be eligible under the CCP.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | See above.                                                                                                                                                                                                                                      |
| 1938 | Individual/employee, NBS Brazil Alliance | 0                                                                                           | ge              | We would like to reinforce the importance of the NCS for meeting the climate targets, considering that the NCS alone have potential to contribute to up to one third of the reductions and removals necessary to meet the Paris targets. In addition, credits from forests and land use correspond to the largest fraction of credits in the voluntary market nowadays. The prominence of this sector in the market is mainly due to the buyers' interest in credits associated with the generation of other benefits that go beyond carbon reduction/sequestration. It is therefore possible to understand the growing interest in projects that also bring benefits to communities, biodiversity, soil health, among others. This scenario conflicts with the little attention that was given for NCS in the CCP consultation texts, the focus was restrained to Jurisdictional REDD+ programs. However, nowadays, most commercialized NCS credits come from project-based REDD and not from JREDD, which programs are still in the initial stage of structuring. Refraining project-based REDD from obtaining CCP certification excludes the largest source of credits on the market from such an important and significant process. | 0                                                                                                                                                                                                                                               |

| 1938 | Individual/employee, NBS Brazil Alliance                             | 0                   | ge              | It is not a good approach to leave project-based REDD out of CCP eligibility, it would be far more important to think of solutions that can be adopted, such as buffer pools, or developed to overcome any issue of reversal risks.                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1939 | Anonymous                                                            | 0                   | te              | The provisions on the transition towards net zero emissions primarily include a negative screening of mitigation activities that have the potential to lock in emissions due to long term investments. There is a lack of clarity in terms of the mitigation activities that would constitute such lock-in effect. This provision also adds considerable uncertainty given that whether that technology provides a transition to net zero, depends on the region and the sector.                                                                                                             | See above.                                                                                                                                                                                                                                                                                                                                                                                                                        |

| 1940 | Anonymous                                                            | 0                   | ge              | We recognize the importance of supporting technologies and projects that do not represent a lock-in risk, however the current proposal is unclear what projects/technologies will fall in that category and a list/clarification is necessary. We are of the opinion that such list should reflect the taxonomy that is being established. i.e in the EU. We assume that CCS is not classified as a carbon lock-in technology.                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 1941 | Anonymous                                                            | 0                   | ge              | In our opinion, the proposed Step 1, Additionality for project-level mitigation activities, is not effective. A proper additionality assessment, regardless of the type of mitigation activity, will be very much dependent upon local context at the specific project level. The proposal sets out that "The assessment will be based on the typical characteristics and circumstances of the type of mitigation activity, noting the variability in characteristics and circumstances for a given type of mitigation activity across contexts (e.g., countries and within jurisdictions)." | *                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1941 | Anonymous                                                            | 0                   | ge              | In our view, actual drivers for project activities can change even within jurisdictions. It would be helpful to understand the level of granularity the IC-VCM will work at. We are concerned with the fact that the proposed approach leaves out the perspective of the project-level circumstances that, if assessed at their level and context, will prove additional.                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1941 | Anonymous                                                            | 0                   | ge              | We support the proposed criteria i.e. financial attractiveness, barriers to implementation and market penetration; but those criteria could rather serve as guidance to VVBs for their verification process of additionality assessment. We recommend that that Step 1 and 2 will be reversed and the ICVCM focuses on assessing crediting programs, while step 1 serves as a guidance for VVBs.                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1942 | Phil Cryle                                                           | 0                   | te              | Clarity is needed on whether the criteria to address the risk of carbon lock-in associated with particular technologies and mitigation activity types means that natural-climate solutions undertaken at sites that are producing fossil fuels would not meet this criteria? Does this necessarily preclude heavy industrial emitters and fossil fuel producers from originating offsets that are eligible for CCP accreditation?                                                                                                                                                            | Clarity is needed on whether the criteria to address the risk of carbon lock-in associated with particular technologies and mitigation activity types means that natural-climate solutions undertaken at sites that are producing fossil fuels would not meet this criteria? Does this necessarily preclude heavy industrial emitters and fossil fuel producers from originating offsets that are eligible for CCP accreditation? |

| 1943 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | 0                   | ge              | All agree that carbon offsets should not be the only tool employed and that purchasers must also work on reducing their own emissions. However, carbon offset projects and programs can be an immediate means of achieving greater ambition while longer internal emission reduction projects are designed and implemented. It is not clear why it is necessary for the ICVCM to evaluate this criterion for projects.                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| 1945 | Ronan Carr           | 0                                                       | ge              | Natural gas and renewable energy are identified as technologies which must be approached with care to avoid lock-ins of incompatible technologies and curtailment issues.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                  |
| 1945 | Ronan Carr           | 0                                                       | ge              | This section addresses the need to avoid locking in technologies that are not compatible with reaching net zero by 2050. Although this issue does not explicitly feature in the BeZero Ratings framework, there remain points of contention which the CCPs should address.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                  |
| 1945 | Ronan Carr           | 0                                                       | ge              | Crucially, the assessment framework is largely qualitative, which makes it unclear how incompatible technologies will be defined and how decisions will be made. The lack of clarity and specific use of terminology may also present market constraints by deterring the scaling-up of certain technologies, augmenting financial barriers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                  |
| 1945 | Ronan Carr           | 0                                                       | ge              | Moreover, BeZero's ratings process has encountered a small number of technologies which we deem to be incompatible with reaching net zero. For example, the development of natural gas distribution networks can lead to its lock-in, relating to both the physical infrastructure and the integration into modern societies and economies. An abundance of natural gas may well delay the adoption of renewable energy and undermine efforts to reach net zero by 2050.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                  |
| 1945 | Ronan Carr           | 0                                                       | ge              | In addition, the development of renewable energy must be carefully planned to avoid curtailment issues. An example of non-optimal practice is in China, where there have been instances of renewable energy generation plants being built without adequate infrastructure. This has resulted in over-capacity which is unused, and subverts the potential benefits of developing such projects. Therefore, BeZero considers it important that clarity is provided regarding the specific technologies which are indeed compatible with net zero targets, as well as guidelines on how to sustainably and effectively harness the intended benefits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                  |
| 1946 | Seoyi Kim            | 0                                                       | ge              | Joint MDB Response to the IC-VCM's CCPs                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Please see comments above.                                                                                                                                                                                                         |
| 1946 | Seoyi Kim            | 0                                                       | ge              | In relation to the comment provided in additionality criterion, having a separate requirement that the mitigation activity uses a technology or practice that is transformational and consistent with a net-zero emissions goal by mid-century is not supportive of the way countries increase their ambitions through carbon markets under the Paris Agreement. Countries have different mitigation options that have different cost, and implementing every mitigation option counts in achieving the country's NDC and beyond (LTS). Moreover, majority of countries have not yet set up their targets/goals consistent with a net zero emissions goal under an LTS. In that sense, approaches that rely on stringency of NDCs and how the targets are set under NDCs are more desirable and effective in catalyzing climate actions and investments and ensuring integrity of the overall carbon markets. Detailed requirements of the eligible mitigation activity laid out in the draft CCP only put excessive policing, which may dampen the market unnecessarily. It is important that new systems and approaches support increasing the transparency to create value first and facilitate learning by doing. Information such as the type of mitigation, technology, practice, and sectors of the underlying mitigation activity, however, is what buyers would be interested in and have different preferences for. Therefore, it is important to transparently disclose such information, and, for example, the Climate Warehouse data taxonomy is designed to support that. | 0                                                                                                                                                                                                                                  |
| 1947 | Anonymous            | 0                                                       | ge              | While of course we all agree that this transition is of critical importance and must be accelerated at pace, we do not understand how this is in scope for defining a high-integrity carbon credit. This is more appropriately handled outside of the supply side of the VCM. We also have concerns that the Expert Panel's judgment on compatibility with the net zero transition, lock-in, etc., may have perverse and unintended consequences.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | This criterion should not be part of the CCP. It is outside its scope.                                                                                                                                                             |
| 1948 | Javier Castro        | Criterion 11.1<br>Transition towards net-zero emissions | te              | This criteria expanded the granularity of the complete approach from project type to technology type, which implies a more detail assessment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | It is recommendable to stay totally clear the program requirements against any program will be assess and in a separate document the project requirements that will be necessary in order to get credits marked as CCP compliance. |
| 1948 | Javier Castro        | Criterion 11.1<br>Transition towards net-zero emissions | te              | It is not clear in the complete document how a program will be assessed considering that the level of assessment is so detailed that even one methodology might not be completely in compliance with the CCP requirements for some technologies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | The project requirements as defined in teh different chapters is a new Standard, which will be in concurrece with all other standards created by the different programs.                                                           |
| 1948 | Javier Castro        | Criterion 11.1<br>Transition towards net-zero emissions | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | My recomendacion is to evaluate only the programs and all the additional requirements to present as a guidance to be implemented or not by the programs.                                                                           |

| 1950 | Anonymous                                          | Criterion 11.1<br>Transition towards net-zero emissions | ge              | This section concerns me since it will be open to the interpretation of an expert panel as to which technologies/industries will 'make it' through the transition, and could prevent reductions today from happening.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | I think we need some examples provided of what wouldn't be considered to qualify today to set expectations, or eliminate this section, or add a qualifier that near term reductions in non-'net zero' industries/technologies could qualify.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 1950 | Anonymous                                          | Criterion 11.1<br>Transition towards net-zero emissions | ge              | I am interpreting this as for example, CCS on a coal plant wouldn't be eligible since most scenarios have coal being phased out by mid-century. But wouldn't we want coal plants TODAY to have CCS retrofits? Does this prevent that from happening?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 1951 | Anonymous                                          | Criterion 11.1<br>Transition towards net-zero emissions | ge              | To ensure adequate assessment of a mitigation activity's alignment with net-zero emissions, more detail is required. For example, it is unclear how a mitigation activity will be assessed as enabling innovation—how are those enabling levers defined? Will the innovativeness of the activity be defined on a sliding scale, or as a binary?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Create clear and detailed criteria upon which to assess the mitigation activity's alignment with net-zero emissions. Consider rotating membership within the Expert Panel to ensure diversity in technological expertise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 1951 | Anonymous                                          | Criterion 11.1<br>Transition towards net-zero emissions | ge              | It is also important to build an Expert Panel with diverse expertise so assessments are accurate. Although the existing membership of the Expert Panel is fairly diverse, rotating membership should be considered so that assessments are truly well-rounded. Since one of the elements in Table 50 is an assessment of whether the activity uses the "best available technology in the relevant region," it is important the Expert Panel comprises of members familiar with different regions and the technologies used there (e.g., nuclear technologies in a uranium-rich area). Additionally, certain technologies may be sector-specific, so members of the Expert Panel should not only be regionally diverse but also have wide-ranging technology backgrounds.                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 1952 | Josiah McClellan                                   | Criterion 11.1<br>Transition towards net-zero emissions | ge              | 11.1                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Much more clarity and transparency are required here. This section suggests a completely subjective review by an expert panel that has no governance over it. Thresholds should be described and the basis for assessments should be explained.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 1953 | Anonymous                                          | Criterion 11.1<br>Transition towards net-zero emissions | ge              | It is unclear what scientific scenarios would be the basis of such assessment of compatibility with reaching net zero emissions by 2050. For example, it is not clear whether biomass should be entirely excluded or just non-renewable biomass. Also, what is the definition of "biomass"? What use of biomass is the subject of this passage? For use in agriculture, power, materials and fuels, biomass can be a sustainable alternative to oil, gas and coal if the biomass is waste material and/or sustainably managed. Any assessment should be based on science and greater definition of alignment with net zero would be preferred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1954 | Phil Cryle                                         | Criterion 11.1<br>Transition towards net-zero emissions | te              | Clarity could be provided on the Criterion 11.1. "Transition towards net zero emissions" requirement (b), which states that "The mitigation activity shall not involve a technology or practice that constitutes an inefficient use of a resource, such as biomass, that might be important for climate mitigation". Certain carbon offsetting methods involve the "use of biomass" that could be construed as being an inefficient use of that resource given its importance for climate mitigation. An example is savannah burning which is intended to reduce overall emissions by burning under cooler, moister conditions compared to a counterfactual where a savannah is burnt in the late dry season when it is hot and a greater proportion of dead organic matter is burned. The "efficient use" of the savannah's biomass to mitigate emissions relies on underlying assumptions that estimate a higher emissions counterfactual. There will need to be a balance here between when it is deemed efficient or inefficient to burn savannah based on the likelihood and magnitude of fires under the counterfactual. | Clarity could be provided on the Criterion 11.1. | 1956 | Individual/employee, Carbon Engineering/1PointFive | Criterion 11.1 Transition towards net-zero emissions                              | ed              | View One – This section could be interpreted as a potential replacement or alternative to an assessment of additionality for individual projects. It does not ask the question: how can we prove our project is additional beyond the business-as-usual case? It instead asks the question: what do we need business-as-usual to be in order for our project to contribute effectively to our broader climate goals (net-zero emissions by mid-century)?                                                                                                                                                                                                                          | View One – This section could be interpreted as a potential replacement or alternative to an assessment of additionality for individual projects. It does not ask the question: how can we prove our project is additional beyond the business-as-usual case? It instead asks the question: what do we need business-as-usual to be in order for our project to contribute effectively to our broader climate goals (net-zero emissions by mid-century)?                                                                                                                                                                                                                          |
| 1956 | Individual/employee, Carbon Engineering/1PointFive | Criterion 11.1 Transition towards net-zero emissions                              | ed              | View Two – This section could be interpreted as a potential justification to disallow certain projects if they do not conform to a net-zero trajectory chosen by the Expert Panel. For example, projects that rely heavily on natural gas for high grade thermal heat may inadvertently lock in the upstream emissions associated with producing that resource.                                                                                                                                                                                                                                                                                                                   | View Two – This section could be interpreted as a potential justification to disallow certain projects if they do not conform to a net-zero trajectory chosen by the Expert Panel. | 1964 | Anonymous                                          | 0                                                                                 | ge              | XXXX welcomes carbon credit labeling with attributes based on project type (reduction, removal and avoidance, NBS and TBS) and user purpose (CORSIA or regulatory compliant with a corresponding adjustment). XXXX welcomes a distinction between avoidance/reduction and removal credit types. The market is growing ever more educated on the relative benefits and risks of different activities by these types. Credit labeling will simply encourage more widespread disclosure of these attributes, and the presentation of these attributes in a consistent way across GHG crediting programs.                                                                             | N/A                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| 1965 | Anonymous                                       | 0                   | te              | The Integrity Council is seeking views on whether to establish an attribute to differentiate credits according to the type of underlying mitigation activity, and if so, at what level to differentiate (e.g., reductions vs removals, tech-based vs nature-based). Attributes are inexpensive and provide critical information to inform the VCM and the quality of VCM credits                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | We believe that attributes are needed to differentiate quality of credits, including reductions vs. removals, tech-based vs. nature-based, as well as: gender equality, LCIP ownership (as defined in a previous comment), among others from the CCPs. Our argument is that these attributes should be paid for as they add value and, thus, should be taken into account when estimating a fair price of carbon. |
| 1966 | Anonymous                                       | 0                   | ge              | Requiring an assessment of the robustness of a methodology as gauged by the ICVCM "expert" panel, puts a subjective assessment of each protocol into the hands of the ICVCM expert group and explicitly substitutes their opinion for that of the scientifically peer reviewed methodologies and staff of the registries. This added step could create significant uncertainty in the market which could hurt both supply and demand.                                                                                                                                                                                                                                                                                                                                                                                                                                             | n/a                                                                                                                                                                                                                                                                                                                                                                                                               |
| 1966 | Anonymous                                       | 0                   | ge              | Each protocol or project must demonstrate that it supports the transition to net zero economy. This again is subjective depending on the technology and jurisdiction where the project would exist, and it too creates significant uncertainty which could impact the market's ability to scale.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1967 | Anonymous                                       | 0                   | ge              | We support the idea of classifying credits. That will be beneficial for the market with increased quality, credibility and transparency, buyers due to increasing reporting requirements in the EU and elsewhere, more information will also be required regarding use of offsetting credits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | .                                                                                                                                                                                                                                                                                                                                                                                                                 |

| 1970 | Anonymous                                       | 0                   | ge              | · Complex labelling might require more local government involvement/processes in a Host Country, and as each Host Country approved body would have different processes/timelines, this could result in delays or uncertainty creating further hinderance in adoption by market participants.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1970 | Anonymous                                       | 0                   | ge              | In this regard, XXXX holds the view that the level of detail required to create meaningful attributes for Sustainable Development impacts may be too burdensome for initial immediate introduction and would serve to complicate and bifurcate the market unnecessarily, at this point in time.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1970 | Anonymous                                       | 0                   | ge              | Secondly, XXXX would like to voice its hesitation in supporting the introduction of an attribute indicating host country authorisation under Article 6 of the Paris Agreement and the subsequent corresponding adjustment. Whilst XXXX welcomes any clarity that can be given as an outcome of the IC-VCM consultation on the intersection between the accounting systems of Paris Agreement and the voluntary carbon market respectively, XXXX perceives that the differentiation of such credits may lead to further confusion for consumers. This may create undue complexity in the market where labels de facto imply that private enterprises are dependent on host country approvals, Since such confusion may risk slowing investment in the voluntary market, XXXX would prefer that the CCPs emphasise simplicity in the use of labelling attributes of carbon credits. | 0                                                                                                                                                                                                                                                                                                                                                                                                                 |

| #    | Comment submitted by                               | Para/Fig/Table/Note        | Type of comment | Submitted comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Proposed change                                                                                                                                                                                                                                                                                                                                                                                                                                |

| 1970 | Anonymous                                          | 0                          | ge              | Finally, XXXX would like to emphasise that XXXX is supportive of the key message in the IETA Response, where a phased approach should be introduced. Whilst XXXX recognises the merit of utilising attributes for removals, reductions, and distinguishing between nature-based and technological solutions is needed for the long term, it would be better to introduce labelling in a more phased manner. GHG mitigation and activity in the voluntary carbon market should not be chilled and the current proposal by the IC-VCM of immediate compliance with the CCPs and Assessment Framework could risk the creation of uncertainty for investors and thereby disincentivise market activity.                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 1971 | Individual/employee, Carbon Engineering/1PointFive | 0                          | te              | We resoundingly welcome the establishment of an attribute to differentiate the type of underlying mitigation activity. We support that the attribute establishes a differentiation of removals and reductions: · Removals and reductions/avoidance need to be distinguished. Removals are a critical pathway for net-zero plans and they need to be distinctly identified for buyers. Distinguishing removal credits enables claims that only allow removal credits (e.g. SBTi Net Zero) · Differentiation between reductions and removals will likely prove critical in meeting market demand. Already, a growing set of corporate customers have pledged to “go beyond offsets” and to procure physical carbon dioxide removals to compensate for the emissions they cannot mitigate within their own activities. Several have expressly indicated a preference for DAC with geological storage. | We resoundingly welcome the establishment of an attribute to differentiate the type of underlying mitigation activity. We support that the attribute establishes a differentiation of removals and reductions:                                                                                                                                                                                                                                 |
| 1972 | Anonymous                                          | 0                          | ge              | Each of the independent carbon standards operates a transparent registry, which provides significant documentation and data. The voluntary carbon market is already challenging enough for non-market participants to understand how to interpret information reported by registries. Adding new labels that could be discerned from other data points (e.g., removal vs avoidance can be determined by the project type, generally) would be redundant and could be addressed with greater education and understanding of projects by market participants.                                                                                                                                                                                                                                                                                                                                        | above                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 1973 | Seoyi Kim                                          | 0                          | ge              | Joint MDB Response to the IC-VCM’s CCPs                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Please see comments above.                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 1973 | Seoyi Kim                                          | 0                          | ge              | In relation to the comment provided in the registry criterion, attributes are useful to describe and differentiate emission reductions and are included in the common data taxonomy developed under the Climate Warehouse. Based on the experience with the Climate Warehouse, however, it is important that the attributes that are considered are properly recognized, sufficiently incentivized and compensated. Efforts should be made to identify and enable simple solutions to support monitoring and tracking of identified attributes to consider the attributes that are easy to track, do not put additional burden on project developers, and are directly attributable to the project operation.                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 1974 | Peter Hurrell                                      | Type of mitigation outcome | te              | The Integrity Council is seeking views whether to establish an attribute to differentiate credits according to the type of underlying mitigation activity, and if so, at what level to differentiate (e.g., reductions vs removals, tech-based vs nature-based).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | The type of mitigation activity is absolutely crucial and will be one of the main drivers of price discovery.                                                                                                                                                                                                                                                                                                                                  |
| 1974 | Peter Hurrell                                      | Type of mitigation outcome | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | The parameters for mitigation and compliance should also be heterogenous based on this attribute.                                                                                                                                                                                                                                                                                                                                              |
| 1974 | Peter Hurrell                                      | Type of mitigation outcome | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | It's necessary for there to be a hierarchy for the classification here and it should be on the lowest level of granularity possible.                                                                                                                                                                                                                                                                                                           |
| 1974 | Peter Hurrell                                      | Type of mitigation outcome | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | As an example, there are commercial entities removing carbon dioxide from the air to then manufacture CO2. TATA just opened the largest in Europe in the UK. While it can be argued that this is carbon capture and usage and so does not result in the issuance of a transferrable certificate, we are aware of at least 2 major organisations who are already engaged in both carbon removal and sequestration AND carbon removal and usage. |
| 1974 | Peter Hurrell                                      | Type of mitigation outcome | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | It is also essential to be agile and able to respond to technology developments. As an example, there are commercial entities currently developing building materials that are able to remove CO2 from the atmosphere. Imposing the same principles and compliance requirements on entities using these materials in construction will not encourage wide spread adoption.                                                                     |

