I can understand where they are coming from, but this seems quite ambitious.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 924 | Anonymous            | Part 4: Assessment Framework | ge              | Criterion 9.3, description: this text is somewhat confusing, why replacement with 'a permanent credit' – aren't all credits temporary in this alternative and may only be claimed by users when they are valid and should be replaced by user when the validity period expires?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 925 | Trevor Paul          | Part 4: Assessment Framework | ge              | As an independent governance body whose stated intention is to develop a common standard for ensuring the creation of quality voluntary carbon credits, the focus IC-VCM mandate should be at the crediting program level – using the framework to assess carbon crediting programs, their systems and credit methodologies against commonly agreed to Core Carbon Principles (CPP). Viresco Solutions believes there needs to be a broad dialogue and alignment among stakeholders to the CPP's and around assessment framework to ensure integrity of voluntary markets, but also results in requirements that are practical to implement.                                                                                                                          | · IC-VCM should be careful to avoid developing a framework system that sets requirements that are overly prescriptive and administratively difficult or impossible to implement. The goal is not to deploy overlapping assurance processes that result in a drastic limit on the amount of investment flowing to reduction activities on the ground. A fine balance must be struck, particularly in the early days of the implementation.                                                                                       |
| 925 | Trevor Paul          | Part 4: Assessment Framework | ge              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | · The IC-VCM should take a phased approach by building off the strengths of existing frameworks and assessment initiatives such as Carbon Offsetting and Reduction Scheme for International Aviation (CORSIA). The wheel does not need to be re-invented, building on off some of the work that is already being done will expedite the pathway to greater credibility. Over time, the IC-VCM governance system will evolve through feedback and continuous improvement as the council and market participants gain experience. |
| 926 | Darcy Jones          | Part 4: Assessment Framework | ge              | There is a specific safeguard (Criterion 7.6) focused on IPLCs; however, the case of IPLCs is a cross-cutting topic.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | IPLC considerations should be reflected throughout the Assessment Framework.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| 927 | Darcy Jones          | Part 4: Assessment Framework | ge              | The current guidance places undue emphasis on project-scale activities, without recognizing the merits of jurisdictional-scale approaches. While there is a role for high-quality, nested project-based approaches, there are distinct, intrinsic benefits of jurisdictional scale approaches for high environmental integrity. The criteria should be updated to accurately reflect and acknowledge the attributes of jurisdictional scale efforts that make credits from these programs high-quality, including that they improve additionality and permanence, uphold stringent environmental and social safeguards, and generate various social, environmental, cultural, and biodiversity co-benefits. Critically, jurisdictional REDD+ initiatives offer transformational change at a scale that impacts global climate trajectories, meeting the urgent need of this decade.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Crediting emissions reductions and removals at a large scale is the transformational change that the IC-VCM should encourage in its draft guidance.                                                                                                                                                                                                                                                                                                                                                                                      |
| 927 | Darcy Jones          | Part 4: Assessment Framework | ge              | In particular, the criteria should recognize that scale, including jurisdictional extent and duration in time, as well as sectoral coverage, should be central to evaluating the environmental robustness of any emissions reductions. In general, large-scale transformations help account for the risk of leakage and improve additionality. The larger the spatial and political decision-making scale of reductions and the longer the program persists, the more risks of shocks (e.g., fires, fraud, policy reversals) can be pooled across locations, actors, and time periods; anticipated risks can also be factored into a conservative jurisdictional baseline at a large enough scale. Additionally, a larger spatial scale makes it easier to avoid bias in the process of setting conservative baselines since the process can be transparent using publicly available data. It is also easier to predict an average over a large area than all, or even any, individual parcels. There is little to no private information at the jurisdictional level, whereas at the landowner or community level there is a lot of information that the landowner has but the credit issuer or verifier does not. This difference in access to information leads to systematic bias toward the interests of the landowners and away from society's climate interests. Jurisdictional scale approaches help mitigate against unequal access to information to make decisions around activities that affect emissions. Furthermore, jurisdictional-scale activities can benefit peoples who may not be able to directly engage in project crediting, but who nonetheless benefit from policies that improve agriculture and protect local forests. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 927 | Darcy Jones          | Part 4: Assessment Framework | ge              | Finally, the social equity advantages of jurisdictional approaches are significant. Stand-alone projects inevitably favor high historical emitters, and the transaction costs mean that they favor communities and landowners who are better organized and resourced to be able to engage. Alternatively, jurisdictional approaches can include all significant actors, e.g., Indigenous peoples and local communities (IPLCs) in tropical forests. Jurisdictional approaches merit recognition on this score as well.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 928 | Darcy Jones          | Part 4: Assessment Framework | te              | As currently drafted, many of the AF criteria undermine jurisdictional REDD+. The proposed approach lacks awareness of the substantial investments of time, resources, and political will that have been made to lay the foundation for achieving these goals. The success of REDD+ requires durable, long-term implementation, and incentives. By deeming these past efforts as criteria that would render them ineligible for crediting, the IC-VCM would cast aside these investments and work against its own stated intention of accelerating a just transition to 1.5 degrees C. These past efforts are essential to this transition and should be supported and amplified.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | The AF criteria should be updated to accurately reflect and acknowledge the attributes of jurisdictional scale efforts that make credits from these programs high-quality, including that they improve additionality and permanence, uphold stringent environmental and social safeguards, and generate various social, environmental, cultural, and biodiversity co-benefits. Critically, JREDD+ initiatives offer transformational change at a scale that impacts global climate trajectories, meeting the urgent need of this decade. |
| 928 | Darcy Jones          | Part 4: Assessment Framework | te              | Many of the criteria proposed under the AF (as detailed in subsequent sections) overlook or disregard the wide-ranging, multilateral efforts that have contributed to the development of REDD+ policies and mechanisms at scale, and place undue emphasis on project-scale activities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 928 | Darcy Jones          | Part 4: Assessment Framework | te              | Jurisdictional approaches to crediting (not just REDD+) are vastly different from project scale crediting and have not been well examined throughout the proposed criteria, even though jurisdictional and nested REDD+ activities may already meet, or be on the path to meeting in the near future, the conditions to be deemed additional and CCP-compliant in many areas.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 928 | Darcy Jones          | Part 4: Assessment Framework | te              | The current criteria risk undercutting or supplanting these efforts, contrary to the expectation that finance for REDD+ will materialize once these efforts have been completed. Full assessment and consideration are needed to ensure that all potential high-integrity options are evaluated before being excluded solely based on the scale of implementation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| 929 | Anonymous            | Part 4: Assessment Framework | ge              | Clear process and timelines should be established for projects and credits that are currently in market to allow those projects that wish to comply with CCPs to do so without devaluing the credit. As one of the original and critical goals of the ICVCM was to scale the voluntary carbon markets, re-assessment of the CCPs should not take place too frequently and should be aligned with the independent standards' crediting periods for underlying methodologies. Investors and market participants need stability and predictability to ensure that investments into projects will be valid for at least as long as the crediting period of the project.                                                                                                                                                                                                                                                                                                                                | 0                                             |
| 930 | Darcy Jones          | Part 4: Assessment Framework | ge              | Recently, eight Indigenous Peoples organizations and NGOs, including EDF, recommended companies rapidly shift their demand toward jurisdictional REDD credits. Moving from project-scale crediting toward this large-scale jurisdictional crediting and emissions accounting is needed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | N/A                                           |
| 930 | Darcy Jones          | Part 4: Assessment Framework | ge              | EDF thanks the IC-VCM for calling out jurisdictional REDD specifically, highlighting its unique attributes. However, as currently written, the IC-VCM draft documents contain some alarming provisions that would undermine demand for high-quality credits from large-scale tropical forest protection programs, known as jurisdictional REDD credits. The proposed guidelines are incompatible with the jurisdictional REDD framework and would effectively exclude credits from large-scale jurisdictional REDD, and eliminate one of our most cost-effective, impactful tools. By discriminating against a high-quality approach like jurisdictional REDD, IC-VCM's proposed guidance creates a risk that lower quality, non-jurisdictional credits will fill the void.                                                                                                                                                                                                                        | 0                                             |
| 931 | Anonymous            | Part 4: Assessment Framework | ge              | We have stated in our high-level response that the requirements of the CCP are much too detailed. They are inflexible, onerous, and often impracticable. These comments apply broadly to the Assessment Framework.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | The entire framework needs to be reevaluated. |
| 932 | Spencer Meyer        | Part 4: Assessment Framework | te              | NCX Recommends that ICVCM alter its requirements for disclosing uncertainty.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | See above.                                    |
| 932 | Spencer Meyer        | Part 4: Assessment Framework | te              | Comment 12a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                             |
| 932 | Spencer Meyer        | Part 4: Assessment Framework | te              | p. 53 Robust Quantification : Overview                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                             |
| 932 | Spencer Meyer        | Part 4: Assessment Framework | te              | We strongly support IC-VCM's choice to include requirements concerned with treatment of uncertainty in this Assessment Framework. Uncertainty is an inherent part of any carbon project, regardless of credit type, and is present in many different elements of calculating a project's net emissions reductions and removals. To date, this issue has been troublingly absent from the conversation around challenges in the VCM, and urgently needs to be brought to the fore. This is true both for determining additionality, where it is necessary to develop models to project a counterfactual baseline scenario, and for estimating overall project impact in MT CO <sub>2</sub> e. If methodologies were required to incorporate robust uncertainty estimates and deductions, over-crediting and high-risk credits would be greatly reduced. Adding further requirements for appropriate measures of uncertainty is an important way IC-VCM can improve the integrity of carbon credits. | 0                                             |

| 932 | Spencer Meyer        | Part 4: Assessment Framework | te              | We recommend that IC-VCM update this requirement to allow for innovative approaches to measuring CO2 equivalence, providing that they have been peer-reviewed. This is a rapidly evolving scientific field and foreclosing new innovative approaches risks IC-VCM becoming irrelevant as new scalable approaches are developed, tested and proven. The language as written appears based on the same simplistic assumptions that gave us the current state of the carbon market with questionable climate benefit.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0               |

| 932 | Spencer Meyer        | Part 4: Assessment Framework | te              | are identified for the type of mitigation activity, or that a provision is included in the quantification methodology requiring each mitigation activity applying the quantification methodology to determine the level of uncertainty in quantifying the emission reductions or removals. The carbon-crediting program or each quantification methodology shall also specify explicitly:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0               |
| 932 | Spencer Meyer        | Part 4: Assessment Framework | te              | 1. how the overall uncertainty is to be assessed (e.g., the steps and methodological approaches); and                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0               |
| 932 | Spencer Meyer        | Part 4: Assessment Framework | te              | 2. that assessment of uncertainty extends to assumptions (e.g., baseline scenario), models (e.g., first-order decay model estimate methane emissions from solid waste disposal sites), parameters (e.g., default values), and measurements (e.g., the accuracy of measurement methods).”                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0               |
| 932 | Spencer Meyer        | Part 4: Assessment Framework | te              | We support the inclusion of uncertainty in general program provisions (section f), and support a requirement for programs to describe their specific treatment of uncertainty involved in calculating reductions/removals before approving a quantification methodology. However, there is a serious problem with the option to simply supply “typical overall level of uncertainty of emissions reductions and removals” for “the type of mitigation activity.” Determining an overall level of uncertainty for calculations across an entire credit type is essentially meaningless and leaves open a large risk of project developers intentionally or unintentionally over-crediting activities. This is not an adequate requirement for ensuring integrity for any program. In fact, we think that it would be much more meaningful to focus on requiring formal model-based quantifications of uncertainty, at both the credit type and project levels. Otherwise, this criterion gives the appearance of improving integrity while in practice working to obfuscate the rigor of individual methodologies. | 0               |
| 932 | Spencer Meyer        | Part 4: Assessment Framework | te              | We support the requirement that CCP approved programs disclose their steps and methodological approaches for estimating uncertainty (section f). However, assessing uncertainty is a key element to calculating the impact of any carbon project. To leave the disclosure of these methods out of the Initial Threshold Requirements would make the entire discussion of uncertainty irrelevant in that Threshold. This is such an important issue that we cannot afford to wait for the Full Requirements to kick in. All programs should be required now to disclose the methods behind their assessment of uncertainty, and should be required to include their assumptions.                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0               |

| 932 | Spencer Meyer        | Part 4: Assessment Framework | te              | 2. the degree of conservativeness in quantifying emission reductions or removals be based on the magnitude of uncertainty in the estimation of emission reductions and removals (i.e., applying a larger degree of conservativeness in case of higher uncertainties); and                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0               |
| 932 | Spencer Meyer        | Part 4: Assessment Framework | te              | 3. conservativeness applies to assumptions (e.g., baseline scenario), models (e.g., first-order decay model estimate methane emissions from solid waste disposal sites), parameters (e.g., default values), and measurements (e.g., accuracy of measurement methods) used in the determination of emission reductions and removals.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0               |
| 932 | Spencer Meyer        | Part 4: Assessment Framework | te              | We support criterion g) 3). We encourage the Expert Panel to include also an additional criterion, g) 4) stating that general program provisions should require a more in-depth description of the calculation of the models and assumptions used to determine amount of reductions/removals and to determine additionality. Quantitative models for estimating project impact or estimating degree of additionality almost always include component models, for instance those that account for growth in an IFM type project. Any rigorous carbon crediting program should require methodologies to disclose critical information in how these component models are brought together to form a joint model, and how uncertainty will propagate through the joint model from its components. Without this information, any disclosed level of uncertainty will be meaningless, and it will be impossible for any 3rd party experts to evaluate the overall level of conservativeness of these critical models. | 0               |
| 933 | Spencer Meyer        | Part 4: Assessment Framework | te              | NCX Recommends that ICVCM alter its requirements for disclosing uncertainty.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | See above.      |

| 933 | Spencer Meyer        | Part 4: Assessment Framework | te              | p. 53 Robust Quantification : Overview                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0               |
| 933 | Spencer Meyer        | Part 4: Assessment Framework | te              | We strongly support IC-VCM's choice to include requirements concerned with treatment of uncertainty in this Assessment Framework. Uncertainty is an inherent part of any carbon project, regardless of credit type, and is present in many different elements of calculating a project's net emissions reductions and removals. To date, this issue has been troublingly absent from the conversation around challenges in the VCM, and urgently needs to be brought to the fore. This is true both for determining additionality, where it is necessary to develop models to project a counterfactual baseline scenario, and for estimating overall project impact in MT CO <sub>2</sub> e. If methodologies were required to incorporate robust uncertainty estimates and deductions, over-crediting and high-risk credits would be greatly reduced. Adding further requirements for appropriate measures of uncertainty is an important way IC-VCM can improve the integrity of carbon credits.              | 0               |

| 933 | Spencer Meyer        | Part 4: Assessment Framework | te              | We recommend that IC-VCM update this requirement to allow for innovative approaches to measuring CO2 equivalence, providing that they have been peer-reviewed. This is a rapidly evolving scientific field and foreclosing new innovative approaches risks IC-VCM becoming irrelevant as new scalable approaches are developed, tested and proven. The language as written appears based on the same simplistic assumptions that gave us the current state of the carbon market with questionable climate benefit.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0               |

| 933 | Spencer Meyer        | Part 4: Assessment Framework | te              | 2. that assessment of uncertainty extends to assumptions (e.g., baseline scenario), models (e.g., first-order decay model estimate methane emissions from solid waste disposal sites), parameters (e.g., default values), and measurements (e.g., the accuracy of measurement methods).”                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0               |
| 933 | Spencer Meyer        | Part 4: Assessment Framework | te              | We support the inclusion of uncertainty in general program provisions (section f), and support a requirement for programs to describe their specific treatment of uncertainty involved in calculating reductions/removals before approving a quantification methodology. However, there is a serious problem with the option to simply supply “typical overall level of uncertainty of emissions reductions and removals” for “the type of mitigation activity.” Determining an overall level of uncertainty for calculations across an entire credit type is essentially meaningless and leaves open a large risk of project developers intentionally or unintentionally over-crediting activities. This is not an adequate requirement for ensuring integrity for any program. In fact, we think that it would be much more meaningful to focus on requiring formal model-based quantifications of uncertainty, at both the credit type and project levels. Otherwise, this criterion gives the appearance of improving integrity while in practice working to obfuscate the rigor of individual methodologies. | 0               |
| 933 | Spencer Meyer        | Part 4: Assessment Framework | te              | We support the requirement that CCP approved programs disclose their steps and methodological approaches for estimating uncertainty (section f). However, assessing uncertainty is a key element to calculating the impact of any carbon project. To leave the disclosure of these methods out of the Initial Threshold Requirements would make the entire discussion of uncertainty irrelevant in that Threshold. This is such an important issue that we cannot afford to wait for the Full Requirements to kick in. All programs should be required now to disclose the methods behind their assessment of uncertainty, and should be required to include their assumptions.                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0               |

| 933 | Spencer Meyer        | Part 4: Assessment Framework | te              | 2. the degree of conservativeness in quantifying emission reductions or removals be based on the magnitude of uncertainty in the estimation of emission reductions and removals (i.e., applying a larger degree of conservativeness in case of higher uncertainties); and                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                    |
| 933 | Spencer Meyer        | Part 4: Assessment Framework | te              | 3. conservativeness applies to assumptions (e.g., baseline scenario), models (e.g., first-order decay model estimate methane emissions from solid waste disposal sites), parameters (e.g., default values), and measurements (e.g., accuracy of measurement methods) used in the determination of emission reductions and removals.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                    |
| 933 | Spencer Meyer        | Part 4: Assessment Framework | te              | We support criterion g) 3). We encourage the Expert Panel to include also an additional criterion, g) 4) stating that general program provisions should require a more in-depth description of the calculation of the models and assumptions used to determine amount of reductions/removals and to determine additionality. Quantitative models for estimating project impact or estimating degree of additionality almost always include component models, for instance those that account for growth in an IFM type project. Any rigorous carbon crediting program should require methodologies to disclose critical information in how these component models are brought together to form a joint model, and how uncertainty will propagate through the joint model from its components. Without this information, any disclosed level of uncertainty will be meaningless, and it will be impossible for any 3rd party experts to evaluate the overall level of conservativeness of these critical models. | 0                                                                                                                                                                                                                                                                                                                    |
| 934 | Anonymous            | Part 4: Assessment Framework | ge              | Nature-Based Solutions are largely absent from this consultation, which make up a vast majority of the voluntary carbon markets today. CCP eligibility is near impossible for most NBS projects and programs, so the stringent requirements are excluding a huge proportion of voluntary credits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | N/A                                                                                                                                                                                                                                                                                                                  |
| 935 | Javier Castro        | 0                            | te              | It is not clear why a standard approach as ISO 14024 is not used as reference to avoid any misunderstandings and assure consistency on the approaches.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Reference to e.g. ISO 14024 will increase acceptance of the approach and clarity on the requirements.                                                                                                                                                                                                                |

| 937 | Anonymous            | 0                            | ge              | We support the Core Carbon Principles as currently defined                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Noting that these reflect a well-established and long-standing set of quality criteria used in the VCM. ICVCM should be considering these as improvements on a continuum rather than a wholesale new standard. It will be important and newsworthy to share the 5 or 10 top line improvements to existing practices. |

| 939 | Anonymous            | 0                            | te              | There is a lot of focus on carbon crediting "programs". It is important to point out that there are also smaller, yet robust independent GHG registries that accept projects and serialize offsets, based on ISO and other established standards*. These independent registries are capable of adhering to requirements of CCP and tagging qualified offsets appropriately on their public listing. The document addresses assessment for carbon credits at seemingly only a 'program' level and offset level. However, there is no guidance for smaller registries on the type of review they need. We need to acknowledge the value of smaller registries, their capabilities, and provide them with CCP guidelines to allow them to keep bringing investment to the market, should they meet CCP.                                                                                                                                                                                                            | Include assessment requirements ofr all entities and not limited to major carbon crediting programs only                                                                                                                                                                                                             |

| 939 | Anonymous            | 0                            | te              | Every high integrity credit coming into the market helps get closer to IPCC goals; we need to enable ALL bodies to join the force and add their high integrity credits to the market. By limiting the review at 'program' level and leaving behind other registries, we will have lost investment for carbon emission reductions and removals. The guideline seems to put aside small yet credible registries rather than providing guidelines for all to be able to meet the CCP requirements, which is contrary to scaling the market. The objective should be enabling more entities on joining the high integrity market rather than risking removing certain capable entities from the picture with a focus on the largest international "programs".                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                    |

| 943 | Anonymous                          | 0                   | ge              | The roles of IC-VCM and its governance committees and experts should consist solely of reviewing programs against the requirements for the initial approval, they should not be involved in any way in the on-going approval of activities below the program level. Meaning, IC-VCM should have no role in project types, methodologies and/or project/program reviews. Any changes in the requirements over time should be done in a consultative manner and allow the standards to have direct input in any updates to the program requirements, and allow the programs the time needed to manage the development and public process they must follow.                                                                                                                                                                                                                        | N/A                                                                                                                                                                                                                                                                                                                       |

| 944 | Spencer Meyer                      | 0                   | ge              | IC-VCM asserts in multiple sections of this document that it has committed to ex-post determination of credits. However, it still allows projects to issue credits up front even when they rely on 25, 50, or 100-years of monitoring to fully deliver those credits. This does not comprise true ex-post crediting. In our view, it is not ex-post crediting when a project issues the full value of credits before the completion of the full change in behavior that generates climate benefits. This should be categorized as ex-ante crediting. For IFM projects that require landowners to defer harvesting or conserve carbon stocks over a 100-year period, credits issued up-front should be considered ex-ante. Ex-post credits, by contrast, deliver guaranteed, irreversible climate benefits—the climate benefit has already occurred when the credits are issued. | 0                                                                                                                                                                                                                                                                                                                         |
| 944 | Spencer Meyer                      | 0                   | ge              | Critically, IC-VCM needs to change its description of ex-post to read as follows: "The impact of GHG emissions reductions or removals shall be determined ex-post, meaning carbon credits shall not be issued for any behavioral action that provides additional climate benefit that has yet to occur."                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                         |
| 944 | Spencer Meyer                      | 0                   | ge              | As described elsewhere in this document, it is technically not removals themselves that need to be credited ex-post, but rather the behavior change that creates the climate benefit. For an IFM project, for example, according to this current criterion, a project could issue credits up-front for any stocks of carbon that are above an average baseline - as CARB's protocol allows. (Badgley et al (2021) Systematic over-crediting in California's forest carbon offsets program. <a href="https://onlinelibrary.wiley.com/doi/10.1111/gcb.15943">https://onlinelibrary.wiley.com/doi/10.1111/gcb.15943</a> )                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                         |
| 944 | Spencer Meyer                      | 0                   | ge              | There are many problems with this approach, but one is that this project developer could argue that the removals/avoided emissions have already "occured" since the above-average carbon stocks have been verified to exist on the ground. But those stocks are the result of past management decisions. The additional benefit that flows from preserving these carbon stocks has not yet occurred—it will be delivered over the next 50 or 100 years as the landowner continues to change their behavior (refrain from harvesting) relative to the baseline scenario. Therefore, the climate benefit of those GHG emissions reductions/removals has yet to occur and these credits should be classified as ex-ante.                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                         |
| 944 | Spencer Meyer                      | 0                   | ge              | We believe updating the definition of ex-post is one important way IC-VCM can improve the integrity of carbon credits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                         |

| 945 | Spencer Meyer                      | 0                   | ge              | IC-VCM asserts in multiple sections of this document that it has committed to ex-post determination of credits. However, it still allows projects to issue credits up front even when they rely on 25, 50, or 100-years of monitoring to fully deliver those credits. This does not comprise true ex-post crediting. In our view, it is not ex-post crediting when a project issues the full value of credits before the completion of the full change in behavior that generates climate benefits. This should be categorized as ex-ante crediting. For IFM projects that require landowners to defer harvesting or conserve carbon stocks over a 100-year period, credits issued up-front should be considered ex-ante. Ex-post credits, by contrast, deliver guaranteed, irreversible climate benefits—the climate benefit has already occurred when the credits are issued. | 0                                                                                                                                                                                                                                                                                                                         |

| 945 | Spencer Meyer                                   | 0                                                                                                                                | ge              | Critically, IC-VCM needs to change its description of ex-post to read as follows: "The impact of GHG emissions reductions or removals shall be determined ex-post, meaning carbon credits shall not be issued for any behavioral action that provides additional climate benefit that has yet to occur."                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 945 | Spencer Meyer                                   | 0                                                                                                                                | ge              | As described elsewhere in this document, it is technically not removals themselves that need to be credited ex-post, but rather the behavior change that creates the climate benefit. For an IFM project, for example, according to this current criterion, a project could issue credits up-front for any stocks of carbon that are above an average baseline - as CARB's protocol allows. (Badgley et al (2021) Systematic over-crediting in California's forest carbon offsets program. <a href="https://onlinelibrary.wiley.com/doi/10.1111/gcb.15943">https://onlinelibrary.wiley.com/doi/10.1111/gcb.15943</a> )                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 945 | Spencer Meyer                                   | 0                                                                                                                                | ge              | There are many problems with this approach, but one is that this project developer could argue that the removals/avoided emissions have already "occured" since the above-average carbon stocks have been verified to exist on the ground. But those stocks are the result of past management decisions. The additional benefit that flows from preserving these carbon stocks has not yet occurred—it will be delivered over the next 50 or 100 years as the landowner continues to change their behavior (refrain from harvesting) relative to the baseline scenario. Therefore, the climate benefit of those GHG emissions reductions/removals has yet to occur and these credits should be classified as ex-ante. | 0                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 945 | Spencer Meyer                                   | 0                                                                                                                                | ge              | We believe updating the definition of ex-post is one important way IC-VCM can improve the integrity of carbon credits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                             |

The criteria included in section 1 are largely redundant with existing frameworks that most Standards already adhere to. Requiring Standards to demonstrate conformance with these criteria would add significant administrative burden without adding any clear value.                                                                                                                                                                                                                                                                       | see comment                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 954 | Individual/employee, Perspectives Climate Group | Criterion 1.1: Transparent assignment of roles and responsibilities and competence requirements at all levels of decision-making | ge              | a) Please provide comment as to the feasibility and desirability of this additional level of risk-based analysis by project type: A general comment would be that the approach about risk-based analysis is quite pertinent and relevant. However, in light of making this approach feasible it needs to be reorganized in a way that reflects an step-wise approach to determine the additionality of a mitigation activity.                                                                                                                                                                                                                                                                                         | a) Please provide comment as to the feasibility and desirability of this additional level of risk-based analysis by project type: A general comment would be that the approach about risk-based analysis is quite pertinent and relevant. | 960 | Ivan VALENCIA        | Table 1 – Requirements for Criterion 1.1: Assignment of roles and responsibilities and competence | ge              | This is important because many countries have different requirements for the voluntary carbon markets and the compliance with these requirements needs to be made explicit by projects and subsequently assessed by validation and verification bodies. Currently, many VVBs overlook national regulations as they focus solely on the methodology set by the standard when validating and verifying projects. We saw this happen regularly in Colombia. In the cases where national regulation overrides the program standard methodologies, this should be identified upfront in the methodologies. | 0                                                                                                                                                                                                                                             |
| 961 | Ivan VALENCIA        | Table 1 – Requirements for Criterion 1.1: Assignment of roles and responsibilities and competence | ge              | The program should also incorporate a procedure to address claims in the initial threshold; which is short of an independent grievance mechanism but which allows stakeholders to issue claims and request information to the program.                                                                                                                                                                                                                                                                                                                                                                | Refer to comments on this section                                                                                                                                                                                                             |

| 963 | Anonymous            | Table 1 – Requirements for Criterion 1.1: Assignment of roles and responsibilities and competence | ge              | The current level of atmospheric carbon dioxide (CO2) is around 417ppm, 140ppm higher than in 1750 when fossil fuels started to become the mainstay of growing economies. This figure is forecast to continue growing for the foreseeable future. To combat this, more CO2 must be removed from the atmosphere than is emitted into it. Given the capacity limitations of converting CO2 to carbon, this can only be achieved with a significant reduction in CO2 emissions and combined with a balancing of the remaining emissions against removals. | 0               |
| 963 | Anonymous            | Table 1 – Requirements for Criterion 1.1: Assignment of roles and responsibilities and competence | ge              | The stated aim of the Core Carbon Principles, Assessment Framework and Assessment Procedure report is to ensure the voluntary carbon markets accelerates a just transition to 1.5°C. In order to do this, it must make carbon markets work. This means:                                                                                                                                                                                                                                                                                                | 0               |

| 963 | Anonymous            | Table 1 – Requirements for Criterion 1.1: Assignment of roles and responsibilities and competence | ge              | Carbon financing must become a crucial tool in addressing these important, intertwined points relating to woodlands and timber. However currently it is not delivering the impetus which is required.                                                                                                                                                                                                                                                                                                                           | 0               |
| 963 | Anonymous            | Table 1 – Requirements for Criterion 1.1: Assignment of roles and responsibilities and competence | ge              | Carbon Mitigation Services                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0               |
| 963 | Anonymous            | Table 1 – Requirements for Criterion 1.1: Assignment of roles and responsibilities and competence | ge              | The difference between mitigation services is frequently mentioned in the draft. It must also be recognised that the two services, CO2 emission avoidance and CO2 removal, are inherently different services. As such, it is essential that careful consideration is given as to whether using the same sets of characteristics to determine the integrity, or more accurately the value, of the activities in question, will lead to optimal outcomes.                                                                         | 0               |
| 963 | Anonymous            | Table 1 – Requirements for Criterion 1.1: Assignment of roles and responsibilities and competence | ge              | 1. Avoided emissions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0               |
| 963 | Anonymous            | Table 1 – Requirements for Criterion 1.1: Assignment of roles and responsibilities and competence | ge              | Avoided emissions are complex to analyse, since they require a counterfactual. In essence, it is the art of valuing something that has not happened, so a subjective framework must be in place to justify an outcome which would have happened otherwise. For this, permanence and additionality are critical characteristics to prove that financing was required. It gives the buyer of credits confidence in the integrity of the service.                                                                                  | 0               |
| 963 | Anonymous            | Table 1 – Requirements for Criterion 1.1: Assignment of roles and responsibilities and competence | ge              | 1. Carbon removals                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0               |
| 963 | Anonymous            | Table 1 – Requirements for Criterion 1.1: Assignment of roles and responsibilities and competence | ge              | Carbon removals cannot be viewed in the same way as avoided CO2 emissions, since they are the objective science of what has happened.                                                                                                                                                                                                                                                                                                                                                                                           | 0               |
| 963 | Anonymous            | Table 1 – Requirements for Criterion 1.1: Assignment of roles and responsibilities and competence | ge              | Additionality                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0               |
| 963 | Anonymous            | Table 1 – Requirements for Criterion 1.1: Assignment of roles and responsibilities and competence | ge              | As things currently stand, additionality serves to remove practically all value from the natural capital service which is CO2 removal through the growth of woodlands. This value demolition of the most important and easily measured positive externality goes against basic economic theory and the targets that carbon frameworks should be striving to achieve. Carbon financing, and thus our ability to meet climate targets, rests on our ability to effectively measure and value positive and negative externalities. | 0               |

| 963 | Anonymous            | Table 1 – Requirements for Criterion 1.1: Assignment of roles and responsibilities and competence | ge              | Permanence destroys value since it seeks to “net” out positive and negative externalities. This is not possible - positive externalities (the removal of CO2) and negative externalities (the emission of CO2) must be respectively maximised and minimised independently. Currently, the framework is such that the body responsible for the removal of CO2 is paying for an unknown body to release the CO2 at an unknown point in time. In the case of woodlands, this de facto subsidy would occur while the trees are still standing, growing and removing CO2. Further, it would assume that the body responsible for the ultimate emission can do so for free, since this price has already been paid. A framework where carbon emissions can be counted twice cannot be right.                                                                                                                                                                                            | 0               |
| 963 | Anonymous            | Table 1 – Requirements for Criterion 1.1: Assignment of roles and responsibilities and competence | ge              | Further, it means that woodlands are only viewed as a static carbon sink, rather than providing an active CO2 removal service. Removals are viewed as emissions, so harvesting timber is regarded as bad. Harvesting does not release the CO2 stored in trees, instead it increases the CO2 which can be removed as faster growing trees can be replanted and timber is supplied to replace other raw materials, which are one of the leading global CO2 emitters. In some cases, the question becomes “carbon or timber.” There is a risk of providing fewer jobs than comparable timber production or farming, which can create conflict. This is an example of why this needs to change so we can have multifunctional forests where the benefits are fully valued – carbon, timber, jobs and other co-benefits. It also leaves the standing carbon at risk of pests, diseases or disasters, which could be avoided if it was harvested.                                       | 0               |
| 963 | Anonymous            | Table 1 – Requirements for Criterion 1.1: Assignment of roles and responsibilities and competence | ge              | Key concepts to be considered:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0               |
| 963 | Anonymous            | Table 1 – Requirements for Criterion 1.1: Assignment of roles and responsibilities and competence | ge              | 1. The fundamental question of “has carbon funding caused this outcome” must be scrutinised regarding its effectiveness across both the mitigation services. A simpler question might be “has the promised service been delivered” or going further from the buyer’s perspective “have I got what I paid for?” If this is found to be a more productive question, do the concepts of additionality and permanence have a role in determining the integrity of CO2 removal services?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0               |
| 963 | Anonymous            | Table 1 – Requirements for Criterion 1.1: Assignment of roles and responsibilities and competence | ge              | 2. It must also be recognised that, for every tonne of carbon dioxide which is removed from the atmosphere but not awarded a credit, another more expensive, resource and energy intensive, less reliable credit with fewer co-benefits must be generated. All the while, the removal which has been rejected by the framework still occurs. This leads to a position where emissions are calculated using one set of rules, but removals are treated differently. This cannot lead to a balance, which is the goal. The framework must work with the wider facts.                                                                                                                                                                                                                                                                                                                                                                                                                | 0               |

| 963 | Anonymous            | Table 1 – Requirements for Criterion 1.1: Assignment of roles and responsibilities and competence | ge              | The impacts from inadequate carbon markets we currently experience are low levels of new planting, which will require an increasing to be planted, to meet the same climate target, since younger trees grow at a slower rate. This will also increase competition for land. Planting targets are habitually missed by 50% annually in the UK and a clear and functioning carbon market would solve this. Given the growth rate of coniferous trees, which supply most of the harvesting in the UK, we have now missed the window to plant woodlands which can produce timber for 2050. Unlike non-renewable materials, new sources cannot be discovered and exploited to meet demand. The supply is strictly limited and based on the actions of others, decades prior. Similarly, the supply available for future generations will be based on how we act now. Timber is also not used as ubiquitously as it should be, if all the CO2 implications were considered and costed. | 0               |

| 963 | Anonymous            | Table 1 – Requirements for Criterion 1.1: Assignment of roles and responsibilities and competence                                  | ge              | Reverting to the focus on atmospheric CO2 ppm, humans have emitted 1.7tn tonnes of CO2 since 1750. Were we to remove all of this, our ppm figure would fall to 197. This is circa 15 ppm lower than the average of 10,000 BCE to 100,000 BCE, also known as the last Ice Age. Whilst in reality we do not risk plunging ourselves into this position, it does highlight the importance of being through and exact with our carbon services. Whilst we have emitted 1.7tn tonnes of CO2 since 1750, but there are 1.1tn more tonnes in the atmosphere. This missing 600 billion tonnes of CO2 emissions must be properly recognised and rewarded if we are to meet our goals in a just fashion. A framework that fails to achieve this through inappropriate characteristics will not lead to a system that efficiently addresses our climate targets. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

The ICVCM should consider how its definition of “relevant project documentation” and disclosure may be impacted by jurisdictional privacy laws. A preferred option would be for the ICVCM to leave the definition of “relevant project documentation” to each individual carbon crediting program. |

What qualifies?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | N/A                                                                                                                                                                                                                                                                                                                                                                           |
| 969 | John Holler                                     | Table 2 – Requirements for Criterion 1.2: Public availability of normative program documents and mitigation activity documentation | te              | On Requirement Full (b): It's not clear how "sustainable development net-positive impacts" is distinct from "promoting sustainable development benefits" under the initial threshold.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                             |
| 970 | Anonymous                                       | Table 2 – Requirements for Criterion 1.2: Public availability of normative program documents and mitigation activity documentation | te              | It should be a very clear requirement that ALL documents, exceptions/extensions granted, and any other correspondence from the Standard to the proponent related to the project/program should be made public. There have been times in the past where standards had granted exceptions for some projects and these were not publicly disclosed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | N/A                                                                                                                                                                                                                                                                                                                                                                           |
| 971 | Barbara Haya                                    | Table 2 – Requirements for Criterion 1.2: Public availability of normative program documents and mitigation activity documentation | te              | Currently, project documents for many projects do not include basic information needed to reproduce the credit calculations and assess credit quality, even though the registries already have much of this information already on hand. The default should be that all information in the monitoring reports including shape files and calculations spreadsheet should be publicly released while developers have the option to redact confidential information. This will enhance quality by making quality assessment easier to perform by offset credit buyers and researchers. This level of transparency is easy to achieve since all it involves is the posting of existing documents that should already be in the possession of the registries, and are already in the possession of the project developers and the verifiers. | Recommendation: To be considered to meet the CCP criteria, programs should make all monitoring reports, shape files, calculation spreadsheets, and any other information needed to understand and recreate emissions reduction calculations, publicly available and easily accessible by default, providing developers with the option of redacting confidential information. |
| 972 | Individual/employee, Perspectives Climate Group | Criterion 1.3: Procedures and requirements for normative program documents                                                         | ge              | b) In this assessment, the Integrity Council proposes to use as one data point analysis of carbon prices. Please provide comments as to the feasibility of use of this indicator, and on the alternative use of marginal abatement costs for this purpose.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | b) In this assessment, the Integrity Council proposes to use as one data point analysis of carbon prices. Please provide comments as to the feasibility of use of this indicator, and on the alternative use of marginal abatement costs for this purpose.                                                                                                                    |
| 973 | Individual/employee, KOKO Networks Limited      | Criterion 1.3: Procedures and requirements for normative program documents                                                         | te              | The requirements should also include appropriate infrastructure, systems and procedures to be implemented by the program and the VVBs for protection of confidential data submitted by the project developers and other stakeholders. An agreement or NDA does not ensure advertant or inadvertant mishandling of the confidential data of the stakeholders.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | n/a                                                                                                                                                                                                                                                                                                                                                                           |
| 973 | Individual/employee, KOKO Networks Limited      | Criterion 1.3: Procedures and requirements for normative program documents                                                         | te              | The data management and protection policies of the program and the VVBs shall be made publicly available for transparency.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                             |
| 975 | Anonymous                                       | Table 3 – Requirements for Criterion 1.3: Procedures and requirements for normative program documents                              | ge              | The programs should be required to have stated processing times for reviews and approvals, and they should be held accountable to meeting these turnaround times. Any changes to the program requirements' processing times should require public disclosure. In addition, these time periods should be reflective of a standard of care that supports this new and dynamic market-driven voluntary market, and not unduly creating multiple delays in getting credits to market and financing to projects. For standard reviews and process requests they should be no longer than 10-15 days.                                                                                                                                                                                                                                         | N/A                                                                                                                                                                                                                                                                                                                                                                           |

| 978 | Anonymous                                       | Table 4 – Requirements for Criterion 1.4: Addressing conflicts of interest | ge              | If carbon-crediting programs are permitted to receive funding from registering mitigation activities and issuing carbon credits, they will have an incentive to structure their rules so as to issue more credits, that is, to have looser criteria. This increased supply will have the effect of lowering the price of such carbon credits. Technologies under development that have not yet achieved scale or maturity will necessarily produce carbon credits at a higher price. Thus, holding demand stable, allowing such issuance fees as funding of carbon-crediting programs necessarily has the effect of crowding out developing technologies from the marketplace. Yet, it is in these technologies where we find the most durable and meaningful removals, with the potential for long-run lower costs and without the unknowable counterfactual concerns of additionality. | Strike from Section 1.4 a): “This requirement excludes fees from registering mitigation activities and issuing carbon credits”          |
| 978 | Anonymous                                       | Table 4 – Requirements for Criterion 1.4: Addressing conflicts of interest | ge              | Potential purchasers of carbon credits would prefer that the price clears at a lower level, so there is a strong private interest in greater supply, and there is sure to be significant pressure to leave this language intact. However, there is a strong public interest that negative carbon technologies still in development have access to revenue that allows them to scale and mature, and the voluntary carbon market is one important source of such revenue. If this language remains, and the market is flooded with low-cost, low-quality credits, it will have the effect of choking off much of this revenue and greatly slowing down their evolution. I urge you to strike the language “This requirement excludes fees from registering mitigation activities and issuing carbon credits” from Section 1.4 a) of the draft Standard.                                   | 0                                                                                                                                       |
| 979 | Anonymous                                       | Table 4 – Requirements for Criterion 1.4: Addressing conflicts of interest | ge              | Criterion 1.4a: "The carbon-crediting program shall undertake periodic disclosure of financial information, including its sources of funding." We believe that the rationale for the periodic disclosure of financial information is weak and meeting this requirement will be difficult for private companies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | We would suggest rephrasing or removing point a of Table 4.                                                                             |
| 980 | John Holler                                     | Table 4 – Requirements for Criterion 1.4: Addressing conflicts of interest | te              | It is conceivable that COIs could arise from circumstances within a single organization but which reach beyond a discrete crediting program, such as where an organization which manages a crediting program does other work that does not fall under the scope of the crediting program. In a hypothetical example of an organization that manages both an auditing firm and a crediting program, limiting the scope of the financial COI disclosures to the crediting program alone would not address potential COI issues presented by the operation of the auditing firm. Please consider whether the scope of this requirement should be reworded to apply organization-wide, or otherwise address the scenario raised here (to the extent that such is not already addressed in requirement (c) or others)                                                                         | n/a                                                                                                                                     |
| 981 | Anonymous                                       | Table 4 – Requirements for Criterion 1.4: Addressing conflicts of interest | ge              | Programs should not be able to operate standards and at the same time provide services or data that are used to meet the standards. This is a conflict of interest, yet some standards are seeking to provide the data and analytics to be used for a project/program to be registered under the standard.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | N/A                                                                                                                                     |

| 989 | Individual/employee, Conservation International | Table 5 – Requirements for Criterion 1.5: Transparency and information disclosure on decision-making | ed              | RE Criterion 1.6, Table 6f                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Add language in brackets: "...shall have have established procedures [and track record] to ensure free, prior and informed consent wherever relevant.                                                                                                                                        |
| 990 | Anonymous                                       | Table 5 – Requirements for Criterion 1.5: Transparency and information disclosure on decision-making | ge              | Comment on criterion 1.5, table 5 'i' : We suggest removing this requirement. This falls outside of the scope of what Standards track and it is unclear how this information would be used even if provided. Would Standards or Verifiers be required to assess 'good' and 'bad' uses of the carbon revenue, and what criteria would such assessments be based upon? Further, credits from a single issuance could be sold over numerous years, and thus reporting on the use of such revenues would be very difficult to pin to specific credits. | see comment                                                                                                                                                                                                                                                                                  |
| 991 | Anonymous                                       | Table 5 – Requirements for Criterion 1.5: Transparency and information disclosure on decision-making | ge              | Criterion 1.5 - Table 5 includes, "Minutes of governing body meetings shall be publicly available on the carbon-crediting program's website." There is confidential information discussed at the Board meetings - for many companies, making the Board meeting minutes publicly available is not possible.                                                                                                                                                                                                                                         | We suggest removing point g from Table 5.                                                                                                                                                                                                                                                    |
| 992 | John Holler                                     | Table 5 – Requirements for Criterion 1.5: Transparency and information disclosure on decision-making | te              | It's not entirely clear what ICVCM would be looking for to check this requirement. Does "completeness" necessitate any particular information that this requirement can explicitly state? Is an "issuance request" the submission of verification documentation to the crediting program (an infrequent occurrence) or every request from the project proponent to issue credits from that verification report period (a potentially more frequent occurrence)?                                                                                    | n/a                                                                                                                                                                                                                                                                                          |
| 993 | John Holler                                     | Table 5 – Requirements for Criterion 1.5: Transparency and information disclosure on decision-making | ed              | Regarding (d): It's not clear what this means. Is this specifying for stakeholders what information they may use to participate in consultations? Disclosing what reference materials/memos that Board members used to make a program-related decision? It would be helpful if this requirement could be more specific.                                                                                                                                                                                                                            | n/a                                                                                                                                                                                                                                                                                          |
| 994 | Anonymous                                       | Table 5 – Requirements for Criterion 1.5: Transparency and information disclosure on decision-making | te              | All complaints, decisions and appeals should be made public.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | N/A                                                                                                                                                                                                                                                                                          |

| 1000 | Anonymous                                       | Table 6 – Requirements for Criterion 1.6: public engagement in decision-making | ge              | Requiring carbon crediting programmes to engage stakeholders on public consultation on all updates to the programme will be very onerous and will be unachievable, particularly for smaller programmes and those in developing countries. This applies to both the initial and full thresholds                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | The criterion needs to be substantially reconsidered in terms of its implementability, particularly for smaller programmes and those in developing countries. Perhaps a small set of key stakeholders could be identified (as per the full threshold) and only these players be consulted.                                                       |
| 1001 | Max DuBuisson                                   | Table 6 – Requirements for Criterion 1.6: public engagement in decision-making | ge              | Requiring public consultation for all mitigation activities is unnecessarily onerous. For MANY project types, especially in developed nations, there are no negative externalities to the community of the development of the project. For example, installation of a landfill gas collection and destruction system provides only positive benefits to the local community. Similarly, implementation of regenerative agricultural practices, such as tillage reduction, diversified crop rotations, and/or planting cover crops, pose no threats to the community that would justify the need for expensive and time-consuming public consultations.                                                                                                                                                                                                                                      | Limit the requirement for public consultations to those mitigation activities which could foreseeably cause harm to the local community.                                                                                                                                                                                                         |
| 1002 | Max DuBuisson                                   | Table 6 – Requirements for Criterion 1.6: public engagement in decision-making | te              | l) The carbon-crediting program shall require that any renewal of the crediting period includes a reassessment of the baseline scenario and the approaches used to calculate baseline emissions. In addition, the renewal includes a review of the conditions and barriers that were overcome using carbon credits revenues, identifying whether the barriers remain, and whether carbon credit revenues are still required to overcome them. This assessment takes into account the need for projects to recover upfront investment costs. Therefore, it does not focus exclusively on immediate vulnerability to discontinuation. Instead, it shall focus on verifying that ex-ante identified objectives, e.g., reaching a specific IRR threshold or investing in measures to counter deforestation drivers, cannot be achieved without the renewed issuance and sale of carbon credits. | Remove the requirement for subjective financial additionality tests at the time of crediting period renewal. Allow flexibility for the reassessment of baselines that acknowledges differences among sectors.                                                                                                                                    |
| 1002 | Max DuBuisson                                   | Table 6 – Requirements for Criterion 1.6: public engagement in decision-making | te              | This requirement goes too far in mandating application of subjective financial criteria in the assessment of ongoing additionality. While industrial project types involve significant, one-time decisions and investments, others, such as agricultural land management, require annual decisionmaking in the face of market forces that often pressure the operator to abandon the mitigation activity, even years after initial adoption.                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                |
| 1003 | Max DuBuisson                                   | Table 6 – Requirements for Criterion 1.6: public engagement in decision-making | ge              | m) For each type of mitigation activity, the carbon-crediting program shall define key indicator(s) of mitigation activity performance that facilitates assessment of the integrity of its reported performance, where feasible (for example, tCO <sub>2</sub> reduced per person per year for improved cookstoves, baseline forest loss rate in tCO <sub>2</sub> per Ha per year for projects avoiding deforestation, etc.). The program shall require this indicator to be reported by mitigation activities in a prominent location in each monitoring report and may require the indicator to be reported in the registry to facilitate quick assessment of the integrity of quantification and performance of similar mitigation activities                                                                                                                                            | Remove this requirement.                                                                                                                                                                                                                                                                                                                         |
| 1003 | Max DuBuisson                                   | Table 6 – Requirements for Criterion 1.6: public engagement in decision-making | ge              | This requirement is onerous and not relevant for all project times.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                                                                                                |
| 1004 | Anonymous                                       | Table 6 – Requirements for Criterion 1.6: public engagement in decision-making | ge              | XXXX supports the requirement to identify key stakeholders for public consultation. We suggest that programs also ensure that their key stakeholders identified by them legitimately represent the interests of pertinent communities. This is suggested keeping in mind the need to have a meaningful public consultation with key stakeholders, rather than a nominal consultation undertaken as a box ticking exercise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | A.Table 6(h)                                                                                                                                                                                                                                                                                                                                     |

| 1015 | Individual/employee, Conservation International | Criterion 1.7: Access to an independent grievance resolution mechanism                            | ed              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Add that GRM should have clearly assigned responsibility and adequate CCP resources.                                                                                                                                                                                                                                         |
| 1016 | Anonymous                                       | Table 7 – Requirements for Criterion 1.7: Access to an independent grievance resolution mechanism | ge              | Some aspects of what is proposed around public availability of information could be problematic. Table 7 on "Requirements for Criterion 1.7" states that "An independent committee shall receive and address information on the status of complaints, which shall be publicly available. When necessary, the committee may request a third-party opinion." Grievances could be aired publicly before it is established whether the concerns are legitimate or not. The unintended consequence could be reputational, commercial or other damage to the project and project proponent. | Grievances could be investigated and information gathered and understood, including through the use of third parties, prior to publication of the grievance.                                                                                                                                                                 |
| 1017 | Anonymous                                       | Table 7 – Requirements for Criterion 1.7: Access to an independent grievance resolution mechanism | te              | Clause f) in addition to ensuring local communities are informed about the grievance mechanism, it needs to be accessible, widely communicated and made available in local languages.                                                                                                                                                                                                                                                                                                                                                                                                 | f) The carbon-crediting program shall have procedures to ensure that stakeholders are informed about the grievance resolution mechanism and the means for accessing the mechanism, including by mitigation activity proponents in modalities that are accessible, widely communicated and made available in local languages. |

| 1018 | Anonymous                            | Table 7 – Requirements for Criterion 1.7: Access to an independent grievance resolution mechanism | ge              | The level of detail required for a grievance mechanism may be overly onerous for smaller carbon crediting programs registering smaller projects, and those in developing countries.                                                                                                                                                                                                                                                                                                                                                                           | Consider a differentiated approach depending on size of program, size of projects etc.                                                                                                                                                                                                                                                                                                                                                                   |
| 1019 | Josiah McClellan                     | Table 7 – Requirements for Criterion 1.7: Access to an independent grievance resolution mechanism | te              | 1.7c                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | While this section allows for grievances to be received about specific mitigation activities registered or seeking registration, it does not include any requirement to include the specific mitigation activity proponent(s) into the handling and addressing of grievances. Where a grievance relates to a specific mitigation activity rather than a type or group, the mitigation activity proponent(s) should be included in addressing grievances. |
| 1020 | Anonymous                            | Table 7 – Requirements for Criterion 1.7: Access to an independent grievance resolution mechanism | ge              | Information about the grievance resolution mechanism should be made available, but they must specifically be made available in formats and languages that are accessible to as many stakeholders as possible, including Indigenous People and Local Communities (IPLCs). Even during the IC VCM Consultation, the Peoples Forest Partnership was wary that the consultation material did not initially reach many IPLC voices due to inaccessible language. It was after translations and separate workshops that IPLCs were able to contribute meaningfully. | A.Table 7(f)                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| 1028 | Anonymous                                 | Criterion 1.8: Robust legal underpinnings of carbon credits                           | ge              | Assuming this is a reference to credits authorized for use under CORSIA, programs will already be required by ICAO to apply such a label. Presumably any other "other mitigation purpose" will likewise be overseen by another body managing that "purpose", making this ICVCM requirement potentially duplicative. As an alternative, ICVCM could require this "in the absence of another governing body requiring this as a prerequisite to program participation under that 'other purpose'".                                                                                                                                                                                                                                                                                 | 0                                                                                                                                           |
| 1029 | Ivan VALENCIA                             | Table 8 – Requirements for Criterion 1.8 robust legal underpinnings of carbon credits | ge              | This criterion should include information of how the fulfillment applies to different countries, as different countries have diverse regulations on carbon rights ownership, or proxys such as land tenure.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Refer to comments on this section                                                                                                           |
| 1031 | Anonymous                                 | Table 8 – Requirements for Criterion 1.8 robust legal underpinnings of carbon credits | te              | It cannot be expected that financial liability for over-issuance of credits by either the program or one of its projects lies with the program or project, unless there is willful misconduct or fraud. This would be a non-starter in this complex market with the counterparties who are engaging in these projects.                                                                                                                                                                                                                                                                                                                                                                                                                                                           | N/A                                                                                                                                         |
| 1033 | Anonymous                                 | Table 9 – Requirements for Criterion 1.9: Effective corporate governance              | ge              | The level of detail on corporate governance required may be overly onerous particularly for smaller carbon crediting programs, those registering smaller projects and those in developing countries.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Consider a differentiated approach for different kinds of programmes and projects                                                           |
| 1034 | Individual/employee, Climate Connect      | Table 9 – Requirements for Criterion 1.9: Effective corporate governance              | te              | The carbon-crediting program is a key stakeholder in the carbon markets and enabler of mitigation action and should also contribute to mitigating climate change                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | The carbon crediting-program may consider annually report its ghg footprint using ghg protocol or ISO 14064 or other similar known standard |

| 1038 | Mark Glossoti                             | 0                                                                                     | ge              | The CCPs require baselines to be constant or lowered over time. For nature-based projects, this would mean that even in locations that face stable or worsening deforestation pressures, the adjusted baselines for their subsequent crediting period would not reflect this increasing risk. CIX questions this conservative approach, and whether it should be revised across different project types. The CCPs generally follow a science-based approach and applying this approach to baselines should allow for downward or upward adjustments of baselines. Technology tends to improve over time, suggested a decreasing baseline approach for tech-based projects may be appropriate. Deforestation, however, can get worse. Project baselines should reflect that fact. | -                                                                                                                                           |

| 1047 | Anonymous                                 | Table 10 – Requirements for Criterion 2.1: Methodology approval process | ge              | I am a tree planting contractor with 30 years of experience. I have planted over a million seedlings personally and supervised the planting of over 30 million more. However my experience is in the USA. Nonetheless I made it this far and I think this is an applicable comment world-wide.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | establish a site's baseline scenario of what happens without CCP completion;                                                                                                                                                                                                                                                                                                                        |
| 1047 | Anonymous                                 | Table 10 – Requirements for Criterion 2.1: Methodology approval process | ge              | The major fail point of far too many planting projects I work on is that no one ever asks what should be an obvious question: What happens to a given project area if we DON'T plant any trees? Is natural regeneration of trees already taking place? Quite often - it is - and to such an extent that laboriously and expensively adding more planted seedlings amidst natural tree regeneration achieves absolutely nothing at all. Land is not empty white space on a computer screen, but that is how it is treated. Answering that key question requires boots on the ground, out in the bugs and the non air-conditioned weather. That little plant that looks like it has Maple leaves on it even though it isn't even a foot tall - yeah, that is a Maple TREE seedling that is going to outgrow this other seedling I am supposed to pointlessly plant, somewhere, amidst all these other naturally generating tree seedlings. | 0                                                                                                                                                                                                                                                                                                                                                                                                   |
| 1047 | Anonymous                                 | Table 10 – Requirements for Criterion 2.1: Methodology approval process | ge              | Meanwhile, some wetlands and grasslands sequester carbon better without trees. Though some wetlands grow new reserves of peat better with tree species on top. Forested conditions are often, but only sometimes, the best result for storing carbon. The hydrology and soil types have to be considered for best carbon outcome.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                   |

| 1047 | Anonymous                                       | Table 10 – Requirements for Criterion 2.1: Methodology approval process | ge              | So I hope any "baseline scenario" created for a robust carbon credit project (oh, the stories I can tell), starts by fully assessing the current vegetation on a project site and then extrapolating what the vegetation will be in decade 1, decade 2, all by itself, with no hubristic and all too frequently stupid intervention by Man. And please, people, quit sending me out to plant trees that have no chance to ever store carbon - because there are already far too many trees on the site! Get out from behind the desk and walk the land! | 0                                                                                                                                                                                             |
| 1048 | Anonymous                                       | Table 10 – Requirements for Criterion 2.1: Methodology approval process | te              | Methodologies should come with an excel template for GHG calculation. This would standardize work, make auditing easier, increase transparency and unlock the potential of more projects.                                                                                                                                                                                                                                                                                                                                                               | Include requirement FULL - Public Excel template for methodology GHG calculation.                                                                                                             |
| 1049 | Anonymous                                       | Table 10 – Requirements for Criterion 2.1: Methodology approval process | ge              | "d) The carbon-crediting program shall require approval of new quantification methodologies and a public stakeholder consultation." Stakeholder consultation can be very expensive and time-consuming. It may not be viable particularly for smaller carbon crediting programmes including those in developing countries to undertake consultation on new methodologies. This may then act as a significant barrier to entry.                                                                                                                           | Consider removing this requirement, or limiting what is required here                                                                                                                         |
| 1053 | Individual/employee, Perspectives Climate Group | Table 10 – Requirements for Criterion 2.1: Methodology approval process | ge              | Include "including leakage" under 5) quantification of ER                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Include "including leakage" under 5) quantification of ER                                                                                                                                     |

| 1065 | Anonymous                                       | Table 10 – Requirements for Criterion 2.1: Methodology approval process                | te              | On 2.1 part e: We recommend modifying this requirement to make clear that the example project could be hypothetical as it is not always feasible to apply a developing methodology to an existing project (there may not be investor interest in a project until there is an approved methodology, the risks would be too high).                                                                                                                                                                                                                                                                             | see comments above.                                                                                                 |
| 1065 | Anonymous                                       | Table 10 – Requirements for Criterion 2.1: Methodology approval process                | te              | On 2.1 part f: We support this proposed requirements, but recommend modifying this requirement to clarify that methodologies must be reviewed every 5 years and updated ONLY IF NEEDED. Requiring updates to a methodology when there are no updates needed is unnecessary.                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                   |
| 1065 | Anonymous                                       | Table 10 – Requirements for Criterion 2.1: Methodology approval process                | te              | On 2.1 part g: We support this requirement with a two suggested modifications. First, such a suspension should not impact projects already listed and registered under the methodology. Second, such a suspension must be based on more than one scientific study and there must be an opportunity for stakeholders to counter such arguments with science based evidence to ensure that the decision to suspend methodologies is based on a fair and balanced provision of information.                                                                                                                     | 0                                                                                                                   |

Add: "Or be approved by accredited audit entity."                                                                                                                                                                                                                                                                                                                                                                 | Add: "Or be approved by accredited audit entity."                                                                   |
| 1068 | Anonymous                                       | Table 10 – Requirements for Criterion 2.1: Methodology approval process                | te              | This is too onerous for all methodologies. "The carbon-crediting program shall require all quantification methodologies to be reviewed and updated at least every five years to verify that they continue to ensure environmental integrity." Make it 10 years, unless there is new research or guidance that has been adopted/published.                                                                                                                                                                                                                                                                    | Review and update methodologies every 10 years, instead of 5.                                                       |
| 1069 | Anonymous                                       | Criterion 2.2: Requirements for quantifying emission reductions or removals            | ge              | Requirements are in line with Gold Standard GS4GG framework                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | n/a                                                                                                                 |
| 1070 | Mark Glossoti                                   | Criterion 2.2: Requirements for quantifying emission reductions or removals            | ge              | The CCPs should aim at scientific accuracy, rather than conservatism, adding additional buffers to cater for remaining scientific imprecisions. Uncertainty can go up or down. Taking only a conservative approach to scientific evidence and adding additional buffers may create an overly restrictive structure. More concretely, in the requirements for Criterion 2.2, the notion of conservative evaluations and quantifications is an inherent contradiction to the overall science-based approach. Instead, the CCPs should require conservativeness only when scientific accuracy is not available. | -                                                                                                                   |
| 1071 | Individual/employee, Perspectives Climate Group | Criterion 2.2: Requirements for quantifying emission reductions or removals            | ge              | Include conservative, robust and transparent approach for quantification to be applied and incl. aspect of leakage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Include conservative, robust and transparent approach for quantification to be applied and incl. aspect of leakage. |
| 1072 | Javier Castro                                   | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | The requirement seems to imply that the accuracy of the values and measurements shall be discounted from the calculations. This seems a very extrem request as several values including IPCC values have accuracy level even above 30%, which would reduce the emission reduction or removals by the same percentage                                                                                                                                                                                                                                                                                         | How to apply the accuracy shall be clear, and not as a conservative approach.                                       |

| 1073 | Calvin Tran                                     | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | ge              | Regarding the full threshold for Criterion 2.2(g) on the robust quantification, overestimation and conservativeness of carbon credits, we recognize that overestimation and conservativeness is useful in reducing the chance of selling credits that do not materialize into reality. However, we also recognize that increased accuracy in quantification is a tenet to higher integrity in the carbon markets. To offer clarity to market participants and carbon buyers, it is important that they understand this distinction as well. | -                                                                                                                                                                                                                                                                                                               |

| 1078 | Anonymous                                       | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | In a scenario where emissions are increasing in any jurisdiction, this approach would artificially cap the reference level to the previous baseline. We would argue that if emissions are increasing, the jurisdiction requires more finance support, not less, and therefore should not be harmed with an artificially lowered baseline.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                       |
| 1079 | Anonymous                                       | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | Table 11(d) artificially caps subsequent baselines for jurisdictional REDD+ projects. XXXX would like to highlight this as a shortcoming of the IC VCM with regard to Natural Climate Solutions. With NCS, there is no guarantee that subsequent baselines would not go up due to social, political or other factors. Where emissions are actually increasing, putting an artificial cap on the baseline would unfairly punish communities living in the jurisdiction, and would disadvantage the government's access to finance and other support.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Rather than artificially capping the baseline, we recommend that crediting should be based on the difference between real-time emissions and an accurate, science-driven baseline.                                                                                                                                                      |
| 1080 | Anonymous                                       | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | Table 11, (g) (2) reads “the degree of conservativeness in quantifying emission reductions or removals be based on the magnitude of uncertainty in the estimation of emission reductions and removals (i.e., applying a larger degree of conservativeness in case of higher uncertainties);”                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Table 11(g)(2)                                                                                                                                                                                                                                                                                                                          |
| 1080 | Anonymous                                       | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | While it has become commonplace to adjust activity data according to calculation uncertainties (e.g. Olofsson et al, 2014), XXXX disagrees with the requirement that such deductions may only result in reference level reductions (i.e. “conservativeness”). The literature specifies adjustment in either direction according to uncertainties. Restricting adjustments to only deductions once again represents a subjective decision and deviates from the science-based approaches in literature.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | We suggests that the adjustment of activity data according to calculation uncertainties should allow for adjustments in both directions, i.e., deductions and additions, whichever may be appropriate.                                                                                                                                  |
| 1081 | Anonymous                                       | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | Table 11 explicitly favours a conservative approach over science and accuracy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Table 11(g)(1)                                                                                                                                                                                                                                                                                                                          |
| 1081 | Anonymous                                       | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | The principle of conservativeness states that when completeness or accuracy of estimates cannot be achieved, the reduction of emissions should not be overestimated, or at least the risk of overestimation should be minimized (e.g., Grassi 2007, Grassi et al 2008, Mollicone et al 2007b). The principle of conservativeness does not stipulate adjustment of results in either direction either based on measured accuracy, nor as an a-priori decision preceding measurement of accuracy. Rather, it requires a lower estimate (i.e., conservative) if results show that measurement accuracy cannot be achieved or if results are considered incomplete. To this end, this criterion is considered counterintuitive to the concept of “Robust Quantification”. Striving for conservativeness over accuracy reflects the Global North’s bias towards developing countries by disregarding country’s efforts at improving scientific accuracy. We strongly suggest avoiding such subjective approach in assessing crediting programs. | XXX suggests rephrasing as “Emission reductions and removals shall be determined using scientific methodologies and best available data to assure high levels of accuracy. If accuracy cannot be achieved, then the principle of conservativeness shall be applied such that reduction of emissions is not overestimated.”              |
| 1082 | Individual/employee, Climate Connect            | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | Higher conservativeness to estimate carbon reduction or removal in cases where uncertainties are higher is a welcome suggestion but needs to be incentivised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | ICVCM may consider recommending the credits with a special labelling or start marking which come from methodologies which accept higher uncertainties and therefore have lower credit volumes so that these credits have higher value in comparison to credits which come from methodologies which do not acknowledge the uncertainties |
| 1083 | Individual/employee, Conservation International | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | RE Criterion 2.2, [Table 11f] :                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Provide a requirement to justify quantification and uncertainty methods and use evidence-based methods backed by cited scientific literature.                                                                                                                                                                                           |
| 1083 | Individual/employee, Conservation International | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | While the CCP requires that standards describe how ERRs and uncertainty in estimates be quantified, there is no requirement to justify the quantification measures and methods they choose.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                       |