| 1975 | Stephanie Sargeant                                                                                 | Attribute           | te              | Emission reduction or removals are two processes often intricately linked in the case of wetland conservation and restoration. This is because of the important role of the very carbon rich soils of many wetlands (particularly peatlands and mangroves), that continue to emit GHG upon conversion and degradation. Restoration of such wetlands not only reduces those ongoing emissions (biggest impact) but also sequesters carbon. Hence a distinction between emission reductions and removals does not make sense in the case of wetlands.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Emission reduction or removals are two processes often intricately linked in the case of wetland conservation and restoration. Restoration of such wetlands not only reduces those ongoing emissions (biggest impact) but also sequesters carbon. Hence a distinction between emission reductions and removals does not make sense in the case of wetlands.                                                                                                                                                                                                                                                                                              |

| 1978 | Individual/employee, Grantham Research Institute, London School of Economics and Political Science | Attribute           | te              | There should be a strong differentiation between removals and reduction credits. There needs to be increasing priority given to removals towards 2050, since reductions alone cannot drive net-zero emissions globally and realise scenarios that limit temperatures to 1.5°C. Reduction credits are also needed in the short term to finance sustainable development in many countries. Other governance frameworks (such as those for assessing the claims companies make with their use of carbon credits) can bake in incentives to bring in a preference for removals over time, which will not be possible without clarity on the supply side over different types.                                                                                                                                                                                                                                                                                                                                                      | The Integrity Council should also consider carving out 'protection' credits from 'reduction' more generally, to differentiate activities that safeguard existing carbon sinks from those that generate fossil fuel emissions. That would delineate this important type of nature-based credit and lead to fruitful conversations about specific aspects of their quality, such as identifying carbon sinks that have the greatest benefits for biodiversity. Segmenting the market in this way would also help to ensure that the low cost of, for example, forestry projects has less of a downward pull on the price of credits for reduced emissions in other sectors. Higher prices are necessary for credit issuance to help make some important types of projects economically viable, such as early decommissioning of coal power plants. |

| 1979 | Anonymous                                                                                          | Attribute           | ge              | Credits already clearly show what the project activity is. Further labeling is not needed as to the underlying mitigation activity. Emission reduction vs removal may be a helpful label. Buyers are already demonstrating preference for this differentiation, and registries have begun providing this label. Other differentiation (like NBS or technology-based) is fine, but overkill. Most buyers can tell, based on the project type. Further, there are some project types that have ties to nature and technology (like biochar), where the project would basically need both tags.                                                                                                                                                                                                                                                                                                                                                                                                                                   | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| 1983 | Anonymous                                                                                          | 0                   | ge              | XXXX supports the addition of CA as an optional credit attribute, but is not in favor to requiring corresponding adjustments for CCP eligibility. Article 6 introduced "corresponding adjustments" (CA), a double-entry bookkeeping tool, to ensure against the double-claiming of emission reductions among countries participating in cooperative approaches to meeting NDCs. Simply put, voluntary market participants are not parties to the Paris Agreement and voluntary action occurs on a different ledger. When an emission reduction is transferred internationally from one private entity to another, the environmental benefit is claimed only by the country of domicile. As such, using CAs for voluntary action offers no real protection to the environmental integrity of voluntary emission trading. Requiring CAs for voluntary action will only introduce barriers (i.e., country readiness to issue letters of authorization) to investment and restrict much-needed scaling of new projects and action. | N/A                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| 1986 | Individual/employee, Conservation International | 0                                                                       | te              | This criterion refers to the attribute of host country authorization for the purpose of Article 6 of the Paris Agreement, whereby "This attribute shall be assigned if the carbon credit is authorized by the host country for "other purposes" under Article 6 of the Paris Agreement". According to the text, activity proponents "shall have obtained an Article 6 authorisation for "other purposes" from the host country consistent with relevant decisions under the Paris Agreement". No mention is made to the corresponding adjustments that will need to take place associated to the national authorization for "other purposes".                 | For this additional attribute to be considered, the requirement should be to get the national authorization with a commitment for the government to implement corresponding adjustments when the transfer occurs.                                                                                                                                                                                                                                                                                                                                                                                                                                             |

Therefore, in turn, this could effectively facilitate the evolution of carbon markets into nature markets (i.e., including, but not limited to, the generation of carbon offsets). This would likely increase total global investment in carbon offsets as investors see a broader reason to invest in natural-climate solutions beyond just carbon. | It is conceivable that requiring such quantitative information would facilitate investments in nature-based solutions that deliver minimal carbon offset units but significant environmental, social, cultural and/or economic outcomes (i.e., carbon sequestration and storage becomes the co-benefit). Therefore, in turn, this could effectively facilitate the evolution of carbon markets into nature markets (i.e., including, but not limited to, the generation of carbon offsets). This would likely increase total global investment in carbon offsets as investors see a broader reason to invest in natural-climate solutions beyond just carbon. |
| 1990 | Phil Cryle                                      | 0                                                                       | te              | There is an opportunity for the IC-VCM to take a leading role in tackling the twin global challenges of climate and nature by recommending / requiring that the environmental, social, cultural and economic outcomes from natural-climate solutions are quantified under the full threshold, rather than as an additional attribute.                                                                                                                                                                                                                                                                                                                         | There is an opportunity for the IC-VCM to take a leading role in tackling the twin global challenges of climate and nature by recommending / requiring that the environmental, social, cultural and economic outcomes from natural-climate solutions are quantified under the full threshold, rather than as an additional attribute.                                                                                                                                                                                                                                                                                                                         |

| 1997 | Trevor Paul                                                          | IV Issues Related to Paris Agreement Alignment | ge              | Natural climate solutions have a significant role to play globally in reaching Paris and net zero ambitions. The Consultation, Assessment Procedure and Framework documents have not adequately addressed pathways for NCS projects to become CPP compliant. As it stands, many of the provisions in the Assessment Framework, would not be attainable for NCS projects.                                                                                                                                                                                                        | n/a                                                                                                                                                                                                                                                                                                                                                                        |
| 1997 | Trevor Paul                                                          | IV Issues Related to Paris Agreement Alignment | ge              | Similar to our comment on the Permanence criteria, we believe that robust buffer pools and reinsurance schemes provide a valid alternative to addressing the long-term risks of reversal associated with NCS projects..                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                                                                                                                          |
| 1998 | Anonymous                                                            | 0                                              | ge              | Voluntary credits are private-sector initiative, and voluntary offsetting is an initiative that goes beyond regulation. Seeking alignment with the Paris Agreement would undermine the role and contribution of voluntary credits. It is not necessary to have the same conditions as those of the Paris Agreement, and it should be left to the choice of project developers whether to seek alignment.                                                                                                                                                                        | No specific language proposed                                                                                                                                                                                                                                                                                                                                              |
| 1998 | Anonymous                                                            | 0                                              | ge              | "Double Claiming" does not require corresponding adjustment., But corresponding adjustments are mentioned in the Registry and Attributes. Please confirm that this is an option.                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                          |

| 2000 | Luzia Bieri                                                          | 0                                              | ge              | We recommend that an alignment of the voluntary carbon market with the Paris Agreement shall not become a requirement: corresponding adjustments shall remain optional and no share of proceeds or contributions to the OMGE shall be required. The transactions in the VCM represent climate action by non-state actors that go above and beyond what is required by law. Imposing additional hurdles to voluntary climate action would slow down the VCM and hamper financial flows host countries need to achieve their NDC targets.                                         | Corresponding adjustments shall remain optional and no share of proceeds or contributions to the OMGE shall be required.                                                                                                                                                                                                                                                   |

| 2003 | Anonymous                                                            | 0                                              | te              | Preference for Option 2 in all cases. Despite the good intentions behind these points, requiring this of voluntary projects is to unnecessarily and unreasonably entangle the voluntary carbon markets in a framework that was designed for an entirely different purpose. The voluntary carbon markets can and should continue to operate in parallel to the frameworks that have been designed and established under the context of the Paris Agreement, and therefore this should not be an ICVCM requirement.                                                               | 0                                                                                                                                                                                                                                                                                                                                                                          |
| 2004 | Eric Cooperstrom                                                     | 0                                              | ge              | We believe clarity on the following considerations will be critical with respect to connecting specific carbon projects with national strategies, NDCs and Paris Agreement goals:                                                                                                                                                                                                                                                                                                                                                                                               | Considerations as above.                                                                                                                                                                                                                                                                                                                                                   |

| 2006 | Anonymous                                                            | 0                                              | ge              | Alignment with the Paris Agreement is a very important reason for introducing a market-wide 5% Share of Proceeds for Adaptation (SOPA) but it is by no means the only one. Another, arguably even more important reason, is to safeguard what has become known as the 'Social Integrity' of the VCM as a whole in the form of a Core Carbon Principle (c.f. <a href="http://blog.oxfordclimatepolicy.org/safeguarding-social-integrity-in-the-voluntary-carbon-market/">http://blog.oxfordclimatepolicy.org/safeguarding-social-integrity-in-the-voluntary-carbon-market/</a> ) | From January 2024 onwards, the carbon crediting programmes shall in alignment with the Paris Agreement charge a share of proceeds of five percent at issuance, for the benefit of the Adaptation Fund, to assist developng countries that are particularly vulnerable to the adverse effects of climate change to meet the costs of adaptation. [Art. 6.6 Paris Agreement] |

| 2006 | Anonymous            | 0                   | ge              | Lack or loss of integrity is a reputational risk that potentially jeopardises the very existence of the market in question, particularly if the buyers rely on the reputation of what they are buying, as in the VCM. A credit on sale in a market that lacks integrity is simply not worth buying. However, 'integrity' in this context has by and large been interpreted as environmental integrity, meaning that carbon markets should not leave the environment worse off than it would have been without them. The problem with this exclusive environmental focus is that carbon markets can also have negative social consequences which pose an equal reputational risk of lacking in global social integrity. One of these is the risk of leaving behind the poorest and most vulnerable, and thus being perceived solely as a tool reduce the cost of the rich polluters to reach their mitigation targets. The SOPA is also an expression of the "principle of common-but-differentiated responsibilities and respective capacities," as it allows all poor and vulnerable countries to participate in the benefits of global carbon markets. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 2006 | Anonymous            | 0                   | ge              | Adopting a SOPA as best practice (i.e. Core Carbon Principle) in alignment with the Art. 6.4 trading mechanism of the Paris Agreement is a first, tried-and-tested, step towards ensuring the social integrity of the VCM as a whole, without having to interfere in market decisions as to the type or location of credit generating projects (although there is the option of promoting poor and vulnerable host countries with a SOPA exemption, as practised in the CDM).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 2006 | Anonymous            | 0                   | ge              | Introducing a SOPA as part of the ICVCM CCPs is both a matter of risk-management and an opportunity. On the one hand it provides a way to safeguard the social integrity of the VCM and to reduce the serious reputational risk of the VCM just being another polluter club leaving behind the poorest and most vulnerable. On the other, it not only aligns the VCM with the Art. 6.4 mechanism, but provides the opportunity to showcase the VCM as being more socially progressive than Art. 6 of the PA (which did not manage to include a SOPA in Art. 6.2)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 2006 | Anonymous            | 0                   | ge              | Finally, as to the way forward, what we need now is to adopt a SOPA following the model of the Paris Agreement which allows for a speedy tried and tested operationalisation. We need to hit the ground running. There will be ample time to modify the operational model if needed afterwards.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 2007 | Anonymous            | 0                   | ge              | This is a voluntary market that should not be subject to an additional tax. The majority of VCM nature based projects for example are already situated in developing markets and are therefore already supporting local developing economies. The responsibility of funding the adaptation fund should rest with governments and not with the private sector.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| 2008 | Anonymous            | 0                   | ge              | This is not necessary and adds administrative and financial complexity to managing a project. An additional 5% 'tax' will hinder growth of climate solutions that by their very nature support north-south investment. It does not bolster the 'integrity' of the climate outcomes of any individual project - which is where ICVCM should focus. By definition, high quality projects will integrate positive socio-economic outcomes into their design (and the support of this should be an important outcome for ICVCM). Companies that manage projects will have their profits taxed in-country, so why add another burden? Let's focus on measures that improve the credentials of the VCM, rather than drag the market into a 'solve-all' quagmire.                                                                                                                                                                                                                                                                                                                                                                                               | This is not necessary and adds administrative and financial complexity to managing a project. Let's focus on measures that improve the credentials of the VCM, rather than drag the market into a 'solve-all' quagmire. |

| 2010 | Grace Blackham       | 0                   | te              | Lack or loss of integrity is a reputational risk that potentially jeopardises the very existence of the market in question, particularly if the buyers rely on the reputation of what they are buying, as in the VCM. A credit on sale in a market that lacks integrity is simply not worth buying. However, 'integrity' in this context has by and large been interpreted as environmental integrity, meaning that carbon markets should not leave the environment worse off than it would have been without them. The problem with this exclusive environmental focus is that carbon markets can also have negative social consequences which pose an equal reputational risk of lacking in global social integrity. One of these is the risk of leaving behind the poorest and most vulnerable, and thus being perceived solely as a tool reduce the cost of the rich polluters to reach their mitigation targets. The SOPA is also an expression of the "principle of common-but-differentiated responsibilities and respective capacities," as it allows all poor and vulnerable countries to participate in the benefits of global carbon markets. | From January 2024 onwards, the carbon crediting programmes shall in alignment with the Paris Agreement charge a share of proceeds of five percent at issuance, for the benefit of the Adaptation Fund, to assist developng countries that are particularly vulnerable to the adverse effects of climate change to meet the costs of adaptation. [Art. 6.6 Paris Agreement) |
| 2010 | Grace Blackham       | 0                   | te              | Adopting a SOPA as best practice (i.e. Core Carbon Principle) in alignment with the Art. 6.4 trading mechanism of the Paris Agreement is a first, tried-and-tested, step towards ensuring the social integrity of the VCM as a whole, without having to interfere in market decisions as to the type or location of credit generating projects (although there is the option of promoting poor and vulnerable host countries with a SOPA exemption, as practised in the CDM).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                          |
| 2010 | Grace Blackham       | 0                   | te              | Introducing a SOPA as part of the ICVCM CCPs is both a matter of risk-management and an opportunity. On the one hand it provides a way to safeguard the social integrity of the VCM and to reduce the serious reputational risk of the VCM just being another polluter club leaving behind the poorest and most vulnerable. On the other, it not only aligns the VCM with the Art. 6.4 mechanism, but provides the opportunity to showcase the VCM as being more socially progressive than Art. 6 of the PA (which did not manage to include a SOPA in Art. 6.2)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                                                                                                                          |
| 2010 | Grace Blackham       | 0                   | te              | Finally, as to the way forward, what we need now is to adopt a SOPA following the model of the Paris Agreement which allows for a speedy tried and tested operationalisation. We need to hit the ground running. There will be ample time to modify the operational model if needed afterwards.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                          |
| 2011 | Grace Blackham       | 0                   | te              | Alignment with the Paris Agreement is a very important reason for introducing a market-wide 5% Share of Proceeds for Adaptation (SOPA) but it is by no means the only one. Another, arguably even more important reason, is to safeguard what has become known as the 'Social Integrity' of the VCM as a whole in the form of a Core Carbon Principle (c.f. <a href="http://blog.oxfordclimatepolicy.org/safeguarding-social-integrity-in-the-voluntary-carbon-market/">http://blog.oxfordclimatepolicy.org/safeguarding-social-integrity-in-the-voluntary-carbon-market/</a> )                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | For Option 1:                                                                                                                                                                                                                                                                                                                                                              |
| 2011 | Grace Blackham       | 0                   | te              | Lack or loss of integrity is a reputational risk that potentially jeopardises the very existence of the market in question, particularly if the buyers rely on the reputation of what they are buying, as in the VCM. A credit on sale in a market that lacks integrity is simply not worth buying. However, 'integrity' in this context has by and large been interpreted as environmental integrity, meaning that carbon markets should not leave the environment worse off than it would have been without them. The problem with this exclusive environmental focus is that carbon markets can also have negative social consequences which pose an equal reputational risk of lacking in global social integrity. One of these is the risk of leaving behind the poorest and most vulnerable, and thus being perceived solely as a tool reduce the cost of the rich polluters to reach their mitigation targets. The SOPA is also an expression of the "principle of common-but-differentiated responsibilities and respective capacities," as it allows all poor and vulnerable countries to participate in the benefits of global carbon markets. | From January 2024 onwards, the carbon crediting programmes shall in alignment with the Paris Agreement charge a share of proceeds of five percent at issuance, for the benefit of the Adaptation Fund, to assist developng countries that are particularly vulnerable to the adverse effects of climate change to meet the costs of adaptation. [Art. 6.6 Paris Agreement) |
| 2011 | Grace Blackham       | 0                   | te              | Adopting a SOPA as best practice (i.e. Core Carbon Principle) in alignment with the Art. 6.4 trading mechanism of the Paris Agreement is a first, tried-and-tested, step towards ensuring the social integrity of the VCM as a whole, without having to interfere in market decisions as to the type or location of credit generating projects (although there is the option of promoting poor and vulnerable host countries with a SOPA exemption, as practised in the CDM).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                          |
| 2011 | Grace Blackham       | 0                   | te              | Introducing a SOPA as part of the ICVCM CCPs is both a matter of risk-management and an opportunity. On the one hand it provides a way to safeguard the social integrity of the VCM and to reduce the serious reputational risk of the VCM just being another polluter club leaving behind the poorest and most vulnerable. On the other, it not only aligns the VCM with the Art. 6.4 mechanism, but provides the opportunity to showcase the VCM as being more socially progressive than Art. 6 of the PA (which did not manage to include a SOPA in Art. 6.2)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                                                                                                                          |

| 2011 | Grace Blackham                                  | 0                   | te              | Finally, as to the way forward, what we need now is to adopt a SOPA following the model of the Paris Agreement which allows for a speedy tried and tested operationalisation. We need to hit the ground running. There will be ample time to modify the operational model if needed afterwards.                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 2012 | Pedro Moura Costa                               | 0                   | ge              | Collecting a share of credits at issuance is as simple a process as can be, carried out by the issuing standards. It does not add "administratively or financially complexity to managing a project" [see comment of 17/08], as it has nothing to do with managing a project on the ground.                                                                                                                                                                                                                                                                                                                                                                                                                                         | From [date] onwards, the carbon crediting programmes shall in alignment with the Paris Agreement charge a share of proceeds of 5% at issuance, for the benefit of the Adaptation Fund, to assist developing countries that are particularly vulnerable to the adverse effects of climate change to meet the costs of adaptation. [Art. 6.6 Paris Agreement]                                                                                                                                         |
| 2012 | Pedro Moura Costa                               | 0                   | ge              | The purpose of the Share of Proceeds for Adaptation (SOPA) is indeed "not to bolster the 'integrity' of climate outcomes of any individual project"[ibid.], nor is it to bolster the social integrity of any individual project (i.e. safeguarding social standards in the host country/community). The purpose of the SOPA from a market perspective is to bolster the social integrity of the VCM as a whole. It allows the VCM to push back against accusations of leaving behind the poorest and most vulnerable countries (which typically are not chosen as project hosts by the market participants), and it crucially does so without interfering with market choices, such as introducing country project quotas instead). | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 2012 | Pedro Moura Costa                               | 0                   | ge              | Such accusations are a serious, indeed existential reputational risk for the VCM as a whole. A SOPA, far from hindering growth of the VCM, can help safeguard the VCM's very existence: being a voluntary market, no one will want to participate in it if its credentials, whether environmental or social are compromised (even if there are some high-quality projects).                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 2012 | Pedro Moura Costa                               | 0                   | ge              | As to the "responsibility of funding the adaptation fund"[comment of 4/08] it is important not to lose sight of the fact that the Adaptation Fund was actually created as a purpose-built vehicle to receive a SOPA from the Clean Development Mechanism. The only reason why governments had to step in and provide additional funding is that following the financial crash of 2009, carbon markets went down and the CDM failed to generate sufficiently credits at a sustainable price.                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 2013 | Anonymous                                       | 0                   | te              | In Glasgow, it was agreed that the carbon trading mechanism under Art. 6.4 of the Paris Agreement is to include a 5% share of proceeds for the Adaptation Fund to ensure that poorest and most vulnerable countries and communities which are not chosen by the market to host projects have nonetheless some small social benefit from it.                                                                                                                                                                                                                                                                                                                                                                                         | In Glasgow, it was agreed that the carbon trading mechanism under Art. 6.4 of the Paris Agreement is to include a 5% share of proceeds for the Adaptation Fund to ensure that poorest and most vulnerable countries and communities which are not chosen by the market to host projects have nonetheless some small social benefit from it.                                                                                                                                                         |
| 2013 | Anonymous                                       | 0                   | te              | Therefore, to also boost the social integrity of the voluntary carbon market, XXXX support that a share of proceeds of five percent at issuance, shall be delivered to the Adaptation Fund for assisting developing countries that are particularly vulnerable to the adverse effects of climate change to meet the costs of adaptation. By doing so, this could ensure that the VCM provides adaptation benefits in an equitable manner.                                                                                                                                                                                                                                                                                           | Therefore, to also boost the social integrity of the voluntary carbon market, the West African Alliance on Carbon Market and Climate Finance support that a share of proceeds of five percent at issuance, shall be delivered to the Adaptation Fund for assisting developing countries that are particularly vulnerable to the adverse effects of climate change to meet the costs of adaptation. By doing so, this could ensure that the VCM provides adaptation benefits in an equitable manner. |