| 1084 | Individual/employee, Conservation International | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | RE Criterion 2.2, [Table 11 g]:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Maintain accuracy as the first criteria                                                                                                                                                                     |
| 1084 | Individual/employee, Conservation International | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | Proposing to use conservativeness over accuracy is not preferable. Prescribing conservativeness will simply encourage projects to use IPCC and other data (which may possibly not even be conservative) and penalize projects that make the effort to be accurate.                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                           |
| 1085 | Luzia Bieri                                     | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | ge              | Criterion 2.2, k): The crediting period of carbon credits used in the VCM shall not need to be aligned with NDC time frames as requested under criterion 2.2 (k) of the AF. A project starting in 2034 would already have to request renewal in 2035. A crediting period of 1 year does not provide any “security”. It means higher risks and higher costs for project owners. Project owners might want to postpone the project start date and hence the start of the emission reduction.                                                                                                                                                                                             | Criterion 2.2, k): The crediting period of carbon credits used in the VCM shall not need to be aligned with NDC time frames. We propose to delete the respective sentence in criterion 2.2 k).              |

| 1086 | Anonymous                                       | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | ge              | 1. "Conservativeness" is often a matter of argument for its judgment. Criteria should be clearly defined.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                           |
| 1086 | Anonymous                                       | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | ge              | 2. Alternatively, there is a need to explain to the public what the programme's thought of conservativeness is, without defining it in the CCP.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                           |
| 1087 | Carolyn Ching                                   | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | ge              | Bullet h): For many REDD projects, the goal is to address the lack of enforcement of government policies and legal requirements. Were these government policies effective, the projects would not be necessary. In such cases, the project should be able to estimate baseline emissions without taking into consideration policies that are not effectively lowering deforestation.                                                                                                                                                                                                                                                                                                   | Please clarify if this also applies to policies that prohibit deforestation.                                                                                                                                |
| 1088 | Carolyn Ching                                   | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | ge              | Bullet h: For REDD activities, the goal is to address the lack of enforcement of government policies and legal requirements. Were these government policies effective, the projects would not be necessary. In such cases, the project should be able to estimate baseline emissions without taking into consideration policies that are not effectively lowering deforestation.                                                                                                                                                                                                                                                                                                       | Please clarify if bullet h also applies to policies that prohibit deforestation.                                                                                                                            |
| 1089 | Individual/employee, KOKO Networks Limited      | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | Under “Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals” of the relevant section of assessment framework, the conservativeness guidelines are issued which are not supported with any tool or guidance on application. Additionally, it seems to be suggesting prioritization of conservativeness over accuracy, which sounds counterintuitive. The principle of conservativeness was introduced to address uncertainty in the measurement or estimation but not to undermine the system of measurement. Carbon market has witnessed genuine projects failing because of the wrong application of conservativeness in absence of clear guidance. | g (1) emission reductions or removals be determined in a conservative manner (rather than striving to use the most accurate estimate) to ensure that emission reductions or removals are not overestimated. |

| 1094 | Ivan VALENCIA        | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | There should be a time limit on the length of crediting periods replicating the guidance of paragraph 31 of the Annex Decision 3/CMA3 on Article 6.4; which provides guidance on length and renewal of activity periods.                                                                                                                                                                                                                                                                                                                                                                                                                                              | Refer to comments on this section |
| 1094 | Ivan VALENCIA        | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | Furthermore, there should be a maximum time for accrediting mitigation activities in the past, definitely not longer than 10 years in the past before the Validation takes place, and no longer than 5 years in the Full threshold.                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                 |
| 1094 | Ivan VALENCIA        | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | On the initial threshold, there should be a requirement that baselines cannot be less conservative than that of the national NDC or its constitutive parameters and assumptions, for countries that have NDC sectoral baseline data, otherwise the initial threshold fails to provide any requirement on the baselines. For instance, if the assumption behind a national NDC baseline is that the growth rate of gasoline-powered motorcycles is 4%, an individual project of e-mobility cannot indicate that its baseline has an assumption of a growth rate of 8% for those same vehicles, as this would result in an “inflated” baseline.                         | 0                                 |
| 1095 | Ivan VALENCIA        | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | On clause h), the inclusion of such policies in the baseline should be contingent to the national NDC baseline as determined by the country. For instance, if a country enacted a minimum product efficiency standard in 2021, projects that serve to implement in a faster way this requirement should be allowed to operate. Otherwise, this requirement poses a disincentive for countries to enact climate-friendly regulation.                                                                                                                                                                                                                                   | Refer to comments on this section |
| 1095 | Ivan VALENCIA        | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | On clause i) nesting SHOULD be required not only in the context of the jurisdictional REDD+ baseline but also within the Forest Reference Emission Levels as submitted by the host country to the UNFCCC.                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                 |
| 1095 | Ivan VALENCIA        | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | On clause j) option 2 is the most appropriate, since it would be bad to punish REDD+ projects that have generated performance within their boundaries, for the underperformance of the entire jurisdiction, particularly when the jurisdiction can be as large as the entire country.                                                                                                                                                                                                                                                                                                                                                                                 | 0                                 |
| 1095 | Ivan VALENCIA        | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | On clause k) the requirement of consistency with the NDC for Article 6 authorised projects should also occur for all projects, not just projects related to forest degradation and restoration.                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                 |
| 1095 | Ivan VALENCIA        | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | On clause m), key indicators should also include non-GHG indicators (hectares planted or restored, kw of renewable energy generated, etc.)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                 |
| 1102 | Anonymous            | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | On 2.2, part i and j: We are supportive of nesting approaches, and alignment of accounting to ensure that there is no double counting. However, we note that there is currently no accepted approach for allocating baselines to avoided planned deforestation projects.                                                                                                                                                                                                                                                                                                                                                                                              | see comments above                |
| 1102 | Anonymous            | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | On 2.2 part k: This type of alignment should only be required if this is specified in Article 6 guidance from the UNFCCC or via a COP decision. Further, regarding the use of forest data, there could be countries that do not include degradation emissions (it is missing from many UNREDD submissions at present) or restoration in their NDC reporting or report it in a manner that is associated with higher uncertainty or less rigor than what is stipulated in offset standards. We do not recommend requiring this, and such alignment should be re-evaluated in 2030 to ensure that is practical and feasible, and importantly, stipulated by the UNFCCC. | 0                                 |

|------|----------------------|----------------------------------------------------------------------------------------|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| 1102 | Anonymous            | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | On 2.2 part m: We do not recommend that this be included in the Assessment Framework. Information about project performance is reported in public monitoring reports and verification reports. Standards track the performance of projects based on meeting requirements specified in applied methodologies and Standard documents, and additional indicators that fall outside of the scope of verification, standard or methodology requirements could be misrepresented or subjective.                                                                                                                                                                                                                                                                        | 0                                                                                                                           |
| 1103 | Alexandre Grais      | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | On point d), although, we agree with this in principle, in practice it may be the case that a jurisdictional baseline increases for a number of reasons that are not under their control (e.g.: natural disasters). This may disincentivize a jurisdiction from participating in JREDD in the future if it has a baseline it cannot achieve, therefore having a long-term negative impact on the atmosphere. We recommend that this requirement be reassessed. For instance, in a jurisdiction where deforestation continues to rise for a decade, should it be allowed to "reset" its FREL? In such a case, should the reset include some discount to avoid providing perverse incentives? Should a discount be linked to the time deforestation has continued? | see above                                                                                                                   |
| 1104 | Vega Tapia           | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | ge              | Aligning crediting periods with NDCs accounting timelines does not seem to add any integrity value to the credits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Repsol Foundation believes that the crediting periods should be established according to demand and market needs, not NDCs. |
| 1105 | Alexandre Grais      | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | On point g): Will the IC-VCM provide further guidance on how conservative estimates may be quantified? Would the deduction simply be a deduction of the uncertainty estimate e.g.: a 7% uncertainty estimate would result in a 7% reduction in VCUs? If so, we recommend the language be revised to state that "Uncertainty estimates should strive to be the most accurate possible and that reduction or removal estimates are reduced accordingly"                                                                                                                                                                                                                                                                                                            | See above                                                                                                                   |
| 1105 | Alexandre Grais      | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | On point j) Option 1: We request further clarity on this point. Should crediting not be allocated with respects to the project's nested baseline? If it is allocated from the jurisdictional performance, it would create performance uncertainty for a nested project were other activities in the jurisdiction are not as successful. The liability should accrue on the jurisdictional level and each nested project would have an updated baseline in the subsequent crediting period. Furthermore, successful projects in a jurisdiction can serve as models for the rest of the jurisdiction.                                                                                                                                                              | 0                                                                                                                           |
| 1106 | Anonymous            | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | Criterion 2.2, requirement D)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | na                                                                                                                          |
| 1106 | Anonymous            | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | "In the case of jurisdictional REDD+ activities, the baseline for second and subsequent crediting periods shall not be higher than the baseline for the previous crediting period." Could you clarify what happens if the baseline is higher? Does the program become ineligible? Does it need to compensate? Presumably there could be extreme scenarios where it is plausible that baselines increase from one crediting period to the next, despite the good intentions of the jurisdictional program.                                                                                                                                                                                                                                                        | 0                                                                                                                           |

| 1106 | Anonymous            | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | "The carbon-crediting program shall require that any renewal of the crediting period includes a reassessment of the baseline scenario and the approaches used to calculate baseline emissions."How often? It would be useful to have a market-wide standard of the timeframes that help ensure high-quality                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                  |
| 1107 | John Holler          | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | Regarding (i): Define what "nested" means in this context unless there is a compelling reason to keep this meaning flexible. For reference, "fully nested" is defined under the Tropical Forest Credit Integrity 2022 Guide: <a href="https://tfciguide.org/">https://tfciguide.org/</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | n/a                                                |
| 1107 | John Holler          | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | Regarding (j): Do include requirements about credit allocation, and define what "appropriate" means in this context. For example, elaborated from the Tropical Forest Credit Integrity 2022 Guide, one component under the "fully nested" definition includes that "benefits from crediting are allocated to stakeholders and rights holders in a fair and transparent manner. Such allocations can utilize different approaches, including, but not limited to, those based on performance relative to jurisdictionally allocated baselines."                                                                                                                                                                                                                                                                                               | 0                                                  |
| 1108 | Anonymous            | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | Accuracy should be prioritized over conservativeness.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Eliminate provision (g)(1).                        |
| 1109 | Anonymous            | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | In the case of jurisdictional REDD+ activities, the baseline for second and subsequent crediting periods shall not be higher than the baseline for the previous crediting period.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | N/A                                                |
| 1109 | Anonymous            | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | This statement needs to specify that when establishing the baselines in the next crediting period these shall remove the results of the program/project from the initial crediting period. It doesn't make sense to require the results from the previous crediting period to be included in the next crediting period. For example, if there where an estimated 1,000 hectares per year of deforestation that would occur in the baseline, and the program/project stops all of it in the first crediting period then if this was included in the next period the baseline would be zero. But the 1,000 hectares of baseline deforestation would have continued in most cases far beyond the initial crediting period (especially with the shorter and shorter crediting periods that are being adopted in the newer standards these days). | 0                                                  |
| 1110 | Anonymous            | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | It is not sound to say "most conservative," and not "scientific." There should be uncertainty deductions, and a principal of conservativeness. Because "determined in a conservative manner" has no scientific quantifiable answer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Replace "most conservative" with "most scientific" |

| 1111 | Anonymous            | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | It is good to require that projects nested in a jurisdictional program have a spatially allocated baseline but programs should have the option of whether to conduct monitoring and verification at the jurisdictional program scale or at the project level.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | N/A                                                                                                                                                                                                                                                                                                                                                    |
| 1112 | Anonymous            | Table 11 – Requirements for Criterion 2.2: Quantifying emission reductions or removals | te              | This requirement is taking funds from REDD+ host countries who are producing an environmental asset. If the program/project were "additional" by needing carbon revenue from the start, and then created a future income stream, they should have the right to continue to receive these carbon revenues after the renewal because they were additional at the start. How can it be justified that once you make "enough money" with your carbon revenue you no longer have an environmental asset with value? That is like saying, you made your IRR on your coffee business now you have to give your coffee away for free.                                                                                                                                                                                                                                                                                             | N/A                                                                                                                                                                                                                                                                                                                                                    |
| 1113 | Anonymous            | Criterion 2.3: Ex-post determination of emission reductions or removals                | te              | There are certain cases that ex-ante crediting schemes can be designed in a way that does not damage the credibility of carbon credits issued, but rather provides a powerful underpinning for mitigation activities facing financial barriers. One good example is reforestation activities that are carried out subsequent to final felling.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | To insert "in principle" between "shall" and "be determined ex-post" and add to the end the following text. "Certain exception may exist especially in cases where ex-ante crediting is truly necessary for projects to overcome financial barriers and drive mitigation actions and is subject to robust quantification and compensation mechanisms." |
| 1113 | Anonymous            | Criterion 2.3: Ex-post determination of emission reductions or removals                | te              | The rationale for this is as follows.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                                                      |
| 1113 | Anonymous            | Criterion 2.3: Ex-post determination of emission reductions or removals                | te              | Firstly, reforestation activities have intrinsically financial difficulties as they require large upfront costs for planting and intensive care of young seedlings during the first ten years of forest development while having to wait for several decades to get revenue from timber sale. Nevertheless, the rate of carbon uptake during the initial 10-year period is so low that carbon crediting cannot be an effective incentive to overcome such financial barrier. The rate of carbon uptake will accelerate significantly after the tree stands reach 10 years old unleashing the potential of benefiting from large volumes of carbon removals. Therefore, adjustment mechanisms may be needed to bridge the temporal gap between when carbon revenue is needed and when carbon credits to be issued are determined.                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                      |
| 1113 | Anonymous            | Criterion 2.3: Ex-post determination of emission reductions or removals                | te              | Secondly, improved forest management methodologies already have a built-in compensation mechanism for possible loss of mitigation outcomes achieved through carbon removals in the form of obligatorily allocating certain percentage of carbon credits issued to the buffer pool account. This mechanism can be also used to compensate for contingencies when carbon credits determined ex-ante are found to become unattainable due to exogenous factors such as natural disturbance or expropriation. The idea of making compensation for the drain of forest biomass carbon by retiring equivalent carbon credits already issued by means of ex-post quantification from the buffer account is essentially the same as making compensation for unsuccessful recharge of biomass carbon in the forest ecosystem by retiring carbon credits already issued by means of ex-ante quantification from the buffer account. | 0                                                                                                                                                                                                                                                                                                                                                      |
| 1113 | Anonymous            | Criterion 2.3: Ex-post determination of emission reductions or removals                | te              | Thirdly, although the loss of forest biomass as a result of cutting down trees is counted as emissions, it does not reflect the real-world carbon flux. Rather, it is just determining emissions that are yet to occur as an accounting practice. The fact is that, however, significant portions of forest biomass that have been counted as ex-ante emissions when trees were felled will keep storing carbon in the form of wood products for decades and will only be released back into the atmosphere after the end of their product life cycle when they will be used as the feedstock for bioenergy substituting fossil fuel uses. This means that offsetting emissions by carbon credits issued ex-ante from sustainably managed forests does not necessarily add carbon dioxide concentration in the atmosphere.                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                      |

| 1113 | Anonymous            | Criterion 2.3: Ex-post determination of emission reductions or removals | te              | Fourthly, although baselin setting in carbon crediting schemes is a robust, reliable and transparent process based on the best available data, it is impossible to get rid of all uncertainties associated with the estimation of baseline emission levels given that actual future emissions or removals are more or less affected by the real-world economic situation. This means that the quantification of credits based on difference between the baseline scenarios and project implementation results will intrinsically encompass uncertainties related to future projections. Theoretically, it does not make sense to penalize any ex-ante crediting by setting the assessment criteria as such while ignoring the uncertainties related to baseline setting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1113 | Anonymous            | Criterion 2.3: Ex-post determination of emission reductions or removals | te              | Fifthly, the quantification of carbon removals in improved forest mnagement methodologies is based on the calculation of the change in forest carbon stock in different points in time derived from the robust model of different types of forest growth tables. It should be noted that that reforestation activities can give confidence to ex-ante crediting once the growth tale to be applied for the calculation of carbon stock change is identified.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1113 | Anonymous            | Criterion 2.3: Ex-post determination of emission reductions or removals | te              | As for the forest management methodology under the J-Credit Scheme, several measures are put in place to ensure the integrity of the ex-ante crediting. First, the loss of forest biomass should be counted at the time of felling and ex-ante crediting can only be applied when planting is completed within two years after felling. Second, the volume of ex-ante crediting is limited up to the projected carbon stock accumulated at the time of the "standard cutting age", which is the statutory lower limit of tree age when clear-felling is permitted. In other words, it is highly likely that forest stands grow beyond the standard cutting age, as long as reforestation is done. Third, no double counting cannot occur because carbon credits will not be issued from the forest stands where carbon credits are already deterined based on ex-ante calculations until the stands reach the standard cutting age. Fouth, once the growth of forest stands with carbon credits issued ex-ante is found to be unsuccessful, the amount of carbon credits equivalent to the credits already issued ex-ante should be retired from the buffer account, or the project proponent should compensate for the same amount, depending on the cause of the damage or lost. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1114 | ANdi Stanner         | Criterion 2.3: Ex-post determination of emission reductions or removals | ge              | Forward financing is absolutely crucial for an efficient, scaled carbon market that is inclusive also to community-led impact projects. Furthermore, it's a reality and increasingly becomes the norm in buying behavior larger corporations. Bilateral forward contracts are gauged in tonnes and are often even denominated in amounts of carbon credits to be received at a later stage (rather than a percentage of the total yield for example).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | We recommend to the ICVCM to view ex-ante units not as a comparable to credits but as a financial product to get access to credits. The terminology should be changed to "units" or similar and it should be made abundantly clear - including established technical safeguards - by any programme that these units cannot (legally and technically) be used to consume the environmental benefit contained in an ex-post credit that is to be issued later |
| 1114 | ANdi Stanner         | Criterion 2.3: Ex-post determination of emission reductions or removals | ge              | The fact that this is a reality and common practice should be reflected and it should be considered that it's better practice to accept and govern than to exclude and leave integrity-functions that are attached to this part of the lifecycle to profit-optimizing individuals.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1114 | ANdi Stanner         | Criterion 2.3: Ex-post determination of emission reductions or removals | ge              | Ex-Ante credits have a nomenclature problem, as in they are not to be confused with credits and they cannot conceptually be retired. Rather they reflect the right (under given circumstances) to receive a carbon credit at a later stage. This financial primitive is a fundamental building block of all efficient commodity markets today and we should strive collectively to utilize this primitive for its potential.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1114 | ANdi Stanner         | Criterion 2.3: Ex-post determination of emission reductions or removals | ge              | For any kind of forward financed purchase, information asymmetry between seller and buyer is exponentially higher than for spot trades. Adding the complexity of credit-yielding projects, this poses (provably so) a huge bottleneck to unlock project-enabling captial to flow into the system, because buyers have very high cost of assessing the risk involved in their investment without the help of costly and scarce expertise. Standard programmes are well positioned to chop away material parts of this information asysmmetry via the work they do and request others to do in order to enroll in the program in the first place. Ex-ante units pose a real efficiency potential in form of transactional cost reduction. Furthermore, much like with other (structured or semi-structured) forward products, flourishing secondary markets can be established to scale up volumes and prices for actual credits and for providing higher liquidity earlier in the life cycle and at lower transactional cost.                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| 1117 | Individual/employee, Meo Carbon Solutions       | Criterion 2.3: Ex-post determination of emission reductions or removals | te              | How only ex-post carbon credits can be issued for a project like Afforestation/Reforestation?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | See above.                                                                                                                                                                                                                                                                                                                                      |
| 1118 | Anonymous                                       | Criterion 2.3: Ex-post determination of emission reductions or removals | te              | With appropriate safeguards, ex-ante issuing (not retirement) is a very important means of unlocking finance for projects, with particular relevance in the land sector. A blanket ban on ex ante credits serves the interests of simplicity, but has no necessary relationship to integrity. Forward financing is very important in making mitigation projects possible, and banning it entirely can choke off investment for no good purpose. We urge the IC to consider appropriate levels of scrutiny that could make ex ante credit issuance viable for meeting the requirements of the CCP.                                                                                                                                                                                             | Eliminate criterion 2.3.                                                                                                                                                                                                                                                                                                                        |
| 1119 | individual/employee, Plan Vivo Foundation       | Description                                                             | te              | Based on the Criterion 2.3 in the requirements for carbon-crediting programs, which states that "carbon credits shall not be issued for emission reductions or removals that are yet to occur", it's not totally clear from the Core Carbon Principles definition of a Carbon Credit (as defined in Part 5.5 of this document) whether pending issuance units (such as Future Plan Vivo Certificates (fPVCs) Reported Plan Vivo Certificates (rPVCs) or Pending Issuance Units (PIUs) from the Woodland Carbon Code (WCC) would be considered carbon credits in this context.                                                                                                                                                                                                                 | Modifying the wording of either the definition of a Carbon Credit, or being more specific on the Criterion 2.3, so that units such as the fPVCs, rPVCs (reported Plan Vivo Certificates, which are reductions or removals that have already occurred and been reported, but not yet verified), or PIUs can be included as carbon credits.       |
| 1119 | individual/employee, Plan Vivo Foundation       | Description                                                             | te              | Although they cannot be retired on the registry (S&P Global – Markit Registry in both cases), they can be issued and administratively cancelled, so could meet the definition proposed; but if Criterion 2.3 is then applied at the program level, it could rule out any programmes / standards, like Plan Vivo or the WCC, that issue PIUs.                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                               |
| 1120 | Individual/employee, Radicle                    | Description                                                             | ge              | Completely agree, removes all the uncertainty that comes with Ex-Ante                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | N/A.                                                                                                                                                                                                                                                                                                                                            |
| 1121 | Eric Cooperstrom                                | Description                                                             | ge              | The risks associated with ex-ante crediting cited in the draft CCPs are relevant, however, we are not supportive of a blanket ban on ex-ante crediting. In certain circumstances, ex-ante crediting may be a critical mechanism for incentivizing actions and investments that contribute to tangible carbon sequestration and climate solutions. For example, we have reviewed the Climate Forward reforestation protocol of the Climate Action Reserve as one such ex-ante mechanism. We have identified situations where Climate Forward crediting could incentivize desirable climate action such as when timberlands are damaged by wildfires and legal requirements and reforestation economics in the absence of carbon finance would be inadequate to promote reforestation outcomes. | Consider developing clear guidance for ex-ante crediting methodologies that ensure integrity.                                                                                                                                                                                                                                                   |
| 1122 | individual/employee, Plan Vivo Foundation       | Means of assessment                                                     | te              | In the way it is currently written, this criterion can be interpreted as ruling out programmes or standards that issue both ex-ante and ex-post carbon credits from being CCP/ICVCM eligible. It was commented during the Consultation Workshop held on 13th September, that it is not the intention for this to happen, so changes in the wording are needed to adjust the criterion to be applicable at a carbon credit level and not a carbon programme level.                                                                                                                                                                                                                                                                                                                             | Modifying the wording of this criterion so that it is applicable at a carbon credit level and not at a carbon-crediting programme level, hence, not affecting programmes / standards that issue both ex-ante and ex-post.                                                                                                                       |
| 1122 | individual/employee, Plan Vivo Foundation       | Means of assessment                                                     | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | It would be ideal too, to set criteria to define when a credit is considered ex-post (e.g. the environmental benefit has been delivered and reported, reported and verified, reported and verified by an external 3rd party?, etc.), especially thinking of those credits that have to go through a conversion process from ex-ante to ex post. |

They will not be eligible under CCP, only carbon credits issued ex-post are CCP-eligible                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | N/A                                                                                                                                                                                                                                                                                                                                             |
| 1124 | Anonymous                                       | Means of assessment                                                     | te              | Understanding the drive for integrity to not allow ex-ante credits to be retired for offsets. However, ARR activities have such a high capex in the beginning and so slow carbon revenue that a lot of potential restoration and removals are impossible by the cashflow model.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | See above.                                                                                                                                                                                                                                                                                                                                      |

| 1124 | Anonymous            | Means of assessment | te              | Such ex-ante units can be pre-sold at a part of the full sales price to provide more secure pre-payments to projects while allowing buyers to only retire them after converted to ex-post and only then paying full price.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1124 | Anonymous            | Means of assessment | te              | Ex-ante credi issuance (not retirement) should be allowed for limit small-scale IPLC projects like ARR <50,000 tCO2e/yr.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1125 | Ryan Holmes          | Means of assessment | ge              | Currently, only credits issued on an ex-post basis may be deemed CCP eligible. However, in many cases one of the key financial levers for instigating a mitigation activity for capital intensive projects in the absence of available government subsidies comes from the sale of ex-ante credits. Although there are inherent risks associated with ex-ante crediting, there are a series of processes that can be put in place such as the inclusion of a reserve pool to deal with lower-than-expected performance. Furthermore, risks related to the discontinuation of the mitigation activity can be mitigated through safeguards such as the development of insurance products to protect against the possible risk of dissolution of the program. In this context, risk mitigation measures will be particularly viable for mitigation activities with no inherent reversal risk. It is valid and understood that only retired ex-post credits will ultimately be able to be utilised as an offset/removal. However, this should not prevent carbon crediting programs from being able to demonstrate their CCP-related credentials as they look to issue ex-ante credits with clear scope to become high quality ex-post credits. The issuance of ex-ante credits should be conducted whilst operating on the basis that it is crucial that claims are accurate and that the responsibility should be placed on the carbon crediting program to ensure that claims are communicated accurately. Any divergence between the number of ex-ante credits issued and the ultimate performance of the mitigation activity will therefore be able to be accounted for, and suitable rectifying actions be carried out, before issuing the associated ex-post credit. | There should be a procedure in place wherein credits issued on an ex-ante basis may be labelled in a manner to demonstrate to potential buyers that credits sold on an ex-ante basis are aligned with the CCPs until such a time when they become fully CCP eligible. As an example, such labels may be "CCP aligned" at the initial ex-ante stage and then "CCP eligible" at ex-post. Following this process would be in keeping with established industry practices such as validating a mitigation activity before the removal is ultimately verified. The associated credits will only then become initially or fully CCP-eligible once they have reached the ex-post stage and the removal has quantifiably and verifiably been carried out. |
| 1126 | Eric Cooperstrom     | Means of assessment | ge              | The risks associated with ex-ante crediting cited in the draft CCPs are relevant, however, we are not supportive of a blanket ban on ex-ante crediting. In certain circumstances, ex-ante crediting may be a critical mechanism for incentivizing actions and investments that contribute to tangible carbon sequestration and climate solutions. For example, we have reviewed the Climate Forward reforestation protocol of the Climate Action Reserve as one such ex-ante mechanism. We have identified situations where Climate Forward crediting could incentivize desirable climate action such as when timberlands are damaged by wildfires and legal requirements and reforestation economics in the absence of carbon finance would be inadequate to promote reforestation outcomes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Consider inclusion of ex-ante crediting methodologies with specific guidance to determine integrity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| 1128 | Max DuBuisson        | 0                   | ge              | Some programs do not break out validation as a separate component of the process. For a program which relies on standardized project protocols, the key components of validation are partially incorporated into the development of the project protocols. Other components of the validation process may occur during project listing, as well as the initial verification. It is overly limiting to assume that every crediting program should be designed to incorporate validation as a standalone activity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Remove the requirement for validation to occur as a standalone activity in the case of projects following standardized protocols.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| 1131 | Individual/employee, CLA                               | 0                   | ge              | Effective market monitoring and compliance systems are critical for establishing trust, but for growth in the UK nature-based VCM, transaction costs must not be prohibitive. To ensure costs remain viable, it is important that the validation and verification process does not mandate an overly prescriptive process. It must be possible to use emerging technologies to reduce the cost burden for this process, to ensure the most accurate measurement and verification methods are used, and to reflect the latest science and technological developments.               | As above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| 1137 | Ronan Carr                                             | 0                                                                                            | ge              | Auditors are known as verification/verification bodies (VVBs), and act as independent third-parties to assess carbon projects against the rules set out by the relevant registry. Despite the common underlying principle that carbon projects must be verified to demonstrate measurable additionality and permanence, there are differences in auditing protocols across various accreditors and methodologies within the VCM.                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 1137 | Ronan Carr                                             | 0                                                                                            | ge              | There are two key points of alignment between the current CCPs and BeZero's stance. First, third-party auditing is key for ensuring consistency, transparency and integrity in the VCM. Second, validation should be completed before the first issuance.                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 1137 | Ronan Carr                                             | 0                                                                                            | ge              | However, there are some points for further consideration. BeZero advocates for more standardised frequency of reporting requirements across accreditors, as current approaches vary significantly.                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 1137 | Ronan Carr                                             | 0                                                                                            | ge              | We would also like to see more robust safeguards against conflicts of interest. Currently, project developers choose and pay for auditors, which can create incentives for auditors to validate and verify projects less scrupulously. One way to counteract this is to introduce more stringent transparency requirements on auditor performance, which would allow buyers to make more informed decisions. A lesson could also be learned from compliance markets, where a rotation system ensures that projects are audited by different VVBs. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 1138 | Individual/employee, ANSI National Accreditation Board | 0                                                                                            | ge              | ANAB appreciates the work of the IC-VCM and appreciated the opportunity to comment. We recommend that IC work and collaborate with existing mechanisms for quality oversight.                                                                                                                                                                                                                                                                                                                                                                     | See previous comments on use of auditing and audit versus validation and verification, which should be defined terms. ANAB welcomes the work of the IC-VCM and encourages IC to collaborate with existing frameworks for quality, conformity assessment and for supporting regulation, namely ISO and IEC for standards and IAF, the International Accreditation Forum, for accreditation. ANAB would welcome the opportunity to answer any questions on its own accreditation which is recognized by numerous voluntary as well as regulatory programs. |