All Adaptation Fund projects must satisfy strong environmental and social standards, including protecting human rights, empowering marginalised and vulnerable groups, fostering biodiversity conservation, protection of natural habitats and land and soil conservation                                                                                                                                                                                                                                                                                                                                                           | 0                                                                       |
| 2018 | Anonymous            | 0                   | ge              | · Efficient. Having its own online crowdfunding engine and tried and tested selection processes for quality projects to be funded, the Adaptation Fund provides a very simple ‘one-click’ solution for proven CSR climate action.                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                       |
| 2018 | Anonymous            | 0                   | ge              | The Adaptation Fund was created in 2001 to receive the original ‘share of proceeds’ of credits (CERs) generated in the Clean Development Mechanism. It has extensive experience, together with its trustee (the World Bank) in receiving credits and monetizing them to generate funding for its projects. Due to a lack of CERs generated in the CDM, the AF had to rely also on voluntary government contributions, and has been very successful, having committed USD923million to projects and programmes since 2010 and attracted a record USD 356 million at COP 26 in Glasgow, including from first time contributors US and Canada. | 0                                                                       |
| 2018 | Anonymous            | 0                   | ge              | Conclusion: The Adaptation Fund has not only proven to be effective, safe, and efficient, but it has also a proven track record in administering an SOP and is ideally placed to serve as the 'start-up' adaptation delivery vehicle for an VCM-SOPA.                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                       |

| 2019 | Anonymous            | 0                   | ge              | Integrity is paramount for carbon markets, in particular if they involve carbon credits to be used as ‘offsets’ in attaining mitigation targets, regardless of whether they are government targets (NDCs) or corporate ones.                                                                                                                                                                                                                                                                                                                                                                                                                | [X%] = five percent, to align with the Paris Agreement                  |
| 2019 | Anonymous            | 0                   | ge              | Lack or loss of integrity is a reputational risk that potentially jeopardises the very existence of the market in question, particularly if the buyers rely on the reputation of what they are buying, as in the VCM. A credit on sale in a market that lacks integrity is simply not worth buying. Indeed, a market that lacks integrity can undermine the global efforts to combat climate change, be it through bogus emission reduction or by destroying public support.                                                                                                                                                                | 0                                                                       |
| 2019 | Anonymous            | 0                   | ge              | However, ‘integrity’ has by and large been interpreted as environmental integrity, meaning that carbon markets should not leave the environment worse off than it would have been without them. The problem with this exclusive environmental focus is that carbon markets can also have negative social consequences which pose an equal reputational risk of lacking in social integrity. One of these is the risk of leaving behind the poorest and most vulnerable, and thus being perceived solely as a tool to reduce the cost of the rich polluters to reach their mitigation targets.                                               | 0                                                                       |
| 2019 | Anonymous            | 0                   | ge              | Adopting a Share of Proceeds for Adaptation with the Adaptation Fund as adaptation delivery vehicle as best practice (i.e. Core Carbon Principle) in alignment with the Art. 6.4 trading mechanism of the Paris Agreement is a simple tried-and-tested way of safeguarding the social integrity of the VCM as a whole, without having to interfere in market decisions as to the type or location of credit generating projects (although there is the option of promoting poor and vulnerable host countries with a SOPA exemption, as practised in the CDM).                                                                              | 0                                                                       |
| 2019 | Anonymous            | 0                   | ge              | Conclusion: Introducing a SOPA as part of the ICVCM CCPs is both a matter of risk-management and an opportunity. On the one hand it provides a way to safeguard the social integrity of the VCM and to reduce the serious reputational risk of the VCM just being another polluter club leaving behind the poorest and most vulnerable. On the other, it not only aligns the VCM with the Art. 6.4 mechanism, but provides the opportunity to showcase the VCM as being more socially progressive than Art. 6 of the PA (which did not manage to include a SOPA in Art. 6.2)                                                                | 0                                                                       |
| 2020 | Anonymous            | 0                   | ge              | In the CDM, Brazil, China and India hosted 66% of all projects issuing 85% of all CERs. The whole continent of Africa hosted less than 2% of projects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | A share of proceeds of FIVE percent (in line with the Paris Agreement). |

| 2023 | Individual/employee, Perspectives Climate Group | 0                   | ge              | Adopting a Share of Proceeds for Adaptation with the Adaptation Fund as adaptation delivery vehicle as best practice (i.e. Core Carbon Principle) in line with the Art 6.4 of the Paris Agreement is a simple tried-and-tested way of safeguarding the social integrity of the VCM as a whole.                                                                                                                                                                                                                                                                                                                                                                                                                                               | Adopting a Share of Proceeds for Adaptation with the Adaptation Fund as adaptation delivery vehicle as best practice (i.e. Core Carbon Principle) in line with the Art 6.4 of the Paris Agreement is a simple tried-and-tested way of safeguarding the social integrity of the VCM as a whole.                                                                             |
| 2024 | Individual/employee, Oxford Net Zero            | 0                   | te              | Criterion 13.1 Share of proceeds for adaptation finance. From [date] onwards, the carbon crediting program shall levy a share of proceeds of [x%] at issuance, for the benefit of the Adaptation Fund, to assist developing countries meet the cost of adaptationMuch-needed adaptation finance that can be unlocked through the VCM. Adopting a Share of Proceeds for Adaptation principle is vital in order to preserve the integrity of the VCM. By stipulating a SOPA as part of the core carbon principles, this will help align the VCM with Article 6.4 of the Paris Agreement. Carbon crediting programmes charge a share of proceeds of five percent for the benefit of the Adaptation Fund to assist climate vulnerable countries. | From January 2024 onwards, the carbon crediting programmes shall in alignment with the Paris Agreement charge a share of proceeds of five percent at issuance, for the benefit of the Adaptation Fund, to assist developng countries that are particularly vulnerable to the adverse effects of climate change to meet the costs of adaptation. [Art. 6.6 Paris Agreement) |
| 2025 | Anonymous                                       | 0                   | ge              | Option 2 - this doesn't seem like an appropriate way to use the voluntary market. Carbon crediting programs do not have the infrastructure for this. For instance, many carbon crediting programs are NGOs, and levying a share of proceeds could create tax complications. These programs are also typically understaffed, and this additional work would create an undue burden on the programs.                                                                                                                                                                                                                                                                                                                                           | see comment                                                                                                                                                                                                                                                                                                                                                                |
| 2026 | Alexandre Grais                                 | 0                   | te              | Although we support the efforts of the Adaptation Fund and adaptation finance more broadly, for nature-based projects, taking a percentage of credits and dedicating them to the Adaptation Fund, reduces revenue for a project's forest dependent communities and their ability to adapt to climate shocks and stresses. Therefore, we propose two options:                                                                                                                                                                                                                                                                                                                                                                                 | see above                                                                                                                                                                                                                                                                                                                                                                  |
| 2026 | Alexandre Grais                                 | 0                   | te              | 1. Option 1: No provision on this matter.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                          |
| 2026 | Alexandre Grais                                 | 0                   | te              | 2. Options 2: We propose that a floor price is created at which the Adaptation Fund may purchase credits. This floor price could be tied to a percentage below market value. Project proponents could voluntarily decide to sell a portion of their credits to the Adaptation fund at the floor price. Such a floor price could provide further security in the market and if aggregated, provide significant revenue for the Adaptation Fund.                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                          |
| 2027 | Eric Cooperstrom                                | 0                   | ge              | We believe that global climate finance and action should support those most vulnerable to the effects of climate change. However, any levy on carbon market proceeds could effectively increase the cost of carbon sequestration for project proponents and potentially reduce carbon market activity.                                                                                                                                                                                                                                                                                                                                                                                                                                       | We believe that global climate finance and action should support those most vulnerable to the effects of climate change. However, any levy on carbon market proceeds could effectively increase the cost of carbon sequestration for project proponents and potentially reduce carbon market activity.                                                                     |
| 2028 | Anonymous                                       | 0                   | te              | VCM projects should not contribute to this. This would be very complicated to manage in terms of administration and crosses a line between UNFCCC and private sector processes that has not been considered by the parties to the Paris Agreement. This could also have direct and unfair negative impacts on IPLCs and project participants that are working on the ground to reduce emissions. This could deter action and slow investment in VCM mitigation. Any levies of this type should be optional, or not required.                                                                                                                                                                                                                 | see comments                                                                                                                                                                                                                                                                                                                                                               |

| 2029 | Darcy Jones                                     | 0                                                        | ge              | EDF welcomes the discussion of a potential contribution by the voluntary carbon market (VCM) to the adaptation finance efforts required to meet the needs of the most vulnerable communities. We see this as a welcome extension of the social impact of the VCM. It is clear that the VCM is already contributing to the meaningful effort to combat climate change. At the same time, the co-benefits of the mitigation support provided by the VCM are likely to primarily benefit countries and communities with higher level of emissions and bypass many communities already impacted by climate change. While EDF acknowledges that more must be done at governmental and intergovernmental levels to address the woeful gap in finance to meet the needs of communities now, this gesture from the IC-VCM is a powerful one. | Implementation of this contribution should not, however, be at the expense of bona fide, high-impact sustainable development projects that are already providing benefits directly to communities. In implementing this idea, we therefore urge the IC-VCM to consider the adequacy of targeting and modulating the contribution requirement according to the type and scale of projects. |
| 2030 | Anonymous                                       | 0                                                        | te              | A mandatory levy on proceeds will disincentivize the development of the market and has unclear relevance to the "integrity" of the credit. We support a voluntary levy with attribute tagging.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | There should be no mandatory fees on projects in the VCM. We support Option 2.                                                                                                                                                                                                                                                                                                            |

| 2041 | MJ Mace                                                                                            | Option 1            | ge              | · Consistency in application across Article 6 and the VCM on these tools will help ensure that the voluntary market does not undermine what Paris Agreement Parties are trying accomplish in using markets to deliver enhanced adaptation and mitigation ambition. Consistent and broad application will help support and reinforce these efforts. Ideally these tools will be embedded directly in programme rules.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 2041 | MJ Mace                                                                                            | Option 1            | ge              | · The 39 countries of the Alliance of Small Island States (AOSIS), and the 40+ countries of the LDC Group all seek application of a 5% share of proceeds to the Adaptation Fund, a 2% cancellation rate for OMGE, avoiding double counting, and applying methodologies reflecting conservative baselines as best practice in the VCM. These ICVCM should support these countries' initiatives. See <a href="https://www.aosis.org/letter-to-the-integrity-council-of-the-voluntary-carbon-markets-on-aligning-with-best-practices/">https://www.aosis.org/letter-to-the-integrity-council-of-the-voluntary-carbon-markets-on-aligning-with-best-practices/</a> Even countries that struggle to attract project activities support SOP.                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 2041 | MJ Mace                                                                                            | Option 1            | ge              | · Application of SOP as a core element within the VCM will create a more level playing field in the market and generate greater revenues to meet the adaptation needs of particularly vulnerable developing countries – consistent with global goals.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 2042 | Individual/employee, Grantham Research Institute, London School of Economics and Political Science | Option 1            | te              | Adding a share of proceeds should be strongly considered. It would add social legitimacy to the market overall by supporting some of the most vulnerable people around the world who may not otherwise benefit from carbon markets (due to restrictive conditions for investment in their area), but without interfering in market allocation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | [Subject to further, independent analysis to inform decision] 'From 2024 January 2024 onwards, the carbon crediting programmes shall, in alignment with the Paris Agreement, charge a share of proceeds of five percent at issuance, for the benefit of the Adaptation Fund, to assist developing countries that are particularly vulnerable to the adverse effects of climate change to meet the costs of adaptation.' |
| 2042 | Individual/employee, Grantham Research Institute, London School of Economics and Political Science | Option 1            | te              | This should be weighed alongside other potential impacts. Firstly, including a share of proceeds would align with the Paris Agreement's Article 6.4 mechanism (and surpass the Article 6.2 mechanism) and in so doing reduce the incentive to issue credits through voluntary standards rather than Article 6.4. Because a share of proceeds would be a flat rate on all credits, any extra logistical burden for market players would be limited, and the bulk of excess profits might otherwise flow back to shareholders in high-income countries. However, the charge may cause some marginal projects to be financially unviable. This could be a problem for equity and justice if these forestalled projects are disproportionately located in low-income, vulnerable countries – which would counter-productive to the goals of including the share of proceeds in the first place. To guide this decision, the Integrity Council should commission analysis of the impact on financial viability of projects across a range of sectors and countries, paying explicit attention to geographical distribution. | 0                                                                                                                                                                                                                                                                                                                                                                                                                       |

| 2043 | Anonymous                                                                                          | Option 2            | ge              | We believe that the share of proceeds to assist developing countries to meet the costs of adaptation shall not be applied as mandatory to the voluntary market. The main concern is referred to the additional burden such a levy poses on project developers. Climate change disproportionately affects the population of developing countries. Exposing activity proponents in the Global South to this additional levy effectively imposes a tax on highly impacted populations to pay for the adaptation to climate change which they are trying to mitigate via their projects. Beyond the distribution effect, it also punishes first movers who are taking action on climate mitigation rather than imposing a levy on actors who continue to emit.                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                       |

Option 1: No option on this matter                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 2047 | Alexandre Grais                                 | 0                                                             | te              | 2. Option 2: We recommend that the IC-VCM take a phased approach on OMGE and evaluate price fluctuations of credits as other IC-VCM criteria are rolled out. Should the market demonstrate sufficient elasticity to compensate for these regulations then further consideration should be given to OMGE.                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 2049 | Eric Cooperstrom                                | 0                                                             | ge              | We believe that high quality and high integrity carbon credits generated through activities considered by the CCPs directly contribute to the contribution of overall mitigation of global emissions by providing both a bridge for emitters to compensate for their emissions as they pursue direct abatement and a means to neutralize any emissions remaining after all reasonable efforts have been taken to achieve net zero through direct abatement. Any mandatory cancellation of carbon credits at issuance or other similar provisions without equitable compensation for project proponents could disincentivize increased carbon sequestration via carbon market activity. | We believe that high quality and high integrity carbon credits generated through activities considered by the CCPs directly contribute to the contribution of overall mitigation of global emissions by providing both a bridge for emitters to compensate for their emissions as they pursue direct abatement and a means to neutralize any emissions remaining after all reasonable efforts have been taken to achieve net zero through direct abatement. Any mandatory cancellation of carbon credits at issuance or other similar provisions without equitable compensation for project proponents could disincentivize increased carbon sequestration via carbon market activity. |
| 2050 | Anonymous                                       | 0                                                             | te              | We do not recommend requiring a contribution or any type of levy from VCM projects and programs. This should be managed by the UNFCCC and individual parties of the Paris Agreement. Requiring this from VCM projects could deter investment and impact projects with already marginal economics.                                                                                                                                                                                                                                                                                                                                                                                      | see comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| 2055 | Individual/employee, Conservation International | Criterion 13.2: Overall mitigation of global emissions (OMGE) | te              | This section provides two options related to OMGE: “OPTION 1 - The carbon crediting program shall have established procedures to implement an overall mitigation of global emissions (OMGE), consistent with relevant decisions by the CMA.                                                                                                                                                                                                                                                                                                                                                                                                                                            | Flexibility should be provided and the implementation of provisions related to overall mitigation of global emissions should be voluntary.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2055 | Individual/employee, Conservation International | Criterion 13.2: Overall mitigation of global emissions (OMGE) | te              | OPTION 2 - No provisions on this matter”.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 2055 | Individual/employee, Conservation International | Criterion 13.2: Overall mitigation of global emissions (OMGE) | te              | OMGE would imply a voluntary cancellation at issuance of the credits. Articles 6.2 and 6.4 of the Paris Agreement have different approaches to overall mitigation of global emissions. OMGE is mandatory for countries under the Article 6.4 cooperative approach and voluntary for countries under the Article 6.2 approach.                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 2056 | MJ Mace                                         | Option 1                                                      | ge              | · Support option 1 – application of a fixed percentage OMGE is important for both the credibility and integrity of the VCM. It is also necessary for Paris alignment – to be consistent with Article 6.4 which has mandatory application of a minimum fixed percentage and with Article 6.2 where application is best practice (strong encouragement to Parties and stakeholders to apply). Conversely, the absence of OMGE application in the VCM will work to undermine what Article 6 is seeking to achieve.                                                                                                                                                                        | It will be helpful to express the OMGE expectation in quantitative terms.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 2056 | MJ Mace                                         | Option 1                                                      | ge              | · Given the large mitigation gap, it is important to harness the VCM to contribute to net global abatement and to accelerate emission reductions in furtherance of global goals.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 2056 | MJ Mace                                         | Option 1                                                      | ge              | · OMGE is not difficult to administer, nor is the minimum 2 percent that is currently mandatorily applied under 6.4 onerous; a fixed percentage should be applied as a matter of course to help ensure integrity across markets and ideally the ICVCM would encourage the application of a still higher %, to contribute to greater environmental integrity and credibility.                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| 2056 | MJ Mace              | Option 1            | ge              | · The 39 countries of the Alliance of Small Island States (AOSIS), and the 40+ countries of the LDC Group all seek application of OMGE in the voluntary market. These countries are all extremely vulnerable to the impacts of climate change, and the VCM should support these countries' efforts wherever possible – see <a href="https://www.aosis.org/letter-to-the-integrity-council-of-the-voluntary-carbon-markets-on-aligning-with-best-practices/">https://www.aosis.org/letter-to-the-integrity-council-of-the-voluntary-carbon-markets-on-aligning-with-best-practices/</a> From this it is clear that countries that may struggle to attract projects nevertheless support OMGE, for the benefit of all countries and peoples.                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 2056 | MJ Mace              | Option 1            | ge              | · Requiring application of OMGE as a core quality element within the VCM will create a more level playing field in the market and generate greater abatement – consistent with global goals.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 2057 | Anonymous            | Option 2            | ge              | We believe that the contribution to overall mitigation of global emissions shall not be applied as mandatory to the voluntary market. The provisions of the Paris Agreement were designed to govern transactions between state actors and do not explicitly take the financial architecture of VCM into account. Administering such a contribution would be extremely costly and complex to enforce in a voluntary setting. Furthermore, this would increase the risk taken by activity proponents and pose a barrier to entry to the market at a time when we are facing an impending supply shortage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | We support Option 2 for all the following:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| 2058 | Stephanie Sargeant   | Option 2            | ge              | Double counting refers to the risk that the same activity or effect to reduce or remove GHG emissions is accounted for twice (or multiple times).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Double counting refers to the risk that the same activity or effect to reduce or remove GHG emissions is accounted for twice (or multiple times).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 2058 | Stephanie Sargeant   | Option 2            | ge              | Double claiming finally, occurs where two entities 'claim' the environmental benefit of the exact same reduction or removal unit.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Double claiming finally, occurs where two entities 'claim' the environmental benefit of the exact same reduction or removal unit.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 2058 | Stephanie Sargeant   | Option 2            | ge              | In our view, double claiming between voluntary corporate offsetting efforts and national NDCs does not pose a risk, at least in developing countries that require additional finance to achieve their NDCs. This is because efforts are only counted once at the level of the NDC of the host country, while additionality is secured by adherence to the voluntary standards. Hence, we encourage many developing countries to take a flexible approach, as allowed by the Article 6 Rulebook, recognizing that voluntary carbon markets can both be a means for corporations to offset their interim or residual emissions and a meaningful contribution towards host country NDC compliance. Countries and investors should report and communicate this in a transparent way.                                                                                                                                                                                                                                                                                                                                                                                                                          | In our view, double claiming between voluntary corporate offsetting efforts and national NDCs does not pose a risk, at least in developing countries that require additional finance to achieve their NDCs. Hence, we encourage many developing countries to take a flexible approach, as allowed by the Article 6 Rulebook, recognizing that voluntary carbon markets can both be a means for corporations to offset their interim or residual emissions and a meaningful contribution towards host country NDC compliance. Countries and investors should report and communicate this in a transparent way.                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 2058 | Stephanie Sargeant   | Option 2            | ge              | As such, double claiming should be distinguished from other forms of double counting that definitely need to be avoided.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | As such, double claiming should be distinguished from other forms of double counting that definitely need to be avoided.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 2058 | Stephanie Sargeant   | Option 2            | ge              | Conversely, requiring projects to obtain a Corresponding Adjustment could create a sharp chilling effect which cannot be afforded again given the urgency to address climate change. Consider the situation for voluntary carbon projects in industrialized countries during the Kyoto years, from 2008 to 2020 when emission reduction targets applied for most industrialized countries. Neither the VCS nor the Gold Standard at the time banned voluntary carbon projects in the affected countries. Instead, they required projects located in these countries to present what the Gold Standard called "satisfactory assurances that an equivalent amount of [government units] will be retired to back-up the [voluntary credits] issued". In practice, no government has ever offered a retirement commitment from public books of this sort, and both standards remained (mostly) unavailable in the affected industrialized countries. This is not surprising given the considerable capacity needs and transactional costs to governments for validation, monitoring and verification control alone, assuming that they would not give blanket authorization to a specific voluntary standard. | Conversely, requiring projects to obtain a Corresponding Adjustment could create a sharp chilling effect which cannot be afforded again given the urgency to address climate change. Specifically within the context of voluntary carbon market (VCM), entities shall have the choice of buying carbon credits that are either authorised (under Article 6) or unauthorised (outside of Article 6), and the issue of double-claiming be assessed based on whether there are any linkages between the entities' and countries' GHG accounting systems. |
| 2061 | Anonymous            | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | te              | I am in favour of Option 2: “no provisions on this matter should be used”. In my view, no corresponding adjustments should not included in the VCM, for the reasons given below:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | I am in favour of Option 2: “no provisions on this matter should be used”. In my view, no corresponding adjustments should not included in the VCM, for the reasons given in the comments section above.                                                                                                                                                                                                                                                                                                                          |
| 2061 | Anonymous            | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | te              | Firstly, the use of corresponding adjustments can have a negative impact on host countries in developing countries.[1] By exporting their mitigation outcomes, the host country still needs to invest in additional mitigation outcomes to reach their NDCs. Depending on the costs of the mitigation outcomes exported, and the costs of the mitigation options still available to the host country, such transfers could result in negative economic impacts for the host country. The exact costs to host countries vary depending on the marginal abatement cost curve (MACCs) of each country. Given that investors usually look for low-cost mitigation options, the host country is left with higher mitigation outputs to meet their NDCs. The result is that the overall cost of meeting NDCs will increase at the national economy level. A recent study for the World Bank Climate Market Club[2] estimates that the opportunity costs to developing countries ranges from U\$ 20 to U\$78 /tCO2e. Consequently, programmes that purchase credits at, e.g., U\$ 10/tCO2e, result in an additional abatement cost of U\$ 10-68 to the host country. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 2061 | Anonymous            | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | te              | Second, it could create a disincentive for host countries to adopt ambitious NDCs. Unlike the Kyoto Protocol, when developing countries did not have emission reductions targets, under the Paris Agreement, all countries have to meet the emission targets stated in their respective NDCs. This creates a conundrum: while developing countries depend on inward investment to reduce their emissions, corresponding adjustments required for emissions trading could affect their ability to meet NDC targets. In essence, host countries are disincentivized to adopt ambitious NDCs, as these would jeopardize their ability to attract inward investment and climate finance                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 2061 | Anonymous            | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | te              | Thirdly, corresponding adjustments result in a zero-sum game with no positive global climate benefit[3]. Given that emission reductions deducted from a host country are used to authorise GHG emissions in the purchaser’s country, corresponding adjustments result in a zero-sum game with no positive global climate benefit. Voluntary transactions without corresponding adjustments, instead, can assist countries in meeting their NDC targets and result in emission reductions that either contribute to, or that are additional to the targets of the Paris Agreement, a truly positive outcome.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 2061 | Anonymous            | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | te              | Fourthly, voluntary projects do not need to be accounted by the UNFCCC, as the investor companies are not mandated to reduce their emissions and therefore do not need these credits for domestic or international compliance.[4] The emission reductions created by their voluntary projects, consequently, do not need to be reflected in any official accounts: the seller’s credits are not debited from the host country’s account, and not added to the national account of the buyer.[5]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| 2061 | Anonymous            | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | te              | [4] There are different types of buyers and motivations to invest in the VCM, from pre-compliance to corporate responsibility, but the immediate impact is the same – they do not need ITMOs given that they do not need to report to any compliance regime (at least at this point in time).                                                                                                                | 0                                                                                     |
| 2061 | Anonymous            | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | te              | [5] Of course, this would not be the case for “mitigation outcomes authorized for use towards achievement of NDCs and/or Other International mitigation purposes” (e.g., CORSIA and the VCM). In this case, the emission reductions should be subjected to corresponding adjustments.                                                                                                                        | 0                                                                                     |
| 2062 | Pedro Moura Costa    | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | te              | I favour Option 2. Corresponding adjustments would have a deleterious impact on host countries, depleting them of low cost mitigation options and hindering their ability to meet their NDCs (a negative climate outcome).                                                                                                                                                                                   | Adopt Option 2.                                                                       |
| 2062 | Pedro Moura Costa    | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | te              | So, if some host countries irresponsibly authorise the transfer of credits to investor countries (through corresponding adjustments), such trades may result in them not meeting their NDCs. Alternatively, countries may not authorise any project to issue carbon credits for "Other mitigation purposes", resulting in the death of voluntary carbon markets.                                             | 0                                                                                     |
| 2062 | Pedro Moura Costa    | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | te              | Indeed, this is what happened during the Kyoto phase, when trading activity using the Joint Implementation mechanism (which required an implicit corresponding adjustment) was a fraction of the trading levels under the CDM.                                                                                                                                                                               | 0                                                                                     |
| 2062 | Pedro Moura Costa    | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | te              | Voluntary Carbon Markets without corresponding adjustments, in turn, can assist developing countries in meeting their NDCs - creating a positive climate impact.                                                                                                                                                                                                                                             | 0                                                                                     |
| 2063 | Anonymous            | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | ge              | The use of corresponding adjustments would increase the overall cost of meeting NDCs of developing countries, as the low hanging fruit options would be exported. This, in turn, could result in 1) developing countries not meeting their NDCs; 2) contracting debt to finance mitigation the activities needed to meet their NDCs; or 3) create a disincentive for host countries to adopt ambitious NDCs. | We are strongly in favour of Option 2: “no provisions on this matter should be used”. |

| 2067 | Johan Börje                                     | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | ge              | Option 2 is preferred, i.e. no provision on this matter. It is essential that the principles of the IC-VCM does not imply that an authorized project is of better integrity/quality than an unauthorized project. If this is not achievable in general, special provisions should be made for negative emissions with geological storage. | -                                                                                                                                                                                                                                                                                                                                |

| 2070 | Anonymous                 | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | ge              | Article 6 requires CAs for authorized projects or those falling under CORSIA. Other VCM projects are not required by the Paris agreement to have CA's. Again, CAs are not an indicator of quality and may directly penalize those countries where foreign investment in mitigation activities is needed. The end result could be a significant decline in demand for international credits.                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 2070 | Anonymous                 | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | ge              | We believe respecting the requirements of the Paris agreement and the negotiators of that agreement should be the foundation of the VCM.                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 2070 | Anonymous                 | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | ge              | B) We do not believe the Registries are set up to assess carbon levies nor are they equipped to distribute revenue to others. The levies are also not related to the quality of credits and ICVCM requirements in this area clearly are an overreach of the groups mandate.                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| 2073 | Eftimiya Salo             | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | te              | Addressing double-counting should not be optional as it is absolutely critical to the effective functioning of the market. When a compensation claim is made, that statement should be grounded in truth. It is simply not acceptable to make a compensation claim using emission reductions or removals that have already been counted and claimed by the host country of the project. Contrary to the intention, this in fact results in a net increase of emissions in the atmosphere as only 1 tCO2 has been avoided or removed instead of 2 tCO2 - one by the company and one by the host country. | If a company claims to be carbon neutral through carbon credits that are also counted into the project's host country goals, as far as climate ambition is concerned, the company hasn't actually done anything extra. On the other hand, double counting can also disincentivize countries from implementing much needed climate action. Offsetting should always be additional to national climate targets for an increase in overall climate ambitions. If corresponding adjustment is not applied, carbon credits should not be used for making offset claims, while companies can still support such projects, they should change the claim to "climate action", "contribution claim" or "climate finance". |

| 2075 | Phil Cryle                                      | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | te              | Given the ambiguity regarding the need for corresponding adjustments in the voluntary market (as a result of the Article 6 rulebook not being clear on this), host country authorisation for voluntary offset use (or at least acknowledgement of this potential use), could be a useful requirement of the CCPs if it can be implemented in a way that avoids any adverse dynamics between projects and States. This could be linked to the proposed VCM labels. Clarity could be provided in the description of the attribution / labelling for offsets authorised for “other purposes” under Article 6 of the Paris Agreement (as currently described in the CCPs) such as:                                                                          | Given the ambiguity regarding the need for corresponding adjustments in the voluntary market (as a result of the Article 6 rulebook not being clear on this), host country authorisation for voluntary offset use (or at least acknowledgement of this potential use), could be a useful requirement of the CCPs if it can be implemented in a way that avoids any adverse dynamics between projects and States. | 2075 | Phil Cryle                                      | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | te              | If the long-term goal for global carbon markets is to have a unified market across voluntary, compliance and ITMO transactions, then the connected view of accounting systems would prevail. Double counting could be avoided by a 'super registry' that requires a 'country of retirement' to be nominated upon retirement that would be counted towards that country's NDC regardless of where it originated so long as a corresponding adjustment is made.                                                                                                                                                                                                                                                                                           | If the long-term goal for global carbon markets is to have a unified market across voluntary, compliance and ITMO transactions, then the connected view of accounting systems would prevail. Double counting could be avoided by a 'super registry' that requires a 'country of retirement' to be nominated upon retirement that would be counted towards that country's NDC regardless of where it originated so long as a corresponding adjustment is made.                                                                                                                                                                                                                  |

| 2077 | MJ Mace                                         | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | ge              | Support Option 1. This is a fundamental element for environmental integrity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | No proposed language change                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2077 | MJ Mace                                         | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | ge              | Agree that double claiming will occur if the holder of an emission reduction is claiming the underlying reduction from an activity, while at the same time this reduction is appearing in the host Party's emissions inventory with no adjustment. In this situation both the investor/credit holder and the host are claiming and seeking to count the same reduction. This is problematic and why corresponding adjustments are needed for all international mitigation purposes, other mitigation purposes or other purposes. It is greenwashing/misrepresentation for the holder of an unadjusted credit – or a credit not linked to a corresponding adjustment - to represent that it has exclusive rights to a ton of abatement when it does not. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 2078 | Individual/employee, Conservation International | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | te              | This section provides two options: “OPTION 1 From XX onward, carbon credits must be authorised by the host country for “other mitigation purposes” under Article 6, and subject to a corresponding adjustment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | This section should allow for both alternatives. In the case of host countries that have not included the VCM under the definition of “other purpose”, it should not be mandatory for credits generated in those jurisdictions to be subject to national authorization and corresponding adjustments. On the other hand, for credits generated in host countries that have included the VCM under “other purposes” definitions and are therefore subject to Article 6, both the national authorization and corresponding adjustments should be mandatory.                                                                                                                      |
| 2078 | Individual/employee, Conservation International | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | te              | OPTION 2 - No provisions on this matter.”                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 2078 | Individual/employee, Conservation International | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | te              | Based on Article 6 guidance, each host country will need to decide whether or not the VCM falls under the national definition of “other purposes” (and therefore is submitted to Article 6 rules). Having national authorization and corresponding adjustments is positive but should not be imposed as a requirement. Since it's national prerogative, mandating for all VCM credits to meet the requirement of being authorized by the host Party would not be appropriate.                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| 2079 | Alexandre Grais                | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | te              | For a host country to properly account for corresponding adjustment and to tangibly account for the benefit to the atmosphere, the host country will need a robust GHG accounting system, that deducts exported credits and reports those deductions in their national GHG reporting. To date, few host countries have such robust systems in place. There are often discrepancies in methodologies and approaches between carbon project GHG accounting systems and national GHG accounting systems. Also, many countries that may host nature-base carbon credits have not yet developed policies on corresponding adjustments. Given the above, requiring government approval for a corresponding adjustment may not only be difficult in certain countries, but it will also most likely not accurately be reflected from a GHG mitigation perspective given the existing reporting challenges. This could eventually be addressed in part with platforms such as the World Bank's Climate Warehouse. | see above                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 2079 | Alexandre Grais                | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | te              | Including a corresponding adjustment tag should be an option provided by the Standards and a choice at the Buyer's discretion but making them mandatory for VCM would be detrimental for the market as various studies have pointed out (e.g. Trove Report) that it may also disincentivize investment in countries that have not established the regulatory framework for corresponding adjustments yet. We recommend that until at least the first NDC reporting period (2030) no such requirements are prescribed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 2080 | Individual/employee, Carbonext | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | te              | Concerning the Host Country Authorization Criterion, we believe that no corresponding adjustments should be included regarding the VCM. Requiring authorization from a host country would prevent them from achieving their own NDCs, as the corresponding adjustments would require a deduction from the national records in each instance. Considering that nowadays most of the VCM credits come from developing countries, the idea of requiring corresponding adjustments would go against the sustainable development proposal and the principles of "common but differentiated responsibilities", principles enshrined in the UNFCCC.                                                                                                                                                                                                                                                                                                                                                              | Some institutions (such as VERRA), concerned with the subject, are developing mechanism to deal with the situation. They are proposing labels that allow converting a credit generated in the voluntary market to the regulated market (NDC- National Determined Contributions), if it is of the proponent interest. In this case, it would be valid to consider these approaches to analyze the applicability of these credits to CCP eligibility criteria. It is very important to ensure that there is no double-counting, finding a solution for this is crucial. However, requiring a country host authorization may not be the best solution |
| 2080 | Individual/employee, Carbonext | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | te              | We believe that corporate claims do not constitute double claiming under Paris Agreement, since corporates are non-state actors and therefore not part of the agreement. The emission reductions created by a host country voluntary project do not need to be reflected in any national accounts: the seller's credits are not debited from the host country's account, and not added to the national account of the buyer. Creating an additional requirement under uncertain future policy decisions further complicates market transactions.                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 2080 | Individual/employee, Carbonext | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | te              | Demanding this authorization can become an obstacle to VCM, slowing down transactions. Considering the important need to reach net zero by mid-century and reduce emission by half by 2030, we should consider not creating new barriers to entry to the market at a time when we are facing an impending supply shortage. It is important to assure credit quality without creating restrictions that could jeopardize, the so much needed, investments in climate action. When a robust accounting architecture under Article 6 is well implemented by all parties involved, a new model of voluntary and compliance accounting systems may be discussed.                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 2080 | Individual/employee, Carbonext | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | te              | We support option 2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 2082 | Anonymous                      | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | te              | Host country authorisation followed by a corresponding adjustment are needed ONLY when units are used for Article 6.2 and CORSIA purposes. Units used by voluntary /net-zero buyers do not require host country authorization or corresponding adjustments. Requiring this would stifle investment into projects as it is clear that countries are currently unable or unwilling to provide corresponding adjustments for voluntary projects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | see comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 2083 | Anonymous                      | Criterion 13.3:<br>Addressing double claiming of mitigation outcomes with host country NDCs | te              | We support Option 2 on this question. We also support the use of attribute tagging to clarify credits that have had a Corresponding Adjustment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | See above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 2084 | Grace Blackham                 | Option 2                                                                                    | ge              | We are strongly in favour of Option 2: "no provisions on this matter should be used". In our view, no corresponding adjustments should be included in the VCM, for the reasons given below:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | None.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

|------|----------------------|---------------------|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| 2084 | Grace Blackham       | Option 2            | ge              | Firstly, the use of corresponding adjustments can have a negative impact on host countries in developing countries.[1] By exporting their mitigation outcomes, the host country still needs to invest in additional mitigation outcomes to reach their NDCs. Depending on the costs of the mitigation outcomes exported, and the costs of the mitigation options still available to the host country, such transfers could result in negative economic impacts for the host country. The exact costs to host countries vary depending on the marginal abatement cost curve (MACCs) of each country. Given that investors usually look for low-cost mitigation options, the host country is left with higher mitigation outputs to meet their NDCs. The result is that the overall cost of meeting NDCs will increase at the national economy level. A recent study for the World Bank Climate Market Club[2] estimates that the opportunity costs to developing countries ranges from US\$ 20 to US\$78 /tCO2e. Consequently, programmes that purchase credits at, e.g., US\$ 10/tCO2e, result in an additional abatement cost of US\$ 10-68 to the host country. | 0               |
| 2084 | Grace Blackham       | Option 2            | ge              | Second, it could create a disincentive for host countries to adopt ambitious NDCs. Unlike the Kyoto Protocol, when developing countries did not have emission reductions targets, under the Paris Agreement, all countries have to meet the emission targets stated in their respective NDCs. This creates a conundrum: while developing countries depend on inward investment to reduce their emissions, corresponding adjustments required for emissions trading could affect their ability to meet NDC targets. In essence, host countries are disincentivized to adopt ambitious NDCs, as these would jeopardize their ability to attract inward investment and climate finance                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0               |
| 2084 | Grace Blackham       | Option 2            | ge              | Thirdly, corresponding adjustments result in a zero-sum game with no positive global climate benefit[3]. Given that emission reductions deducted from a host country are used to authorise GHG emissions in the purchaser's country, corresponding adjustments result in a zero-sum game with no positive global climate benefit. Voluntary transactions without corresponding adjustments, instead, can assist countries in meeting their NDC targets and result in emission reductions that either contribute to, or that are additional to the targets of the Paris Agreement, a truly positive outcome.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0               |
| 2084 | Grace Blackham       | Option 2            | ge              | Fourthly, voluntary projects do not need to be accounted by the UNFCCC, as the investor companies are not mandated to reduce their emissions and therefore do not need these credits for domestic or international compliance.[4] The emission reductions created by their voluntary projects, consequently, do not need to be reflected in any official accounts: the seller's credits are not debited from the host country's account, and not added to the national account of the buyer.[5]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0               |
| 2084 | Grace Blackham       | Option 2            | ge              | For the reasons above, we recommend that voluntary carbon markets should continue to run parallel and not included in the accounting of the Paris Agreement. In this way, voluntary carbon markets could provide the basis for international climate cooperation without being detrimental to host countries' targets.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0               |

|------|----------------------|---------------------|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| 2085 | Grace Blackham       | Option 2            | ge              | Firstly, the use of corresponding adjustments can have a negative impact on host countries in developing countries.[1] By exporting their mitigation outcomes, the host country still needs to invest in additional mitigation outcomes to reach their NDCs. Depending on the costs of the mitigation outcomes exported, and the costs of the mitigation options still available to the host country, such transfers could result in negative economic impacts for the host country. The exact costs to host countries vary depending on the marginal abatement cost curve (MACCs) of each country. Given that investors usually look for low-cost mitigation options, the host country is left with higher mitigation outputs to meet their NDCs. The result is that the overall cost of meeting NDCs will increase at the national economy level. A recent study for the World Bank Climate Market Club[2] estimates that the opportunity costs to developing countries ranges from U\$ 20 to U\$78 /tCO2e. Consequently, programmes that purchase credits at, e.g., U\$ 10/tCO2e, result in an additional abatement cost of U\$ 10-68 to the host country. | 0               |
| 2085 | Grace Blackham       | Option 2            | ge              | Second, it could create a disincentive for host countries to adopt ambitious NDCs. Unlike the Kyoto Protocol, when developing countries did not have emission reductions targets, under the Paris Agreement, all countries have to meet the emission targets stated in their respective NDCs. This creates a conundrum: while developing countries depend on inward investment to reduce their emissions, corresponding adjustments required for emissions trading could affect their ability to meet NDC targets. In essence, host countries are disincentivized to adopt ambitious NDCs, as these would jeopardize their ability to attract inward investment and climate finance                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0               |
| 2085 | Grace Blackham       | Option 2            | ge              | Thirdly, corresponding adjustments result in a zero-sum game with no positive global climate benefit[3]. Given that emission reductions deducted from a host country are used to authorise GHG emissions in the purchaser's country, corresponding adjustments result in a zero-sum game with no positive global climate benefit. Voluntary transactions without corresponding adjustments, instead, can assist countries in meeting their NDC targets and result in emission reductions that either contribute to, or that are additional to the targets of the Paris Agreement, a truly positive outcome.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0               |
| 2085 | Grace Blackham       | Option 2            | ge              | Fourthly, voluntary projects do not need to be accounted by the UNFCCC, as the investor companies are not mandated to reduce their emissions and therefore do not need these credits for domestic or international compliance.[4] The emission reductions created by their voluntary projects, consequently, do not need to be reflected in any official accounts: the seller's credits are not debited from the host country's account, and not added to the national account of the buyer.[5]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0               |
| 2085 | Grace Blackham       | Option 2            | ge              | For the reasons above, we recommend that voluntary carbon markets should continue to run parallel and not included in the accounting of the Paris Agreement. In this way, voluntary carbon markets could provide the basis for international climate cooperation without being detrimental to host countries' targets.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0               |

| 2086 | Anonymous                | Option 2                      | ge              | We believe that the host country authorization and the associated corresponding adjustment should not be made mandatory, since the compliance and voluntary market should operate in parallel. Indeed, the GHG accounting systems of States and private companies do not overlap and they are used for different aims. This means that voluntary carbon credits generated in one country are not supposed to be used to offset the GHG emissions of another country. Therefore, corresponding adjustment, in most cases (we might exclude only the use of voluntary carbon credits in the national compliance markets, where allowed), it is not necessary. | We support Option 2 for all the following:                                                                                                                                                                                                                                                                                                                                                       |
| 2086 | Anonymous                | Option 2                      | ge              | Making the host country authorization mandatory would effectively hinder host countries from achieving their own NDCs, given that corresponding adjustments would require a deduction from national registries in each instance. Accounting frameworks and claims in the voluntary carbon market run separate to those in compliance markets, as they do not concern the same actors.                                                                                                                                                                                                                                                                       | <ul style="list-style-type: none"> <li>· Criterion 13.1: Share of proceeds for adaptation finance</li> </ul>                                                                                                                                                                                                                                                                                     |
| 2086 | Anonymous                | Option 2                      | ge              | The VCM offers an opportunity to funnel finance into mitigation that is additional in order to accelerate the transition to net zero. Requiring corresponding adjustments will downsize the VCM, thereby reducing the total amount of funding allocated to climate mitigation.                                                                                                                                                                                                                                                                                                                                                                              | <ul style="list-style-type: none"> <li>· Criterion 13.2: Overall mitigation of global emissions (OMGE)</li> </ul>                                                                                                                                                                                                                                                                                |
| 2086 | Anonymous                | Option 2                      | ge              | In addition, most countries today do not have the accounting frameworks in place to be able to consider corresponding adjustments. This raise the risk of slowing down transactions in the VCM when additional investments into climate action are urgently needed.                                                                                                                                                                                                                                                                                                                                                                                         | <ul style="list-style-type: none"> <li>· Criterion 13.3: Addressing double claiming of mitigation outcomes with host country NDCs</li> </ul>                                                                                                                                                                                                                                                     |
| 2088 | Our 2050 World core team | Part 5: Terms and definitions | te              | Many definitions in this document are also refered to in working draft 2 of the Net Zero Guiding Principles (IWA 42); it is important to align to a common defitnion as far as possible. The Net Zero Guiding Priniciples are being collectively authored to catpure a common defitnion by pooling insights from across the zero space. Participants include prominant organisations from across the space and the seed document was based on analysis of over 40 intitiaves and frameworks in the global governance space.                                                                                                                                 | We propose that defintions listed in clause 3 of the Net Zero Guiding Priniciples are, aligned to, referered to or directly referenced. We are not listing the specifics here as they are beign itereated but advise seccariat and commentors to access them by registering at <a href="http://www.our2050.world/#register">www.our2050.world/#register</a> to recieve the document and updates. |