For example, where the verification body utilizes automated sensor data collection and analytics, and makes the data publicly available for audit, then the automatic production of carbon certificates from the standard-attaining operations should be encouraged for its high-integrity, low cost, and scalability. This is the direction that information technology is driving every other industry. It will drive the emissions mitigation industry as well, so it is imperative that it be permitted and even encouraged within the standard. | Alternatively, the verification body might not need to be separated from the carbon certificate issuing party if employing a superior methodology. | 1143 | Individual/employee, ANSI National Accreditation Board | Description                                                                                                              | ge              | Consider defining key terminology such as "validation" or "verification".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | See ISO 14065 definitions. Verification is a process where a verification body assesses an organization's, product's, or project's GHG statement against defined verification criteria (this process therefore deals with historical outcomes). Validation is a process where a validation body assesses a project's GHG project plan against defined validation criteria (this process therefore deals with the assessment of potential future outcomes).                                                                                                                                                                                                                                              |

| 1152 | Individual/employee, Conservation International | Table 12 – Requirements for Criterion 3.1: Independent, third-party validation and verification of mitigation activities | te              | The document does not specify criteria or acceptable internationally recognized types of certifications for VVB accreditation.                                                                                                                                                                                                                                                                                                                                                                                                                                        | Provide specific guidance on accreditation of VVBs.                                                                           |
| 1153 | Oda Almas                                       | Table 12 – Requirements for Criterion 3.1: Independent, third-party validation and verification of mitigation activities | te              | It is not clear what "resolution of findings" in no 10 refers to.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Se above                                                                                                                      |
| 1153 | Oda Almas                                       | Table 12 – Requirements for Criterion 3.1: Independent, third-party validation and verification of mitigation activities | te              | There is a need for 3.1 to include criteria about what methods VVBs should use for data collection when it comes to consideration of compliance with social safeguards (e.g. respect for human rights). E.g. the carbon-crediting program must require VVBs to triangulate any information shared by the mitigation activity proponent by inter alia conducting community site meetings and interviews, check for community/NGO/academic reports regarding outstanding issues/conflicts in an area of land etc etc. This could be inserted as bullet c), for example. | 0                                                                                                                             |
| 1154 | Carolyn Ching                                   | Table 12 – Requirements for Criterion 3.1: Independent, third-party validation and verification of mitigation activities | te              | Bullet f implies that all projects, including NCS projects, must monitor and verify emission reductions and carbon removals annually. This isn't financially practicable for NCS projects where emission reductions and carbon sequestration accumulate on a slower timeline and where monitoring is expensive and time consuming.                                                                                                                                                                                                                                    | Please what it means to be "inactive" and whether projects and programs need to conduct monitoring and verification annually. |
| 1156 | Ivan VALENCIA                                   | Table 12 – Requirements for Criterion 3.1: Independent, third-party validation and verification of mitigation activities | te              | On clauses a) and b) a new item should be added: -Compliance with national regulations, particularly those associated with carbon market projects.                                                                                                                                                                                                                                                                                                                                                                                                                    | Refer to comments in this section                                                                                             |
| 1156 | Ivan VALENCIA                                   | Table 12 – Requirements for Criterion 3.1: Independent, third-party validation and verification of mitigation activities | te              | This is important because several countries have imposed regulations on mitigation projects in terms of carbon accounting, baselines, alignment with NDCs, additionality, eligibility requirements, consultation processes, carbon rights ownership, that need to be examined by the VVB in both the validation and verification reports. Otherwise, the VVB sticks to revising the project in light of the methodology set by the standard without understanding whether there are nationally-specific provisions that must be met.                                  | 0                                                                                                                             |
| 1158 | Anonymous                                       | Table 12 – Requirements for Criterion 3.1: Independent, third-party validation and verification of mitigation activities | te              | On 3.1 part e: We suggest changing this to 'at the time of issuance'. Often the final reports are not available until the time of issuance, so requiring this would result in delayed issuance without any clear benefit.                                                                                                                                                                                                                                                                                                                                             | see comments                                                                                                                  |

| 1158 | Anonymous            | Table 12 – Requirements for Criterion 3.1: Independent, third-party validation and verification of mitigation activities | te              | On 3.1 part f: This is a confusing requirement as the 12 months prior to an issuance request will almost always coincide with a verification which, of course, requires significant input from a project. Perhaps this is referencing the unusual and unlikely situation where a project delays its issuance request following the completion of verification? If so, it is unclear why a 12 month delay between verification completion and an issuance request would need to be justified as long as all other MRV requirements are met. We suggest removing this requirement as it does not add value. | 0                                                                            |

| 1159 | Anonymous            | Table 12 – Requirements for Criterion 3.1: Independent, third-party validation and verification of mitigation activities | te              | This criterion is not clear. ICVCM must clarify how it defines the "inactivity" of a mitigation activity. Does this mean that the project simply has not conducted a verification within 12 months, or something else?                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                            |
| 1160 | John Holler          | Table 12 – Requirements for Criterion 3.1: Independent, third-party validation and verification of mitigation activities | te              | Recommendation for new requirement: The program shall require the VVB to provide immediate notice of any suspension or other lapses in its accreditation, and the reasons for such. Failing this rule, lapses in accreditation may go unnoticed by the crediting program, making requirement (g) under this section difficult to monitor/enforce.                                                                                                                                                                                                                                                         | Add requirement requiring that VVB's provide notice of accreditation lapses. |
| 1161 | John Holler          | Table 12 – Requirements for Criterion 3.1: Independent, third-party validation and verification of mitigation activities | ed              | Regarding (f): Is this implying that projects should be issuing credits (or otherwise signaling activity?) on an annual basis? If not, the wording is unclear. If so, it is important that projects with non-permanence risks indicate on a frequent and pre-determined basis that they are still in operation and have not experienced reversals. It is less clear why a project without non-permanence risks should be expected to indicate that it is "active with the program".                                                                                                                       | n/a                                                                          |
| 1162 | Anonymous            | Criterion 3.2: Robust accreditation of validation and verification bodies                                                | ge              | At present there are insufficient accredited VVBs in many parts of the world                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Please see the suggestions in our overarching comments on this matter        |

| 1163 | Individual/employee, Perspectives Climate Group | Criterion 3.2: Robust accreditation of validation and verification bodies                             | ge              | To ensure that VVBs have a valid accreditation, is also necessary to cross-check whether the accreditation presented includes the sectoral scope of the underlined activity ( to be audited) - in other words if the VVB is allowed to perform audits in the specific sector of the activities, especially in cases when VVBs are accredited at the national level ( with national accreditation programs). VVBs could have just one or two sectoral scopes included in their accreditation (because more sectors accredited imply more cost for them) | To ensure that VVBs have a valid accreditation, is also necessary to cross-check whether the accreditation presented includes the sectoral scope of the underlined activity ( to be audited) - in other words if the VVB is allowed to perform audits in the specific sector of the activities, especially in cases when VVBs are accredited at the national level ( with national accreditation programs). VVBs could have just one or two sectoral scopes included in their accreditation (because more sectors accredited imply more cost for them)   |
| 1165 | Anne-Marie Warris                               | Description                                                                                           | te              | Criteria 3.2 states that “The carbon-crediting program shall require GHG validation and verification processes to be undertaken by VVBs with a valid accreditation issued by an International Accreditation Forum or by an accreditation system under the UNFCCC”. To ensure no risk of misunderstanding the following edits are proposed                                                                                                                                                                                                              | Proposed changes to the language - Note red text are proposed additions/ changes and red text with strike through are proposed deletions                                                                                                                                                                                                                                                                                                                                                                                                                 |

| 1172 | Darcy Jones                                     | Table 13 – Requirements for Criterion 3.2: Robust accreditation of validation and verification bodies | te              | Accreditation by the CDM is not relevant to REDD+ projects or programs, as REDD+ is not eligible under the CDM. Designated Operational Entities cannot be assumed to have competence related to REDD+. Neither the CDM Executive Board nor the UNFCCC provide oversight over the performance of VVBs when they are auditing projects and programs under independent standards. | Accordingly, this section needs to be revised either to require accreditation by a member body of the International Accreditation Forum, OR to include additional requirements regarding competence in oversight for those VVBs that are not accredited to such a body.                                                                                                                                                                                    |

| 1175 | Individual/employee, Perspectives Climate Group | Criterion 3.3: Procedures and requirements to ensure impartiality and avoid conflicts of interest     | ge              | To ensure impartiality also the internal structure of the third independent entity needs to be reviewed. This includes their legal status and the services they offer, since even if there is not a conflict of interest between the project and the entity, internally, they could also be offering other services that influence their participation in the project.         | To ensure impartiality also the internal structure of the third independent entity needs to be reviewed. This includes their legal status and the services they offer, since even if there is not a conflict of interest between the project and the entity, internally, they could also be offering other services that influence their participation in the project.                                                                                     |
| 1176 | Vega Tapia                                      | Criterion 3.3: Procedures and requirements to ensure impartiality and avoid conflicts of interest     | ge              | It seems a good option for promoting impartiality from VVBs to propose the rotation, but not on every validation/verification.                                                                                                                                                                                                                                                 | A maximum of 3 validation/verification procedures, to have better offers from the VVBs.                                                                                                                                                                                                                                                                                                                                                                    |
| 1178 | Anonymous                                       | Description                                                                                           | te              | Rotation of VVBs will demand a lot of efforts to the Scheme entities and might create unnecessary confusion to PDs. I think this has to be on VVBs side; ISO already provides requirements for this. VVBs cannot perform verifications of a validated project and requires the rotation of team members.                                                                       | The provisions shall include the exclusion of VVBs in carrying out validations and verifications and rotation of team members.                                                                                                                                                                                                                                                                                                                             |

| 1180 | Javier Castro                                   | Table 14 – Requirements for Criterion 3.3: Ensuring impartiality and avoiding conflicts of interest   | te              | a) and b) are irrelevant as those requirements are part of the accreditation process                                                                                                                                                                                                                                                                                           | delete a) and b)                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1181 | Josiah McClellan                                | Table 14 – Requirements for Criterion 3.3: Ensuring impartiality and avoiding conflicts of interest   | te              | 3.3c                                                                                                                                                                                                                                                                                                                                                                           | This provision is superfluous in light of provisions 3.3a and 3.3b. Rotating VVBs for the sake of rotating VVBs only adds administrative burden, especially since risks to conflict of interest are mitigated in 3.3a and 3.3b. VVBs that have familiarity with a mitigation activity proponent (contracting, invoicing, project knowledge) are helpful and not a conflict of interest. Arbitrary rotation would harm the ability to leverage familiarity. |

| 1182 | Individual/employee, Conservation International | Table 14 – Requirements for Criterion 3.3: Ensuring impartiality and avoiding conflicts of interest | te              | The document does not specify the types of conflict of interest that would inhibit the independence of VVBs and their decision-making.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Provide specific guidance and examples of conflicts of interest.                                                                                                                                                                                                                                                                                                                                                                        |
| 1183 | Individual/employee, KOKO Networks Limited      | Table 14 – Requirements for Criterion 3.3: Ensuring impartiality and avoiding conflicts of interest | te              | One of the biggest gap is observed in appointment of auditors and disclosure of conflict of interest by the VVBs external auditors. Many individuals are working as both consultants and VVBs' auditors for similar projects where it becomes difficult to monitor conflict of interest. Moreover, the VVB agencies don't have proper mechanism to identify conflict of interest but solely rely on individual's declaration of conflict of interest. The assessment framework should provide a robust tool on how to conduct conflict of interest. The framework should also release guidelines for VVB agencies/program to avoid hiring individuals who are offering both kind of services at the same time or they should implement stringent procedures to track any conflict of interest (beyond declaration by the individual). | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 1183 | Individual/employee, KOKO Networks Limited      | Table 14 – Requirements for Criterion 3.3: Ensuring impartiality and avoiding conflicts of interest | te              | Similar issue is also observed at program level where the program appoints external individuals as auditors but solely relies on self declaration by these external individuals for addressing conflict of interest.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 1184 | Oda Almas                                       | Table 14 – Requirements for Criterion 3.3: Ensuring impartiality and avoiding conflicts of interest | te              | In the pursuit of independence and impartiality it is important that the carbon standards have requirements ensuring that the funding for the VVBs is separate from the projects/jurisdictions being audited. One recommendation is to require the carbon crediting standards to set up escrow funds to which the projects/jurisdictions seeking verification can contribute and which can cover the work of the VVBs for that carbon standard in general.                                                                                                                                                                                                                                                                                                                                                                            | New c)                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1184 | Oda Almas                                       | Table 14 – Requirements for Criterion 3.3: Ensuring impartiality and avoiding conflicts of interest | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | The carbon-crediting program shall have an independent fund (e.g. escrow fund) to which projects/jurisdictions seeking validation and verification must contribute. This fund will pay for the work of the VVB(s) of the specific carbon-crediting standard in general, so no direct link will exist between the specific entity being verified and the VVB.                                                                            |
| 1185 | Individual/employee, EarthXCG GmbH              | Table 14 – Requirements for Criterion 3.3: Ensuring impartiality and avoiding conflicts of interest | ge              | It is our opinion at EarthXCG that any accreditation requirements reflect the actual expertise required in the methodology being implemented. Where, for example, the validation method requires a human scientific expertise, then such scientific expertise and process should be confirmed. Where the solution is driven by data analytics, then the information technology expertise and algorithmic integrity should be confirmed.                                                                                                                                                                                                                                                                                                                                                                                               | It is our opinion at EarthXCG that any accreditation requirements reflect the actual expertise required in the methodology being implemented. | 1190 | Anonymous            | Table 15 – Requirements for Criterion 3.4: Normative program documents with which VVBs are to conform in performing their auditing functions | ge              | Many of these provisions should be provided for internally by the VBB by virtue of being accredited.                                                                                                                                                                                                                                                                                                                                              | Consider streamlining to minimise the burden placed on the carbon crediting programme                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 1191 | Anonymous            | Table 15 – Requirements for Criterion 3.4: Normative program documents with which VVBs are to conform in performing their auditing functions | ge              | We understand the general requirements to avoid conflicts of interest in any governance or operational structure. However, under a rigid policy dictating conflict of interest, Validation and Verification Bodies would engage individuals without any connection to the activity area, such that it discourages local market entrants and consequently results in the accumulation of revenue and resources to individuals in the Global North. | XXX suggests rephrasing Table 15(a)(2) to “adequate resources to undertake audits, adequate resources for personnel and competency management, including, training and hiring of members from IPLC communities, particularly women and youth ”                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 1191 | Anonymous            | Table 15 – Requirements for Criterion 3.4: Normative program documents with which VVBs are to conform in performing their auditing functions | ge              | We advocate for a less rigid policy on conflict of interest, balanced sufficiently with transparency requirements to check impartiality. This can also enable VVBs to support training and create careers for local community members and IPLC members to partake in the audit process, thereby contributing to local development and regional SDG priorities.                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 1192 | Anonymous            | Table 15 – Requirements for Criterion 3.4: Normative program documents with which VVBs are to conform in performing their auditing functions | ge              | XXXX is conscious that the emphasis on impartiality would eliminate local participation in validation and verification of mitigation activities, by engaging disconnected global service providers. We ask for the re-consideration of this provision such that training and employment at the local level can contribute to positive SD impact as well.                                                                                          | An indicator of success for IC VCM’s ambition will be to see the emergence of local service providers, technicians, consultants, auditors that speak local dialects and languages, are paid in local currency and operate at local costs. Thus far, the VCM is still a market dominated by a few large developers and investors. To unlock the full mitigation potential, carbon measurement and accounting services need to be mainstreamed and made accessible, particularly in the area of energy efficiency and for nature-based solutions, where tremendous mitigation potential lies in restoration and conservation opportunities that often require multi-stakeholder and co-operative approaches. |

| 1196 | Anonymous                                                            | Criterion 3.5: Robust oversight of the VVBs in performing their auditing functions under the carbon-crediting program, including a system for sanctioning nonconformity | ge              | We believe that the oversight of VVBs should also include the ability to retroactively cancel or declassify/downgrade credits certified by a VVB in breach of their performance standards.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | n/a                                                                                                                                                                                                                                                                                                               |
| 1197 | Darcy Jones                                                          | Means of assessment                                                                                                                                                     | te              | Member bodies of the International Accreditation Forum provide this oversight for accredited VVBs, so carbon-crediting programs that require such accreditation need not perform such oversight directly. However, VVBs not accredited by an IAF member would require oversight by carbon-crediting programs that do not require such accreditation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Linked to the concern about Criterion 3.2, clarification is needed regarding which entities are eligible to provide oversight.                                                                                                                                                                                    |
| 1199 | Darcy Jones                                                          | Table 16 – Requirements for Criterion 3.5: Robust oversight of the VVBs in performing their auditing functions                                                          | te              | N/A                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Point b) should be expanded to additionally require that the suspension or revocation of a VVB be accompanied by publicly available notice as a means of further driving transparency and accountability in the market. This approach could help other crediting programs conduct more targeted risk assessments. |
| 1200 | Alexandre Grais                                                      | Table 16 – Requirements for Criterion 3.5: Robust oversight of the VVBs in performing their auditing functions                                                          | te              | We fully support these points; the market would greatly benefit from further confidence in the third-party evaluation of carbon projects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Therefore, we would recommend that VVBs undergo an accreditation process by an independent entity, such as an IC-VCM. We would also recommend making the performance of VVBs publicly available to help project developers to engage in prioritizing the highest quality VVBs.                                    |

However, it would not meet the current requirements vis a vis double counting with domestic compliance systems. A domestic regulated carbon market can be a powerful tool for countries to implement including allowing reduction and removal credits generated in the country through GHG projects for use to meet the compliance obligation. In some cases, these are used to meet the compliance obligation only, and no claim for offsetting or other benefits is allowed to be made. In this instance, these ERRs should be permitted to count as reductions by the national GHG program and be issued under a GHG Program. There is no double claim made or double use. The only claim is towards reducing the national GHG emissions. The compliance system is a means of valuing carbon and driving finance to those that can achieve reductions and removals immediately while longer term programs are developed and implemented. | 0                                                                                                                                                                                                                                                                                                                 |

Suggest to include clarity on how this will be governed between/across standards; e.g. will there be a centralized database that allows Standards to cross-check locations of projects. From experience, we know that even within the same Standard, there are sometimes (unknown) overlaps between project areas.                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| 1217 | Anonymous            | Criterion 4.1: No double issuance (double registration)                             | ge              | In Finland ministries have started to form national carbon register, where (probably) all issued carbon credits in Finland should be registered.                                                                                                                                                                                                                                                                                                                                 | So these kind of entities should be adaptable to this ICVCM.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 1218 | Javier Castro        | Table 17 – Requirements for Criterion 4.1: No double issuance (double registration) | te              | Double issuance cannot be corrected by cancelling a credit. If for the same emission reductions credits have been issued by two carbon programs or a carbon program and a mandatory schemes, this a double issuance. If this is the case the cancellation in one system is a corrective action for an especific project but does not correct the fact that double issuance ocured.                                                                                               | see above                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 1219 | Anonymous            | Table 17 – Requirements for Criterion 4.1: No double issuance (double registration) | ed              | a) No double issuance: Double issuance can occur when uncanceled carbon credits coexist at the same time for the same emission reductions or removals, either under one carbon-crediting program or under more than one carbon-crediting programs.                                                                                                                                                                                                                               | Consider rewording to ensure full alignment and clarity                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 1219 | Anonymous            | Table 17 – Requirements for Criterion 4.1: No double issuance (double registration) | ed              | The definition given here of double counting does not completely align with the provisions in Criterion 4.1 and 4.2 (particularly 4.2).                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 1220 | Josiah McClellan     | Table 17 – Requirements for Criterion 4.1: No double issuance (double registration) | ge              | 4.1b                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | To clarify, this should be the responsibility of the carbon crediting program, not the mitigation activity proponent, for the purpose of remaining impartial and objective.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 1221 | Emma van de Ven      | Table 17 – Requirements for Criterion 4.1: No double issuance (double registration) | te              | Supply chain carbon accounting isn't currently grouped under double claiming, while with agriculture related credits, this is a real threat.                                                                                                                                                                                                                                                                                                                                     | Added to this list should be verification that none of the carbon farming activities have been counted towards supply chain carbon accounting and that the sold credits should be subtracted from any supply chain activity (see GHG protocol for land sector and removals, first draft). Vice versa it's key that all farms should be identifiable on a registry, allowing for a clear comparison between supply chain accounting and the VCM.                                                                                                                                                                                                                                                                                  |
| 1222 | Ivan VALENCIA        | Table 17 – Requirements for Criterion 4.1: No double issuance (double registration) | te              | On clause b) there should be a reference that the checks with other programs include checks with results-based payment programs (particularly for REDD+) that may not necessarily be deemed as credits but are rewarded emission reductions.                                                                                                                                                                                                                                     | On clause b) there should be a reference that the checks with other programs include checks with results-based payment programs (particularly for REDD+) that may not necessarily be deemed as credits but are rewarded emission reductions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 1223 | Josiah McClellan     | Table 18 – Requirements for Criterion 4.2: Double-issuance (overlapping claims)     | ge              | 4.2ab                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | These provisions should be removed. As written, they incentivize “squatter” rights and monopolies for accounting boundaries of certain mitigation activities. Some overlap must be allowed especially in NBS because there is too much for any one mitigation activity proponent to implement. The provisions also restrict the ability of small landholders to operate in a free market; essentially their carbon benefits can only go to one mitigation activity proponent. 4.2c is a more appropriate and effective safeguard against double issuance. The clear use of “OR” in these provisions would also be better (see 4.4 as an example), to indicate that 4.2c can be used to show compliance in lieu of 4.2a and 4.2b. |
| 1224 | Max DuBuisson        | Table 18 – Requirements for Criterion 4.2: Double-issuance (overlapping claims)     | te              | These requirements completely ignore the possibility of more nuanced program management and tracking of participation. A mitigation activity could be "actively registered" with more than one program if sufficient levels of transparent reporting and program safeguards were in place to ensure no double counting/issuance/claiming was occurring. For example, a farm with crops in rotation could participate in different types of crediting schemes in different years. | Acknowledge the possibility of a mitigation activity being registered with multiple crediting programs so long as sufficient safeguards and transparency exist to avoid double counting scenarios.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 1225 | Max DuBuisson        | Table 18 – Requirements for Criterion 4.2: Double-issuance (overlapping claims)     | te              | a) Carbon credits are not issued in respect of mitigation activities that receive other funding with an explicit claim to emission mitigation, or that generate or receive tradable units under other environmental market mechanisms                                                                                                                                                                                                                                            | Soften the criteria in this section to reflect the reality that legitimate scenarios exist where one activity should be able to receive credits from multiple environmental markets (e.g., carbon and biodiversity).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 1225 | Max DuBuisson        | Table 18 – Requirements for Criterion 4.2: Double-issuance (overlapping claims)     | te              | Many non-GHG environmental market mechanisms exist that should be "stackable" with carbon crediting mechanisms.                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| #    | Comment submitted by | Para/Fig/Table/Note                                                             | Type of comment | Submitted comment                                                                                                                                                                                                                                                                                                                                                 | Proposed change                                                                                                                                              |
|------|----------------------|---------------------------------------------------------------------------------|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1226 | Max DuBuisson        | Table 18 – Requirements for Criterion 4.2: Double-issuance (overlapping claims) | te              | 5) all necessary information to enable third parties to replicate the emission reduction calculations (including baseline quantification) and assess the social and environmental impacts of the activity;                                                                                                                                                        | Delete this requirement.                                                                                                                                     |
| 1226 | Max DuBuisson        | Table 18 – Requirements for Criterion 4.2: Double-issuance (overlapping claims) | te              | This requirement is unreasonable and unnecessary. Projects should not have to publicly disclose their underlying data. Moreover, projects which employ complex models and statistical methods would necessitate the disclosure of mountains of sensitive data for a casual observer to even attempt at recalculation. This is the role of the verification body.  | 0                                                                                                                                                            |
| 1227 | Max DuBuisson        | Table 18 – Requirements for Criterion 4.2: Double-issuance (overlapping claims) | te              | 7) information on stakeholder consultations, including how stakeholders were identified and invited (ensuring that this includes, where relevant, IPLC), the means of conducting the consultations, the issues raised during the stakeholder consultations, and how issues raised were considered and resolved, such as through free, prior and informed consent; | Remove this requirement, or at the very least, make it only required "where a project activity may possibly result in adverse impacts on local communities." |
| 1227 | Max DuBuisson        | Table 18 – Requirements for Criterion 4.2: Double-issuance (overlapping claims) | te              | As noted in previous comments, stakeholder consultations are not relevant for all project types and jurisdictions.                                                                                                                                                                                                                                                | 0                                                                                                                                                            |
| 1228 | Max DuBuisson        | Table 18 – Requirements for Criterion 4.2: Double-issuance (overlapping claims) | te              | 1) The carbon-crediting program shall require disclosure of the spreadsheets used for calculations of emission reductions and assessment of additionality.                                                                                                                                                                                                        | Remove this requirement.                                                                                                                                     |
| 1228 | Max DuBuisson        | Table 18 – Requirements for Criterion 4.2: Double-issuance (overlapping claims) | te              | In many cases this material could/should be considered confidential. Also, some projects may not use spreadsheets at all. Project quantification may be conducted via complex databases, software code, and biogeochemical models.                                                                                                                                | 0                                                                                                                                                            |
| 1229 | Max DuBuisson        | Table 18 – Requirements for Criterion 4.2: Double-issuance (overlapping claims) | te              | The carbon-crediting program requires periodic reporting by the mitigation activity proponents on the credit volume sold and average and median price. This information shall be aggregated, anonymized and reported by the carbon-crediting program (or an entity it designates) grouped by mitigation activity, geographical location, and vintage.             | Remove this potential requirement.                                                                                                                           |
| 1229 | Max DuBuisson        | Table 18 – Requirements for Criterion 4.2: Double-issuance (overlapping claims) | te              | Carbon pricing is completely outside the scope of work for carbon crediting programmes. Their work should not change based on the price of carbon.                                                                                                                                                                                                                | 0                                                                                                                                                            |
| 1230 | Max DuBuisson        | Table 18 – Requirements for Criterion 4.2: Double-issuance (overlapping claims) | te              | The program requires public reporting on total carbon revenues and the allocation of those revenues by mitigation activities.                                                                                                                                                                                                                                     | If this requirement is included, it should be optional.                                                                                                      |

| 1241 | Anonymous                                       | Table 20 – Requirements for Criterion 4.4: No double claiming with mandatory domestic mitigation schemes | te              | Outside of any mandatory domestic mitigation schemes, it needs to be made 100% clear that some credits may trade with an authorization from the host country and corresponding adjustment, and this should be tracked in the registry and these may be used for another country's NDC. But that credits may also be traded without an authorization from the host country and corresponding adjustment, and that these may be fully used for voluntary claims on corporate neutrality and the host country may report them under their NDC. But the voluntary buyer may not onsell this non-CA credit without these restrictions on use. The registries should be able to track these two types of credits. | N/A                                                                                                                                                                                                                                                                       |

| 1242 | Anonymous                                       | Criterion 4.5: No double claiming of mitigation outcomes in relation to other environmental credit or attribute-tagging schemes | ge              | What do you mean by "other funding with an explicit claim to emission mitigation"? What kind of funds are considered double claiming? For example, public support like 45q tax credit (USA) or any equipment subsidies are included in "other funding with an explicit claim to emission mitigation", or not?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Please add specific requirements for what "other funding" is covered.                                                                                                                                                                                                                                                                                                                                                                           |
| 1243 | Carolyn Ching                                   | Criterion 4.5: No double claiming of mitigation outcomes in relation to other environmental credit or attribute-tagging schemes | te              | This criterion implies that projects are not allowed to stack credits, which means that projects are not allowed to pursue all available sources of funding. If a project on agricultural land both reduces emissions and improves water quality, it should be allowed earn credits and financing for both. This isn't a form of double counting. If the project would have occurred already with the financing from water quality credits, this would be captured through an additional test. If the financing from carbon credits isn't enough to make the project economically viable, the project should be able to earn financing through other markets.                                                                                                                                                                                                                                                                                     | Refer to Gold Standard requirements on this issue:                                                                                                                                                                                                                                                                                                                                                                                              |
| 1243 | Carolyn Ching                                   | Criterion 4.5: No double claiming of mitigation outcomes in relation to other environmental credit or attribute-tagging schemes | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Projects seeking to issue multiple different Gold Standard Certified Impact Statements and/or products ('stacking') shall demonstrate Financial Additionality. Such Projects shall also provide qualitative, evidence-based justification of the need and value-add to the Project outcomes for each additional revenue stream.                                                                                                                 |
| 1244 | Individual/employee, Conservation International | Description                                                                                                                     | te              | This phrase implies that activities which also generate other ecosystem service crediting schemes (eg. nature/biodiversity credits) should not generate carbon credits: "Carbon credits shall not be issued for mitigation activities directly or indirectly claimed in conjunction with other funding sources, including trading units issued under other environmental market mechanisms." Later it clarifies (correctly) that it's only the carbon claim that should remain exclusive. The IC-VCM framework should not be designed in a way that hinders the development of other ecosystem services markets. Preventing one action which causes both carbon and other nature benefits from generating both carbon and other ecosystem credits (i.e., "stacking") would hinder the growth of non-carbon crediting systems. Especially given the immaturity of other ecosystem markets we don't believe IC-VCM should preclude such "stacking". | Clarify that mitigation activities may also produce other non-GHG benefits which may generate non-GHG credits/claims and that sale of these other credits should not prevent CCP compliance.                                                                                                                                                                                                                                                    |
| 1245 | Josiah McClellan                                | Table 21 – Requirements for Criterion 4.5: No double claiming                                                                   | te              | 4.5a potentially disincentivizes the pursuit of mitigation activities that have co benefits. Mitigation activities with co benefits is especially important for NBS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 4.5b is the better approach to this provision and should be kept in place of 4.5a.                                                                                                                                                                                                                                                                                                                                                              |
| 1246 | Emma van de Ven                                 | Table 21 – Requirements for Criterion 4.5: No double claiming                                                                   | te              | Supply chain carbon accounting isn't currently grouped under double claiming, while with agriculture related credits there is a real possibility of double claiming due to opaque accounting standards (inventory vs. intervention).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Added to this list should be verification that none of the carbon farming activities have been counted towards supply chain carbon accounting and that the sold credits should be subtracted from any supply chain activity (see GHG protocol for land sector and removals, first draft). Vice versa it's key that all farms should be identifiable on a registry, allowing for a clear comparison between supply chain accounting and the VCM. |
| 1247 | Anonymous                                       | Table 21 – Requirements for Criterion 4.5: No double claiming                                                                   | ge              | Programs that provide funding and explicitly note that the funding is for carbon related benefits and the meeting of NDC or other government carbon objective, should not also be allowed to create carbon credits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 1247 | Anonymous                                       | Table 21 – Requirements for Criterion 4.5: No double claiming                                                                   | ge              | Government funding support, however, by itself should not eliminate the potential for a specific project type to be eligible as an offset credit. For example, Direct Air Capture projects or long-term CO2 storage projects are essential for addressing climate change and the value of a carbon credit will not typically provide sufficient incentive to enable their development – as such direct government tax incentives like that found in the U.S. or Canada will be needed in addition to carbon revenue.                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| 1250 | Anonymous            | Table 21 – Requirements for Criterion 4.5: No double claiming | ge              | Reputable registries already have rules against double-counting. Option b should be sufficient in this case.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | n/a                                                                                                                                                                                                                                                                                                                                                               |
| 1251 | Anonymous            | Table 21 – Requirements for Criterion 4.5: No double claiming | te              | Criterion 4.5: unclear what scenario is expected to be addressed here. For example, Table 21 bullet a) now reads as if a project yielding biodiversity credits or other environmental credits in the future would not be able to issue carbon credits. If that's the intent, this is an issue. Double claims of mitigation activities and to a certain extent outcomes (e.g. carbon sequestration with net positive biodiversity impact at the same time as a biodiversity credit in the future) should be permissible under certain conditions.                                                                                                                                                                                               | na                                                                                                                                                                                                                                                                                                                                                                |
| 1252 | John Holler          | Table 21 – Requirements for Criterion 4.5: No double claiming | te              | It is not clear how (b) mitigates the issue described in (a) because one can accurately attest to having exclusive claim to ERs while also generating other tradable units. Consider removing "or"                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | n/a                                                                                                                                                                                                                                                                                                                                                               |
| 1253 | Anonymous            | 0                                                             | ge              | During the webinar Thursday 15 September 2022, Assessment Procedure and Implementation, I started a discussion on the requirement of record registration, the number of registrations from a GHG reductions or removals mitigation action, from cradle to grave, with information of the projects' location, operation, ownership, to buyer and buyer's buyer etc.                                                                                                                                                                                                                                                                                                                                                                             | As I represent a new carbon crediting program XXX, where the total registration is done in block-chain, and this information stream is public available through our homepage, I hereby ask ICVCM come (virtually) and have a look of our concept and assess if we do comply with the criterions which are given in the draft version of the Assessment framework. |
| 1253 | Anonymous            | 0                                                             | ge              | My argument is that a systematic and strict controlled block-chain is actually the best solution for these registrations, there not any convincing counter arguments, more an acknowledgement of lack of knowledge from ICVCM's side. I will in the best interest for the best forward-looking solution ask the ICVCM to learn more about the usefulness for the block-chain and it use for masse successive registration.                                                                                                                                                                                                                                                                                                                     | Practically, I assume the ICVCM would like to have a regulative criterion on the block-chain, other than stat innovation and modern registration technique is not accepted to be CCP eligible.                                                                                                                                                                    |
| 1253 | Anonymous            | 0                                                             | ge              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Please, be so king to contact me for further elaboration and exchange on knowledge and point of view on the matter.                                                                                                                                                                                                                                               |
| 1254 | Anonymous            | 0                                                             | te              | One tonne of carbon offset calculated consistently as per appropriate quantification, monitoring, verification and reporting methods should be consistently viewed. This document focuses on how to ensure adherence to CCP for tonnes of carbon that only use methodologies from carbon crediting programs, and not those that use equal rigorous methodologies which are validated and verified by third parties under ISO 14064 (parts 2 and 3) but register with registries that are not tied to a carbon crediting program.                                                                                                                                                                                                               | Please modify to acomodate for the above comment and inclusion                                                                                                                                                                                                                                                                                                    |
| 1254 | Anonymous            | 0                                                             | te              | Many project developers use acceptable methodologies and MVR mechanisms and can adhere to the CCP requirements, many of these developers do not pick up methodologies from established programs, which seems to be the focus of this document. Independent registries, that are not tied to carbon crediting programs, enable these projects to register their offsets and let them enter the VCM. This type of system is as capable of generating high integrity offsets at scale, the same as the focused "carbon programs". Yet stand along voluntary carbon registries are completely sidelined in this document where the focus has shifted from required process to guidelines on detailed assessment of methodologies at Program level. | 0                                                                                                                                                                                                                                                                                                                                                                 |

| 1255 | Anonymous                                                            | 0                   | ge              | It is important to ensure this carbon registry 1) ensures authenticity, 2) is publicly available, and 3) is transparent. Different formats can be pursued to ensure adherence to these principles. If a standard accounting ledger were used in the registry, it should have a mechanism for checks to resolve any issues in database governance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Use a registry format which would allow for checks to resolve any issues in database governance. |
| 1255 | Anonymous                                                            | 0                   | ge              | One way to achieve this is a two-tier system whereby a relational database is paired with a blockchain ledger. This need not be the only route forward as blockchain ledgers have been critiqued for being energy-intensive. Of course, the pros/cons of using a blockchain ledger should be weighed against those of other formats, but we recommend these considerations if it were to be pursued. The blockchain ledger should use a proof of stake system instead of a proof of work system as the former consumes less energy. A blockchain ledger would help ensure accountability, particularly for organizations facing claims of greenwashing. It would also encourage decentralization of registry regulation and equalize ownership because multiple parties, regardless of size, power, or regional origin, would be involved in regulation. | 0                                                                                                |

| 1258 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | 0                   | ge              | As noted in our other comments, it is not possible or practical for jurisdictional programs to attribute ERRs to specific activities and therefore, it is not practical to require Registries to label each credit with the related activity. We agree that it is appropriate to label credits with the accounting approach used to determine the reduction or removal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                |
| 1258 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | 0                   | ge              | RECOMMENDATION: Limit Registry labels and tags to crediting approach and attributes rather than a specific activity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                |

| 1262 | Seoyi Kim                                                            | 0                   | ge              | While registries are critical to record and track mitigation activities and carbon credits issued, communication between different program registries is essential to prevent double counting as it enables verification of the history of transactions and modifications made to the projects and credits. The draft CCPs, however, focus only on the former – carbon crediting programs having a registry, but not on the latter – the need for such registries to communicate with each other, which can be supported through use of common data formats and taxonomy in the different programs.                                                                                                                                                                                                                                                      | 0                                                                                                |
| 1262 | Seoyi Kim                                                            | 0                   | ge              | The Climate Warehouse, a global public meta-data layer that is designed to support transparency of markets, has developed such data model through consultations with multiple stakeholders over the past three years. The initiative also provides minimum functionalities and technical specification of a robust registry. The draft CCPs would benefit from incorporating outcomes of the initiative into their registry requirements.                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                |

| 1262 | Seoyi Kim                                       | 0                                                                                          | ge              | Also, the assessment framework includes several requirements that seem to be more applicable to end-users (buyers of credits) than projects/programs. For instance, assessing the provisions towards the transition to net-zero emissions, the use of proceeds from issued carbon credits and tracking of funds, and overseeing the chain of custody after credits are issued, are all issues that go beyond the scope of carbon Standards. Therefore, if approved, this requirement will be very difficult (if not impossible) and costly to be achieved.                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 1263 | Individual/employee, Conservation International | Criterion 5.1: Unique identification of carbon credits                                     | ge              | Suggesting (but not necessarily requiring) credit tags or labels to identify the mitigation activity, whether an emissions reductions or removal project, ecosystem type, and co-benefits could allow for more transparency and specificity in the type of credit being generated or purchased. This would also help to group multiple activities within one project while allowing credits to have different prices based on market demand.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Specify the types of attributes that should be tracked and attached to credits via tags or labels (e.g., removals vs. emissions reductions, blue carbon vs. terrestrial carbon). Standards should be encouraged to have tags/labels but not penalized if they do not.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1264 | Phil Cryle                                      | Criterion 5.1: Unique identification of carbon credits                                     | te              | Clarification could be provided in Table 22 that "The carbon-crediting program shall uniquely identify each carbon credit, the related mitigation activity and any other attributes tagged to the carbon credit", as set out in the description under Criterion 5.1, rather than simply stating that "The carbon-crediting program shall identify each credit with a unique serial number."                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Clarification could be provided in Table 22 that "The carbon-crediting program shall uniquely identify each carbon credit, the related mitigation activity and any other attributes tagged to the carbon credit", as set out in the description under Criterion 5.1, rather than simply stating that "The carbon-crediting program shall identify each credit with a unique serial number."                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1264 | Phil Cryle                                      | Criterion 5.1: Unique identification of carbon credits                                     | te              | Consideration should also be given to requiring registries to include information from the IC-VCM assessments relating to key quality attributes including additionality (i.e., very likely or medium, as per Figure 3, p. 45 and Table 40 p. 55 in Part 4: Assessment Framework), permanence (i.e., low or zero risk of non-permanence as per Table 43, p. 61 in in Part 4: Assessment Framework) as well as sustainable development impacts and safeguards (i.e., the 'Quantified SD impacts' attribute). This information could be a first step towards providing the market with a more sophisticated understanding of the relative quality of different carbon offset units (e.g., through a more detailed assessment supporting an indexing of offset quality attributes on a scale of 0-1) that would promote price discovery and drive efficient capital allocation as investors would be able to demand offsets with a certain level of quality across different attributes. | Consideration should also be given to requiring registries to include information from the IC-VCM assessments relating to key quality attributes including additionality (i.e., very likely or medium, as per Figure 3, p. 45 and Table 40 p. 55 in Part 4: Assessment Framework), permanence (i.e., low or zero risk of non-permanence as per Table 43, p. 61 in in Part 4: Assessment Framework) as well as sustainable development impacts and safeguards (i.e., the 'Quantified SD impacts' attribute). This information could be a first step towards providing the market with a more sophisticated understanding of the relative quality of different carbon offset units (e.g., through a more detailed assessment supporting an indexing of offset quality attributes on a scale of 0-1) that would promote price discovery and drive efficient capital allocation as investors would be able to demand offsets with a certain level of quality across different attributes. |
| 1264 | Phil Cryle                                      | Criterion 5.1: Unique identification of carbon credits                                     | te              | We are keen to work with the IC-VCM and other interested parties on how an offset scoring approach could be developed to further scale high integrity voluntary carbon markets.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | We are keen to work with the IC-VCM and other interested parties on how an offset scoring approach could be developed to further scale high integrity voluntary carbon markets.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 1265 | Individual/employee, INUK                       | Table 22 – Requirements for Criterion 5.1: Unique identification of carbon credits         | te              | For this purpose, Inuk has developed a low-carbon blockchain-based solution that allows to convert avoided CO2e into carbon credit "tokens", and provides a unique tracking number to each carbon credit. Each time a carbon credit is sold, the corresponding token is immediately and automatically deleted from the blockchain, guaranteeing the uniqueness of carbon credits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | NA                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 1266 | John Holler                                     | Description                                                                                | ed              | It is not clear whether the information described in Table 23 must be publicly available.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 1267 | ANdi Stanner                                    | Means of assessment                                                                        | ge              | This should be assessed via document review as well as spot checks of registry entries. While most registries in theory require stringent documentation, the reality of available information is different from the theoretical required                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Add spot checks of registry data to the methods of assessing                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 1268 | individual/employee, Plan Vivo Foundation       | Table 23 – Requirements for Criterion 5.2: Mitigation activity information in the registry | te              | We recognise that requirement D could be difficult to enforce unless more detail is given on what it is understood by 'identification'.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Clarify the wording to understand what is understood by 'identification' under these criteria.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 1268 | individual/employee, Plan Vivo Foundation       | Table 23 – Requirements for Criterion 5.2: Mitigation activity information in the registry | te              | The requirement states that 'the carbon crediting program shall require identification of the entity by whom and/or on whose behalf the credit was retired'                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Clarify if it is necessary for the carbon crediting program to enforce that the purpose of the retirement is mandatory in all cases.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| 1268 | individual/employee, Plan Vivo Foundation | Table 23 – Requirements for Criterion 5.2: Mitigation activity information in the registry | te              | Currently, some registries allow final buyers and intermediaries with accounts on the registry to retire and cancel carbon credits. However, sometimes intermediaries retire these credits on behalf of other final buyers without an account. These final buyers are mentioned (identified) in the retirement certificate and transaction, but they have not been through a due diligence process conducted by the carbon crediting program /registry (when the program uses a third party registry). In this case, is the requirement still covered? Otherwise, it would be impossible to conduct a due diligence process for each final buyer                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1268 | individual/employee, Plan Vivo Foundation | Table 23 – Requirements for Criterion 5.2: Mitigation activity information in the registry | te              | Regarding requirement E: '[...]require the identification of the purpose of retirement'                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1268 | individual/employee, Plan Vivo Foundation | Table 23 – Requirements for Criterion 5.2: Mitigation activity information in the registry | te              | At the moment, some registries have the identification of the purpose of the requirement as optional, and while many transactions state the purpose of the retirement, others are just limited to naming the organization / individual on behalf of whom the retirement occurs. Should the 'identification' of the purpose of the retirement be enforced by the program?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1269 | Individual/employee, CLA                  | Table 23 – Requirements for Criterion 5.2: Mitigation activity information in the registry | te              | As well as identifying the country in which the emission reduction or removal occurred, for nature-based credits, the land parcel must also be able to be identified. This is so that in future sales or acquisitions of land, carbon based liabilities / restrictions are traceable. The carbon sequestration potential will impact the value of the land, and carbon related contracts will restrict the future use of the land. To ensure this is traceable, in the UK, all land-based credits could be listed against the title(s) on the UK Land Registry.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | As above.                                                                                                                                                                                                                                                                                                                                                                                                    |
| 1270 | Carolyn Ching                             | Table 23 – Requirements for Criterion 5.2: Mitigation activity information in the registry | ed              | bullet c: requires the GHG program to "track the credit". However, according to bullet (a) the credit is already traceable back to the mitigation activity. This seems repetitive.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Please clarify what it means to "track the credit". Also note that it is not the responsibility of the GHG registries to track how the credit is bought and sold in the marketplace.                                                                                                                                                                                                                         |
| 1271 | Ivan VALENCIA                             | Table 23 – Requirements for Criterion 5.2: Mitigation activity information in the registry | te              | The carbon crediting program shall also identify the first buyer and/or intermediate owners (traders) of credits. This is important to later have the required information to examine any conflict of interest provision that may pertain to traders.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Refer to comments on this section                                                                                                                                                                                                                                                                                                                                                                            |
| 1275 | ANdi Stanner                              | Criterion 5.3: Mechanisms to prevent double issuance and double use of credits             | te              | There's two angles to consider, standard program internal double issuance and double use and across programm double issuance and usageBoth aspects have in common that a registry system tracking issuance, transfers and retirements needs to be auditable publicly and efficiently. For this matter, a registry system should contain information not only electronically but machine-readable (e.g. not obfuscated in files or natural language or screenshots, etc) as well as expose this information programmatically via a state-of-the art API layer.As a minimum good practice today is defined as a highly available, web-technology-based database and sufficiently documented RESTful api layer.Additionally, to prevent any tampering or human error that could lead to program-internal double issuance or use, an immutable record that cannot be rolled back is requested, and, likewise state of the art.Current best practice for registry system can be found in distributed ledger technologies, with a specific focus on public blockchains as only they can guarantee actual immutability of records and efficient auditability by the public, non-technical and technical alike | We recommend to the ICVCM to include language in this section that parallelizes the ambition to scale the market with integrity with an equal ambition to improve the technological backbone to serve a scaled market reliably. Especially the aspects of transparency, auditability, immutability, trustlessness, and scalable interoperability are material and should be included in a minimum threshold. |
| 1276 | Individual/employee, Climate Connect      | Criterion 5.3: Mechanisms to prevent double issuance and double use of credits             | te              | It would be very difficult for a registry to track and control resale of retired credits if someone wants to sell these and someone wants to buy these                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | The registry should undertake a declaration from the institution which is retiring credits that the retired credits would not be resold by it in any form                                                                                                                                                                                                                                                    |

| 1277 | Individual/employee, Conservation International                      | Criterion 5.3: Mechanisms to prevent double issuance and double use of credits                             | te              | Under the requirements, it is stated that “The carbon crediting program registry shall (...) c) require any Article 6 authorisation to be clearly identifiable; and identify whether or not a corresponding adjustment has been applied by the host country”. The registry should definitely identify those credits that have a national authorization for transfer and a corresponding adjustment applied. Nevertheless, as noted in other sections of the document that will not always be possible as it is national prerogative to decide whether or not the VCM is an “other purpose” and therefore subject to national authorization and corresponding adjustment.                                                                                      | This section should reflect both cases: 1) where host countries consider the VCM to be “other purpose” and subject to national authorization and corresponding adjustment, so Article 6 should be clearly identifiable and should identify if a corresponding adjustment has occurred; and 2) those cases where host countries decide the VCM is not “other purpose”, therefore no national authorization and corresponding adjustment is mandated. The current text could be understood to infer that all transfers will require national authorization and corresponding adjustment, so text is needed to clarify that it would only be for circumstances described in case 1) explained above. |

| 1279 | ANdi Stanner                                                         | Means of assessment                                                                                        | te              | At a minimum it's unfeasible and in many cases impossible to assess the registry software's ability to programmatically make double issuance and usage impossible by just reviewing documentation without having audited the (closed) source code. The notion of holding assets reflecting and material to public goods such as climate in closed, source, sometimes antiquated ledgers is counter-intuitive on a conceptual level and highly inefficient on a practical level, considering proven, open-source technologies exist, are matured enough and have market acceptance.                                                                                                                                                                            | We recommend that the ICVCM builds up technical capacity to conduct or steer such technical audits and makes a technical audit of registry software a mandatory part of the assessment framework and of the minimum threshold.                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 1279 | ANdi Stanner                                                         | Means of assessment                                                                                        | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | On a longer time horizon, we recommend to add a provision incentivizing the switch of registry software to proven and mature best-in-class open source technologies such as public DLTs                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1280 | Alexandre Grais                                                      | Means of assessment                                                                                        | te              | Application of corresponding adjustments by host country might happen several years after a credit is retired.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Perhaps a notification could be sent to the credit holder/ or to the entity that retired the credit when the corresponding adjustment deduction has officially been verified?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| 1282 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | 0                                                                                                          | ge              | This comment is from Emergent, the coordinator of the LEAF Coalition.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | RECOMMENDATIONS:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1282 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | 0                                                                                                          | ge              | 1. It is not practical or necessary for jurisdictions to be required to publicly share every piece of information relating to its program including for example, all underlying data related to the carbon calculations and all documents and summaries from every stakeholder engagement meeting. This would be an incredible burden to the jurisdiction and would likely result in numerous staff being required to maintain and respond to inquiries from third parties attempting to conduct their own validation and verification. All of this information would be reviewed and would be summarized in the Validation and Verification Reports. This should suffice to provide evidence of conformance with the methodology or Standard’s requirements. | · Make reporting on transaction terms optional.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| 1299 | Josiah McClellan                                | Table 25 – Requirements for Criterion 6.1: Minimum information | ge              | 6.1a5                                                                                                                                                                                                                                                                                                                                                                                                                  | These requirements are not realistic. Especially for NBS, significant effort and resources go into collecting baseline data. Mitigation activity proponents are making material investments in people and technology to enable data collection. The reference in the guidance to “spreadsheets” indicates a limited understanding of how mitigation activities collect data. Many mitigation activity proponents have developed sophisticated IP to collect and manage raw data. These investments must be protected by limiting access to raw monitoring data. Furthermore, this section of the guidance requires information to be “accessible to non-specialized audiences.” Much of the information specified in this section is highly technical and specialized. It is sufficient to rely on VVBs (which are under confidentiality agreements) to do the necessary checks to replicate calculations during verification. If additional transparency is needed into raw monitoring data it questions the effectiveness of validation and verification. |
| 1300 | Josiah McClellan                                | Table 25 – Requirements for Criterion 6.1: Minimum information | te              | 6.1a9                                                                                                                                                                                                                                                                                                                                                                                                                  | The guidance specifically names GPS coordinates for location information. This is impractical for NBS or aggregated projects, which have multiple parcels in a project. This is another example of technical information being made available to “non-specialized audiences.” The guidance should be revised to reference descriptive locations at a NUTS-2 level, and not GPS coordinates.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| 1301 | Josiah McClellan     | Table 25 – Requirements for Criterion 6.1: Minimum information | ge              | 6.1c1                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | These requirements are not realistic. Especially for NBS, significant effort and resources go into collecting baseline data. Mitigation activity proponents are making material investments in people and technology to enable data collection. The reference in the guidance to “spreadsheets” indicates a limited understanding of how mitigation activities collect data. Many mitigation activity proponents have developed sophisticated IP to collect and manage raw data. These investments must be protected by limiting access to raw monitoring data. Furthermore, this section of the guidance requires information to be “accessible to non-specialized audiences.” Much of the information specified in this section is highly technical and specialized. It is sufficient to rely on VVBs (which are under confidentiality agreements) to do the necessary checks to replicate calculations during verification. If additional transparency is needed into raw monitoring data it questions the effectiveness of validation and verification. |
| 1302 | Josiah McClellan     | Table 25 – Requirements for Criterion 6.1: Minimum information | te              | 6.1c                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | The requirements for sharing revenue and price would also need to be agreed upon by buyers of CCPs. This could limit the market for CCPs if buyers are unwilling to disclose the prices they are paying. Option 2B would be preferred to keep revenue figures high level. However, this may still require buyers to have an option to opt-out of having their individual transaction details used as information within such an aggregated approach as outlined in 2B.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 1303 | Anonymous            | Table 25 – Requirements for Criterion 6.1: Minimum information | ge              | Re: Points c) 1) and c) 4)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1303 | Anonymous            | Table 25 – Requirements for Criterion 6.1: Minimum information | ge              | Requiring projects to provide key commercial terms like price and revenue (or specific calculation sheets), or how projects provide equitable and fair revenue sharing is also not justified from a carbon mitigation perspective and infringes on key competitive information. Requiring this type of information could cause developers to be less transparent and some could choose other options (e.g., crypto) rather than development of a project according to existing registry standards                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| 1304 | Anonymous            | Table 25 – Requirements for Criterion 6.1: Minimum information | ge              | While we fully agree with the importance of transparency and adequate carbon credit program governance (i.e., avoidance of conflict of interest and ensuring a robust code of business conduct), many of the elements identified for reporting are overly expansive, overstep what the registries require or are impractical. Reporting in detail on public stakeholder consultation for example will make the projects with the greatest social benefits more expensive and less desirable from a developer perspective. In addition, information on benefit sharing, is confidential commercial information. Neither the project developer nor the local community would be happy to have this information publicly reported. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1304 | Anonymous            | Table 25 – Requirements for Criterion 6.1: Minimum information | ge              | Related to stakeholder consultation, requiring quantitative reporting and proof of positive net benefits, for three issuance periods is excessive and adds additional costs. Increasing project costs for these types of activities could push developers to other project types and away from projects that have significant social benefits, or it could push developers to create projects using alternative tracking tools like Crypto or without a registry. This outcome reduces the transparency and impacts the credibility that the ICVCM is trying to improve.                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| 1309 | Individual/employee, Conservation International | Table 25 – Requirements for Criterion 6.1: Minimum information | ge              | This section should reflect both cases: 1) where host countries consider the VCM to be “other purpose” and subject to national authorization and corresponding adjustment, so Article 6 should be clearly identifiable and should identify if a corresponding adjustment has occurred; and 2) those cases where host countries decide the VCM is not “other purpose”, therefore no national authorization and corresponding adjustment is mandated. The current text could be understood to infer that all transfers will require national authorization and corresponding adjustment, so text is needed to clarify that it would only be for circumstances described in case 1) explained above. | 0                                                                                                                                                                                      |

It should be noted that a certain period of preparation is considered necessary                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | No specific language proposed                                                                                                                                                          |
| 1311 | Carolyn Ching                                   | Table 25 – Requirements for Criterion 6.1: Minimum information | te              | ICVCM requires projects to publicly list all of their information and data transparently on the registry, such that another entity could replicate the emission reduction/removal estimates if they wanted to (RE Table 25 a.5). Almost no information can be considered confidential. This isn’t reasonable or practical. This creates a reporting burden for NCS projects, and could have a disproportionate effect on projects that are less well-funded or where English isn’t the primary language. Also, it’s not clear how this requirement would improve the integrity of credits. Instead, this seems to be an added layer that would lead to bottlenecks for projects and GHG programs. | We suggest limiting this to reporting on the data and parameters monitored--note that monitoring reports include the monitored values. This is what is currently expected of projects. |
| 1312 | Carolyn Ching                                   | Table 25 – Requirements for Criterion 6.1: Minimum information | te              | Under the full requirements, we suggest Option 1b (no text)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Under the full requirements, we suggest Option 1b (no text)                                                                                                                            |
| 1313 | Ivan VALENCIA                                   | Table 25 – Requirements for Criterion 6.1: Minimum information | te              | On clause a) 1 v) it must be more specific: “Project Design Document and its annexes”. Many annexes have material information but it is common for them not to be included in Registry documentation,                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Refer to comments on this section                                                                                                                                                      |

| 1316 | Anonymous            | Table 25 – Requirements for Criterion 6.1: Minimum information | ge              | We agree that transparency is important, and reporting on these key elements in a searchable registry format is something that reputable registries have been doing for many years. This is another example of where registries should be consulted, so as to not be duplicating efforts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | n/a                                                                                        |
| 1317 | Anonymous            | Table 25 – Requirements for Criterion 6.1: Minimum information | ge              | For the full time period requirements:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | n/a                                                                                        |
| 1317 | Anonymous            | Table 25 – Requirements for Criterion 6.1: Minimum information | ge              | Requiring the publication of commercial terms may create perverse incentives for private entities to move outside the framework of trusted carbon crediting programs. At a minimum, we suggest keeping this information anonymized to minimize potential infringement on competitive information for project developers. While registries may seem to be a natural fit for collecting and publishing this type of information, registries deliberately do not involve themselves in the commercial terms of project developers and credit buyers, as it is critical for carbon crediting programs to remain independent and avoid any potential conflicts of interest. While we are supportive of more transparent price discovery in the carbon market, it should be aggregated and anonymized by an independent agency with little potential for conflict of interest and with the bandwidth, funding, and infrastructure to do such reporting. | 0                                                                                          |
| 1318 | Anonymous            | Table 25 – Requirements for Criterion 6.1: Minimum information | ge              | Table 25, Option 2b (in the Full requirements): This option could be difficult to comply with. We would recommend removing it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Please see above.                                                                          |
| 1319 | Anonymous            | Table 25 – Requirements for Criterion 6.1: Minimum information | ge              | Criterion 6.1 (full threshold)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | na                                                                                         |
| 1319 | Anonymous            | Table 25 – Requirements for Criterion 6.1: Minimum information | ge              | Preference is to only implement Option 2a. The other options include highly confidential information that is not within the authority of the programs to require of their activity proponents to share. Sharing information on BSPs, however, is highly desirable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                          |
| 1320 | Ronan Carr           | Table 25 – Requirements for Criterion 6.1: Minimum information | ge              | · BeZero is broadly aligned with the CCPs in this regard, and endorses the requirement for project documentation to be publicly available.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | NA                                                                                         |
| 1320 | Ronan Carr           | Table 25 – Requirements for Criterion 6.1: Minimum information | ge              | · We recommend the inclusion of shapefiles and share of carbon revenues in disclosure requirements, while the breakdown of calculations should be made available in Excel format.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                          |
| 1320 | Ronan Carr           | Table 25 – Requirements for Criterion 6.1: Minimum information | ge              | BeZero supports the CCPs' requirement for project documentation to be made publicly available, with all necessary information to enable third-parties to replicate the emission reduction calculations. This includes the share of carbon revenue received by a project, with this level of disclosure being vital for ensuring integrity and mirrors the BeZero Carbon rating eligibility criteria.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                          |
| 1320 | Ronan Carr           | Table 25 – Requirements for Criterion 6.1: Minimum information | ge              | However, BeZero still has a number of recommendations. We suggest the inclusion of a requirement that shapefiles are provided by nature-based project developers, as this facilitates external Earth Observation interrogation of project assumptions. These should not be limited to the project area, but all associated regions such as the reference and leakage management areas.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                          |
| 1320 | Ronan Carr           | Table 25 – Requirements for Criterion 6.1: Minimum information | ge              | In addition, information regarding emission reduction and additionality calculations should be made available in a Microsoft Excel format, to allow wide access.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                          |
| 1321 | John Holler          | Table 25 – Requirements for Criterion 6.1: Minimum information | te              | Regarding (a)(1)(i): The accounting boundary must be disclosed to mitigate double issuance risks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Add the accounting boundary to (i) in addition to the location of the mitigation activity. |

| 1324 | John Holler                                                          | Table 25 – Requirements for Criterion 6.1: Minimum information | ed              | We support including Option 2a as a requirement. This transparency and accountability benefits all stakeholders - especially IPLCs - and has the ancillary benefit of providing confidence to the market that climate finance is being allocated in an impactful way (or allows troubleshooting if not).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 1325 | Anonymous                                                            | Table 25 – Requirements for Criterion 6.1: Minimum information | te              | These requirements are not viable. "Spreadsheets used for calculations of emissions reductions" are intellectual property and will not be published publicly. Many other things listed here, including potentially benefit-sharing arrangements and quantification, are also commercially sensitive. Most of these requirements seem to want projects to disclose sensitive information in order to duplicate activities carried out by VVBs. It is unclear what purpose this is intended to serve.                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Delete, at minimum, all references to commercially sensitive material and to information that would identify individual landowners.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 1325 | Anonymous                                                            | Table 25 – Requirements for Criterion 6.1: Minimum information | te              | "GPS coordinates" are not appropriate disclosure targets for many NBS/NCS projects. These especially include those that operate over multiple parcels; with landowners who may be unwilling to disclose specific locations; for commercial operations with specific locations that are confidential commercial information; or for projects that aggregate across multiple small landowners for whom public geospatial information would identify individuals and families.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| 1332 | Phil Cryle                                                           | 0                                                              | te              | The carbon market is (currently) aimed at directing finance to sectors that will provide carbon sequestration and storage benefits, with co-benefits a secondary priority. The carbon market is therefore not focused on, or structured as, a mechanism to mobilise investment in broader nature-based solutions, yet it has the potential to do so. Consideration should be given to explicitly requiring the robust quantification of positive SD impacts under the full threshold or through a ratcheting up of the full threshold to require quantification over time. Requiring quantification of broader environmental, social, cultural and economic outcomes of nature-based solutions would facilitate the emergence of standardised methodologies for assessing co-benefits that have been slow to evolve despite their use internationally, such as in the development of natural capital accounts under the UN System of Environmental Economic Accounting. | The carbon market is (currently) aimed at directing finance to sectors that will provide carbon sequestration and storage benefits, with co-benefits a secondary priority. | 1332 | Phil Cryle                                                           | 0                                                              | te              | Whilst offset projects with broader (i.e., non-carbon), environmental, social, cultural and economic co-benefits currently command a price premium, the absence of robust quantitative information on (the type and magnitude of) co-benefits delivered means that this premium is not a direct reflection of the underlying societal value of these co-benefits and meaningful comparison across the co-benefits delivered by offset projects is not possible. A requirement under the CCPs' assessment framework's full threshold for robust, quantitative information (or a ratcheting up of the full threshold to require quantification over time) on the type, magnitude and value of co-benefits, using consistent measurement metrics, would facilitate more robust price discovery (i.e., by establishing the willingness-to-pay / demand for offsetting projects with these benefits) and efficient capital allocation.                                       | Whilst offset projects with broader (i.e., non-carbon), environmental, social, cultural and economic co-benefits currently command a price premium, the absence of robust quantitative information on (the type and magnitude of) co-benefits delivered means that this premium is not a direct reflection of the underlying societal value of these co-benefits and meaningful comparison across the co-benefits delivered by offset projects is not possible. It is therefore likely to result in a slower evolution of the market and/or suboptimal capital investment to support nature-based solutions at a time when the loss of natural capital is increasing the risk to future economic and social prosperity.                                                                                                                                                                                                                                                                                                                                                                      | Such an evolution of the carbon offset market to mobilise investment in nature-based solutions could arguably still be achieved through the tagging of "Quantified SD impacts" as an additional attribute under the CCP, but this approach places less emphasis on the importance of quantifying SD impacts of carbon offsetting projects. It is therefore likely to result in a slower evolution of the market and/or suboptimal capital investment to support nature-based solutions at a time when the loss of natural capital is increasing the risk to future economic and social prosperity.                                                                                                                                                                                                                                                                                                                                                                      |

| 1333 | Luzia Bieri          | 0                   | ge              | From the set of criteria and requirements, it is unclear what needs to be documented, assessed and proofed by evidence. Crediting programs, project developers and validation/verification bodies might be lacking resources and expertise to assess certain requirements. During the first phase, we recommend labelling positive Sustainable Development Impact on one or more SDGs as an attribute rather than making it a requirement as the necessary metrics are currently not available at scale.                                                                                                                                                                                        | During the first phase, we recommend labelling positive Sustainable Development Impact on one or more SDGs as an attribute rather than making it a requirement as the necessary metrics are currently not available at scale.                                                                                                                                                                                                                                    |
| 1334 | Trevor Paul          | 0                   | te              | Viresco believes that reducing emissions should always be the primary focus of carbon markets. Never-the-less, we are generally supportive of the IC-VCM's inclusion of sustainable development impacts and safeguards as CPP's in the Assessment Framework. However, we believe the collection of the appropriate data and metrics required to effectively assess, monitor and verify Sustainable Development Impacts at scale will be both challenging and onerous. The implementation of these requirements may delay or put potential projects at risk at a time when we need to accelerate reduction activities. Therefore, we recommend the gradual implementation of these requirements. | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| 1336 | Vega Tapia           | 0                   | ge              | Repsol Foundation fully supports considering Impact and Safeguards when assessing the credits/projects/programmes. However, more than a requisite initial threshold, we see positive Impact as an attribute (to be labelled) that helps buyer adapt their choice to the projects/credits that best suit their vision.                                                                                                                                                                                                                                                                                                                                                                           | more than a requisite initial threshold, we see positive Impact as an attribute (to be labelled) that helps buyer adapt their choice to the projects/credits that best suit their vision.                                                                                                                                                                                                                                                                        |
| 1337 | Oda Almas            | 0                   | te              | See earlier recommendation to re-phrase this principle, either by separating the three different components currently covered here (human rights, SD and environmental safeguards) in which case the first would be:"adherence to international human rights instruments"                                                                                                                                                                                                                                                                                                                                                                                                                       | See above                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 1337 | Oda Almas            | 0                   | te              | Or, if the three are kept in one principle, spell out the fact that the aim of social safeguards is to respect and protect human rights as they are set out in international human rights instruments ratified and endorsed by the host countries (e.g the Bill of Human Rights and other core UN conventions such as the Convention on the Elimination of All Forms of Racial Discrimination as well as the UN Declaration on the Rights of Indigenous Peoples). If kept together we suggest the following phrasing:"Adherence to international human rights instruments, environmental safeguards and sustainable development goals"                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 1338 | Darcy Jones          | 0                   | te              | The guidance around sustainable development impacts and safeguards does not recognize that nature-based solutions are particularly beneficial to the Sustainable Development Goals, adaptation, and other co-benefits. Regarding jurisdictional REDD+ specifically, these programs are required to meet additional safeguards (i.e., the Cancun Safeguards), while not being recognized for this additional layer of compliance.                                                                                                                                                                                                                                                                | Suggest amending this section to reflect these circumstances and concerns. In addition to the proposals listed here, we have provided some specific proposals in other comments.                                                                                                                                                                                                                                                                                 |
| 1338 | Darcy Jones          | 0                   | te              | The Assessment Framework assumes a do-no-harm approach for social and environmental safeguards. That means that rather than focusing on avoiding/preventing the occurrence of risks, promoting good practices, or moving toward a transformative approach that challenges the barriers that make it difficult IPLCs to be considered effective partners with voice and vote, the Assessment Framework adopts a business-as-usual approach.                                                                                                                                                                                                                                                      | Emissions reductions initiatives that affect IPLCs in any sense need to 1) ensure FPIC across the board (without "where appropriate" caveats); and 2) where IPLCs wish to engage, guarantee their effective participation (that is, partnership in design and implementation of programs and equitable benefit sharing).                                                                                                                                         |
| 1338 | Darcy Jones          | 0                   | te              | Despite that, the Assessment Framework adopts some best-in-class standards (IFC, ILO, UNDP Social and Environmental Standards, Cancun Safeguards, etc.). However, the language to promote effective participation of IPLCs in the Assessment Framework is still vague.                                                                                                                                                                                                                                                                                                                                                                                                                          | No initiatives that negatively affect IPLCs should be eligible for carbon crediting of any description. This implies, inter alia, that jurisdictions inhabited by IPLCs where emissions reductions are generated, whether on a project or jurisdictional scale, must guarantee IPLCs land rights (to the standard of ILO 169), their resource rights and recognize them as legitimate providers of environmental services, including reduction of deforestation. |
| 1338 | Darcy Jones          | 0                   | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Most of the safeguards in the document have a risk-focus approach that pursues the reduction and mitigation of risk. Instead, the AF should include a rights-focused approach that empowers IPLCs and facilitates fair conditions in the decision-making processes or benefit-sharing schemes.                                                                                                                                                                   |
| 1338 | Darcy Jones          | 0                   | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | It would be helpful for the AF and CCPs to define effective participation more clearly; this would be useful for the application of FPIC.                                                                                                                                                                                                                                                                                                                        |
| 1338 | Darcy Jones          | 0                   | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Although the AF adopts safeguards based on the best-in-class standards, the AF should consider that there needs to be room for adopting good practices promoted by national legislations or coming from customary systems.                                                                                                                                                                                                                                       |
| 1338 | Darcy Jones          | 0                   | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Safeguards that require the improvement in the living conditions of IPLCs (poverty reduction) should also be included.                                                                                                                                                                                                                                                                                                                                           |