| 2094 | Individual/employee, Conservation International | Part 5: Terms and definitions | ge              | Terms seem generally aligned with use across standards, although there may be some issues given that each standard may provide its own definition of such terms and that such definitions may conflict.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Provide guidance on evaluating standards using ICVCM CCP definitions when such definitions conflict with those provided by the standard being evaluated.                                                                             |
| 2095 | Individual/employee, Conservation International | Part 5: Terms and definitions | ed              | Key terms from the CCP seem to be missing, e.g., "additionality", "permanence", etc.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Include all key terms in the "Terms and definitions" sections in order for it to be a useful reference, even when such terms are defined in their respective sections. Ensure consistency in definitions throughout ICVCM documents. |
| 2097 | Belinda Rowsell                                 | 0                             | te              | Currently, there is no agreement within the international community on how the concept of a carbon emission offset (or carbon credit) should be treated for legal purposes (e.g., tangible or intangible property right, personal property, inventory property, capital property), nor for domestic or cross-border tax purposes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | The character (income versus capital / broker versus dealer), timing (current versus deferred), and source (domestic versus foreign) of income differs from jurisdiction to jurisdiction, resulting in disparate tax outcomes.       |
| 2098 | Molly Brown                                     | 0                             | ed              | This is quite opaque. I read much of this document thinking that ICVCM was intending to vet EVERY project developer. Rather than just vetting the registries. Please make clearer                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | "A standard setting program that registers mitigation activities and issues carbon credits - i.e. a registry like Verra, Gold Standard."                                                                                             |
| 2099 | Anonymous                                       | 0                             | te              | By definition, the procedure in this document focuses only on carbon credits registered on an electronic registry which is operated by a carbon crediting program only. This focus is omitting major players in current carbon markets including all registries which are not tied to a carbon crediting program but enable project registration and carbon offset serialization from variety of methodologies while using established international standards and can adhere to the CCP requirements. This document should be inclusive and offer guidance for such registries as well. By providing only guidance for larger carbon crediting programs, rather than enabling ALL capable registry entities who can bring more investment on emission reduction and removal projects, we are missing a big opportunity to scale the market and have CCP attributed to all those that seek to meet the requirements. | Inclusion of all legitimate organizations as per above comment so that all can prove adherence to CCP (when eligible)                                                                                                                |
| 2100 | Mark Glossoti                                   | 0                             | ge              | The consultation offers very limited explicit guidance on evaluation of the science behind the methodologies, notably setting of sequestration rates etc. Using best-in-class available science could have a significant impact. We recommend adding requirements to make better use of robust scientific evidence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | -                                                                                                                                                                                                                                    |
| 2101 | Eftimiya Salo                                   | 0                             | te              | Robust baseline scenario is critical in order for the offset claim to be grounded in truth. In the current draft, the term "conservative baseline" is too vague and can be misused. For example some baselines could be more or less conservative than others.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Changing from "conservative baseline" to "most conservative" baseline and adding baseline criteria to show what it means in practice would avoid such misinterpretation or "baseline shopping".                                      |

| 2104 | Jeppe Bay Pedersen   | 0                   | te              | Actors involved with activities or the creation of a project that leads to GHG mitigation would like to express and claim their involvement in the project. Partnerships are needed and they built on collaboration and a shared outcome. It is extremely important that there is a clear distinction of double claiming (e.g., in cases where multiple project partner claim contribution towards mitigation activity) and double counting. Double claiming is not problematic by default - only when actors on the same accounting "level" (i.e., two private actors or two country inventories) choose to count mitigation action towards meeting climate targets at the same time leading to double counting.                                                                                                                                                    | The definition should clearly specify that double claiming is only problematic when it leads to double counting in national GHG inventories or in private inventory, i.e., when it is claimed in two inventories of the same "level".                                                                                                                                                                                                                                                                                                                                                     |
| 2104 | Jeppe Bay Pedersen   | 0                   | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | A mitigation outcome shall count towards a single actor (company or other type of entity that does not have a governmental GHG Inventory) as well as in a single countries GHG Inventory. In that way, no double claiming occurs, as the mitigation outcome in the countries GHG Inventory – towards its NDC – is only a reflection of what occurs on a private level.                                                                                                                                                                                                                    |
| 2104 | Jeppe Bay Pedersen   | 0                   | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | This position is shared with multiple market actors as reported by Verra in The Future of the Voluntary Carbon Market from April 2021, in which a majority of respondents believe that Corresponding Adjustment is not relevant for the purpose of voluntary action – that the country in which the actor resides, should adjust for the mitigation action pursued by said actor in order for it not to be counted towards the NDC.                                                                                                                                                       |
| 2104 | Jeppe Bay Pedersen   | 0                   | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | This would greatly impact the mobilization of private capital towards climate action as one of the main drivers for investing in mitigation action is to counterbalance a negative externality of an actor's activity while also helping its country of domicile reach climate goals towards the Paris Agreement. Ørsted strongly believes that a mitigation outcome generated by an actor should be able to be reflected in the same capacity towards global climate ambitions and disconnecting voluntary offsetting from countries NDC prevents that from happening.                   |
| 2104 | Jeppe Bay Pedersen   | 0                   | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Furthermore, requiring countries to not account for the mitigation outcomes that is used for corporate offsets would require said country to authorize a project (or negative emission or carbon credit) through corresponding adjustments for that transfer of a mitigation outcome. This system is not functional yet and does not seem to be so until 2031, where the Subsidiary Body for Scientific and Technological advice (SBSTA) under the Paris Agreement presents its proposal for a common system for corresponding adjustments in line with article 6 of the Paris Agreement. |
| 2105 | MJ Mace              | 0                   | ge              | This definition works as drafted. Double counting and double claiming will occur if the holder of an emission reduction is claiming the underlying reduction from an activity, while at the same time this reduction is appearing in the host Party's emissions inventory with no adjustment. In this situation both the investor/credit holder and the host are claiming and seeking to count the same reduction. This is problematic and why corresponding adjustments are needed for all international mitigation purposes, other mitigation purposes or other purposes unless a different kind of claim entirely is explicitly presented. It is greenwashing/misrepresentation for the holder of an unadjusted credit – or a credit not linked to a corresponding adjustment - to represent that it has exclusive rights to a ton of abatement when it does not. | No proposed change                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 2106 | Pedro Moura Costa    | 0                   | te              | There is no scope for double counting In voluntary carbon markets. Voluntary projects are often financed by companies that are not mandated to reduce their emissions and therefore do not need these credits for domestic or international compliance. The emission reductions created by their voluntary projects, consequently, do not need to be reflected in any official accounts: the seller's credits are not debited from the host country's account, and not added to the national account of the buyer. I.e., the mitigation outcomes do not need to be authorized for use towards achievement of NDCs, and thus do not result in double counting and do not require corresponding adjustments.                                                                                                                                                           | Perhaps a clarification on point 10. Like a final sentence reading "Unless the mitigation outputs of VCM projects are used for 'other mitigation purposes', double counting is unlikely to occur in the VCM".                                                                                                                                                                                                                                                                                                                                                                             |
| 2106 | Pedro Moura Costa    | 0                   | te              | If not subjected to corresponding adjustments, the mitigation outcomes of voluntary projects contribute only to the NDC the host country and the voluntary targets of project or programme investors. In this way, such projects result in a truly additional environmental impact at the UNFCCC level, while avoiding the perverse effects of corresponding adjustments on host countries.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 2106 | Pedro Moura Costa    | 0                   | te              | Of course, if such voluntary credits are used for Other International Mitigation Purposes, such as CORSIA, these activities must be recognised and authorised by the host country, and subject to corresponding adjustments of ITMOs from the host country accounts and reallocated elsewhere.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| 2107 | Anonymous            | 0                   | te              | It is positive that ICVCM has included specific criteria for grievance redress - an element that receives little attention in existing REDD+ safeguard policies. | ICVCM can improve standards by highlighting the elements of grievance redress addressed in the UN Guiding Principles: legitimacy, accessibility, predictability, fairness, rights compatibility, transparency, capability. While many of these are mentioned in the draft policy, the precise criteria can be more explicit, including clear guidance for carbon-crediting programs. This will be particularly important due to the lack of clear standards on grievance redress by carbon-crediting programs, and the essential role that accountability mechanisms play in making safeguards work.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 2107 | Anonymous            | 0                   | te              | 0                                                                                                                                                                | In relation to Criterion 1.7, I urge ICVCM to make the full text of complaints public unless complainants request anonymity - not simply the status of the complaint.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| 2108 | Anonymous            | 0                   | ge              | 0                                                                                                                                                                | I am writing in response for your call for public consultation on your CCPs and Assessment Framework as a Gates Scholar with a PhD in climate policy from the University of Cambridge. As the ICVCM has stated, "the purpose of the CCPs and Assessment Framework is ultimately to provide a credible, rigorous, and readily accessible means of identifying high-quality carbon credits that create real, additional and verifiable climate impact with high environmental and social integrity," and to accelerate a "just transition to 1.5 C." Drawing from the best science and disinterested expertise available, I am writing to suggest that JREDD+ not be considered to meet the CCP criteria. There is no significant evidence that JREDD+ will result in real, additional and verifiable climate impact, nor can CCP assessments of JREDD+ standards adequately ensure high environmental and social integrity. Allowing JREDD+ to be considered for the CCP stamp would harm the integrity of the ICVCM, the CCPs and the Assessment Framework and pose a considerable risk for the ICVCM program as a whole. |
| 2108 | Anonymous            | 0                   | ge              | 0                                                                                                                                                                | REDD+ offset credits have not created real climate impact in terms of GHG emissions reductions, regardless of their design or scale. This is because economic models in REDD+ target countries have not changed to effectively address the drivers of deforestation and forest degradation (Loft et al 2017; Duchelle et al 2019)—namely the global and domestic commodity chains of beef, palm oil, coca, soya, timber, pulp and paper (Duchelle et al 2019). To this end, the International Union of Forest Research Organization's 2022 report "Forests, Climate, Biodiversity and People: Assessing a Decade of REDD+" states as its first lesson for policymakers: "Addressing drivers of deforestation and forest degradation at multiple levels of governance remains a fundamental component of REDD+ that is not yet effectively tackled."                                                                                                                                                                                                                                                                       |
| 2108 | Anonymous            | 0                   | ge              | 0                                                                                                                                                                | We also do not have confidence in REDD+ offset credits in creating real climate impact in terms of GHG emissions reductions due to fundamental problems of permanence and leakage, which remain problems regardless of REDD governance scale. Reversals are a major criticism of all REDD+ projects (see van Oosterzee et al 2012). Research has been done to try to quantify the impacts of REDD+ project implementation has found that rates of forest loss have increased after projects' end (e.g. Roopsind et al 2019 and Demarchi et al 2021). They have also found evidence of international leakage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 2108 | Anonymous            | 0                   | ge              | 0                                                                                                                                                                | Second, REDD+ projects have also not been proven to create additionality, due to significant uncertainty around whether REDD+ results would have happened in the absence of REDD+ activities. In addition to the numerous studies calling into question the additionality of REDD+ credits, in the first studies of their kind—attempting to model the counterfactual of REDD+ —Ellis et al 2020 undertook a synthetic control analysis of villages engaging in REDD+ in Mexico and found limited evidence of reduction in forest loss due to REDD+ activities, with at least half of the villages showing no impact of REDD+ activities on forest loss. Bos et al (2017) using Before-After-Control-Intervention found minimal impact of REDD+ interventions on tree cover loss rates in subnational projects in six countries.                                                                                                                                                                                                                                                                                          |
| 2108 | Anonymous            | 0                   | ge              | 0                                                                                                                                                                | Finally, REDD+ and JREDD+ projects have not been proven to have verifiable positive climate impacts, nor have they adequately ensured positive environmental and social integrity impacts, despite the inclusion of safeguards. While there have been significant advances in the use of remote sensing for assessing forest area change, there is still a problem of establishing credible baselines for all types of REDD+ projects. A fundamental problem with this is that forest degradation is harder to detect and measure and monitor than deforestation (yet is estimated to generate between 25% and 65% of total forest-related emissions) by releasing CO2 and other GHGs (Pörtner et al 2021). In addition, baseline dates for comparing deforestation rates before and after REDD projects can and are at risk of being chosen in ways to ensure positive results for interested parties (West et al 2020).                                                                                                                                                                                                 |

| 2108 | Anonymous                                       | 0                   | ge              | 0                                                                                                                                                                                                                                                                            | Furthermore, there is limited direct evidence of desired social and non-carbon environmental outcomes being achieved through REDD+ projects. While safeguards can help, they cannot ensure that harm will not be avoided. Some REDD+ and other PES projects have provided short-term material benefits to forest communities, often in the form of small payments for tree planting or forest-guard duties or community benefits such as fuel-efficient stoves technical support, or school or health clinic buildings. Still, most have failed to generate lasting improvements in living standards, and many have failed to reach those most affected by the losses that result from REDD+ restrictions on their use of land and forest resources (e.g. Sills; Simonet et al; Larson et al.), namely Indigenous Peoples and local communities (IPLC) (Dehm, 2016). Core safeguards lack specificity and legal authority, and often fail to avoid harm due to the inherent subjectivity and conflicts of interest of project managers and consultants hired to determine whether safeguard requirements have been met. Many studies have showed REDD+ projects have indeed caused harm—from fomenting community tensions, to restricting communities from their traditional use of forests, to violent displacement of villages or response to community protest against REDD+ projects. |
| 2108 | Anonymous                                       | 0                   | ge              | 0                                                                                                                                                                                                                                                                            | Despite this, “country progress over the past 10+ years has often been slow in meet the Cancun safeguard requirements, with little guidance from UNFCCC on what safeguards mean in practice and how they should be reported on” (IUFRO 2022). Given the limited legal recognition of IPLC rights to carbon, as well as limited defined benefit-sharing arrangements, more work needs to be done to ensure that the conditions for fair, effective and transparent transactions or REDD+ are in place to ensure equitable outcomes (RRI, 2021). REDD+ implementation currently requires improvements in monitoring for ecological and social non-carbon benefits and adherence to safeguards. However, there is “limited evidence of current progress in ensuring the rights of communities are respected and improved” (IUFRO).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2108 | Anonymous                                       | 0                   | ge              | 0                                                                                                                                                                                                                                                                            | This evidence shows that the fundamental problems of REDD+ (permanence, leakage, additionality, and risk of harm) cannot be ‘designed out’ at any governance scale to ensure high quality carbon offsets. There is no significant evidence that JREDD+ will result in real, additional and verifiable climate impact. Therefore, they cannot be considered high quality. The ICVCM should not recognize them as such, and they should not be considered as an offset means to contribute to a “just transition to 1.5 C.” Doing so would significantly harm the integrity of the voluntary carbon market as a whole. Instead, the ICVCM’s stamp of approval should be reserved for credits that are conservatively not over-credited and confidently not associated with harm.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

This could be based on an initial threshold that reflects best practice today, based on a benchmarking of the high-quality standards that currently exist (e.g., those endorsed by ICROA and/or ICAO's CORSIA). | See above                                                                                                                                                            |
| 2122 | Anonymous                                       | 0                   | te              | Programs should not be required to commit at the outset to the full thresholds, particularly as they are currently written. As noted throughout, we strongly disagree with many provisions, a number of which would take the market backwards in terms of quality, would restrict innovation or would be impractical or infeasible to implement.                  | 0                                                                                                                                                                    |

| 2122 | Anonymous            | 0                   | te              | IC-VCM should instead create a threshold on current best practice and then identify key areas of future work (e.g., on additionality, permanence, SD impacts). Now and with future provisions, the focus should be on high-level principles and governance (similar to the level of detail included in ICAO's approach), and not on sector-level (or "credit type") assessments, nor on the review of methodologies (as noted in comments above).                                                                                                                                                                                                                                                  | 0                                         |
| 2122 | Anonymous            | 0                   | te              | This process for continuous improvement must include multi-stakeholder working groups to ensure representation from carbon market standards and programs, academia, carbon market participants and representation from local actors (e.g., developing country policy makers, associations or community groups), and must take account of the process, timelines and governance of the standards bodies.                                                                                                                                                                                                                                                                                            | 0                                         |

| 2127 | Molly Brown                               | 0                   | ge              | For accreditation to be meaningful, the ICVCM will need to create multiple subdivisions. For example, in cookstoves, additionality varies by distribution method, fuel type, stove efficiency, household income, and project location (urban vs peri-urban vs rural). In addition, the inclusion of legal requirements in 8.4 means that there is need for differentiation of credit type by nation and region.                                                                | Even better, remove credit types from the scope of the ICVCM, and focus on making sure that registries have robust procedures in place to approve methodologies (removed from vested interests). Perhaps instead of re-accrediting all credit types, create some kind of public forum for discussing and comparing methodologies between registries, and a process for ensuring they are all up to scratch. Make sure this public forum includes project developers. |
| 2127 | Molly Brown                               | 0                   | ge              | Is a "credit type" a woodfuel cookstove in a rural area distributed at a subsidy to a household living on under \$1/day in the Gambia? If so, we are going to end up with a LOT of credit types. If not, then the assessment of additionality is going to be debated and it will be hard for ICVCM to prove that their additionality assessment is any better than the current methodologies available.                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2127 | Molly Brown                               | 0                   | ge              | The many sub-divisions of credit type will extend the length of time it takes to approve every credit type. What happens to credit types which are pending approval, while other types have been approved? Some credits will be potentially able to command higher prices in the market while others are awaiting approval.                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2128 | Molly Brown                               | 0                   | ge              | In general, the ICVCM should make it easier for IPLCs to create and register programmes so they don't need to rely on expert (white) middle-men.                                                                                                                                                                                                                                                                                                                               | Provide a non-technical summary that uses human language (carbon offset project developer not "mitigation activity proponent")                                                                                                                                                                                                                                                                                                                                       |

| 2131 | Vega Tapia           | 0                   | ge              | In addition to this, the current proposal envisages a five-year validity period for CCP eligible credit types. But methodologies are constantly being updated or new methodologies are regularly being developed. Therefore, either the five-year validity period will be far too long to keep up to date with changes that are occurring, or it will send a signal to the market to stop innovating.                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| 2136 | Trevor Paul          | 0                   | ge              | Viresco Solutions recognizes the need to develop credible, rigorous means of identifying high-quality carbon credits that deliver real and verifiable emission reductions and removals. To that end, Viresco is supportive of embedding the CCP directly within the assessment framework. Viresco also supports the phased approach (Assessment of carbon-crediting programs, Assessment of types of Carbon credits, identification of CCP-eligible carbon credits) to the implementation of the Assessment Procedure.                                                                                                                                                                                                                                                                | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| 2137 | Anonymous            | 0                   | te              | The implication of a program/project type meeting only the initial stringency threshold vs. the full stringency threshold is not clear. Will the full stringency threshold be rolled out during some transition/grace period? If so, what is the envisaged timing of that period?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | na                                                                 |
| 2138 | Oda Almas            | 0                   | te              | The point that the IC will not only assess programs against principles and criteria, but also against implementation is very important and deserves fleshing out somewhere in the assessment framework. We recommend that it is made clear what information the IC will base its assessments on, especially when it comes to the implementation of carbon-crediting programs. It is important that during the assessment, the IC is required to triangulate any self-assessment by the program through inter alia information generated by communities affected by mitigation activities. The IC must actively look for information in the public domain regarding any land tenure or other conflicts in the area of the mitigation activity and where relevant conduct interviews with affected with communities.                                                                                                                                                        | See above                                                          |
| 2139 | Anonymous            | 0                   | te              | There is too much emphasis on “program operators”. It is important to recognize that there are independent organizations who establish methodologies and have them validated them by 3rd parties. These companies can also initiate projects and generate offsets which are independently verified outside just selected program operators. There is no guidance on how these entities can prove adherence to the CCP requirements, outside of a selected program, nor how their carbon offsets can be equally valuable when adhering to CCPs. Therefore, ICVCM is urged to provide guidance for more independent project developers and organization following recognized standards (Such as ISO 14064), to ensure the broadest growth of carbon markets possible. These market players and smaller registries also seek adherence to CCP, and expanding guidance for these situations is critical in addition to the core focus on major programs and their registries. | Modify to include all eligible organizations as per above comments |
| 2139 | Anonymous            | 0                   | te              | Thus, there should be guidelines for organizations, project developers, independent registries on steps they need to take to ensure alignment with CCP. This approach was taken when the GHG accounting standards (ISO 14064 series) were first written. The intention was to guide programs, governments, businesses, regions .... on how to appropriately quantify, monitor, report and verify greenhouse gas emissions. CCPs should be written in the same manner to guide and enable all entities; programs, governments, businesses, regions, registries receive guidelines to generate CCP compliant credits. Otherwise, only a limited number of major ‘programs’ would be able to be recognized under CCP tagged credits, and CCPs guidance should instead be rolled out for all market players who wish to apply them.                                                                                                                                           | 0                                                                  |
| 2140 | Anonymous            | 0                   | te              | Oversight body should be overseeing the process and make sure appropriate rules are followed. The current language of the document focuses on a limited few chosen programs (not all registries) and this will limit the market scalability and the full application of CCP. If guidance is focus based on the process of pre-selected programs, registries who are not tied into a selected program and its methodologies will not have guidance. Assessment should rather support broad guidance for all legitimate project developers within and outside selected programs. Supporting those applying ISO 14064-2, can also abide by CCP requirements and help scale the market and add quality offsets to the pool.                                                                                                                                                                                                                                                   | Modify to include all eligible organizations as per above comments |
| 2141 | Anonymous            | 0                   | ge              | It is key to accelerate investments into climate solutions. In order to do this, we need to scale high quality credits currently available in the market. The proposed process runs the risk of slowing down rather than accelerating high quality transactions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | see above                                                          |
| 2141 | Anonymous            | 0                   | ge              | To avoid any further delay, our organization recommends simplifying the process to allow for CCP verification to be applicable in early 2023. The assessment procedure should focus on approving crediting programmes first by reviewing program governance. IC-VCM could also identify key areas for improvement over time, and run specific working groups to provide suggestions on how programs could improve key issues such as additionality, permanence and nature-based solutions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                  |