| 1339 | Anonymous            | 0                   | te              | General comments on Section 7: These requirements will add significant additional cost and time, and thus could have negative impacts on IPLCs and other project participants by deterring investment and making offset project implementation prohibitively expensive.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | see comments                                                                                                                                                                                                                                                                                                      |
| 1339 | Anonymous            | 0                   | te              | A Risk based approach is needed. Application of certain safeguards are not always relevant to some project types or in some geographies--there must be criteria for determining when safeguards are needed and applicable                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                 |
| 1339 | Anonymous            | 0                   | te              | GENERAL FOR SECTION 7 ON JREDD: These requirements are not workable for JREDD. We recommend that only the Cancun Safeguards be required for JREDD noting that they were developed especially for Jurisdictional REDD+ after years of negotiation and significant consultation with and input from IPLCs, parties and other stakeholders. We strongly recommend that they be used for J-REDD on its own, and that no additional requirements are added to JREDD at this time. Some countries are still working on their initial Safeguard Information Systems and even when an SIS exists, many have yet to be fully implemented. The VCM is already helping to fast track this work in some places, but imposing additional requirements at this stage, when JREDD is still in early stages of entering the VCM could stifle investments and deter action from jurisdictions. | 0                                                                                                                                                                                                                                                                                                                 |
| 1341 | Anonymous            | 0                   | ge              | Overall strong emphasis on documentation and while not prescriptive on what documentation will be acceptable it will likely increase project costs by requiring additional third party audits or assessments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | na                                                                                                                                                                                                                                                                                                                |

| 1342 | Ronan Carr           | 0                   | ge              | · The requirement for net positive impact creates potential perverse incentives and faces similar inconsistencies as ESG scores that rely on incomparable metrics.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                 |
| 1342 | Ronan Carr           | 0                   | ge              | · We favour greater transparency on reporting and more quantitative assessments where possible given the improved comparability. However, the burden created by implementation of this area should not pose a risk to the broader CCP agenda.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                 |
| 1342 | Ronan Carr           | 0                   | ge              | The Core Carbon Principles by their nature should focus on the integrity of the carbon reductions or removals claimed in the first instance. Sustainable development impacts and assessments of performance according to SDGs are secondary. This would ensure the CCPS remain neutral between project types with inherently different co-benefit profiles.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                 |
| 1342 | Ronan Carr           | 0                   | ge              | BeZero does not have a recommendation for which option to use to assess alignment with Environmental and Social Safeguards requirements for carbon-crediting programmes in the initial phase.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                                                 |
| 1342 | Ronan Carr           | 0                   | ge              | However, BeZero supports two key aspects of criterion 7.10. First, we approve of the requirement for carbon-crediting programmes to provide publicly available information regarding how mitigation activities align with SDG objectives. BeZero research suggests that many projects with SDG claims fail to provide evidence for their SDG claims, particularly quantitative evidence. Of the major accreditors (SD VISTa, GS4GG, CAR, ACR, Plan Vivo), only SD VISTa labels/assets and GS4GG-certified SDG impacts/monetised contributions require quantitative evidence.                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                 |
| 1342 | Ronan Carr           | 0                   | ge              | Second, BeZero endorses the requirement that carbon crediting programmes must have provisions for monitoring, reporting, and verification (MRV) - at least for projects that seek to make SDG claims. We find that only two SDG crediting programmes require monitoring and few require verification. The programmes that have these requirements provide more robust publicly available evidence for their SDG claims.                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                 |

| 1342 | Ronan Carr           | 0                   | ge              | Lastly, we support the requirement that mitigation activities avoid - or at least minimise - physical and economic displacement. BeZero views strong land rights as essential for a ratable project.                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                            |
| 1342 | Ronan Carr           | 0                   | ge              | However, BeZero has several recommendations regarding criterion 7.10. First, we suggest amendments where the crediting programme requires qualitative assessments of SDG impacts. The approved tools to make these qualitative assessments include those by Gold Standard and SD VSta, however discrepancies may arise given some assessments have higher associated costs than others.                                                                                                                                                                                     | 0                                                                                                                                                                                            |
| 1342 | Ronan Carr           | 0                   | ge              | For example, SD VSta, arguably the most rigorous SDG claim programme, has extra fees whereas the other options listed (e.g. WRI's NDC-SDG interlinkages tool) is free, but much less rigorous. This could lead to variation in claim quality due both free and paid assessments being allowed.                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                            |
| 1342 | Ronan Carr           | 0                   | ge              | Second, BeZero suggests removing the requirement that crediting programmes incorporate evidence-driven procedures using national/local tools and frameworks. This is because national and local SDG impact tools and frameworks vary widely. Many governments have set out their own interpretations of the SDGs and adapted their targets and indicators for their own nations, and the same is true for some local governments. If these are applied, SDG impacts will not be comparable based on their impact to the goals on a global level.                            | 0                                                                                                                                                                                            |
| 1342 | Ronan Carr           | 0                   | ge              | We also recommend that the requirement for carbon credits to have a net positive impact on SDGs is removed. This requirement creates scope for significant negative impacts to be obscured by incomparable positive impacts. If the only cap on negative SDG impacts is as long as they are lower than the positive impacts, then severe negative impacts could still occur on unrelated SDGs, as well as on the same SDG but according to different indicators. Furthermore, impacts across SDGs and indicators are not comparable because they measure different targets. | 0                                                                                                                                                                                            |
| 1343 | Anonymous            | 0                   | ge              | Section 7: Sustainable Development Impact & Safeguards                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | n/a                                                                                                                                                                                          |
| 1343 | Anonymous            | 0                   | ge              | Many offset projects, such as natural climate solutions, can provide benefits beyond GHG reductions. At the same time, co-benefits can create additional confusion and complexity around the measurement or classification of project attributes that can be subjective. Additionally, requirements that track, monitor and verify these co-benefits can make the broader adoption of the CCP's more difficult for existing standards and market participants.                                                                                                              | 0                                                                                                                                                                                            |
| 1344 | Seoyi Kim            | 0                   | ge              | Joint MDB Response to the IC-VCM's CCPs                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Please see comments above.                                                                                                                                                                   |
| 1344 | Seoyi Kim            | 0                   | ge              | The balance needs to be maintained between the requirements for standards to ensure net positive SD impacts and for ensuring robust environmental and social safeguards. While ensuring net positive SD impact is desirable, having it as an additional attribute like the way the draft suggests (in #12.2 quantified SDG impacts) may be sufficient.                                                                                                                                                                                                                      | 0                                                                                                                                                                                            |
| 1345 | Anonymous            | 0                   | te              | These requirements in total go far beyond what is currently considered best practice. The ICVCM is proposing extremely onerous requirements that very few programs will be able or willing to meet, and only at great cost if so.                                                                                                                                                                                                                                                                                                                                           | We suggest basing these requirements (1) on a self-assessment that makes it possible for programs to focus only on relevant issues; and (2) existing safeguard frameworks, including Cancun. |
| 1347 | Anonymous            | 0                   | ge              | The Sustainable Development Impacts and Safeguards outline a comprehensive set of criteria. Unfortunately, some lack of clarity prevails in terms of what evidence will be required to prove compliance as well as the implementation of necessary processes. Additionally, the strict criteria of the kind outlined in this document may disproportionately affect projects with low economic feasibility such as small-scale projects and projects in LDCs.                                                                                                               | N/A                                                                                                                                                                                          |
| 1348 | Anonymous            | 0                   | ge              | "Unless indicated otherwise under specific criteria, the IFC performance standards are considered the minimum requirement necessary for CCP eligibility from the outset."                                                                                                                                                                                                                                                                                                                                                                                                   | Provide clarity right upfront (there are some footnotes later than make reference specifically to the IFC Standard) and consider revising this requirement to make it less onerous.          |
| 1348 | Anonymous            | 0                   | ge              | It is not quite clear how this sentence is to be applied in the context of fulfilling the criteria. Does it mean that each of the procedures e.g. in Table 26 needs to fully comply with the IFC performance standards. If this is the case, it needs to be ensured that the onus on programmes in meeting this requirement, particularly smaller programmes, is not too great.                                                                                                                                                                                             | 0                                                                                                                                                                                            |

| 1349 | Individual/employee, Finnwatch | 0                   | ge              | The reference to "best-in-class standard" fails to recognize the global authoritative standard on business and human rights that is UN Guiding Principles on Business and Human Rights (UNGP) which should be mentioned here. Other international guidance that should be mentioned here are OECD Guidelines for Multinational Enterprises and OECD Due Diligence Guidance for Responsible Business Conduct. In addition to mentioning these authoritative international guidances, the whole section on social safeguards should be based on them. We'd like to point out that the European union will be applying UNGPs (and OECD Guidelines building on UNGPs) to its upcoming CSDD Directive. It would be counter productive for ICVCM not endorse UNGP based human rights approach.                                                                                                                                                                                                                                                                                                                                                                                                                                                     | The reference to "best-in-class standard" fails to recognize the global authoritative standard on business and human rights that is UN Guiding Principles on Business and Human Rights (UNGP) which should be mentioned here. | 1350 | Carolyn Ching                  | 0                   | ge              | We agree that it is important that projects and programs adhere to safeguards and ensure that benefits are shared. However, the IFC Safeguards are not intended for carbon projects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | We recommend that ICVCM draw from relevant and carbon market-based safeguards standards, such as the Cancun safeguards, CCB Standards, and REDD+SES standards to inform safeguards instead of the IFC Safeguards which are not intended for carbon projects. Please also clarify if projects are required to demonstrate they conform to IFC safeguards as well as all of the requirements in this section.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1351 | Anonymous                      | 0                   | ge              | I am a PhD Candidate at the University of California, Berkeley and an affiliate of the Berkeley Carbon Trading Project. My research focuses on understanding the complex impacts of international finance in countries and jurisdictions with high levels of corruption, impunity, and violence against environmental activists. Prior to my PhD research, I served as Director of the Guatemala Human Rights Commission and as Senior Campaigner for the Center for International Environmental Law. In these positions, I worked closely with communities who had been impacted by international development projects, supported efforts to strengthen safeguards in Development Finance Institutions, collaborated with local partners to file complaints at the Independent Accountability Mechanisms of the IFC and Inter-American Development Bank, and conducted extensive monitoring of the human rights impacts of these processes. My work has been focused in Latin America, but I have also worked for over a decade with international coalitions of NGO partners and communities around the world facing environmental harms, threats, violent evictions, and violence occurring in the context of carbon mitigation projects. | While I commend ICVCM's attention to social and environmental safeguards as a crucial element of carbon-crediting programs, experience has shown that even the best-in-class safeguards are not enough to ensure programs respect safeguards nor can they ensure communities are protected from harm. I urge ICVCM to clarify and strengthen its safeguard requirements for CCP-eligibility. In the context of jurisdictional REDD+, I suggest ICVCM consider additional eligibility requirements and higher due diligence standards for projects and programs carried out in jurisdictions with a history of repeated violations of human rights, environmental degradation, corruption, and repression against indigenous communities. For carbon crediting programs like REDD+ that have a history of safeguard violations and community harms, I urge ICVCM to consider exempting them from eligibility until stronger mechanisms are developed to ensure compliance and accountability. |
| 1351 | Anonymous                      | 0                   | ge              | My comments relate specifically to the ICVCM's proposed social and environmental safeguard standards—as well as relevant criteria in relation to program governance, validation and verification, and mitigation activity information—and how they might apply to REDD+. ICVCM's proposed standards raise the bar on safeguards in some respects, however they are too vague to ensure a higher standard of practice, and depend on existing validation and verification processes to measure compliance—a system which has time and again given a stamp of approval to projects which violate basic safeguard principles.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1351 | Anonymous                      | 0                   | ge              | Simply having written standards does not mean projects automatically "do no harm." When concerns arise about REDD+, proponents cite the existence of social and environmental safeguards as evidence that harms will be effectively avoided or mitigated. Proponents of safeguards can benefit from a review of other experiences with environmental and social safeguards, particularly among Development Finance Institutions, where they have existed for decades. Significant research, reporting and analysis has been conducted to understand the extent to which safeguard policies (and related accountability mechanisms) have prevented or reduced harms. As I discuss below, safeguard policies may have raised the bar for assessing social and environmental harms within DFI projects, yet there continues to be debate and critique around the quality of the safeguards, evidence on ongoing non-compliance of DFIs with their own policies, and concerns about whether these mechanisms effectively provide redress for affected communities.                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| 1351 | Anonymous            | 0                   | ge              | The first safeguard policies arose at the World Bank in the 1980s in response to widespread harms to communities and the environment. Despite these policies, the World Bank was failing to comply with its own policies, and as a result, causing “devastating human and environmental consequences” in projects such as the Sardar Sardovar Dam (Lewis 2012: 5, citing Morse Commission 1992). An internal review of the World Bank’s investment portfolio and “found that more than one third of Bank projects were ranked as “unsatisfactory” and that violations of loan agreements and internal policies were endemic” and “identified a ‘culture of approval’ in which various Bank incentives, such as year-end lending targets, compelled staff to focus on “moving money out the door,” in some cases with little concern for risks, potential impacts, country capacity, feasibility, or long-term sustainability, either financial or environmental” (Lewis 2012: 5, Citing World Bank 1992). The creation of the World Bank Inspection Panel in 1993 was set up to address this systematic lack of compliance.                                 | 0               |
| 1351 | Anonymous            | 0                   | ge              | Independent accountability mechanisms and grievance redress are essential elements of a safeguards system, however are also not sufficient to prevent harm. Today, most DFIs lending to both the public and private sector have safeguard policies, and most multilateral banks have an Independent Accountability Mechanism (IAM) whose role it is to review safeguard compliance. However, even institutions with decades of experience with safeguard standards and IAMs does not prevent harms from occurring. Incentives within lending institutions continue to be at odds with environmental and social protection. A report by the IAM Network in 2012 found a long list of harms that continue to occur, and had given rise to complaints, including “destruction of culturally significant or ecologically unique landscapes; loss of traditional user-rights to forest or other natural resources; loss of access to resources or livelihoods [...] and poor project implementation stemming from inadequate consultation, participation, or information-sharing” (Lewis 2012: 4).                                                               | 0               |
| 1351 | Anonymous            | 0                   | ge              | And while accountability mechanisms have been essential for bringing to light violations, highlighting the systematic nature in which they occur, even the “best in class” tools for accountability fail to follow through with community complaints and are unable to provide adequate remedy (Daniel et al. 2016, Altholz and Sullivan 2017). An external review of 684 finalized complaint processes, filed at 12 IAMs between 1994 and 2014, found that, of the information available, 44% of complaints raised concerns about environmental issues such as pollution and biodiversity, and that complainants consistently raised concerns about procedural issues such as consultation and disclosure (42%), and due diligence (42%) (Daniel et al. 2016: 25). The review also found that only about 20% of complaints had achieved results, and only 15% resulted in formal compliance review of a lender’s actions. As part of the study, complainants from 12 cases that had “achieved results” were interviewed, and the majority described the process unsatisfactory; for many, substantive grievances were never resolved (Daniel et al. 2016). | 0               |
| 1351 | Anonymous            | 0                   | ge              | Current “best-in-class” standards, on which ICVCM safeguards are based, are not sufficient to prevent harms and provide redress. The IFC’s performance standards are often cited as a global standard. However, the standards do not effectively prevent harms. In fact, the vast majority of complaints across all IAMs (246 from 2000-2014) have been filed at the IFC’s mechanism, the Compliance Advisor Ombudsman (CAO). These complaints suggest that the IFC struggles to meet its own standards. Moreover, a study by UC Berkeley of CAO’s process and complaint outcomes between 2000 and 2011 found that only 7% of complaints led to project audits and that 68% of cases in dispute resolution were not resolved (Altholz and Sullivan 2017).                                                                                                                                                                                                                                                                                                                                                                                                   | 0               |
| 1351 | Anonymous            | 0                   | ge              | In the context of jurisdictional REDD+, the Cancun Safeguards are the current international standard. Yet the Cancun principles contain little concrete or specific guidance on how countries should interpret the safeguards, what laws or policies need to be in place, or how to report on safeguard compliance. Proponents of safeguards have condemned the decisions in Durban for failing to make safeguards mandatory, and not developing any performance indicators (Dehm 2016). This discretionary approach leaves no clear understanding of what adequate safeguarding looks like, or how countries will be held accountable to these standards. The flexible and negotiable nature of Cancun safeguards reflects the very attributes that reduce accountability, according to advocates. Moreover, Cancun provides no clear guidance on grievance redress.                                                                                                                                                                                                                                                                                       | 0               |

| 1351 | Anonymous            | 0                                                                                      | ge              | Clearly safeguards themselves are no silver bullet, and safeguards, without accountability mechanisms, are unable to address concerns. The strength and clarity of the environmental and social standards sets the bar for action, and the existence of an accountability mechanism opens avenues for redress. If standards are weak, compliance with those standards may do little to address adverse environmental and social impacts. If the mechanism to review grievances about safeguard violations is nontransparent, unpredictable, and has no independent authority to act, it may do little to provide effective redress. Moreover, if IAMs don't conduct effective compliance review, or do so without any ability to address systematic safeguard violations, it is unlikely that compliance will improve over time.                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0               |
| 1351 | Anonymous            | 0                                                                                      | ge              | Safeguard policies of carbon-crediting entities would need to undergo significant adjustments to meet ICVCM's standard - much less international human rights norms - and it should be a red flag for ICVCM that a major carbon-crediting entity such as Verra openly states that few of their credits would be eligible. Indeed, existing REDD+ safeguards face a series of challenges. They are more vague, and less binding, than DFI policies. The grievance procedures are undefined and non-transparent. Insofar as safeguards require consultation and FPIC of IPLCs, they will face the same challenges and likely give rise to similar complaints by affected communities as DFI projects. In their direct implications for land tenure, and resource access and management, they will similarly be engaging in areas with long histories of conflict, corruption and the potential for violence.                                                                                                                                                                                                                                                                                                                                                                                   | 0               |
| 1351 | Anonymous            | 0                                                                                      | ge              | The challenges will be even greater with jurisdictional REDD programs. In the context of jurisdictional REDD+, analysis must not only include existing legal frameworks, but the local and national governments historical track-record on implementing them, including addressing land rights, FPIC, and grievance redress. Complaints are typically filed at DFI accountability mechanisms because local institutions had failed in their duty to protect vulnerable citizens, conduct FPIC, recognize ancestral land rights, and/or ensure a right to a healthy environment. As 'mechanisms of last resort,' the IAMs and their caseload provide a glimpse into the challenges that local and national jurisdictions have in upholding their own laws, as well as international norms and standards. Violent forced evictions, corrupt management of land, forests and waterways, conflicts over land tenure, and blatant violation of FPIC obligations are common around the world. Many countries with REDD+ projects and moving toward Jurisdictional programs have poor track records in this regard; that this is true for international legal obligations calls into question their ability to meet these standards in the context of non-binding, flexible or voluntary standards. | 0               |

| 1352 | Anonymous            | Criterion 7.1: Assessment and Management of Environmental and Social Risks and Impacts | te              | Every project should be able to explain its theory of change as part of the demonstration of additionality. In the end, carbon projects operating in the VCM are the germs of potential sustainable development paths that can unfold in the future, and it is important to understand what is intended to be achieved and how it will be achieved, attending to the particularities of each geography and region.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0               |

| 1353 | Individual/employee, Finnwatch | Description                                                                                                        | ge              | The "identify, assess and manage" should be brought in line with the UNGPs, according which companies must also have in place processes to remedy actual adverse impacts (i.e. impacts that cannot anymore be prevented) that they have caused or contributed to. Being linked to an adverse impact does not lead to responsibility to remediate; however, a company must also manage (i.e. prevent and mitigate) such impacts too. If it doesn't, there is a risk that the impact gets worse and that the company's involvement changes from being "linked to" to "contribute".                                                    | The "identify, assess and manage" should be brought in line with the UNGPs, according which companies must also have in place processes to remedy actual adverse impacts (i.e. impacts that cannot anymore be prevented) that they have caused or contributed to. | 1354 | Anonymous                      | Description                                                                                                        | ge              | A good practice is to publish the assessment, not the mitigation measures. This will avoid understating mitigation measures by being publicly disclosed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | See comments above                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 1354 | Anonymous                      | Description                                                                                                        | ge              | In nature-based solutions, it is important to assess that the communities are ready for symmetrical operations to occur that can last. As stated in previous comments, developing these capacities and documenting them will require grants by multi-lateral or bi-lateral agencies, as well as some practical registry documenting the communities that are ready to receive the funding. Assessment of risks and consultation can be followed by an assessment of capacities that indicates that the seller is (1) organized; (2) understands the commitment that will be signed; (2) has a financial plan to share the benefits. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 1355 | Anonymous                      | Table 26 – Requirements for Criterion 7.1: Assessment and management of environmental and social risks and impacts | ge              | The requirements are for the carbon-crediting program, but is our understanding correct that most information would need to be submitted by the program owners? If so, what kind of support would the program owners receive from the carbon-crediting program?                                                                                                                                                                                                                                                                                                                                                                     | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 1356 | Individual/employee, Finnwatch | Table 26 – Requirements for Criterion 7.1: Assessment and management of environmental and social risks and impacts | ge              | We suggest covering negative human rights and environmental impacts in separate sections. Regarding human rights mitigation activity proponents should have in place 1) a human rights due diligence process to identify, prevent, mitigate and account for how they address their impacts on human rights; and 2) Processes to enable the remediation of any adverse human rights impacts they cause or to which they contribute.                                                                                                                                                                                                  | The first requirement should be (according to the UNGPs) a policy commitment to meet their responsibility to respect human rights.                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 1357 | Anonymous                      | Table 26 – Requirements for Criterion 7.1: Assessment and management of environmental and social risks and impacts | ge              | Most requirements are covered by internationally widely used guidelines such as IFC Performance Standard and Cancun Safeguard, and they are also used in actual projects. By clearly stating that these international guidelines and practices will be used, projects can be developed and implemented smoothly. Establishing new, detailed thresholds will cause confusion and disturb reduction projects.                                                                                                                                                                                                                         | No specific change proposed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 1358 | Oda Almas                      | Table 26 – Requirements for Criterion 7.1: Assessment and management of environmental and social risks and impacts | te              | In table 26, a): Suggest the use of rights-language throughout -- identify, assess, and address potential and actual negative human rights impacts. Addressing impacts includes preventing, and mitigating where prevention is not possible, potential impacts, and remedying actual impacts. This may mean refraining from pursuing the proposed mitigation activity further where potential impacts are identified that cannot be prevented or appropriately mitigated                                                                                                                                                            | See above                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 1359 | Alexandre Grais                | Table 26 – Requirements for Criterion 7.1: Assessment and management of environmental and social risks and impacts | te              | We welcome the consideration of including compliance with IFC Performance Standards. However, it would take time to integrate these into Standards requirements such as CCBS and today such safeguards are not auditable by VVBs.                                                                                                                                                                                                                                                                                                                                                                                                   | We therefore recommend that project developers that voluntarily adopt these performance standards and report compliance in their monitoring reports to be recognized and encouraged until formal verification is made possible by the auditors.                                                                                                                                                                                                                                                                                                                                  |

| #    | Comment submitted by                            | Para/Fig/Table/Note                                                                                                | Type of comment | Submitted comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Proposed change                                                                                                                                                                                                                                                            |

| 1377 | Anonymous            | Criterion 7.4: Land Acquisition and Involuntary Resettlement                             | te              | (a) requires projects to avoid physical and economic displacement. Note that many NBS projects will involve some kind of economic displacement e.g. restrictions on charcoal making, timber cutting, expansion of agricultural activities. These displacement impacts are managed through alternative livelihood strategies that can offer more sustainable livelihoods. We do not think it is the intent of the CCP to embargo or discourage projects where there are credible, effective, sustainable alternative livelihood activities for economic displacement. Suggest the text is revised.        | 0                                                                                                                                                                                                                                                                                                                                                               |
| 1378 | Anonymous            | Table 29 – Requirements for Criterion 7.4: Land acquisition and involuntary resettlement | te              | - clause b) will require proponents to ensure and provide evidence of meaningful and informed participation of affected communities                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | The carbon-crediting program shall require mitigation activity proponents to ensure and provide evidence of a meaningful and informed participation of affected individuals and communities in the planning, implementation and monitoring of resettlement activities.                                                                                          |
| 1379 | Anonymous            | Table 29 – Requirements for Criterion 7.4: Land acquisition and involuntary resettlement | te              | Regarding these points" a) The carbon-crediting program shall require mitigation activities to avoid or minimise pollutant emissions to air, discharges to water, noise and vibration; and the generation of waste by abiding to local laws and regulations or IFC performance standard #3 (whichever the higher).b) The carbon-crediting program shall have legal and regulatory procedures requiring that mitigation activities promote more sustainable use of resources, including energy and water by abiding to local laws and regulations or IFC performance standard #3 (whichever the higher)." | Consider removing the words "whichever the higher"                                                                                                                                                                                                                                                                                                              |
| 1379 | Anonymous            | Table 29 – Requirements for Criterion 7.4: Land acquisition and involuntary resettlement | te              | "whichever the higher" could rather be stated as "whichever is more rigorous"                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                                                                                                                                               |
| 1379 | Anonymous            | Table 29 – Requirements for Criterion 7.4: Land acquisition and involuntary resettlement | te              | having said that, we do feel that adherence to local laws and standards may be sufficient providing that they are enforced, and notably where conformance to the IFC standard will be too onerous for the project proponent to achieve, and particularly initially. such credits, which only adhere to local laws and standards could be tagged as being suited only for domestic rather than international sale.                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                               |
| 1380 | Anonymous            | Table 29 – Requirements for Criterion 7.4: Land acquisition and involuntary resettlement | ge              | Land Acquisition, though featured in the title, is not specifically addressed in the criteria or means of assessment under 7.4. Therefore, XXXX proposes the addition of a means of assessment by which mitigation activities do not acquire land from IPLCs. We also suggest that if IPLCs are able to acquire land in their name through the mitigation activity, then such acquisition must be permissible in the interest of strengthening IPLC relationships to their ancestral or customary land which is often held in the name of the State or local authorities                                 | Table 29(c)                                                                                                                                                                                                                                                                                                                                                     |
| 1380 | Anonymous            | Table 29 – Requirements for Criterion 7.4: Land acquisition and involuntary resettlement | ge              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | "The carbon crediting program shall prohibit mitigation activities from acquiring title or ownership over any land or territory held (formally or customarily) by IPLCs. However, where it is possible for IPLCs to acquire land through the mitigation activities, such acquisition shall be encouraged to strengthen IPLC relationships to land and territory |
| 1381 | Anonymous            | Table 29 – Requirements for Criterion 7.4: Land acquisition and involuntary resettlement | ge              | Section 7.4 does not provide any requirement with regard to land acquisition. The two Criteria only address displacement. Hence, XXXX suggest a additional criterion in Table 29 to prohibit acquisition of land from IPLCs, and also strengthen IPLC relationship to land where possible.                                                                                                                                                                                                                                                                                                               | Table 29(c)                                                                                                                                                                                                                                                                                                                                                     |

| 1382 | Anonymous                                       | Table 29 – Requirements for Criterion 7.4: Land acquisition and involuntary resettlement | ge              | The Climate, Community and Biodiversity Standards, the UN Declaration on the Rights of Indigenous People and the ILO Convention 169 offer guidance on what constitutes fair and appropriate compensation – “compensation should be in the form of lands, territories or resources equivalent in quality, size and legal status to those taken. When such compensation is not available, monetary compensation is appropriate”. | “where avoidance is not possible, displacement is to occur only with the consent of affected parties, with full justification provided as well as appropriate forms of legal protection and compensation support. Efforts shall be made to ensure that compensation is in the form of lands and resources similar in quality and size to the original area. Where this is not achievable, commensurate monetary compensation shall be granted.”                                                                                                                                                                      |
| 1382 | Anonymous                                       | Table 29 – Requirements for Criterion 7.4: Land acquisition and involuntary resettlement | ge              | XXXX believes that the Assessment Framework can take inspiration from this to set a good industry threshold in this regard.                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 1383 | Individual/employee, Conservation International | Table 29 – Requirements for Criterion 7.4: Land acquisition and involuntary resettlement | te              | This safeguard criterion lacks considerable detail.                                                                                                                                                                                                                                                                                                                                                                            | Suggested additional bullets to Table 29                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 1383 | Individual/employee, Conservation International | Table 29 – Requirements for Criterion 7.4: Land acquisition and involuntary resettlement | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                              | Projects may support project-initiated involuntary resettlement only after a) the free, prior and informed consent (FPIC) of affected resource dependent communities has been sought, obtained and documented; b) the result restores, and if possible, improves the livelihoods and standards of living of displaced persons; and c) ensures the provision of adequate housing (including essential services and utilities) with security of tenure, and safety at resettlement sites.                                                                                                                              |
| 1383 | Individual/employee, Conservation International | Table 29 – Requirements for Criterion 7.4: Land acquisition and involuntary resettlement | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                              | Resettlement or displacement is sought primarily through consultation processes that lead to good-faith negotiated settlements meeting the requirements of providing timely compensation for loss of assets at full replacement cost, even if the CCP has the legal means to displace and/or acquire land without the seller’s consent. Such agreements should ensure fair and equitable sharing of benefits associated with project usage of the resources.                                                                                                                                                         |
| 1383 | Individual/employee, Conservation International | Table 29 – Requirements for Criterion 7.4: Land acquisition and involuntary resettlement | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                              | Good faith negotiations must be documented as the preferential manner in which to reach a resettlement or alternative livelihoods plan. The CCP shall undertake good-faith efforts to secure negotiated agreements with affected individuals and communities, based on transparent, consistent and fair compensation standards and equitable procedures to ensure that those people who enter into negotiated agreements maintain the same or better income and livelihood status. Such agreements should provide access for displaced communities and persons to appropriate development benefits from the project. |
| 1383 | Individual/employee, Conservation International | Table 29 – Requirements for Criterion 7.4: Land acquisition and involuntary resettlement | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                              | Particular care is required where the CCP intends to use or restrict access to natural resources that are central to the identity, culture, and livelihood of program affected communities of Indigenous Peoples and their usage thereof may exacerbate livelihood risk.                                                                                                                                                                                                                                                                                                                                             |
| 1384 | Carolyn Ching                                   | Table 29 – Requirements for Criterion 7.4: Land acquisition and involuntary resettlement | ge              | While the rights of IP and LC are discussed in Section 7.5, this section does not acknowledge land rights of IP and LC.                                                                                                                                                                                                                                                                                                        | We recommend that this section should also acknowledge that IP and LC do not always have legal land tenure, but their customary rights should be respected.                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| 1385 | Darcy Jones          | Table 29 – Requirements for Criterion 7.4: Land acquisition and involuntary resettlement                                    | te              | N/A                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Regarding point a), suggest adding the following bolded language as follows “[...] legal protection and compensation support. If IPLCs were involved in displacement or resettlement, the carbon credit program will require the realization of the Free, Prior and Informed Consent (FPIC) according to ILO 169.”                                                                                                                                             |
| 1387 | Anonymous            | Table 29 – Requirements for Criterion 7.4: Land acquisition and involuntary resettlement                                    | te              | The language and requirements for this section are vague and need detail and clarity in order to address the complex concerns related to land acquisition and involuntary resettlement. In the context of REDD+, numerous projects have been validated and verified despite inadequate consultation, or the complete exclusion of communities without formal land title. In such contexts, involuntary resettlement may happen but is never documented by project proponents or VVBs. | This section should explicitly cite to existing international standards on indigenous land rights; specific norms on Free, Prior and Informed Consent; and should explicitly recognize customary land rights. Moreover, the text should address *how* carbon-crediting entities are "expected to ensure meaningful and informed participation of individuals and communities". Such a vague standard does nothing to raise the bar on such an important issue. |
| 1388 | Anonymous            | Criterion 7.5: Biodiversity conservation and sustainable management of living natural resources                             | ed              | It is specified that projects should “avoid and, if this is not possible, minimise, impacts on biodiversity and ecosystem services including the production of living natural resources”. It should be clarified that this refers to adverse impacts.                                                                                                                                                                                                                                 | "adverse impacts"                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 1389 | Stephanie Sargeant   | Criterion 7.5: Biodiversity conservation and sustainable management of living natural resources                             | ge              | Refer to IUCN NBS standard and IPBES and CBD guidance.                                                                                                                                                                                                                                                                                                                                                                                                                                | Refer to IUCN NBS standard and IPBES and CBD guidance.                                                                                                                                                                                                                                                                                                                                                                                                         |

| 1393 | Anonymous            | Table 30 – Requirements for Criterion 7.5: Biodiversity conservation and sustainable management of living natural resources | te              | This requirement could be quite onerous particularly for project proponents in developing countries where suitable information is not available.                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                              |
| 1394 | Anonymous            | Table 30 – Requirements for Criterion 7.5: Biodiversity conservation and sustainable management of living natural resources | ge              | XXXX welcomes requirements on avoiding invasive species and stressing on native species. However, we suggest that the Assessment Framework go beyond the no-harm approach and mandate positive biodiversity impacts through mitigation activities.                                                                                                                         | A.Table 30(a)                                                                                                                                                                                                                                                                                                                  |
| 1394 | Anonymous            | Table 30 – Requirements for Criterion 7.5: Biodiversity conservation and sustainable management of living natural resources | ge              | We also suggest that where avoidance of negative impact is not possible, it is not sufficient to just minimise impact. The program must also mandate compensation for impacts.                                                                                                                                                                                             | “The carbon-crediting program shall require that mitigation actions avoid and, if this is not possible, minimise and compensate for, impacts on biodiversity and ecosystem services.”                                                                                                                                          |
| 1395 | Anonymous            | Table 30 – Requirements for Criterion 7.5: Biodiversity conservation and sustainable management of living natural resources | ge              | XXXX is concerned that Table 30 only require a bare minimum approach of do-no-harm to biodiversity. For NCS, it is essential to ensure positive impact on biodiversity. We believe that the criteria under this section could be much stronger and higher in ambition, specifically regarding High Conservation Values and monitoring net positive impact on biodiversity. | Criterion 7.5, Table 30                                                                                                                                                                                                                                                                                                        |