| 2141 | Anonymous                            | 0                   | ge              | Solutions to any integrity concerns need to be tailored, e.g. vintage cutoffs may address additionality concerns for renewable energy, while certain categories of NCS projects may require a different solution. Rather than the IC-VCM getting into these details, which would require methodology-level provisions, it should focus on overall program governance, ensuring that standards have adequate ways to seek feedback and improve on these key issues over time, via their own stakeholder engagement and governance procedures. This would allow proper technical input from a wide-range of stakeholders from academics to local communities, while ensuring IC-VCM doesn't essentially become its own standard. If IC-VCM feels it does need to opine on methodology-level decisions, then it should simply create its own alternative standard. It will not be feasible to assess that level of detail in another program without significantly harming the market by slowing down process, preventing innovation and undermining the standards' governance bodies and procedures. | 0                                                                                                                                                                                                                                               |

| 2144 | Ronan Carr                           | 0                   | ge              | The guideline and assessment frameworks built by organisations such as ICROA Standards Assessment Procedure are very extensive. Based on the understanding that a large amount of resources will be required at the outset to assess programmes and credit types, it seems pragmatic that the Integrity Council draws on these existing assessment frameworks to expedite the start-up phase.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                               |
| 2144 | Ronan Carr                           | 0                   | ge              | BeZero supports the use of conditional approval to expedite the initial threshold uptake. We also advise that the initial threshold criteria must represent the best practices in the market, particularly compliance offset markets that have existed for more than a decade. The council must maintain transparency and high information disclosure standards while explaining steps to be undertaken to receive full approval against the initial threshold.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                               |
| 2144 | Ronan Carr                           | 0                   | ge              | A 5-year validity period for CCP-eligible credit types seems longer than the ideal time period. The proposed period will be too long to keep up to date with changes in methodologies, and/or it will send a signal to the market to slow down innovation. A ratchet system that incorporates improvements in best practice as they emerge may be more effective in the long-term while achieving balance between ambition and pragmatism.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                               |

| 2144 | Ronan Carr                     | 0                   | ge              | Assessment of all credit types seems to be an impractical take on the assessment framework. Categories of credits are broad and nuanced. It will be very challenging to accurately assess each credit type. Assessment of each category type may be affected by a unique set of criteria ranging from size and scope of project, technology applied and policy framework in the host nation.                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                    |
| 2145 | Javier Castro                  | QUESTION            | ge              | No. The Integrity Council is an independent Body, that has no legal mandate to assess any other institution unless is required by the repective institution.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | IDEM                                                                                                                                                                                                                                                                                                                                                 |
| 2146 | Aya Yamazaki                   | QUESTION            | ge              | No. For the IC to perform such unsolicited activities, at this stege, it lacks enough governance structure, track record, support/recognition by various stakeholders including national authorities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | As stated above.                                                                                                                                                                                                                                                                                                                                     |
| 2147 | Anonymous                      | QUESTION            | ge              | No. Also, it could lead to CCP ruling a standard uneligibile to CCP if the standard does not label credits as "CCP-eligible" or not.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | CCP shall not include in criteria of CCP-eligible credits the fact whether or not a standard is willing to label credits as CCP eligible or not in their registry.                                                                                                                                                                                   |
| 2148 | Calvin Tran                    | QUESTION            | ge              | Yes, particularly if the information is already publicly available. If the process is strictly opt-in, CCP compliance will not have the significance to buyers that it will otherwise. Criticisms of carbon programs and buyer mistrust lie specifically in the perceived "self-regulation" of the industry, so for the Integrity Council to artificially restrict its own assessments to only those that opt-in would undermine its standing as a true assessor of carbon market integrity. We suggest that a follow-up process is detailed so that there is public feedback, transparency, and open, constructive dialogue regarding the initial findings of the Integrity Council. | -                                                                                                                                                                                                                                                                                                                                                    |
| 2149 | Anonymous                      | QUESTION            | ge              | Please see our overarching comments about the importance of defining a clear and differentiated role for ICVCM, which does not include the assessment of programmes, but rather to remain as the standard setter and arbiter                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Clearly differentiate the role of ICVCM.                                                                                                                                                                                                                                                                                                             |
| 2150 | Josiah McClellan               | QUESTION            | ge              | The ICVCM should not reserve the right to assess programs unsolicited. Carbon crediting program should have the opportunity to ensure their programs are compliant with the standards before being assessed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | The ICVCM should not reserve the right to assess programs unsolicited. Carbon crediting program should have the opportunity to ensure their programs are compliant with the standards before being assessed.                                                                                                                                         |
| 2151 | Emma van de Ven                | QUESTION            | ge              | No, the ICVCM shouldn't do this because there is no consensus yet on the validity of the CCPs and the FA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | -                                                                                                                                                                                                                                                                                                                                                    |
| 2151 | Emma van de Ven                | QUESTION            | ge              | Also, who would be paying for the activities of the ICVCM in those cases?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                    |
| 2152 | Max DuBuisson                  | QUESTION            | ge              | Yes. The problem is not with the minor gaps that exist in high quality programs today. The big problem is with the proliferation of low quality programs that don't meet even half the requirements of the CCPs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | N/A                                                                                                                                                                                                                                                                                                                                                  |
| 2153 | Anonymous                      | QUESTION            | ge              | There are many cases in which credit ratings are given without permission, and there are usually more unsolicited cases than requested ratings. However, unlike financial information in credit ratings, if the evaluation is based on carbon credit-related information, which is not mandatorily disclosed, it may be necessary to introduce additional measures to ensure objectivity and neutrality (e.g., public disclosure of assessed material).                                                                                                                                                                                                                               | n/a                                                                                                                                                                                                                                                                                                                                                  |
| 2154 | Individual/employee, BBVA      | QUESTION            | ge              | Yes, it would be positive in order to foster penetration of CCPs. However, companies should have a remediation period so they have the right to challenge/claim a verdict from the Integrity Council.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | n/a                                                                                                                                                                                                                                                                                                                                                  |
| 2155 | Molly Brown                    | QUESTION            | ge              | No, the IC should only assess crediting programmes with the full consent of the programme.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | .                                                                                                                                                                                                                                                                                                                                                    |
| 2156 | Individual/employee, Finnwatch | QUESTION            | ge              | Yes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | n/a                                                                                                                                                                                                                                                                                                                                                  |
| 2157 | Individual/employee, CLA       | QUESTION            | ge              | As the purpose of the CCPs and Assessment Framework are to build confidence in the market, and have the CCP mark recognised as a mark of quality, there should be not need to assess programs unsolicited.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | n/a                                                                                                                                                                                                                                                                                                                                                  |
| 2158 | Phil Cryle                     | QUESTION            | te              | Efforts to increase the integrity of the carbon market are a good thing. The IC-VCM should therefore reserve the right to undertake assessments of carbon crediting programs and carbon credits against the CCPs where this is in the public interest. However, this should be done in a way that is:                                                                                                                                                                                                                                                                                                                                                                                 | Efforts to increase the integrity of the carbon market are a good thing. The IC-VCM should therefore reserve the right to undertake assessments of carbon crediting programs and carbon credits against the CCPs where this is in the public interest. | 2159 | Individual/employee, Pavilion Energy Singapore | QUESTION            | ge              | For public interest, integrity council should reserve the right to assess programs unsolicited, at its own discretion if considered inevitable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2160 | Sadie Frank                                    | QUESTION            | te              | Yes, we support the IC-VCM reserving the right to assess programs unsolicited. While we hope that programs are interested in participating in efforts to steer financial flows towards quality, programs may opt to not participate in the assessment process. Should a program of significant size and importance to the market not opt in, the IC-VCM should reserve the right to independently engage in evaluation to support firms and investors in identifying quality. This consideration is particularly important if large market segments decline to participate due to their perception that the proposal is too stringent. | See our comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 2161 | Anonymous                                      | QUESTION            | ge              | We support an approach where programs apply for assessment, to facilitate a dialogue. This was a valuable process during CORSIA applications, in which registries and ICAO were able to discuss elements of each program and make necessary adjustments on both sides of the table. One-sided unsolicited assessments may be less accurate, and will send a message that devalues the experience of established carbon programs.                                                                                                                                                                                                       | We suggest a more collaborative dialogue.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 2162 | Anonymous                                      | QUESTION            | ed              | During the first few years of operating, it seems like it might be a waste of resources to proactively assess companies without their application; smaller and new companies could be working towards CCP eligibility before applying and it might be harder for them to get there after being rejected without their permission to assess them.                                                                                                                                                                                                                                                                                       | Do not assess programs unsolicited for at least the first couple of years of ICVCM operation; re-considering after this time frame.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2163 | Darcy Jones                                    | QUESTION            | ge              | This is acceptable, but the Council should notify the standard that they are doing this prior to publishing anything, etc. so that the standard has a right to respond/clarify.                                                                                                                                                                                                                                                                                                                                                                                                                                                        | N/A                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2164 | Individual/employee, Intercontinental Exchange | QUESTION            | ge              | ICE does not believe that the Integrity Council should assess programs unsolicited.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | See above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2164 | Individual/employee, Intercontinental Exchange | QUESTION            | ge              | Rather, the IC-VCM should aim to incentivise programs to apply for assessment because they see added value in it. The starting point of the Initiative of the Integrity Council should remain that it is voluntary. Conducting unsolicited assessments would be a top-down approach that is in addition contrary to the inclusive, dialogue approach of the assessment framework.                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 2165 | Anonymous                                      | QUESTION            | ge              | No. The ICVCM is a voluntary body with no mandate to do this, no confirmed access to the data it would need to conduct such an assessment, and no long, public track record of institutional stability and stakeholder trust.                                                                                                                                                                                                                                                                                                                                                                                                          | See above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

Protections for confidential information must be considered for the ICVCM assessments. While the carbon crediting programs understandably do not utilize their full granted rights with confidential information, the pursuit of CCP eligibility may incentivize them to disclose some confidential information. Members of the expert panel or other advisory members of the ICVCM may be employed by direct competitors of the mitigation activity proponents, and so would have access to highly confidential information that could have a material impact on the organizations involved. |

This should be included explicitly.                                                                                                                                                                                                                                                                                      | When reviewing a program, in addition to program documents and the materials submitted by the program, the Executive Secretariat should also review “relevant peer review and gray literature”. This should be included explicitly.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2173 | Josiah McClellan     | 0                   | ge              | 2.2.6                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | We commend the use of conditional approval to expedite initial threshold uptake and increase adoption of the ICVCM standards. Pledges or commitments should be presented at the time when a final decision is published. Conditional approval should be granted with the expectation that the stated commitment (full compliance by X date) is met. There should be an abbreviated/streamlined review process to enable the carbon crediting program to submit evidence that it has met its commitment and the conditional approval changed to full approval, or for the conditional approval to be suspended as per 2.3.4 if the carbon crediting program does not submit evidence (or insufficient evidence) by its commitment date. |
| 2173 | Josiah McClellan     | 0                   | ge              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | In addition, ICVCM should consider how it can do more to increase adoption of the ICVCM standards with new carbon crediting programs. It is clear from the guidance that it was written with the large main carbon crediting programs in mind. It will prove difficult for a nascent carbon crediting program to meet the significant requirements even in the initial threshold. ICVCM must consider how its guidance could have the unintended consequence of consolidating the voluntary carbon market with the four large main carbon crediting programs.                                                                                                                                                                          |
| 2174 | Javier Castro        | QUESTION            | ge              | Considering that the integrity council cannot put any legal sanctions, it is recommended not to use any conditional approval.                                                                                                                                                                                                                                                                                                                                                                                            | IDEM                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 2175 | Anonymous            | QUESTION            | ge              | No conditional approval for commitments should be made.                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | No conditional approval for commitments should be made.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 2176 | Calvin Tran          | QUESTION            | ge              | -                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | How is a program assessed for whether it “can commit” to initial threshold requirements? This seems like another separate set of requirements, and we wonder if a simpler approach would be to have an “under review” label that shows that a program is actively working on documenting its compliance with initial thresholds.                                                                                                                                                                                                                                                                                                                                                                                                       |
| 2177 | Anonymous            | QUESTION            | ge              | We do support the use of conditional approval as being one way of reducing market disruption due to the introduction of ICVCM. In the case of non-fulfilment, it would be important to cancel credits that have been introduced by such programs, to help contribute to market integrity (endorsed).                                                                                                                                                                                                                     | Include conditional approval                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2178 | Anonymous            | QUESTION            | ge              | · We welcome such an approach. We emphasize the need for visibility for project developers regarding when additional thresholds will be implemented and how credits approved before such thresholds are implemented will be treated.                                                                                                                                                                                                                                                                                     | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2178 | Anonymous            | QUESTION            | ge              | · Pre-approval of existing carbon-crediting programs should be based on a transparent assessment of the relative alignment of crediting programs with CCP principles, identifying areas for improvement where required to meet the initial threshold. Particularly where there are gaps related to the initial threshold, a specific timeframe during which existing programs apply should be set, upon which commitments and the progress of such commitments should be subject to review on a comply or explain basis. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 2179 | Molly Brown          | QUESTION            | ge              | In general, we are concerned about the process for ICVCM approval of carbon crediting programmes (registries), and fear that the two tier “threshold” vs “full” approach introduces additional and unnecessary uncertainty. Is it really helpful to throw doubt on the rigor of Gold Standard and Verra? What would happen to the market if one but not the other is certified by the IC, if one is certified first, or if one is only certified as meeting “threshold” requirements?                                    | .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 2179 | Molly Brown          | QUESTION            | ge              | Instead, ICVCM should assess all existing carbon crediting programmes at the same time (there aren’t very many!). They should then give registries time to make necessary improvements (e.g. 12 months), and then synchronise the publishing of CCP approval, so that all registries get their status at the same time.                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 2179 | Molly Brown          | QUESTION            | ge              | Sanctions should be applied with caution. If a registry is punished for non-compliance then all the projects registered with it will lose their status, which creates unfair uncertainty for project developers and buyers.                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 2180 | Phil Cryle           | QUESTION            | te              | Given the challenge of setting a specific date for all carbon crediting programs to fully comply with the CCPs, yet the desire to see crediting programs comply with both the initial and full thresholds as soon as possible, the timing for the initial / full threshold could be left to the market. Under this approach the IC-VCM would issue a series of CCP approved labels / endorsements such as:                                                                                                               | Given the challenge of setting a specific date for all carbon crediting programs to fully comply with the CCPs, yet the desire to see crediting programs comply with both the initial and full thresholds as soon as possible, the timing for the initial / full threshold could be left to the market. | 2180 | Phil Cryle                                     | QUESTION            | te              | Under this approach, full CCP endorsement of a carbon-crediting program would be withheld until the full threshold is met. As carbon crediting programs will want to demonstrate CCP approval as soon as possible, this approach to staggering CCP endorsement would provide carbon crediting programs with an incentive to comply with the initial and then the full threshold as soon as possible.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Under this approach, full CCP endorsement of a carbon-crediting program would be withheld until the full threshold is met. As carbon crediting programs will want to demonstrate CCP approval as soon as possible, this approach to staggering CCP endorsement would provide carbon crediting programs with an incentive to comply with the initial and then the full threshold as soon as possible. |
| 2180 | Phil Cryle                                     | QUESTION            | te              | A carbon crediting program that does not fulfil its pledge or commitment would remain at the “CCP - initial threshold - conditional approval” stage and will become dis-credited over time as other carbon crediting programs move to (full) CCP approval.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | A carbon crediting program that does not fulfil its pledge or commitment would remain at the “CCP - initial threshold - conditional approval” stage and will become dis-credited over time as other carbon crediting programs move to (full) CCP approval.                                                                                                                                           |
| 2181 | Individual/employee, Pavilion Energy Singapore | QUESTION            | ge              | Conditional approval status is good option during the transition period. However, one of the concerns is the project might be abused such conditional approval to achieve competitive advantages, if the penalty/sanction is not serious enough, as CCPs itself is not mandate framework.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | n/a                                                                                                                                                                                                                                                                                                                                                                                                  |
| 2182 | Sadie Frank                                    | QUESTION            | te              | We strongly urge the IC-VCM to not use conditional approval to expedite initial threshold uptake. Conditional approval adds an additional layer of administrative complexity, and undermines the effort’s goal of bringing clarity to the market. The IC-VCM already takes a graduated threshold approach, which implies that the needed bar for quality is unable to be immediately obtained. Standards should be earned, not promised, and compromises in setting relatively low-ambition standards should be transparent.                                                                                                                                                                                                                                                                                                                                                                                                                                                               | See our comment.                                                                                                                                                                                                                                                                                                                                                                                     |
| 2183 | Anonymous                                      | QUESTION            | ge              | We echo IETA's comment that use of conditional approval can help expedite initial uptake. Following assessment of the crediting programme, a list of these remedial actions should be developed by the Integrity Council and the crediting programme, which need to be undertaken to receive full approval against the initial threshold. These actions, along with reasonable timeframes to deliver them, should be published on the Integrity Council's website. The crediting programme should remain in close dialogue with the Integrity Council to report progress on undertaking the remedial actions. If the remedial actions cannot be implemented within the stated timeframes, conditional CCP approval should be removed. In these circumstances, the crediting programme will then need to meet the initial threshold requirements before receiving full CCP approval. Conditional approval should have a clear path to formal approval, to reduce uncertainty in the market. | n/a                                                                                                                                                                                                                                                                                                                                                                                                  |
| 2184 | Vega Tapia                                     | QUESTION            | ge              | Repsol Foundation supports the concept of an initial threshold requirement that reflects current best practice in the market. The best way to improve integrity in the market is start with a threshold that is achievable by the leading programmed within reasonable timeframes. This should be followed by a mechanism to review and adjust the requirements over time which is backed by science, experience gained with the practical application of the quality threshold, and in alignment with the governance processes of the existing crediting programmes.                                                                                                                                                                                                                                                                                                                                                                                                                      | N/a                                                                                                                                                                                                                                                                                                                                                                                                  |
| 2185 | John Holler                                    | QUESTION            | ge              | Conditional approval should not be granted by the IC. The stated purpose of conditional approval is to expedite adherence to the required quality thresholds, but not providing conditional approval would provide a greater incentive to the crediting programs to enact the required policies to meet compliance threshold.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | n/a                                                                                                                                                                                                                                                                                                                                                                                                  |
| 2185 | John Holler                                    | QUESTION            | ge              | Commitment to future compliance of the quality thresholds, even if met on time, provides no assurance that credits issued up to the point of implementing threshold requirements are of the appropriate quality. Allowing conditional approval would seemingly allow potentially non-compliance credits to be issued, transacted, and retired as CCP-compliant and undermine the work of the ICVCM.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2186 | Individual/employee, Intercontinental Exchange | QUESTION            | ge              | ICE supports the use of conditional approval to expedite initial threshold. This approach might serve as an accelerating incentive for credit programmes to comply with current best practice.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | See above.                                                                                                                                                                                                                                                                                                                                                                                           |
| 2186 | Individual/employee, Intercontinental Exchange | QUESTION            | ge              | Following assessment of the crediting program, the crediting program should remain in                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2186 | Individual/employee, Intercontinental Exchange | QUESTION            | ge              | close dialogue with the Integrity Council to report progress. If the requirements of the initial threshold cannot be implemented within the stated timeframes, conditional CCP approval should be removed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                    |

| 2187 | Anonymous                            | 0                   | ge              | Approval against initial requirements will be dependent on a commitment by the applicant program to take all reasonable steps to meet the more stringent requirements in a timely manner. Approval of the program against initial requirements is valid until any of the relevant initial requirements are phased out. By that time, the program would need to have been assessed by the Integrity Council as satisfying the corresponding more stringent requirements.                                                                                                                                                                                                                            | Include details of by when the initial requirements are to be phased out (if this distinction is to be retained in line with our other comments on dropping the "full" threshold.)                                                                                                                                                                                                                                                                                                                                                                    |

| 2188 | Anonymous                            | 0                   | ge              | Immediate and retroactive invalidation is not compatible with market transactions and offsets. There should be a certain transitional period.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | No specific language proposed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 2189 | Individual/employee, CLA             | 0                   | ge              | The ability to apply the termination of CCP-eligible status on credits / projects retroactively may leave project developers exposed to liabilities, for example, where they have signed agreements to deliver CCP compliant credits and therefore may be in breach of their contract. This additional risk may make projects unviable. Project developers will need to be sure that they are using an approved program and risk of retroactive removals of CCP status will dampen the market. This is particularly important as the IC have suggested that the CCPs and Assessment Framework will be subject to continual revisions, in effect a moving of the goal posts for programmes/credits. | As above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2190 | Phil Cryle                           | 0                   | te              | Given the complexity regarding the definition of a credit type, a database / repository with the full list of the unique types of credit that: (a) are known; (b) have been assessed; and (c) have been endorsed (or not) as CCP aligned would be useful. This would provide those seeking to purchase credits with clarity regarding the way credit types are defined as well as confidence regarding whether a particular credit type has CCP endorsement. A template for this could be ICAO's document on "CORSIA Eligible Emission Units" (here).                                                                                                                                              | Given the complexity regarding the definition of a credit type, a database / repository with the full list of the unique types of credit that: (a) are known; (b) have been assessed; and (c) have been endorsed (or not) as CCP aligned would be useful. | 2198 | Barbara Haya                         | 0                   | te              | Currently published research on offsets quality is fairly limited. As more comprehensive studies of offset project types are performed, or more research is published on specific emissions calculation factors, the CCPs should be reevaluated. If protocols are found to over-credit, registries should amend protocols to avoid over-crediting or otherwise, new credits should no longer be allowed to hold the CCP stamp.                                                                                                                                                                                                                                                                     | Currently published research on offsets quality is fairly limited. As more comprehensive studies of offset project types are performed, or more research is published on specific emissions calculation factors, the CCPs should be reevaluated. If protocols are found to over-credit, registries should amend protocols to avoid over-crediting or otherwise, new credits should no longer be allowed to hold the CCP stamp.                                                                                                                        |

The ICVCM should pursue this across carbon crediting programs seeking CCP eligible status. Attribute tagging is one example where consistent and clear nomenclature will help, but there is also a need for more consistency around credit type terminology. |
| 2204 | Anonymous                                       | 0                   | te              | See comment above. Even when credits of a standard are CCP-Eligible, it must be standard's decision to add such a label or not. This cannot be a requirement for all credits of standard to be CCP-Eligible or not.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | See comment above. | 2205 | Mark Glossoti                                   | 0                   | ge              | Over time, frequent or unexpected revisions to the CCPs could further market uncertainty. Today, the most carbon credits are sold by brokers in bespoke over-the-counter agreements. For the market to effectively scale, sophisticated products found in other financial markets – indices, derivatives, futures, etc. – are needed. However, emerging efforts to develop a wider choice of products related to carbon credits for both buyers and sellers are currently held back by unstable carbon credit methodologies and markers of quality. Ideally, firms could trade a basket of “CCP-approved” credits, as they do for CORSIA. However, if the CCPs or the eligibility of carbon credit programs change too frequently or unexpectedly, financial intermediaries might not be able to adjust the financial products to the underlying assessment framework. The establishment of stable and robust physical and derivatives markets necessitates some degree of predictability and clarity. In order to minimise potential disruption to the trading of physical spot standard contracts and derivatives, ample time – we suggest 18 months – should be given between the announcement and the implementation of the successive phases of the CCPs and of any subsequent change susceptible of having a material effect on such contracts. This would allow market operators including exchanges and marketplace the time to make the necessary adjustments without compromising the integrity of the emerging instruments. So, changes to IC-VCM's core carbon principles should aggregate scientific evidence and happen only on a regular cadence, giving the market a chance to keep up. | -                                                                                                                                                                                                                                                                                                                                              |
| 2206 | Mark Glossoti                                   | 0                   | ge              | CIX suggests a transitional period of 4 years. The market needs clarity regarding Phase 1 as soon as possible, with sufficient lead time for changes in Phase 2 to minimise uncertainty and provide for a steady supply of carbon credits. The length of Phase 1 should be long enough to ensure a seamless transition of projects. Project developers investing in nature- or technology-based solutions require stability for new long-term investment projects and their planning and operation of on-going projects. The standard process and development of new NBS projects can be several years (e.g., 2-3 years for afforestation programs). Programs need time to adapt to the new CCPs. Further, the approval of changes to the CCPs for Phase 2 also requires sufficient lead time so that there are no disruptions of projects that are already at advanced planning and implementation steps.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | -                                                                                                                                                                                                                                                                                                                                              |

The ICVCM must oversee the market and foster standardisation without becoming burdensome. Change and evolution in this market is occurring at a fast pace with new firms emerging and creating new solutions. If the ICVCM can set out a minimum level of performance and expectations this will give market participants greater clarity. | However, we strongly believe that the ICVCM must seek to find the right balance between integrity and adoptability. | 2308 | Anonymous            | 0                   |                 | · Many project implementers, credit buyers, buyers, and off-takers are familiar with and adhere to IFC Performance Standards or UNDP SES and have adopted some of the key features of their content and format, as part of their environmental and social safeguard systems.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2308 | Anonymous            | 0                   |                 | · Some of the carbon programs already refer to and require the application of these standards[1]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2309 | Anonymous            | 0                   |                 | · The detailed Guidance Notes of the standards provide further details on interpretation and implementation of the Standards, including over the screening assessment, management and monitoring and reporting of project activities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2309 | Anonymous            | 0                   |                 | It should be noted the Green Climate Fund adopted the IFC performance standards as an interim approach, and to allow the fund to gather enough experience to be able to develop its own ESS standards. The carbon programs can and should follow this approach.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2309 | Anonymous            | 0                   |                 | By adopting one of the best-in-class international environmental and social standards frameworks, the carbon programs can efficiently and effectively meet the requirements set out by the draft assessment framework criterion 7.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2309 | Anonymous            | 0                   |                 | It must be noted that the risks and challenges of requiring carbon crediting programs to introduce and/or strengthen their standards in relation to environmental and social safeguards, include:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2309 | Anonymous            | 0                   |                 | · Clear risk of adopting a fragmented set of standards and associated requirements, all of which can ultimately put people and the environment at risk. Some of the standards already have a fragmented set of requirements, which can lead to an inconsistent and limited application. This fragmentation may well be exacerbated if the carbon programs try to update/strengthen their ESS frameworks following the list of requirements of the draft assessment framework, which in practical terms might lead carbon programs to try to fill gaps by adopting pieces of other standards, without having an integrated and coherent approach. For example, the Gold standard requires adherence to UNDP standards for the preparation of management plans for displacement and resettlement, but does not use UNDP's screening and assessment process, although they are intended to be used together to ensure their effective application. Disconnection between applicable standard and the associated assessment process can lead to poor/limited application. See annex II for more details. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2309 | Anonymous            | 0                   |                 | · It might take years for the carbon programs to update/ strengthen these standards, which will also be detriment to credibility of the VCM.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2310 | Anonymous            | 7.1                 |                 | We recognize that carbon projects increasingly take place in contexts with significant social environmental, and governance risks. Working in these higher-risk contexts can often present considerable opportunities to catalyse transformational change for climate impact and sustainable development. Therefore, the risk category of the project                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | We recommend that under Criterion 7.1 of the Assessment Framework, carbon programs and standards are required to have in place requirements, guidance and procedures for the screening and risk categorization of projects. This is in alignment with our general recommendation above, whereby by adopting a one of the best-in-class international environmental and social standards frameworks a risk categorization will be applicable. |
| 2310 | Anonymous            | 7.1                 |                 | does not indicate whether a proposed project is "good" or "bad." Instead, the risk category recognizes the inherent risks associated with the project and that adequate assessments and management measures need to be put in place to manage and mitigate these risks appropriately, ensuring the social, environmental and governance integrity of the project throughout its implementation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2311 | Anonymous            | 7.1 – 7.11          |                 | According to emerging best practice on this matter, the same set of safeguards should apply, but through a fit-for-purpose procedure and guidance. This allows IPLCs to identify, assess, manage, monitor, and report on both negative and positive environmental and social risk and impacts of projects, in accordance with their context and capacities[2].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | We recommend considering that best-in-class in standards do not consider "who" is project proponent, but rather "when" FPIC is required, which is what should be considered in carbon crediting programs and standards.                                                                                                                                                                                                                      |
| 2311 | Anonymous            | 7.1 – 7.11          |                 | In accordance with best-in-class standards, FPIC is required in specific circumstances, which should still be the only circumstances in which FPIC is required[3], no matter "who" requests the project or the "size" of project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2311 | Anonymous            | 7.1 – 7.11          |                 | If IPLCs are the project proponents, they would still be subject to a screening and a social and environmental assessment to determine if the proposed activities could lead to risks and impacts that require the application of FPIC. If the screening and/or assessment determines the activities do not pose risks/ impacts through which FPIC is required, then what is still required is ensuring meaningful engagement of all relevant stakeholders (even within Indigenous Peoples' (IP) groups- according to their decision-making processes), which should be evidenced in the project documents.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| 2312 | Anonymous            | 7.1                 |                 | By adopting one of the best-in-class international environmental and social standards frameworks, the carbon programs can efficiently and effectively meet all the requirements set out by the draft assessment framework criterion 7.10.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | We recommend that carbon programs and standards adopt/apply the requirements, guidance, and procedures of best-in-class standards. This extends to the integrated approach for safeguarding climate actions and promoting the SDGs, which is achieved through the entire lifecycle of the project (e.g. screenings, risk categorization, social and environmental assessments, management or action plans, stakeholder consultations, grievance redress mechanisms, monitoring of compliance, and transparency and public disclosure approaches). |

| 2312 | Anonymous            | 7.1                 |                 | · Clear risk of undermining the processes that need to be implemented to ensure that safeguards constitute a minimal standard that projects would have to fulfil to be able to contribute to sustainable development goals.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Within the application of this integrated approach for safeguarding climate actions and promoting the SDGs, we also recommend carbon programs and standards should require project proponents to quantitative and qualitative assess the project's contributions to the SDGs.                                                                                                                                                                                                                                                                     |
| 2312 | Anonymous            | 7.1                 |                 | · It will also take more time and additional costs for projects to undertake two parallel processes, which will also be detriment to the VCM.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 2313 | Anonymous            | 7.9                 |                 | The series of substantial and procedural Decisions under the UNFCCC with regards to the adoption of the Cancun Safeguards and associated information and reporting requirements, namely the Safeguard Information System (SIS) and Summaries of Information (SOIs), are the result of over a decade of negotiations under the UNFCCC. Said Decisions reflect a common ground in the context of the broad array and diverging views and concerns revolving around the adequacy, transparency and robustness of implementing, monitoring and reporting on safeguards in the context of REDD+. In contrast to traditional project-scale interventions, effective REDD+ implementation would generally entail policy transformations that are both cross-sector and cross-scale. Accordingly, as large-scale and cross-sectoral policy programmatic interventions, REDD+ national strategies or action plans are required to adhere only to the Cancun Safeguards in accordance with each country's unique national context and circumstances. | We recommend that the Integrity Council does NOT compel carbon programs and their standards to require that Jurisdictional REDD+ activities also conform to best-in-class international environmental and social standards frameworks, which are designed and applicable for project level activities.                                                                                                                                                                                                                                            |
| 2313 | Anonymous            | 7.9                 |                 | The experience of Jurisdictional REDD carbon programmes[4] offer insights over the significant challenges and shortcomings of imposing safeguards requirements beyond those stipulated by the UNFCCC to Jurisdictional REDD+ activities. Drawing from these experiences, some Jurisdictional REDD+ carbon programmes[5] have focused on ensuring the highest standard of application of the Cancun safeguards, primarily through the adoption of qualitative assessments and accompanying validation and verification procedures to adequately and comprehensively assess the extent to which the REDD+ activities were carried out in consistency with the Cancun safeguards.                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 2314 | Anonymous            | 7.9                 |                 | A key lesson from Jurisdictional REDD+ carbon programmes are the adoption of a clear qualitative assessment in accompanying validation and verification procedure, to adequately and comprehensively assess the extent to which the REDD+ activities were carried out in consistency with the Cancun safeguards.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | We recommend that:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 2314 | Anonymous            | 7.9                 |                 | The requirements in section 7.9 of the draft assessment framework do not stipulate the need for carbon programs and standards to specify 'how' conformance with the Cancun safeguards will be assessed (including what evidence needs to be provided). Without this specification, the Integrity Council will not ensure transparency and predictability for the Jurisdictions participating in the Jurisdictional carbon programs. Moreover, is important the                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | · Carbon programs and their standards require jurisdictional REDD+ activities conform only to Cancun Safeguards (i.e. DO NOT require that Jurisdictional REDD+ activities also conform to best-in-class international environmental and social standards frameworks, which are designed and applicable for project level activities).                                                                                                                                                                                                             |
| 2314 | Anonymous            | 7.9                 |                 | Integrity Council considers that some of the carbon programs and standards generally refer to compliance with the UNFCCC and the Cancun safeguards, but DO NOT specify 'how' conformance with the Cancun safeguards will be assessed (see Box 1). If the above is not incorporated into the requirements for Criterion 7.9, there is a clear risk the Integrity Council will not address the most important gaps of certain Jurisdictional REDD programs and standards.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | · Carbon programs and their standards adopt a clear framework of interpretation of the Cancun safeguards (i.e. unpacking the safeguard elements), which serves as clear performance standards against which the Jurisdictional REDD+ activities will be assessed[6].                                                                                                                                                                                                                                                                              |
| 2314 | Anonymous            | 7.9                 |                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | · Carbon programs and their standards adopt clear procedures for validation and verification of conformance with Cancun safeguards-in alignment with the clear framework of interpretation set out above.                                                                                                                                                                                                                                                                                                                                         |

| 2314 | Anonymous            | 7.9                 |                 | Finally, the draft assessment framework does not spell out the need for carbon programs and standards to specify clear requirements over the 'design and quality of the SIS' and how the SIS will be assessed. Effectively demonstrating compliance with safeguards and being able to provide participatory and quality assured information on a continual basis requires the adoption of tools, systems and/or procedures for the SIS. Carbon programs and standards should offer clarity over the parameters against which the SIS will be assessed, in alignment with UNFCCC guidance ("transparency, consistency, comprehensiveness and effectiveness when informing on how all the safeguards referred to in decision 1/CP.16, appendix I, are being addressed and respected"). | <ul style="list-style-type: none"> <li>Carbon programs and their standards adopt clear requirements and/or guidance over the design of the SIS</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| 2318 | Anonymous            | 0                   |                 | Avoiding double-counting through Article 6                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | We urge, however, that the IC-VCM not put in place any quality or integrity rules dependent on a project's authorization under Article 6 or the notion of double claiming across the two accounting systems. There is still enormous confusion around exactly what Article 6 will mean for government NDCs and corporate claims. Some governments plan to include removals from capital-intensive projects they support in their NDCs and believe the credits can be sold through Article 6 to a foreign corporate, as long as no corresponding adjustment is applied. Other governments worry that this kind of global trade is not possible. |
| 2318 | Anonymous            | 0                   |                 | Avoiding double counting is crucial to the credibility of carbon markets and to their contribution to tackling climate change. When corporate climate accounting through robust VCM registries and climate accounting at national level are kept separate, the question of double counting (including double issuance, double claiming and double use) is straightforward, and we strongly support the principles proposed. We also support your requirement to have full transparency on identifying any Article 6 authorization and whether a corresponding adjustment has been identified.                                                                                                                                                                                        | Carbon removals need to be thoughtfully considered in international policy frameworks, so that suppliers can operate and trade globally, governments and corporate buyers are clear on how to navigate claims, there is full transparency and stringent principles are in place to avoid double counting.                                                                                                                                                                                                                                                                                                                                      |
| 2319 | Anonymous            | 0                   |                 | Defining additionality for high-durability carbon removals                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 2319 | Anonymous            | 0                   |                 | Additionality has been at the heart of improving integrity and ambition in the VCM – requiring proof that a reduction or removal would not have happened without the revenue from the carbon credit and that the baseline on which this decision is made is sound. It makes sense that this is your first CCP. Your risk-based approach also makes sense, removing the burden of detailed financial and market analysis from credit types that, by their nature, have a high likelihood of additionality.                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 2319 | Anonymous            | 0                   |                 | We believe high-durability carbon removals, as a credit type, are fundamentally additional and should be considered as a low-risk category where a simplified financial additionality test is sufficient. The counterfactual baseline for high durability removals is simply business as usual. There is no incentive for a developer to carry out these capitalintensive activities without the revenues from carbon markets. Even where jurisdictions have introduced incentives for removals, these are not sufficient for financial viability on their own.                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| 2319 | Anonymous            | 0                   |                 | The complicated rules for proving “medium likelihood” additionality are not appropriate for an industry that is too immature to have standard and reliable IRR and market penetration data. Our projects are among the most advanced on the market, but they are first-of-a-kind. That means we are using them as a test-bed for scaling up volume and bringing down cost – nth of a kind costs and returns will be very different.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                      |
| 2320 | Anonymous            | 0                   |                 | Raising ambition on permanence                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | We would also urge the IC-VCM to recognise that many jurisdictions already have or are developing stringent regulatory regimes for dealing with long-term geological CO2 storage liability, and should work within the framework of those requirements, where they exist, rather than cutting across them or adding additional requirements.                                           |
| 2320 | Anonymous            | 0                   |                 | We believe that stringent and robust permanence criteria should be at the heart of carbon removals. As with additionality, we believe this should be risk-based. The large-scale removals projects that our companies are implementing – biomass energy with carbon capture and storage, direct air capture and storage, and enhanced weathering – all have very high durability storage in the geosphere rather than the biosphere, and the risk of reversal is tiny.                                                                                                                                                                                                                                                                                                                                                                                                                                                          | High-durability carbon removal technologies – the kind we will need at scale to neutralize residual fossil emissions – are at an early stage of deployment and face uncertainties in potential revenue and cost structure, while often requiring billions in investments. It is hence critical that the work of the IC-VCM sets the right conditions for these technologies to thrive. |
| 2320 | Anonymous            | 0                   |                 | Building obligatory and significant buffer pools is certainly relevant for low-durability, high-risk and low-cost removals. For high-durability removals where costs are high and risks are low, a buffer pool is not an adequate solution, and the economics would be challenging.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                      |
| 2326 | Gold Standard        | ge                  |                 | Enabling implementation and action, rather than holding this back                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                      |
| 2326 | Gold Standard        | ge                  |                 | As is reflected in this consultation response, Gold Standard welcomes the role that the IC-VCM and the CCPs can play to provide assurance of quality in the carbon market. However, the right balance has to be struck between rigour on the part of the IC-VCM’s through its framework, and flexibility for standards to innovate, to move quickly, and to improve and simplify rules and procedures. On this topic, we would like to give the following main recommendations:                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                      |
| 2326 | Gold Standard        | ge                  |                 | A. At various public and private events, it has been shared that the initial CCPs are a starting point on the road to further ratcheting of quality, ambition and integrity. Whilst at one level Gold Standard supports this, it is important to relate this to the specific use case of offsetting, which is the IC-VCM’s stated aim. Offsetting requires, in order to be ‘true’, that each CCP is met in such a way that the claim to have offset is ultimately delivered. Going beyond this threshold, in some cases, will not mean ‘more’ offsetting has happened and thus becomes a driver of inefficiency. For example, if it is deemed (illustratively) that we should be 80% certain or more to safeguard the claim of offsetting, then ratcheting to 90% is simply adding unnecessary cost. We would recommend therefore focusing as much on delivering 80% more efficiently as on ratcheting to 90%, in this example. | 0                                                                                                                                                                                                                                                                                                                                                                                      |
| 2326 | Gold Standard        | ge                  |                 | B. Many of the governance-related requirements proposed by the IC-VCM are directly relevant to the processes that lead to high-quality credits. However, we consider others to go beyond the mandate of the IC-VCM, as a body focused primarily on credit-level quality, and we are wary about their adoption where they may prove difficult to abide by. For instance, a requirement to publish minutes of governing body meetings may act to stifle the frank and open discussion amongst members that is needed for robust and inclusive decision-making.                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                      |
| 2326 | Gold Standard        | ge                  |                 | C. Well-run standards have in place robust procedures to design approaches for the assessment of additionality and the adoption of new methodologies, which involve input from recognised experts. Rather than acting as an additional regulatory hurdle for the adoption of new methodologies or approaches, and contributing to delays, we believe the IC-VCM could choose to work with standards as stakeholders within their processes. This way of working could both bring efficiency and lead to better outcomes. A good example of this ethos can be found in the governance and membership of the ISEAL Alliance, of which Gold Standard is a member. This more collegiate way of working engenders trust, innovation and mutual support and is thus a better way to work with non-profit organisations (as all of the longer-established standards are).                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                      |
| 2326 | Gold Standard        | ge                  |                 | D. Gold Standard has taken a number of steps in recent years to bring simplicity and efficiency to its processes and rules, without compromising on either accuracy or integrity. It is hoped that the IC-VCM will consider it a priority to embrace and encourage efforts to simplify and streamline approaches, rather than introducing criteria that would require standards to do the opposite.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                      |