Guidance and procedures shall ensure that in designing and implementing mitigation activities, proponents can anticipate and avoid adverse impacts on IPLCs, or when avoidance is not possible, obtain the consent of affected parties and *agree on measures of compensation with affected IPLCs* fully compensate for such impacts taking into account that sometimes mitigation activities are also developed and managed by IPLCs."                                                                                                                                                                                                                                                                              |
| 1408 | Darcy Jones          | Description                                                                                                                 | te              | The framing of Indigenous Peoples and Local Communities (IPLCs) considerations in Criterion 7.6 of the Assessment Framework is incorrect. Reducing emissions in general does not negatively affect IPLCs because they are not responsible for significant emissions.                                                                                                                                                                                                                                                                                                  | This criterion should not start from the premise that the point of the safeguards is to avoid or mitigate negative impacts, but rather focus on avoiding/preventing the occurrence of risks, promoting good practices, or moving toward a transformative approach that addresses the barriers that make it difficult for IPLCs to be considered effective partners with voice and vote. Projects or programs that negatively affect IPLCs cannot generate carbon credits, and FPIC is always required.                                                                                                                                                                                                                                                                                                                                                                                            |
| 1408 | Darcy Jones          | Description                                                                                                                 | te              | There is also no evidence of safeguards that require the improvement in the living conditions of IPLCs (poverty reduction).                                                                                                                                                                                                                                                                                                                                                                                                                                           | Safeguards that require the improvement in the living conditions of IPLCs (poverty reduction) should also be included.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1409 | Anonymous            | Description                                                                                                                 | te              | All too often, project proponents conduct simplified presentations to a subset of affected community members and call it "FPIC". However, these processes take time, and are not equivalent to a stakeholder engagement meeting or presentation about the project. FPIC is, ultimately, a State’s obligation, and FPIC has been implemented poorly --or not at all -- in many countries around the world.                                                                                                                                                             | ICVCM should be detailed and explicit about what is expected from carbon-crediting programs, VVBs and project proponents. Specifically, I recommend that ICVCM require VVBs to conduct additional due diligence (outside of documents from the project proponent) to understand whether all stakeholders/affected communities have been properly identified. It should be made explicit that FPIC is required in cases where indigenous communities affected by the project have customary land rights. ICVCM should look to international standards regarding the process of conducting FPIC, including regional jurisprudence from entities such as the Inter-American Commission and Court on Human Rights. Finally, ICVCM should make clear that a project should not move forward - and should not meet standards for validation or verification - if communities do not give their consent. |

| 1416 | Individual/employee, Conservation International | Table 31 – Requirements for Criterion 7.6: Indigenous People, Local Communities and Cultural Heritage | ed              | The criterion should balance the possible marginalization of IPLCs with recognition of the leadership, contributions and accumulated knowledge of Indigenous Peoples, from which CCPs can learn from and further the achievement of natural resource conservation in accordance with their worldview. Indigenous Peoples promote, own and manage activities and enterprises that underscore the significance of their unique knowledge of, ability and interests in sustainable development.                                                                    | CCP policy on IPs should ensure that the design and implementation of projects fosters full respect for Indigenous Peoples’ identity, dignity, individual and collective rights, livelihood systems, and cultural uniqueness as defined by the Indigenous Peoples themselves in accordance with their worldview. |

| 1416 | Individual/employee, Conservation International | Table 31 – Requirements for Criterion 7.6: Indigenous People, Local Communities and Cultural Heritage | ed              | 0                                                                                                                                                                                                                                                                                                                      | Update this bullet with language in brackets: The carbon-crediting program shall require mitigation activity proponents to obtain FPIC for the utilisation and/or commercial development of natural resources on land and territories claimed by IPLCs [or any proposed commercialization of tangible or intangible cultural heritage of IPLCs].                                                                                                                                                                                                                                                                                                  |
| 1416 | Individual/employee, Conservation International | Table 31 – Requirements for Criterion 7.6: Indigenous People, Local Communities and Cultural Heritage | ed              | 0                                                                                                                                                                                                                                                                                                                      | * The meaning of full and effective participation is represented in the ESMF commitment to diversity, equity and inclusion (DEI), and stakeholder engagement, both defined in the Glossary of Terms, which emphasizes the scope and quality of participation and, as well as can include the decision to not participate.                                                                                                                                                                                                                                                                                                                         |
| 1417 | Anonymous                                       | Table 31 – Requirements for Criterion 7.6: Indigenous People, Local Communities and Cultural Heritage | ge              | The Assessment Framework refers to both FPIC and to Informed Consultation and Participation (ICP). Table 30 mention two scenarios in which FPIC would be essential 31(a) and 31(d) - but it does not specify what would be required as part of the FPIC process. It also does not specify when ICP would be relevant., | XXX urges the IC VCM to provide strong assessment criteria for FPIC to ensure that it does not remain a box ticking exercise, but guarantees meaningful participation of key IPLC stakeholders and accounts for their concerns and questions.                                                                                                                                                                                                                                                                                                                                                                                                     |

| 1420 | Anonymous            | Table 31 – Requirements for Criterion 7.6: Indigenous People, Local Communities and Cultural Heritage | ge              | Table 31(g) requires mitigation activities to ban access restrictions to land or resources. This is an important requirement, but it should include an exception because restriction on use of certain land and resources is typically an important part of mitigation activities. For eg, restriction on timber logging for a REDD+ project.                                                                                                                                                                                                                                | XXX suggests the following language for Table 31(g):                                                                                                                                                                                                                                                                                                                                                                               |
| 1420 | Anonymous            | Table 31 – Requirements for Criterion 7.6: Indigenous People, Local Communities and Cultural Heritage | ge              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | “The carbon-crediting program shall ban forced eviction or the whole or partial physical or economic displacement of IPLCs, including through access restrictions to lands, territories, and resources. However, access restrictions to lands, territories and resources which are essential for the mitigation activity (eg. prohibition on timber harvesting) may be allowed if agreed upon with IPLCs during the FPIC process.” |
| 1421 | Anonymous            | Table 31 – Requirements for Criterion 7.6: Indigenous People, Local Communities and Cultural Heritage | ge              | XXXX supports the ban on restricting access to IPLC land and resources. But we understand that most mitigation activities inherently require access restrictions in different ways in order to implement the project and reduce carbom. For eg. prohibition on timer harvesting.                                                                                                                                                                                                                                                                                             | Table 31(g)                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 1421 | Anonymous            | Table 31 – Requirements for Criterion 7.6: Indigenous People, Local Communities and Cultural Heritage | ge              | We suggest including an exception to this provision such that access restrictions that are agreed upon by IPLCs during the FPIC process are permitted when needed in order to implement the mitigation activity.                                                                                                                                                                                                                                                                                                                                                             | “The carbon-crediting program shall ban forced eviction or the whole or partial physical or economic displacement of IPLCs, including through access restrictions to lands, territories, and resources. However, access restrictions to lands, territories and resources which are essential for the mitigation activity (eg. prohibition on timber harvesting) may be allowed if agreed upon with IPLCs during the FPIC process.” |
| 1422 | Ivan VALENCIA        | Table 31 – Requirements for Criterion 7.6: Indigenous People, Local Communities and Cultural Heritage | te              | Several countries have differentiated requirements for IPs, other ethnic groups and local communities (of non-specific ethnicities). It is important to acknowledge this situation, as demanding that the standards mandated for indigenous peoples must be met for all local communities (many of them non-indigenous) may be unattainable in many jurisdictions, particularly when employing concepts such as FPIC which are strictly codified in national regulations and limited to indigenous peoples and ethnic groups, but not applicable to other local communities. | on clauses a), d), g) should incorporate the caveat “as appropriate according to national circumstances of the host country.”                                                                                                                                                                                                                                                                                                      |
| 1422 | Ivan VALENCIA        | Table 31 – Requirements for Criterion 7.6: Indigenous People, Local Communities and Cultural Heritage | te              | Therefore, on clauses a), d), g) should incorporate the caveat “as appropriate according to national circumstances of the host country.”                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1423 | Oda Almas            | Table 31 – Requirements for Criterion 7.6: Indigenous People, Local Communities and Cultural Heritage | te              | As a first criterion on the list should be:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | See above                                                                                                                                                                                                                                                                                                                                                                                                                          |

| 1439 | Anonymous            | Criterion 7.8: Gender Equality                                                                            | ge              | Good progress on the topic of gender equality is being made by many national governments and international bodies, and further efforts can be included in the design of carbon projects. However, the gender equality criteria require project developers to perform “a comprehensive gender assessment undertaken by a suitably qualified individual when potential gender impacts have been identified”. As this criterion refers to all impacts, and not adverse impacts, it would require such an assessment from many community projects, such as cookstove projects. It should be considered that such an assessment may be too resource demanding for many small-scale project developers to perform. | N/A                                                                                                                                                                                                                                               |
| 1440 | Anonymous            | Criterion 7.8: Gender Equality                                                                            | ge              | There is a lack of “proportionality principle” in this (an others) safeguards criterion. It is important to reflect the baseline and monitor over time with simple scales, for example (1) no visibility of the contribution by women; (2) visibility of women’s contribution; (3) women's participation in decision making; (4) women leading role in decision making. Carbon offsets should at a minimum not go back in the scale.                                                                                                                                                                                                                                                                         | Reflect a “proportionality principle”                                                                                                                                                                                                             |

Is it reasonable to ask every project developer to pay for an independent gender assessment? How thorough are these? Who is going to do this work?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | ...                                                                                                                                                                                                                                               |
| 1442 | Anonymous            | Table 33 – Requirements for Criterion 7.8: Gender equality                                                | ge              | This criterion could be very onerous to meet, depending on the level of detail required, and may not always be relevant to projects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | As suggested before, introduce a self assessment to determine if this is an issue, and only be required to meet the criteria if it is an issue                                                                                                    |
| 1443 | Carolyn Ching        | Table 33 – Requirements for Criterion 7.8: Gender equality                                                | ge              | We heard feedback on this when we conducted research on key carbon market safeguards. This requirement would be easier to implement for technological projects but can be challenging for NCS projects. In some cases, gender equity goes against traditional and cultural practices. Forcing gender equality can be seen as forcing modern/western culture onto other communities. While this is very important, it might be necessary to consider how this plays out in NCS projects with indigenous and traditional communities.                                                                                                                                                                          | Please consider how to balance this requirement with requirements on respecting indigenous and traditional cultures and communities.                                                                                                              |
| 1444 | Ivan VALENCIA        | Table 33 – Requirements for Criterion 7.8: Gender equality                                                | ge              | Several of these requirements such as c) and d) could be taken to the full threshold as they are desirable but not indispensable in the initial threshold and to some extent the concerns are covered by clauses a, b and e. They may dissuade carbon credit programs from applying to the CCPs as a result or discourage many programs to establish projects in jurisdictions where gender norms are still evolving and that would warrant a more simplified approach.                                                                                                                                                                                                                                      | Refer to comments on this section                                                                                                                                                                                                                 |
| 1444 | Ivan VALENCIA        | Table 33 – Requirements for Criterion 7.8: Gender equality                                                | ge              | On clause c) the term Environmental and Social Impact Assessment (ESIA) does not have any reference elsewhere and therefore should be removed as it implies an additional requirement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                 |
| 1445 | Anonymous            | Table 33 – Requirements for Criterion 7.8: Gender equality                                                | te              | (d) mention of gender specialist where warranted. However no other social specialists mentioned in the CCPs. Clarify expectations for specialists where IPs, CH or other key social risks present.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | na                                                                                                                                                                                                                                                |

| 1446 | Darcy Jones          | Description                                                                     | ed              | The framing of the description of this criterion makes it unclear whether jurisdictional REDD+ activities must conform to the Cancun Safeguards in addition to all the other listed criteria, or whether they must conform to the Cancun Safeguards instead of all the other criteria, with the exception of the explicitly named safeguards.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | The description would be clearer if it were listed as pertaining only to JREDD+, if that is what is intended.                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 1447 | Anonymous            | Description                                                                     | ge              | I am a PhD student at University of California, Merced. I have been studying Acre's jurisdictional REDD+ for three years. My research included a field research in summer 2019, when I visited rubber tappers communities and interviewed Indigenous leaders who supported or opposed the local jurisdictional program. Acre is internationally praised for following the Cancun safeguards and the Social Environmental Standards (SES). Despite safeguards, the inclusion of the forest peoples in the jurisdictional REDD+ program in Acre is still problematic due to ineffective and limited participation, unfair benefit distribution for Indigenous peoples, and an increasing power to the state government to determine who should receive incentives and how (Greenleaf 2020, Santos Rocha da Silva & Correia 2022). Formally participatory governance is not a synonym of representativeness. Physical and cultural barriers have made full and effective participation impossible. More transparency and effective communication - including in Indigenous languages - are necessary. Opponent voices should also be heard and treated as valid. Actions towards more transparency and effective communication, however, would implicate additional costs for jurisdictional programs channelizing more REDD+ payments to the state apparatus rather than local communities. | Make jurisdictional programs more community-centered, even if results will take longer to be demonstrated. States in tropical forests often have an ambivalent - if not always harmful - relationship with Indigenous peoples and non-Indigenous forest-dependent communities. States seldom represent the interests of those groups. Instead of formal participants, Indigenous peoples and non-Indigenous forest-dependent communities should take the lead in REDD+ projects and jurisdictional approaches, representing parallel authorities, leaderships and jurisdictions. |

The gender tag system that some institutions have introduced provides a wide range of ways to move beyond 'not making gender inequalities any worse', and to show a variety of positive impacts (closing gender gaps) that are feasible, time-bound and measurable for projects. Projects must show some evidence-based understanding of the gender gap that will be targeted, interventions that are appropriate and reasonable for closing these gaps, and performance indicators to know if it worked. The solutions are suited to the nature of the project, and therefore not appropriate for all projects/investments. Here is one example of how this approach is being applied to WB agribusiness investmentsone example of how this approach is being applied to WB agribusiness investments, which resemble carbon projects: <a href="https://documents1.worldbank.org/curated/en/898711526020334478/pdf/126136-WP-9-5-2018-16-33-2-FinalagriingenderGuidelinesApril.pdf">https://documents1.worldbank.org/curated/en/898711526020334478/pdf/126136-WP-9-5-2018-16-33-2-FinalagriingenderGuidelinesApril.pdf</a> . |

| 1463 | Phil Cryle                                      | Criterion 7.10: Ensuring net positive SDG impacts | te              | The carbon market is (currently) aimed at directing finance to sectors that will provide carbon sequestration and storage benefits, with co-benefits a secondary priority. The carbon market is therefore not focused on, or structured as, a mechanism to mobilise investment in broader nature-based solutions, yet it has the potential to do so. Consideration should be given to explicitly requiring the robust quantification of positive SD impacts under the full threshold or through a ratcheting up of the full threshold to require quantification over time. Requiring quantification of broader environmental, social, cultural and economic outcomes of nature-based solutions would facilitate the emergence of standardised methodologies for assessing co-benefits that have been slow to evolve despite their use internationally, such as in the development of natural capital accounts under the UN System of Environmental Economic Accounting.                                      | The carbon market is (currently) aimed at directing finance to sectors that will provide carbon sequestration and storage benefits, with co-benefits a secondary priority. A requirement under the CCPs' assessment framework's full threshold for robust, quantitative information (or a ratcheting up of the full threshold to require quantification over time) on the type, magnitude and value of co-benefits, using consistent measurement metrics, would facilitate more accurate price discovery (i.e., by establishing the willingness-to-pay / demand for offsetting projects with these benefits) and efficient capital allocation (to those projects with the greatest net societal benefit) by enabling: | Whilst offset projects with broader (i.e., non-carbon) environmental, social, cultural and economic co-benefits currently command a price premium, the absence of robust quantitative information on (the type and magnitude of) co-benefits delivered means that this premium is not an accurate reflection of the underlying societal value of these co-benefits and meaningful comparison across the co-benefits delivered by offset projects is not possible. A requirement under the CCPs' assessment framework's full threshold for robust, quantitative information (or a ratcheting up of the full threshold to require quantification over time) on the type, magnitude and value of co-benefits, using consistent measurement metrics, would facilitate more accurate price discovery (i.e., by establishing the willingness-to-pay / demand for offsetting projects with these benefits) and efficient capital allocation (to those projects with the greatest net societal benefit) by enabling:                                                                                                                                                                                                                                  |

| 1463 | Phil Cryle           | Criterion 7.10: Ensuring net positive SDG impacts                             | te              | There is an opportunity for the IC-VCM to address these market failures by requiring the quantification of co-benefits under the full threshold of the CCP Assessment Framework (or a ratcheting up of the full threshold to require quantification over time), thereby facilitating the evolution of carbon market as the mechanism to support investment in nature-based solutions. The metrics used to quantify these co-benefit outcomes should be linked to existing / emerging global natural capital assessment frameworks in order to aid consistency and comparability across offsetting projects. This could include natural capital accounting frameworks such as the UN System of Environmental Economic Accounting – Ecosystem Accounting and the TNFD. Such linking of metrics would help to facilitate the evolution of carbon markets to mobilise finance to tackle both the global climate and nature challenges. | There is an opportunity for the IC-VCM to address these market failures by requiring the quantification of co-benefits under the full threshold of the CCP Assessment Framework (or a ratcheting up of the full threshold to require quantification over time), thereby facilitating the evolution of carbon market as the mechanism to support investment in nature-based solutions. | 1463 | Phil Cryle           | Criterion 7.10: Ensuring net positive SDG impacts                             | te              | It is conceivable that requiring such quantitative information could facilitate investments in nature-based solutions that deliver minimal carbon offset units, but significant environmental, social, cultural and economic outcomes (i.e., carbon sequestration and storage becomes the co-benefit). Therefore, in turn, this could effectively facilitate the evolution of carbon markets into nature markets (i.e., including, but not limited to, the generation of carbon offsets). This would likely increase total global investment in carbon offsets as investors see a broader reason to invest in natural-climate solutions beyond just carbon.                                                                                                                                                                                                                                                                        | It is conceivable that requiring such quantitative information could facilitate investments in nature-based solutions that deliver minimal carbon offset units, but significant environmental, social, cultural and economic outcomes (i.e., carbon sequestration and storage becomes the co-benefit). | 1465 | Calvin Tran          | Table 35 – Requirements for Criterion 7.10: Ensuring net positive SDG impacts | ge              | Criterion 7.10(a) of the initial threshold is very similar to Criterion 7.10(g) of the full threshold. Why should mitigation activity proponents bother using the project-level SDG tools suggested in 7.10(a) when 7.10(g) suggests that the carbon-crediting programs later “shall provide clear guidance and robust tools” for the full threshold? Unless the same project-level SDG tools used for the initial threshold will be used for the full threshold, it may be additionally costly to implement those project-level SDG tools under the initial threshold if they are to be phased out within a reasonable timeframe for a different tool.                                                                                                                                                                                                                                                                            | -                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1467 | Anonymous            | Table 35 – Requirements for Criterion 7.10: Ensuring net positive SDG impacts | ge              | Regarding the point "e) The carbon-crediting program shall have provisions for monitoring, reporting and verification in accordance with these criteria that enables SDG impact tracking for no less than three no longer needed issuance periods."                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Consider revising or putting into the "full" threshold if this is to be retained                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 1467 | Anonymous            | Table 35 – Requirements for Criterion 7.10: Ensuring net positive SDG impacts | ge              | This represents a significant burden for particularly smaller programs to achieve. Also is three issuance periods required, could this be shortened?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1468 | Anonymous            | Table 35 – Requirements for Criterion 7.10: Ensuring net positive SDG impacts | ge              | f)The carbon-crediting program shall incorporate evidence-driven procedures to ensure that a mitigation activity is consistent with the SDG objectives of the participating parties and where possible use national/local tools and frameworks.g) The carbon-crediting program shall provide clear guidance and robust tools for actively promoting the implementation of net positive SDG impact actions.h) The carbon-crediting program shall assess and disseminate how types of mitigation activities contribute to SDGs based on publicly available data from mitigation activities.                                                                                                                                                                                                                                                                                                                                          | Please see our suggestions in our overarching comments for a self screening mechanism to be introduced to determine which requirements are relevant or appropriate                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

The current wording is awkward and unclear.                                                                      |
| 1470 | Anonymous                                                                                          | Table 35 – Requirements for Criterion 7.10: Ensuring net positive SDG impacts | ge              | Contribution to SDGs as a co-benefit is important, but it is not appropriate to make it a requirement of the reduction project, since it is a consequence and by-products.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Delete "net" and change from "ensuring" to "contributing"                                                                                               |
| 1470 | Anonymous                                                                                          | Table 35 – Requirements for Criterion 7.10: Ensuring net positive SDG impacts | ge              | There seems to be no established methodology to evaluate the net positive impact of SDGs, which is the sum of positive and negative impacts. This is an excessive requirement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                       |
| 1471 | Individual/employee, Grantham Research Institute, London School of Economics and Political Science | Table 35 – Requirements for Criterion 7.10: Ensuring net positive SDG impacts | te              | E&S criteria are especially important for the benchmark set by the Integrity Council because they go significantly beyond the provisions that several leading carbon crediting programs already have in place (for reference, see the Carbon Credit Quality Initiative scoring results). Improvement in this area would address some of the central objections to the VCM levelled by critics and would set a much higher bar for integrity. Even if some of the provisions in the Assessment Framework were trimmed back (e.g., those relating to other aspects of program governance or carbon measurement), E&S criteria for safeguards and transparent measurement and disclosure of impacts should be retained.                                                                                                                                                                                                                                                      | Remove requirement b). In requirement d), replace 'how a mitigation activity is consistent with' with 'the links between each mitigation activity and'. |
| 1471 | Individual/employee, Grantham Research Institute, London School of Economics and Political Science | Table 35 – Requirements for Criterion 7.10: Ensuring net positive SDG impacts | te              | However, the Integrity Council should weaken the requirement that projects demonstrate net positive impacts for the Sustainable Development Goals (SDGs), and instead focus mainly on requiring use of methodologies to assess and transparently disclose such impacts. Firstly, this requirement raises difficult and unhelpful questions over how SDGs should be weighed against each other to derive a net overall impact. For example, if a project harms biodiversity but expands energy access, is it IC-VCM eligible? Secondly, most methodologies for measurement are quite new and may still be imperfect – it will take some time for programs to familiarise with them, leading to improvements over time. Finally, with more information, buyers in the market will likely reveal a preference for projects with stronger positive SDG impacts, providing incentives for project developers without the need for a direct mandate from the Integrity Council. | 0                                                                                                                                                       |
| 1473 | Anonymous                                                                                          | Table 35 – Requirements for Criterion 7.10: Ensuring net positive SDG impacts | te              | It is unclear whether SDG impacts can be “netted,” and the document would benefit from clarification. Requirement (e) is unfeasible, and it is unclear why it would be necessary.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Remove requirement (e). Disaggregate the concept of a carbon credit from the co-benefits that a mitigation activity can provide.                        |
| 1473 | Anonymous                                                                                          | Table 35 – Requirements for Criterion 7.10: Ensuring net positive SDG impacts | te              | More broadly, we do not support the inclusion of SDG impacts as part of the definition of a high-integrity carbon credit. Credit generation should be assessed for integrity based on whether the mitigation activity mitigates damage to the climate. If the activity also delivers SDG benefits, that is laudable and should be encouraged, and the appropriate way to do that is with attribute tagging so that such credits can be priced accordingly. However, SDG benefits should not be required in order to define a high-integrity carbon credit.                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                       |

| 1474 | Mark Glossoti                             | Criterion 7.11: Access and benefit-sharing                             | ge              | While the CCPs impose numerous requirements regarding financial transparency of credit schemes, CIX notes the absence of financial transparency requirements of specific projects on the ground. While criterion 7.11 provides significant guidance on benefits sharing, broader financial transparency and use of funds is not discussed. Project developers should be required to provide additional information about how they are using proceeds from the sale of credits, whether as a high-level split between the amount reinvested in the project vs. shared with beneficiaries, or something more granular. | -                                                                                                                                                                   |

| 1484 | Luzia Bieri                                     | Table 36 – Requirements for Criterion 7.11: Access and benefit sharing | ge              | Criterion 7.11 (access and benefit sharing) requires benefit sharing relative to revenues from post-issuance of credits and subsequent transactions. This is impossible in the secondary market.                                                                                                                                                                                                                                            | Delete requirement h) of criterion 7.11.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 1485 | Individual/employee, Conservation International | Table 36 – Requirements for Criterion 7.11: Access and benefit sharing | te              | RE Table 36, bullet g2 : “The carbon-crediting program shall define the minimum acceptable content for the advanced draft and the final benefit sharing plan including, inter alia, the following: ... 2) reporting on total carbon revenues and the allocation of those revenues between project management, in line with the benefit sharing arrangements agreed with partners, in particular IPLCs directly affected by the activity;”   | Further clarification of this standard in line with good international industry practice would involve a requirement to demonstrate and document that good-faith negotiation of any benefit sharing agreement. This entails a number of process guarantees that ensure the most likely outcome is fair. Revenue allocation reporting should be based on defined cost categories that place any defined benefits in a wider financial context. Persons receiving benefits should have access to how all project carbon revenue is or will be allocated prior to providing consent. |
| 1485 | Individual/employee, Conservation International | Table 36 – Requirements for Criterion 7.11: Access and benefit sharing | te              | Reporting on expected carbon revenues and the proposed allocation is important for any stakeholder assessment of benefit sharing as fair or equitable                                                                                                                                                                                                                                                                                       | Adequately representative baselines are necessary to ensure meaningful and rigorous measures of benefits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1485 | Individual/employee, Conservation International | Table 36 – Requirements for Criterion 7.11: Access and benefit sharing | te              | Definition of benefits should be clarified. Project/program costs should not be automatically defined as benefits (e.g. is a community nursery job a benefit or a project cost?). If possible, a project/program internal rate of return should be the basis for quantifying benefits as surplus revenue after capital and operating costs are paid.                                                                                        | Criteria for process and outcome for Good-faith agreements could be clarified. For example, minimal criteria for a BSP might include evidence of:                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1485 | Individual/employee, Conservation International | Table 36 – Requirements for Criterion 7.11: Access and benefit sharing | te              | Standardized project cost categories (e.g., establishment, implementation, verification/transaction, project/program administration) would enhance consistent explanation of project or program costs. At a minimum, carbon revenue allocation should be explained as aggregate allocation to standard cost categories, with benefits indicated as a separate cost category or separated out as part of one of the defined cost categories. | 1. How community needs with respect to capacity to engage in negotiation, including a sufficient technical understanding of the proposed project,* were established and addressed;                                                                                                                                                                                                                                                                                                                                                                                                |

| 1487 | Oda Almas            | Table 36 – Requirements for Criterion 7.11: Access and benefit sharing | te              | Clarify in criterion a) that for IPs/LCs benefit-sharing plans are developed as part of the FPIC process.                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | See above                                                                                                                                                                                                                                            |
| 1488 | Darcy Jones          | Table 36 – Requirements for Criterion 7.11: Access and benefit sharing | te              | Regarding requirement e), it is unclear whether this means that it's the responsibility of the program to make a general benefit sharing plan (BSP) available to the public and all relevant stakeholders considering that it should be the obligation of the jurisdiction to develop, consult, and share the plan.                                                                                                                                                                                                                                                                 | For requirement e), it would be helpful to clarify who (crediting program or jurisdiction or mitigation activity proponent) is developing the BSP and who is responsible for making it publicly available.                                           |
| 1488 | Darcy Jones          | Table 36 – Requirements for Criterion 7.11: Access and benefit sharing | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Additionally, it would be helpful to add another requirement (j) that states "The carbon-crediting program shall define criteria that ensure the full and effective participation of IPLC groups in the design of the benefit sharing arrangements." |
| 1489 | Alexandre Grais      | Table 36 – Requirements for Criterion 7.11: Access and benefit sharing | te              | We believe that transparency is key and must be ensured with the caveats described in the below points:                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | See above                                                                                                                                                                                                                                            |
| 1489 | Alexandre Grais      | Table 36 – Requirements for Criterion 7.11: Access and benefit sharing | te              | 1. Communities need to be fully informed on the benefit sharing model that is being employed and their share within the model. For example:                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                    |
| 1489 | Alexandre Grais      | Table 36 – Requirements for Criterion 7.11: Access and benefit sharing | te              | 1. In Model A, 100% of the credits are prepaid by an investor below market rate. However, the investor sells the credits at three times the price on the market. Therefore, the investor can claim that 100% of the revenue goes to the local communities but the communities receive a third of the value of the credits.                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                    |
| 1489 | Alexandre Grais      | Table 36 – Requirements for Criterion 7.11: Access and benefit sharing | te              | 2. Model B, investors and local communities agree on a 50% revenue share as the credits are sold on the market. The investor will report a 50% revenue share but if the market increases threefold, the communities will have a higher revenue than in Model A above.                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                    |
| 1489 | Alexandre Grais      | Table 36 – Requirements for Criterion 7.11: Access and benefit sharing | te              | There is inherent risk with Model B as the community's revenue is more closely tied to market fluctuations. However, it is clear that in the example above communities will benefit more from Model B, although it may seem like Model A is providing them with a greater revenue share. Purely focusing on the % number might not represent the full picture so we encourage that requirement is on broader transparency on the sales structure, as well as the % and over the entire lifetime of the project as there could be variance during the total lifetime of the project. | 0                                                                                                                                                                                                                                                    |
| 1489 | Alexandre Grais      | Table 36 – Requirements for Criterion 7.11: Access and benefit sharing | te              | 1. Long-term financial audits that report on sales as well as on how the revenue is distributed over the length of the project. This should be carried out by a financial auditor in collaboration with the VVB.                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                                                                                                    |
| 1489 | Alexandre Grais      | Table 36 – Requirements for Criterion 7.11: Access and benefit sharing | te              | 2. Working with exchanges/financial regulators to set a minimum ESG criteria, so that entities that do not meet minimum ESG requirements are not permitted to trade credits.                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                    |

Some mitigation activities might never be able to achieve CCP eligibility, regardless of the rigor and governance a carbon crediting program uses. ICVCM must be more transparent about its intentions to be the gatekeeper of mitigation activities, and not just an evaluator of carbon crediting programs.<br>No specific language proposed |

Requirements relating to types of carbon credits                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | MF comment: start of II. Requirements relating to types of carbon credits                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 1498 | Anonymous                                                            | II. Requirements relating to types of carbon credits                   | ge              | Overall, involvement of the Expert Panel at the level of detail outlined in this section suggests that the ICVCM is attempting to position itself as the arbiter of what is an appropriate mitigation activity. That is not its mandate or its stated goal. More transparency about what the IC wishes to accomplish here would be welcome.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | The ICVCM should be transparent about its aims in this section.                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1499 | Anonymous                                                            | 0                                                                      | te              | The approach to additionality seems to be rather roundabout and not aligned with how this is typically done - where carbon credit programmes define approaches to additionality through methodologies. We strongly support a "positive list" for projects under ICVCM as outlined later in the document                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Simplify the approach to additionality substantially by allowing project proponents to develop and adopt approved methodologies. Retain the provision for development of a "positive list" under ICVCM                                                                                                                                                                                                                                                                                                  |
| 1501 | Molly Brown                                                          | 0                                                                      | ed              | The numbering here is a mess. Why is there section 8.4 as well as criterion 8.4. It's very confusing                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Fix the numbering                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 1502 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | 0                                                                      | ge              | This comment is from Emergent, the coordinator of the LEAF Coalition.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | RECOMMENDATIONS:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