| 2327 | Gold Standard        | ge                  |                 | Whilst acknowledging the importance and benefits associated with the CCPs, it must also be acknowledged that they will inevitably add cost and resource burden to the market. Gold Standard encourages the IC-VCM to take into consideration the following issues:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0               |
| 2327 | Gold Standard        | ge                  |                 | A. It is important to be able to 'grandfather' good projects that are part of the existing portfolios of market standards, such that they can achieve the ICVCM label. Vulnerable projects (i.e., those that might fail without market support) should be prioritised, particularly those in developing countries. It would not be fair to exclude good projects in these areas simply because of their timing. Indeed, there would be no market without them, and it would send an unsettling and counterproductive signal. We recommend that a procedure for existing projects is added, including how to deal with timebound CCPs that cannot be dealt with retroactively. This isn't simply a matter of inclusivity; the CCPs will inevitably be a factor in carbon credit pricing and buyer preferences.                                                                                        | 0               |
| 2327 | Gold Standard        | ge                  |                 | B. The added costs of the CCPs can only be borne to a certain extent by the standards. It is inevitable therefore that some may be passed to participants, which may be unfair particularly for developing country / vulnerable community projects. The costs associated with the assessment procedure are not currently clear, but Gold Standard urges IC-VCM to carefully consider this in relation to projects that are already in hard to reach and challenging conditions, as these are the areas in most need of financial support. We would also recommend considering each CCP in light of Least Developed Country conditions and whether there can be any easing of requirements and/or processes reflective of the challenges faced in those contexts. Gold Standard has extensive experience of this and has demonstrated that this can work.                                             | 0               |
| 2327 | Gold Standard        | ge                  |                 | C. The stated aim of the IC-VCM documentation is to set out CCPs that, in summation and packaged as a credit, lead to support of the claim to have offset/compensated an emission elsewhere. We understand the logic behind using this as an initial benchmark. However, we note that use of the voluntary carbon market is already beginning to move beyond offsetting, with some companies seeking to make alternative claims without such a direct compensatory claim. The aim of the IC-VCM may act to skew the types of activities supported through the carbon market towards those most able to meet the CCPs rather than those most important to support, which may be suitable for other non-offsetting forms of voluntary use of the carbon market. We would like to see greater acknowledgement of this in surrounding communications, to ensure this is well understood by stakeholders. | 0               |
| 2328 | Gold Standard        | 0                   |                 | Alignment with, and best practice under, the Paris Agreement and 2030 Agenda for Sustainable Development                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0               |
| 2328 | Gold Standard        | 0                   |                 | While the voluntary carbon market may not be directly regulated by the Paris Agreement, it clearly exists and operates within an international policy framework that is defined by it. It is therefore important that the voluntary carbon market aligns with the new context under the Paris Agreement in order to uphold its rigour, for instance with respect to additionality and baseline-setting. We also consider it sensible to align with design features of the new crediting mechanism under Article 6.4, to help build towards a global, harmonised carbon market. We welcome the fact that these goals have been reflected in different parts of the ICVCM proposals.                                                                                                                                                                                                                   | 0               |
| 2328 | Gold Standard        | 0                   |                 | The IC-VCM presented options for three issues related to alignment with the Paris Agreement: share of proceeds for adaptation finance, overall mitigation in global emissions and the application of corresponding adjustments under Article 6.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0               |
| 2328 | Gold Standard        | 0                   |                 | With respect to the first two of these, adaptation finance and overall mitigation in global emissions, Gold Standard is of the view that the voluntary carbon market should respect the decision taken by Parties at COP27, and in particular the strong encouragement placed on Parties and stakeholders to contribute to both goals when using mitigation outcomes authorised under Article 6.2. We intend to consult on the following approach to this topic in the near future, developed through discussion with our Expert Group on Alignment with the Paris Agreement:                                                                                                                                                                                                                                                                                                                        | 0               |

| #    | Comment submitted by | Para/Fig/Table/Note | Type of comment | Submitted comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Proposed change                                                                                                                                                                                                                                                                                                                                                                                                         |

| 2328 | Gold Standard        | 0                   |                 | <p>1. For credits authorised under Article 6.2 of the Paris Agreement, set a default that 2% of credits will be cancelled at issuance to deliver overall mitigation of global emissions and 5% diverted for sale to fund adaptation, but give project developers the option to receive full issuance without application of these levies (subject to point 3 below). 2. For credits not authorised under Article 6.2, set a default that no credits are cancelled at issuance or diverted for sale to fund adaptation (subject to point 3 below), but give project developers the option to request application of these levies.</p> <p>3. Respect any regulations or requests set by a project's host country that require that credits must be cancelled to deliver overall mitigation of global emissions or diverted to fund adaptation, whether or not the credits are authorised under Article 6.2.</p> <p>4. Add identifiers in the registry to signal contributions to adaptation finance and overall mitigation in global emissions.</p> | 0                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 2328 | Gold Standard        | 0                   |                 | We consider this approach to respect the decision adopted by Parties at COP26, providing strong encouragement but also optionality to market actors, as well as the right of governments to introduce requirements related to overall mitigation of global emissions and adaptation finance if they wish to do so. We invite the ICVCM to consider its adoption or recognition within its framework.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 2328 | Gold Standard        | 0                   |                 | With respect to corresponding adjustments, it is our hope that the IC-VCM is able to rise above the contention associated with this topic, and to find an approach to the risk of displacement or deferral of mitigation action that is as robust as the proposals it has made in other areas. The IC-VCM's framework exists in order to provide assurance of the quality of carbon credits for offsetting purposes, with safeguards to ensure that any risks to the integrity of credits are comprehensively addressed. If the IC-VCM is not able to include safeguards that manage the risk of displacement or deferral of mitigation action towards the host country's NDC - recognising that the extent of this risk will be variable across scenarios - then its work will be incomplete. See also below for further comments on double counting.                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 2328 | Gold Standard        | 0                   |                 | With respect to sustainable development, which is treated as an additional attribute, programmes must be expected to apply robust quantification, monitoring and verification of SDG impacts as a condition for indicating credits as holding this additional attribute. This is needed to avoid SDG-washing, and to provide more consistency across the market in how and when SDG impacts can be associated with projects and credits. See also below for further detailed comments on sustainable development and safeguarding.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 2328 | Gold Standard        | 0                   |                 | In addition, we encourage the IC-VCM in addition to consider aligning maximum crediting period limits with those set under the new crediting mechanism established by Article 6.4, to ensure consistency in approach.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 2329 | Gold Standard        | 0                   |                 | Alignment with the 1.5oC temperature goal and avoiding the lock-in of emissions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | However, rather than the proposed approach of assessing each mitigation activity under programmes, we recommend that the IC-VCM establishes a dynamic 'negative list' of technologies/mitigation activities that are deemed incompatible with the net-zero emission goal. This should take into account regional differences where appropriate, and be reassessed and updated regularly, for instance every five years. |
| 2329 | Gold Standard        | 0                   |                 | The voluntary carbon market's value is in enabling the adoption of technologies and practices that reduce or remove emissions and bring the world closer to achieving the temperature goal adopted under the Paris Agreement. It should not serve to perpetuate technologies and practices that involve continued emissions that could put achievement of this temperature goal at risk.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | This approach would achieve the objective sought by the IC-VCM and provide a clear, consistent, market-wide signal while avoiding additional administrative burdens to standards and developers.                                                                                                                                                                                                                        |
| 2329 | Gold Standard        | 0                   |                 | Gold Standard therefore welcomes the IC-VCM's proposal to consider and assess the consistency of technologies with a net-zero emission goal by mid-century.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 2330 | Gold Standard        | 0                   |                 | Robust approaches to sustainable development and safeguarding                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 2330 | Gold Standard        | 0                   |                 | Gold Standard welcomes the inclusion of both safeguarding principles and contribution to sustainable development, both of which are also important parts of alignment with the Paris Agreement. On this topic, we would like to share the following comments:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                                                                                                                       |

| 2330 | Gold Standard        | 0                   |                 | A. The references cited for safeguards, for example to IFC and UNDP standards, are useful and relevant. However, from our experience it is not possible to simply point to these standards as they are not governed by our scheme and are not written in standards language that can easily be adopted and verified. Gold Standard reinterpreted these and others to be fit for our purpose, and we have therefore clearly demonstrated that this is possible. We recommend that the CCPs state clearly that a conversion / adoption process should be implemented, rather than a simple reference to third party standards.                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2330 | Gold Standard        | 0                   |                 | B. We also advise IC-VCM to be sure that it is itself protected from poor safeguarding implementation, and that it gives itself the ability to withdraw approvals where necessary, including retroactively.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2330 | Gold Standard        | 0                   |                 | C. Sustainable development contributions and co-benefits should be stated explicitly and publicly by all projects and programmes, even where either none is achieved or no MRV is in place. Those projects that do contribute positively should then receive a 'CCP+' tag for sustainable development. In this way the CCP becomes part-mandatory (though with no 'fail' threshold for sustainable development contributions, simply disclosure) and part additive. This would ensure that projects that make no effort to contribute to sustainable development or no effort to have their efforts assured cannot make unverified claims to the market, in association with the IC-VCM name and brand. It also helps to more clearly differentiate those projects that do contribute, allowing them to justifiably attract a higher market value.                                         | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2331 | Gold Standard        | 0                   |                 | Double counting                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Accordingly, we recommend a much stronger definition and rationale for the issues caused by double claiming, a clear statement of these two forms, and a clear position on them by IC-VCM. This may be to say that IC-VCM recognises them as issues but considers them to be buy-side consideration. However, stating that the issues are not settled or are contentious is technically unsound and diminishes the stated aim to bring integrity to the market. |
| 2331 | Gold Standard        | 0                   |                 | A unique claim, i.e. only one claimant uses the benefit associated with a credit against one target/claim, is an essential principle of offsetting. Without it, i.e. where the benefit is used by two or more claimants for any reason, the claim to have offset is no longer secure. This is because neither the first claimant nor the credit issuer can guarantee how further claimants will respond to the 'free' benefit handed to them and thus it is as likely that the credit offsets their emissions as the originally intended claimants. A good example of this would be the South Africa carbon tax, where the emissions being offset are not the purchasing companies but emissions elsewhere in the South African NDC. In this example this is intentional and acceptable, but it is often conflated with a company level claim to have offset emissions, which is not true. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2331 | Gold Standard        | 0                   |                 | The CCPs correctly identify the three forms of double counting that can lead to the scenario of failure to offset the target emissions. The first two – double issuance and double use are well-covered and we expect little further effort to address. Double claiming however is poorly explained and poorly covered.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2331 | Gold Standard        | 0                   |                 | In the current market environment there are two forms of double claiming that are particularly challenging that have not been an issue for historic markets, namely with host country NDCs and with voluntary company inventories (such as via Science Based Targets). The former can and should be dealt with via either a Corresponding Adjustments or through a non-offset claim which does not require a unique claim. The latter - as stated in a recent guidance from the Greenhouse Gas Protocol (see Chapter 13) - should be similarly adjusted for by the reporting company. Gold Standard recognises that the latter especially may not be in the gift of either projects or standards to administer.                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2334 | Anonymous            | G. Additionality    |                 | CMI recognises the importance of additionality for ensuring high integrity carbon credits but also recognises that there are many ways that it can be assessed. The criteria currently set out in the AF rely on the demonstration of financial additionality. Often, there are constraints to demonstrating financial additionality for many types of activities, such as those that are nature-based. This is not because these project types lack additionality necessarily, but because there are data and capacity constraints for even the highest quality nature-based activities that would not be able to satisfy the CCP requirements. There is also the further challenge of project developers' willingness or legal rights to disclose internal financials due to competition risk.                                                                                           | XXX recommendation: that the ICVCM consider alternative methods of assessing additionality for nature-based carbon credits where demonstrating financial attractiveness is not practical. For smaller scale projects, where the cost of demonstrating additionality can be cost prohibitive, the XXX suggests expanding the application of positive lists.                                                                                                      |

| 2334 | Anonymous            | G. Additionality    |                 | This is a key issue for the Australian market given its current regulatory framework. In Australia, the Clean Energy Regulator assesses whether activities - including nature-based activities - meet additionality requirements, through the following criteria:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                     |

Additionality    |                 | · Newness requirement: this requires that the project has not yet begun to be implemented;                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                     |
| 2334 | Anonymous            | G. Additionality    |                 | · Regulatory additionality requirement: the project is not required to be carried out by or under a law of the Commonwealth, a State or Territory; and                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                     |
| 2334 | Anonymous            | G. Additionality    |                 | · Government program additionality requirement: the project would be unlikely to be carried out under another Commonwealth, State or Territory government programs (with the exception of the Carbon Farming Initiative Act central to Australia's carbon market).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                     |
| 2334 | Anonymous            | G. Additionality    |                 | Further detail about additionality assessment in the Australian carbon market can be found here. The ICVCM could consider proposing these same criteria for nature-based carbon credits, given the challenges associated with applying the financial additionality test to these activities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                     |
| 2334 | Anonymous            | G. Additionality    |                 | The CMI also notes the challenges associated with the Expert Panel accurately assessing additionality across entire mitigation activity types, as is also currently proposed by the ICVCM. This is because there is considerable variability across projects including variation in finances, Internal Rate of Return (IRR), and implementation practices. Assessing a market-wide IRR would be challenging in and of itself, since IRRs vary from project to project and are both financing and geography-dependent.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                     |
| 2334 | Anonymous            | G. Additionality    |                 | In addition to nature-based projects, the CMI notes that financial additionality tests can be prohibitive for smaller scale projects. CMI supports the ICVCM's proposed application of positive lists to those activities that have a 'very high' likelihood of additionality, necessitating expert validation and peer review. The CMI is also supportive of updating the positive lists every three years to ensure that they reflect changed circumstances.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                     |

| 2335 | Anonymous            | H. Permanence       |                 | The permanence criteria set out in the AF would also not be attainable for many types of nature-based projects. For example, it would be challenging and impractical to comply with the ICVCM's 100-year monitoring commitment, which forms the basis of all of the ICVCM's requirements for monitoring and compensating for reversals (criterion 9.2a). Furthermore, CMI is concerned that the full threshold requirement for the treatment of avoidable reversals, demanding that the carbon-crediting program require "proponents to sign legal agreements obligating them to monitor, report and compensate for avoidable reversals for the full commitment period", will be too difficult to enforce, as it will be impossible to legally chase many entities to compensate over such a long period of time. If the carbon crediting program assures proper management of permanence, there is no reason for the ICVCM to implement such specific requirements. ICVCM could provide guidance to certification bodies on the regularity of audits, and/or spot-check investigations. | XXX recommendation: the ICVCM separates the permanence criteria for nature-based carbon credits and technology-based carbon credits. For nature-based credits, robust buffer pools to cover the risk of reversal could provide an alternative to the permanence criteria currently set out in the AF. |
| 2335 | Anonymous            | H. Permanence       |                 | Temporary crediting has been identified by the ICVCM as one alternative to allow credits into the market that do not meet permanence requirements. The CMI notes that historic approaches to temporary CERs (e.g., under the Clean Development Mechanism) have proven impractical given the lack of demand for credits that are valid for only a fixed period.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | In addition, the ICVCM could consider reviewing the process by which a scheme assesses and addresses permanence, rather than making specific decisions about permanence. Guidance in the form of an overall risk framework, and not a predetermined risk profile, would be more useful and inclusive. |
| 2335 | Anonymous            | H. Permanence       |                 | Under the Australian CFI legislation, sequestration activities have the option of selecting a 25-year or 100-year permanence period. If a disturbance occurs in the project area during the permanence period that causes a decrease in the carbon stored, land management practices must enable the carbon stock to return to previously reported levels, or alternatively ACCUs are relinquished to the Regulator.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                     |

| #    | Comment submitted by | Para/Fig/Table/Note                                     | Type of comment | Submitted comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Proposed change                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| 2335 | Anonymous            | H. Permanence                                           |                 | In addition, a risk of reversal buffer applies to all sequestration projects, which means that the total number of ACCUs issued to these activities is discounted. Projects with a permanence period of 25 years have a discount of 25%, and projects with a permanence period of 100 years have a discount of 5%. These ACCUs are held in a buffer account by the Regulator as a form of insurance to cover any potential loss of sequestration caused by a natural disturbance or circumstances beyond the project proponent's control. The Australian Government's approach is intended to balance flexibility with environmental integrity.                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 2336 | Anonymous            | 3. Attributes of Carbon Credits                         |                 | Whilst supportive of the inclusion of the SDGs as a CCP, methodologies, tools and guidance to measure and report them should be standardised to ensure there can be like-for-like comparisons with projects developed under different standards. Currently, it is challenging to compare the SDG performance of activities across different standards and geographies, because approaches to measuring outcomes are so variable. Ensuring SDG net positive impact is also a challenge, especially as the SDG framework was not designed to quantitatively measure net impacts.                                                                                                                                                                                                                                                                   | XXX recommendation: ICVCM should develop standardised methodologies, tools and guidance to measure and report SDGs in consultation with the UN Development Programme should be to allow for comparison within and across different standards and geographies Application and quantification of co-benefits should not be prescriptive. The ICVCM could consider the LRF Co-Benefits Standard when developing these standardised methodologies, tools and guidance. ICVCM should consult with certification/ standard bodies in the practical application of this guidance. |
| 2336 | Anonymous            | 3. Attributes of Carbon Credits                         |                 | In Australia, the Queensland State Government has established its own 'Co-benefits Standard' to enable measuring, reporting and verification of co-benefits under the Land Restoration Fund (LRF). LRF activities may seek to claim co-benefits from one or more of the following co-benefit categories:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| 2336 | Anonymous            | 3. Attributes of Carbon Credits                         |                 | The Queensland Government also invests in Queensland carbon farming projects that generate ACCUs and co-benefits in accordance with its Standard. The LRF is willing to pay a premium price for ACCUs from projects that deliver LRF co-benefits. The LRF's Investment Panel considers the value for money of each project proposal with respect to the co-benefits it will deliver, when making investment decisions. The Investment Panel uses a range of information sources when determining value for money, including reasonable project and opportunity costs, ecosystem services value, and the known cost of delivering outcomes via other traditional funding mechanisms.                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 2337 | Anonymous            | 1 Program Governance                                    |                 | The process for assessing compliance against the CCPs, and the way in which decisions are made, will be a vital aspect of the ICVCM's work program. More detail is required about the governance of the CCPs and how the future body that will oversee them will monitor compliance. For instance, it should be clarified what constitutes 'relevant project documentation' that 'shall require public disclosure'. The 'procedures and requirements' used in the 'development, approval and regular updating of all normative program documents' will similarly have to be elaborated. Moreover, the institutional arrangement of the grievance mechanism should be explained, including whether it will be represented by a committee or an ombudsman and whether it will be staffed by ICVCM staff or contracted out to a private consultant. | XXX recommendation: that the ICVCM provide more detail on the governance of the CCPs and how the future body that will oversee them will monitor compliance.                                                                                                                                                                                                                                                                                                                                                                                                               |

| 2338 | Anonymous            | Criterion 11.1<br>Transition towards net-zero emissions |                 | More clarity is needed on the criteria that the Expert Panel will use to assess whether an activity is net-zero aligned. Without further objective detail, it will be challenging for project proponents to implement or demonstrate compliance with this criteria. CMI also notes the potential overlap of this criterion with the VCMI Claims Code and the implications this raises if/when it is out of alignment.                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| 2338 | Anonymous                                                                                                                                          | Criterion 11.1<br>Transition towards net-zero emissions |                 | We also note the important work of the UN's High-Level Expert Group on the Net-Zero Emissions Commitments of Non-State Entities that is currently seeking to clarify current standards and definitions for setting net-zero targets by non-state actors, credibility criteria used to assess stated objectives, measurement and reporting, processes for the international community to verify and account in a transparent manner, as well as a roadmap to translate these standards and criteria into international and jurisdictional regulations, in the context of a just transition[1]. We consider that this process could potentially inform the ICVCM's approach.                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2339 | Anonymous                                                                                                                                          | L. Alignment with the Paris Agreement                   |                 | XXX recognises the inherent difficulty of drafting best practice guidance in the still-evolving voluntary carbon market, where there remain unavoidable uncertainties – not least how the VCMs and various global compliance markets may begin converging and interacting under the Paris Agreement. Nevertheless, we consider that there is enough guidance in the Glasgow Paris Rulebook to provide appropriate clarity and flexibility, voluntary markets can continue to play an important role in advancing market integrity in the intervening period.                                                                                                                                                                                                                                                                                                                                                                                                                        | XXX recommendation: More detail is required on how the CCPs consider the convergence between compliance & voluntary markets.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 2339 | Anonymous                                                                                                                                          | L. Alignment with the Paris Agreement                   |                 | While it may not be possible to provide full clarity and guidance at the present time, the ICVCM should take a clearer position on the convergence between compliance and voluntary markets. XXXX notes that most countries, including Australia, do not yet have the accounting frameworks to be able to assign corresponding adjustments. If the voluntary use of carbon credits were to require host country authorisation for the purposes of corresponding adjustments, this could put critical mitigation activities at risk. It could also serve to disadvantage less developed countries that are less likely to have the appropriate legislative and regulatory infrastructure in place necessary to facilitate corresponding adjustments. XXXX recognises that there is benefit in the future convergence of accounting frameworks between compliance and voluntary markets as, and when, all parties have developed the appropriate Article 6 accounting infrastructure. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

This is a collective response from 5 companies working to implement first-of-a-kind, commercial-scale carbon removal projects with very high durability storage. Individually, we have submitted detailed responses to the CCP consultation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2340 | Johan Borje, Stockholm Exergi, Kel Coulson, Carbon Engineering, Angela Hepworth, Drax, Simon Manley, UNDO, David Ungar, Carbon Finance Laboratory, | 0                                                       |                 | Together, our projects will remove around 65 MT of atmospheric carbon per year by 2030 – a massive increase from the less than 100,000 tonnes of carbon durably removed today, but still far below the one gigatonne of high-durability removals per year the UNFCCC Climate Champions believe is needed by 2030 to be on a science-based track for net zero.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2342 | Johan Borje, Stockholm Exergi, Kel Coulson, Carbon Engineering, Angela Hepworth, Drax, Simon Manley, UNDO, David Ungar, Carbon Finance Laboratory, | 0                                                       |                 | Additionality has been at the heart of improving integrity and ambition in the VCM – requiring proof that a reduction or removal would not have happened without the revenue from the carbon credit and that the baseline on which this decision is made is sound. It makes sense that this is your first CCP. Your risk-based approach also makes sense, removing the burden of detailed financial and market analysis from credit types that, by their nature, have a high likelihood of additionality.                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | We believe high-durability carbon removals, as a credit type, are fundamentally additional and should be considered as a low-risk category where a simplified financial additionality test is sufficient. The counterfactual baseline for high durability removals is simply business as usual. There is no incentive for a developer to carry out these capital-intensive activities without the revenues from carbon markets. Even where jurisdictions have introduced incentives for removals, these are not sufficient for financial viability on their own.                                                                     |