This is subjective, questions the processes of the standards and will introduce market uncertainty and stifle investments.                                                                                                                                                                                                                                                                                                                                        |
| 1502 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | 0                                                                      | ge              | 1. The Assessment Framework introduces a complex two step evaluation process to determine additionality. The first step is an evaluation by the expert panel of the probability that the activity is additional. The framework states “The likelihood of additionality depends on the financial attractiveness of a mitigation activity without carbon credit revenues. An activity that financially is highly attractive is more likely to be implemented without carbon credits (except where other barriers prevent its implementation). In contrast, mitigation activities with very poor financial performance will be unlikely to be implemented without carbon credit revenues. The most commonly applied indicator for assessing the financial attractiveness of a mitigation activity is its internal rate of return (IRR) in relation to a required benchmark for investments.” This type of assessment is impractical and unnecessary for REDD+ because it is clear that we are losing forests at an unprecedented rate and countries need financial incentives to reduce deforestation and protect and restore forests. | · Eliminate the financial additionality requirements for JREDD+ as well as the demonstration of impacts of new policies and measures and of advanced consideration of carbon credits;                                                                                                                                                                                                                                                                                                                   |
| 1502 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | 0                                                                      | ge              | 2. The additionality approaches proposed by the ICVCM, while heavily weighted towards pure financial additionality via investment analysis, also include barrier analysis (financial, institutional, information other), market penetration assessments and positive lists. The performance standard approach, as employed by ART, is not included as an option.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | · Allow a performance threshold approach for additionality for REDD+ such as currently employed by ART and other major jurisdictional programs to be an approved additionality test for jurisdictional REDD+ without other requirements. This approach has been tested through multiple peer review and public consultation processes and was selected as best suited to the scale and nature of activities.                                                                                            |

To meet the proposed ICVCM financial additionality test, "Jurisdictional REDD+ activity proponents shall provide evidence demonstrating that expected revenues received per tonne of credited CO2-equivalent mitigation (or per tonne paid for through results-based finance) are sufficient to cover or exceed the expected costs per tonne of CO2-equivalent mitigation achieved. Expected cost per tonne shall be estimated as the ratio of: i. the jurisdictional REDD+ activity proponent's estimate of the total jurisdictional budget needed to undertake the REDD+ implementation plan amortised over the jurisdictional REDD+ activity's initial crediting period; and ii. the jurisdictional REDD+ activity proponent's estimate of the total emission reductions and removals it expects to achieve by undertaking the REDD+ implementation plan, amortised over the jurisdictional REDD+ activity's initial crediting period." This type of requirement for financial additionality makes no sense at a jurisdictional scale. Drivers of deforestation and degradation always have a significant financial component. The revenue from protection and restoration activities has to be greater than the alternative land use and would need to be considered when planning the activities. Furthermore, a financial additionality test would be difficult, if not impossible, to document and verify. Acquiring the financial information from every landowner and small-scale project implementer as would be needed to perform the full analysis would be extremely burdensome. | 0                                                                                                                                                                      |
| 1502 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | 0                   | ge              | 4. In addition to the above (as well as implementation of new and enhanced policies and measures), to meet the proposed additionality test, the jurisdictional REDD+ activity proponent must also show evidence of expectation of carbon credits by providing "clearly documented evidence that the generation of carbon credits or results-based payments was considered prior to the start of the first crediting period. This may include the application or other formal documentation submitted to any jurisdictional REDD+ carbon crediting or results-based payments program, an official document shared with stakeholders with clear intent to apply to a carbon crediting or results-based payments program, or a recorded stakeholder meeting where such an application to a carbon crediting or results-based payments program was discussed." This requirement is also not appropriate for jurisdictional REDD+.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 0                                                                                                                                                                      |

| 1502 | Individual/employee, Emergent, the coordinator of the LEAF Coalition | 0                   | ge              | · Allow a performance threshold approach for additionality for REDD+ such as currently employed by ART and other major jurisdictional programs to be an approved additionality test for jurisdictional REDD+ without other requirements. This approach has been tested through multiple peer review and public consultation processes and was selected as best suited to the scale and nature of activities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                      |
| 1503 | Anonymous                                                            | 0                   | ge              | Overall, we should move away from financial additionality and focus more on project tonnage additionality (i.e. these tons would not be removed without this project). The IPCC AR6 clearly states that there is enough global capital to fund economy-wide decarbonization, so it makes little sense to restrict the flow of capital into the voluntary carbon markets due to financial additionality. Choosing to only credit otherwise financially unattractive projects that would not be possible without carbon credit revenue creates a market that cannot thrive beyond net-zero. The science is clear that we cannot stop at offsetting hard-to-abate emissions, we must also continue to remove legacy emissions at the gigaton scale for the remainder of our lifetimes. Reaching this scale requires supporting all viable projects, especially projects with the ability to succeed beyond the VCM, rather than limiting availability of carbon credits and throttling supply.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Simplify the approach to additionality, shift to a framework that grows supply instead of constricting it, and prioritize increasing the flow of capital into the VCM. |

| 1504 | Anonymous                                       | 0                   | te              | IC-VCM shouldn't be a priori defining what is additional, nor should it be developing this level of specific requirements. Rather, IC-VCM should focus on program governance, and ensuring programs have an adequate approach to establishing additionality (in each methodology and for each project type). You cannot establish additionality at the program or sector-level. It is best done at the methodology level (and audited at the project level), which is far too detailed for IC-VCM to engage in without seriously damaging the market-- due to likely delays, disincentives/inability to innovate, and because these assessments will quickly be out of date as methodologies change, new ones are added, and as approaches shift to the best available science and practice.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | IC-VCM should rethink this entire assesment procedure to focus on program governance of these issues, rather than making specific, standards-level detailed requirements. |
| 1505 | Individual/employee, Finnwatch                  | 0                   | ge              | As additionality is the core requirement of any carbon credit, it is worrying that the IC-VCM framework for assessing additionality will accept projects with medium likelihood even without a financial additionality test. If this is not fixed in the final version, the credits with "medium" additionality should be flagged separately from the units that have "very high" additionality.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | n/a                                                                                                                                                                       |
| 1506 | Individual/employee, Agreeena ApS               | 0                   | te              | Agreeena ApS: Additionality is a core element of all currently recognized international standards for developing VCM projects and further for carbon credits. In assessing the Additionality of the activities and the project itself, many carbon crediting projects hold to well-recognized global standards which ensure a high level of environmental integrity. In addition, the VCM has been working alongside public incentive schemes for more than ten years and the coordination between both public and private funding is necessary to financially incentivize nature-based carbon removals and achieve targets set by the global scientific community. For the projects that are already prescribed to global standards, we believe that the CCPs could propose a way to recognize their validity and decades-long dedicated work experience towards high-quality standards and environmental integrity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | N/A                                                                                                                                                                       |
| 1506 | Individual/employee, Agreeena ApS               | 0                   | te              | Financial Additionality. Beyond undertaking legal analysis to assess whether there are regulatory requirements to conduct the project activity, the CCPs introduce Financial Additionality. The CCPs outline the benchmark IRR analysis, carbon credit price, and type of IRR in order to assess Financial Additionality. Achieving the scalability, alongside credibility, of carbon crediting projects is essential. The assessment of Financial Additionality should be scalable, and is particularly critical in nature-based removal projects to ensure wide adoption and ensure additionality across different markets and regulatory regimes. In the current CCP framework, the rather complex process for examining Additionality at a project level makes it difficult for projects or programs that operate at scale. While Financial Additionality assessments are common practice for the global carbon crediting standards and take environmental integrity as a priority, we request additional clarification on the proposed procedures of Financial Additionality and the scope to carry out all suggested analyses, which would be beneficial and bring more clarity to the expected outcomes. Agreeena believes that the level of complexity in how the CCPs propose to assess financial additionality will act as a market barrier to the VCM and potential projects and prevent market entry. The CCPs should clarify the procedures for carrying out the proposed analyses as it is currently unclear how it will be feasible to do such a thorough assessment on a project basis. | 0                                                                                                                                                                         |
| 1507 | Luzia Bieri                                     | 0                   | ge              | We recommend that IC-VCM focus its assessment on the crediting programs' rules and requirements for the demonstration of additionality.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | We recommend that IC-VCM focus its assessment on the crediting programs' rules and requirements for the demonstration of additionality.                                   |
| 1508 | Individual/employee, Conservation International | 0                   | ge              | General Comment on use of Expert Panel to assess additionality.: What is the timeline for the expert panel to decide on what projects they consider as additional.? Also, considering that additionality can be highly site specific, if the expert panel finds that an activity is not additional, what recourse does a project or standard have to provide evidence of the opposite and how long will this delay a project? Furthermore, if the expert panel finds lack of additionality for existing projects it will result in negative impacts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | N/A                                                                                                                                                                       |
| 1509 | Trevor Paul                                     | 0                   | te              | Along with issues of permanence, leakage and displacement, additionality is widely considered a core aspect of quality assurance of climate change mitigation activities. However, financial additionality is a narrow lens through which to assess the net benefits associated with a mitigation or removal activity or project. A focus on financial additionality alone could unnecessarily lead to the automatic exclusion of important project types or individual projects that achieve real reductions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | n/a                                                                                                                                                                       |

| 1509 | Trevor Paul               | 0                   | te              | There are other approaches to additionality that IC-VCM should consider. The intent of additionality is to incent behavioral and technological change (a delta) that results in an emission reduction or removal that otherwise would not have occurred. A key component in quantifying carbon savings/removals, relates to comparisons with a baseline condition (business-as-usual). From that perspective, a lack of additionality implies there are no GHG abatement benefits over and above those that would have arisen in absence of the activity or project. Viresco Solutions believes that performance type benchmarks are arguably a more appropriate way to determine additionality for most credit types and credit projects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                 |

| 1511 | Individual/employee, INUK | 0                   | te              | Additionality can be conflicting with the principle of robust quantification: indeed, how can we guarantee the measurability of emissions removals or reductions when a project does not yet exist ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | n/a                               |
| 1511 | Individual/employee, INUK | 0                   | te              | In order to overcome this dilemma, Inuk's solution relies on a couple of renewable energy projects: each carbon credit sold by Inuk will fund (1) a project that is already in operation (guaranteeing the robust Quantification of Emission Reductions since we can connect to the meter of the power plant and collect real-time production data) ; and (2) a project that is seeking funding (guaranteeing the additionality principle). This way, the carbon revenue supports the development of both existing and future renewable energy projects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                 |
| 1511 | Individual/employee, INUK | 0                   | te              | It is important to specify that Inuk only works with local, small-scale, independant renewable energy producers for whom the revenue from carbon offsetting is economically significant.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                 |
| 1512 | Ivan VALENCIA             | 0                   | ge              | Safeguards and additionality – The CCPs are very detailed in these topics and probably and the distinctions between the Initial and Full thresholds are reduced. These are areas were complexity must be reduced particularly for the Initial threshold, otherwise they become a big deterrent for programs to seek CCP certification. GGGI holds the highest standards of environmental integrity but at the same time accompanies developing country governments to initiate projects and reach trades but we are always wary of new certifications coming into the market that will then be used as a minimum standards by buyers, being likely very onerous for the sellers to meet.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Refer to comments on this section |

| 1513 | Anonymous                 | 0                   | ge              | XXX urges the Integrity Council to consider performance baselines / benchmarks as a measure to assess additionality. Given that performance benchmarks allow for a single baseline to apply to multiple projects using the same technology or implementing a similar activity in a specific geography, this approach streamlines comparability and is viewed as a strong method to demonstrate additionality.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                 |
| 1513 | Anonymous                 | 0                   | ge              | As mentioned above, we strongly recommend the IC-VCM to build on what is being currently implemented across other programs (e.g., Alberta, Canada) and look at functional equivalency to their prescriptive requirements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                 |

| 1514 | Seoyi Kim                 | 0                   | ge              | As carbon markets under the Paris Agreement operate under the countries' NDC context, the requirements to demonstrate the unit quality need innovative approaches that address uncertainties of the methodologies used under the CDM, facilitate faster and more inclusive market access, and ensure the credibility of markets. As markets under the Paris Agreement are expected to support increasing the ambition of countries' climate action, approaches should take NDCs, long-term strategies (LTSs), and their baselines into consideration. Accordingly, the approaches that rely on stringency of NDCs and how the targets are set under NDCs should be considered. Recognizing that the methodologies to validate the stringency of NDCs and LTSs are still evolving, the MDB WG proposes a phased approach to demonstrate the environmental integrity - where feasible to establish the stringency of the climate plans, it is sufficient to perform the corresponding adjustments to demonstrate the integrity; where not feasible, the same can be achieved through both stringent or conservative baselines and corresponding adjustments. Importantly, the MDBs plan to increase their support to LTSs that lead to net-zero or net-negative targets by certain deadlines and ensures that such support also takes care of environmental integrity considerations. In addition, countries should be encouraged to develop positive lists, benchmarks and standardized baselines. Approaches that rely on financial aspects of the projects and barriers they face are highly subjective and hence should be prioritized less. | 0                                 |

| 1515 | Anonymous            | 0                   | te              | The ICVCM should not be involved in determining what is additional at this level. Program methodologies have already assessed additionality using subject-, activity-, and geography-specific expertise. The Expert Panel lacks both the ability and capacity to correctly assess additionality at the level of a credit type, and its attempts to do so will stifle the market.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | The IC should focus on program assessment and governance. This entire approach should be reassessed. |
| 1516 | Anonymous            | 0                   | ge              | While it is true that additionality processes and tools across standards need improvement, this section is a patchwork of rules that together do not make sense for some project types. And again the overarching requirements (not these details) should be designated at the program level. Then the programs approach to additionality shall be reviewed in its application.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | N/A                                                                                                  |

| 1517 | Spencer Meyer        | 0                   | ge              | This has objectively been shown to be true for many examples: from avoided deforestation projects where baselines were exaggerated to inflate deforestation risk, to reforestation projects where the trees would have been planted even without carbon finance. The chief problem among those projects was not the absence of an Integrity Council Assessment Framework. Rather, it was that baseline scenarios were set by the project developers without an objective, data-driven way to test those assumptions against reality.                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                    |
| 1517 | Spencer Meyer        | 0                   | ge              | The proposed assessment framework mimics what is already used by the incumbent carbon standards, without addressing the main challenge of additionality: setting real and accurate baselines, and crediting against those. Instead of focusing on accurate baselines, the proposed Assessment Framework's tests and checks for additionality are based on subjective analyses like the investment analysis, barrier analysis, and market penetration assessment. Not only do those analyses not assess baseline accuracy, they are inherently biased since the project developers themselves are responsible for carrying them out.                                                                                                                                                                                                                                                                                    | 0                                                                                                    |
| 1517 | Spencer Meyer        | 0                   | ge              | Under the proposed assessment framework, it appears that data driven quantification of additionality could be used to categorize credit types into so-called positive lists. However, this is not sufficient. Additionality cannot be predetermined for whole programs, or even methodologies. Additionality must be assessed and quantified for each project, and before each verification of climate benefit.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0                                                                                                    |
| 1517 | Spencer Meyer        | 0                   | ge              | Moreover, incumbent approaches assess additionality as a binary: if a project passes subjective checks for additionality, it is presumed to have 100% certainty of additionality. But assessing additionality in an objective, quantitative fashion would never result in 100% certainty. Any projection of a baseline scenario into the future results in a probability or likelihood that this baseline would occur. An accurate expression of additionality, then, will always be a percentage - the probability that carbon storage is additional to the baseline scenario. IC-VCM should modify its Assessment Framework to reflect this reality. By taking a data-driven approach and encouraging programs to assess additionality as a percentage likelihood, IC-VCM could significantly increase the accuracy and transparency of additionality tests, as well as increasing confidence in the VCM as a whole. | 0                                                                                                    |

| 1517 | Spencer Meyer                                   | 0                                                     | ge              | Finally, the Expert Panel should clarify its criteria for realistic and plausible baselines. In the section on Robust Quantification, 10.1.3, the Assessment Framework requires that “the mitigation activity is only credited for as long as it continues to generate emission reductions or removals compared to a realistic and plausible baseline.” We agree on the importance of realistic and plausible baselines. However, the task of projecting a realistic baseline over any decades-long period of time is near impossible from a data science perspective. Projecting a baseline for 100 years in order to issue up-front credits cannot be considered realistic nor plausible, and therefore by this document’s own logic should not be credited if they cannot empirically demonstrate their additionality. We would appreciate more detail from the Expert Panel on how it defines “realistic and plausible,” and also recommend that it rewards methodologies that use empirical performance tests, spatially explicit analysis, and dynamic baselines for the increased rigor of their baselines. | 0                                                                                                                                                                                                                                                                                                                                                                                         |
| 1517 | Spencer Meyer                                   | 0                                                     | ge              | We recommend that the Assessment Framework verify whether or not carbon programs transparently quantify projects’ additionality using a data-driven approach. The status quo of subjective additionality analyses, even if evaluated by experts, will allow for more non-additional credits to be issued and will further erode public confidence in the VCM.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                         |

| 1524 | Individual/employee, Carbon Engineering/1PointFive | Additionality for project-level mitigation activities   | te              | The proposed approach in the Assessment Framework leans heavily on financial additionality, which is not appropriate for assessing technological removals such as DACCS. Deploying technology at industrial scale requires high capital, multi-year planning cycles with revenue certainty to secure investment which is a challenge in existing VCM frameworks. The current financial additionality frameworks require project proponents to disclose detailed financial information that is commercially sensitive in nature, yields results based on first-of-a-kind (FOAK) facility or front-end-engineering-design (FEED) data that have inherent uncertainty, or requires project information that simply does not yet exist. This creates tension between the need for uncertain/commercially sensitive data and the need to create revenue certainty required to deploy projects. | The proposed approach in the Assessment Framework leans heavily on financial additionality, which is not appropriate for assessing technological removals such as DACCS. | 1524 | Individual/employee, Carbon Engineering/1PointFive | Additionality for project-level mitigation activities   | te              | Large-scale carbon removal projects, such as DACCS, are being developed with the single driving purpose of providing an environmental benefit to the climate. This project type and project purpose is an excellent example of why conventional thinking about additionality in VCM needs to modernize. Furthermore, the environmental integrity of any geological storage-based capture project, such as a DACCS project, is readily quantifiable; it requires no consideration of counterfactuals nor estimations. Hence, this conventional aspect of additionality can be empirically shown rather than assumed.                                                                                                                                                                                                                                                                       | Large-scale carbon removal projects, such as DACCS, are being developed with the single driving purpose of providing an environmental benefit to the climate. Hence, this conventional aspect of additionality can be empirically shown rather than assumed.                                                                                                                                                                                                                                                                       |
| 1525 | Anonymous                                          | Additionality for project-level mitigation activities   | ge              | We agree with the definition of additionality and the two-step assessment approach to simplify the evaluation process for projects which are very likely to be additional. However, since the Expert Panel determines the overall likelihood of additionality in Step 1, will the carbon-crediting program have to prepare for an evaluation of all relevant provisions regardless, since they won't know the results of the Step 1 assessment?                                                                                                                                                                                                                                                                                                                                                                                                                                           | We would like clarification on the implementation of the two-step assessment approach.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| 1526 | Anonymous                                          | Additionality for project-level mitigation activities   | te              | · ICVCM requires a very detailed list of requirements and data requests. Question is whether details such as full cashflows and IRRs and 'carbon credit price' predictions can realistically be expected.. Confidentiality of data is an issue that should be discussed with proponents and could pose a key barrier for getting this requirement on financial data signed off.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1526 | Anonymous                                          | Additionality for project-level mitigation activities   | te              | · Additionality is not a binary concept. There are activities more additional than other. See comment on 3/G                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1526 | Anonymous                                          | Additionality for project-level mitigation activities   | te              | · IRR will vary over time, depending on costs and geopolitics (see cost of gas in Europe right now). Could this consideration be included in the assessment?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1526 | Anonymous                                          | Additionality for project-level mitigation activities   | te              | · ICVCM requires a very detailed list of requirements and data requests. Question is whether details such as full cashflows and IRRs and 'carbon credit price' predictions can realistically be expected.. Confidentiality of data is an issue that should be discussed with proponents and could pose a key barrier for getting this requirement on financial data signed off.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

There are activities more additional than other. See comment on 3/G                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1526 | Anonymous                                          | Additionality for project-level mitigation activities   | te              | · IRR will vary over time, depending on costs and geopolitics (see cost of gas in Europe right now). Could this consideration be included in the assessment?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1527 | Javier Castro                                      | Figure 3 – Overview of criteria to assess additionality | te              | The approach implies, that IC-VCM will create a list of project types that are not "additional" according to IC-VCM assessment. Considering that within the voluntary market every Standard decides on additionality requirements. This approach is a contradiction with the logic to not create a new standard in the market.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | It shall be clear why IC-VCM is proposing a new standard to assess additionality, with the additional aspect that soem projects will be defined by the IC-VCM as non additional (insufficient). If a new standard is created, it shall compeite with the other voluntary standards, but to create an standard and present it as a program assessment criteria, will disrupt the market and create big fragmentation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 1528 | Anonymous                                          | Figure 3 – Overview of criteria to assess additionality | te              | ICVCM is overreaching here by defining new Additionality Criteria. The previous logic here was to check if standards check for Financial Additionality, Barrier Analysis and Common Practice. To regulate into the details of that would overwrite standards and rule into them.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Strongly suggest to scale this back to seeing if standards apply an overall rigerous additionality test of Financial Additionality, Barrier Analysis and Common Practice without new further detailed requirements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 1529 | Anonymous                                          | Figure 3 – Overview of criteria to assess additionality | ge              | The IC is overreaching in this attempt to develop a new standard. Leave this to the existing programs, which have spent many years in standards and safeguards development and stakeholder consultation. This applies to all of the criteria in this section, each of which is problematic in its own way.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | The ICVCM should not be involved in assessing additionality at this level.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| 1533 | Anonymous                                       | 0                   | te              | Some activities may be better evaluated at a project than a national level, this may not be the best guidance to reference. Again, this step seems overly punitive and requires more specificity. For example, "Renewable energy" may be deemed insufficient, whereas at the level of non-grid connected RE in an LDC, it may be very additional. At what level will activities be addressed? Also, parsing what falls inside/outside a category like "non-grid connected RE" is a far more complex issue than one might think! (see recent clarifications from Verra).                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 1534 | Josiah McClellan                                | 0                   | ge              | 8.1                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | This section references the context of mitigation activities (e.g., countries and within jurisdictions), but does not provide any clarity on how this will be considered in the evaluation of additionality. These contexts are very important for nature based solutions. More guidance is needed on how the additionality assessment criteria are applied with reference to this context.                                                                                                     |
| 1535 | Max DuBuisson                                   | 0                   | te              | It is fairly ridiculous to assess additionality of a mitigation activity globally, without the context of the local or regional market and cultural forces that shape decisionmaking for that activity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Remove the process of assessing an entire sector globally for additionality. The range of uncertainty on the necessary assumptions is simply too large.                                                                                                                                                                                                                                                                                                                                         |
| 1536 | Luzia Bieri                                     | 0                   | ge              | According to step 1 (assessment of the overall likelihood of additionality of the mitigation activity), mitigation activity types with an "insufficient likelihood of additionality" will not be CCP-eligible. This first step of the assessment should not lead to an automatic exclusion of mitigation activities but rather to a positive list of mitigation activity types with a "very high likelihood of additionality".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | This first step of the assessment should not lead to an automatic exclusion of mitigation activities but rather to a positive list of mitigation activity types with a "very high likelihood of additionality".                                                                                                                                                                                                                                                                                 |
| 1537 | Individual/employee, Conservation International | 0                   | te              | It is not clear how this additionality assessment process would be implemented by IC-VCM given the variability in mitigation activities across contexts and programs. Many of the context considerations being discussed are relevant to the review of an individual project, yet the CCP are meant to be applied at the scale of programs. It is not clear from the documentation whether a given mitigation activity type will receive a single overall likelihood rating across geographic contexts or whether there will be a rating provided on a country or jurisdictional basis. The additionality criteria considered in the CCP assessment (financial attractiveness, barriers to implementation, and market penetration) have high levels of variation across contexts. Thus, additionality likelihood as assessed via these criteria can vary at fine spatial and temporal scales, which is not accounted for in the present CCP document. | Provide a clear description of how Step 1 of the additionality assessment would be carried out, including clarity on whether ratings will be produced on a global or jurisdictional basis. Finer, context-specific ratings are advised to avoid prohibitive rules and stigmas against certain activities that are truly additional in their local geographic context.                                                                                                                           |
| 1537 | Individual/employee, Conservation International | 0                   | te              | Providing a single additionality likelihood rating across all contexts is untenable. It would lead to oversimplification and barriers raised against certain activities, and there are no details as to how conflicting likelihood ratings between contexts will be resolved into a single rating. A medium rating would be advisable to avoid the possibility that ratings for activity types be skewed by high- and low-risk outliers. If the finer-scale approach is pursued, there are concerns about the complexity of providing a rating for an activity type in every single context, including the limited capacity and size of the IC-VCM team, the need to update additionality assessments frequently, variability in the availability of data, and logistical constraints.                                                                                                                                                                | Describe how disparities between the different criteria will be resolved across contexts (i.e., What rating would an activity receive if it were "highly likely" in one context but "insufficient likelihood" in another context?)                                                                                                                                                                                                                                                              |

An initial set of simple additionality criteria can be used to demonstrate the integrity of some activities. Those that do not meet these initial criteria should be allowed to provide further information as a means to demonstrate integrity. A binary approach does not allow for an escalating burden of proof for activities for which it may be more difficult to provide evidence for additionality. |

| 1538 | Anonymous                                       | 0                                       | te              | ICVCM must clarify the level at which these likelihoods will be assigned. If, for instance, these likelihoods were applied at the technology level (e.g., wind), this approach risks glossing over the substantial variation of risk profiles associated with investments in certain technologies in certain contexts (e.g., LDCs), the investment climate for projects when investment decisions were made (i.e., for certain early mover projects that were developed many years before their technology became more cost-competitive over time), and of other characteristics (e.g., size of installed capacity). This implies that ICVCM would need to conduct its Step 1 assessment at the very least to account for all of these variations and assign a likelihood to each scenario. Otherwise, a broader approach risks incorrectly categorizing 'very high' or 'medium' likelihood projects as 'insufficient'.                                                                                                                                                                                                                                              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1539 | Anonymous                                       | 0                                       | te              | We have significant concerns about the bottlenecks that could result by relying on an Expert Panel to make these assessments as well as the inherent subjectivity in these types of tests.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | see comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1540 | Javier Castro                                   | Criterion 8.1: Financial attractiveness | te              | The assessment proposed is relevant for each project, but should not be used to evaluate a project type. The differences within the same project type in the same area could be very high, which would imply a very extended sample, which will never be granulate enough to assure an accurate response.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | In my opinion, this step might be presented to the market as a separate study, but shall not be used as basis to evaluate programs which will affect the projects included in the program.                                                                                                                                                                                                                                                                                                                                                                                   |
| 1541 | Anonymous                                       | Criterion 8.1: Financial attractiveness | te              | The inclusion of the carbon credit price in the assessment of financial attractiveness problematic, as the criterion is currently written. The paragraph (iii) on "carbon credit price" states "the carbon credit price shall reflect the expected prices over time for the relevant type of carbon credit", but this approach does not take into account the variety of structures and markets in which carbon credits may be sold. These approaches could include spot market sales, through derivative structures, and under long-term offtake contracts. Long-term offtake contracts may see credits being sold for under market price to trade off risk for the project developer and create price certainty for the buyer. If carbon credit pricing is to be included in the financial assessment, then as a test it would need to look at the particular circumstances of the project proponent, while also not constraining them to change their approach to the market in the future. Ultimately, the financial assessment should be looking at the overall contribution of carbon revenues to profitability margin of the project in a range of scenarios. | The financial assessment should be looking at the overall contribution of carbon revenues to profitability margin of the project in a range of scenarios.                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 1542 | Aya Yamazaki                                    | Criterion 8.1: Financial attractiveness | ge              | Too much importance should not be given to this IIR factor.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Deletion of this criteria is strongly requested.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 1542 | Aya Yamazaki                                    | Criterion 8.1: Financial attractiveness | ge              | Project IIR estimation is dependent on many assumptions, so that simple comparison of project A with project B in the light of their IIR numbers most likely leads to erroneous conclusions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1542 | Aya Yamazaki                                    | Criterion 8.1: Financial attractiveness | ge              | In addition, projects with high IIR are commonly considered to be robust ones with high probability of bringing about expected positive results including reduction effects. Although they may be attractive for lenders, to exclude such projects for the simple reason of high IIR is misleading and unhealthy as principle.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1544 | Molly Brown                                     | Criterion 8.1: Financial attractiveness | te              | Whose benchmark though? What happens if it is artificially high or low (intentionally, in order to make the IRR comparison, or just because normative projects cost less or more than high quality projects).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | More details                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| 1545 | Anonymous                                       | Criterion 8.1: Financial attractiveness | te              | It would be useful to provide formulae making it explicit how these three variables relate to each other. So how is change in IRR for I2 defined? Is I3 just the IRR after carbon revenues or is it ratioed? If it's the former, then the benchmark of >100% IRR to achieve a high score seems very steep. I2 may also be too high. Please check all benchmarks once the definitions are finalised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1546 | Individual/employee, Perspectives Climate Group | Criterion 8.1: Financial attractiveness | ge              | Criterion 8.1a makes sense. Criterion 8.1b takes up many NGO positions, but does not really assess additionality (for large activities, a small change in overall attractiveness through carbon revenues can already mobilize the activity, while for small activities, a large change may be required). So it should be deleted. Criterion 8.1c: Propose to delete, or keep only as optional, since activity developers do not necessarily have reliable information or assumptions about the carbon credit revenue until the time of, or after issuance of carbon credits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Criterion 8.1a makes sense. | 1547 | Anonymous            | Criterion 8.1: Financial attractiveness | ge              | Financial attractiveness should not impact a project's access to carbon credits. High IRR is an indicator that a project is more likely to scale, especially for small projects and startups. It should be as financially attractive as possible for everyone to decarbonize and remove legacy emissions, and we should not pull back support for successful projects that can scale efficiently just because there's a financial incentive to do so. Small companies need years of outsized returns in order to compete with historical emitters, and financially attractive projects may still have high upfront costs that can be reduced via carbon credit revenue, thus allowing more rapid reinvestment in project expansion.                                                                                                                                                                                  | Remove financial attractiveness as a barrier to crediting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1548 | Anonymous            | Criterion 8.1: Financial attractiveness | te              | Credit price: This is quite the crystal ball exercise, especially over the life of a project. How will IC-VCM determine the prices and will they be set overall or by activity type? How will IC-VCM deal with differences in markets (e.g., VCM vs domestic markets vs Article 6, when credits may end up in many different markets).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Do not set this level of detail and rethink the entire assesment process. See general comments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 1549 | Anonymous            | Criterion 8.1: Financial attractiveness | te              | It is a very different thing to assess this at a sector level than a specific activity and still very different at a theoretical level than in the context of a specific project type. It seems problematic to assess this at a theoretical activity level. There is no global benchmark IRR.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Reference the work done by many standards to improve additionality, in particular performance benchmarks and other standardized approaches.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 1549 | Anonymous            | Criterion 8.1: Financial attractiveness | te              | Note also that financial additionality is highly flawed, as has been written about in many academic papers. This also problematic for new activity types (the very thing carbon markets should most support), as existing data (to set an IRR benchmark for example) simply doesn't exist (e.g., for direct air capture or other CCS+ activities).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | But more importantly, IC-VCM shouldn't be a priori defining what is additional,see general comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1550 | Emma van de Ven      | Criterion 8.1: Financial attractiveness | ge              | Taking the carbon credits as the key input for profitability near-automatically excludes farmers and farm-based interventions. Farmers depend on their land for their livelihoods and shouldn't implement an intervention based on a highly unstable carbon credit price. Especially because of very high standards for the permanence of the intervention, this criterion is not at all inclusive for those interventions where the land owners depend on the land for their livelihoods.                                                                                                                                                                                                                                                                                                                                                                                                                           | Allow for livelihood-impacting interventions a different approach to additionality that respects the additional value of the carbon credit, but doesn't consider it the key differentiator that makes or breaks additionality.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 1551 | Max DuBuisson        | Criterion 8.1: Financial attractiveness | ge              | This section talks about how investors consider financial attractiveness. But what if the key decisionmaker is not an investor, but a farmer? Or a mission-driven nonprofit? Or what if, as is usually the case, the decisionmaker is operating under imperfect information and has a personal lens that assigns risk differently than perhaps a "rational" economic actor might, given the same circumstances and information?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Remove the requirement for broad assessments of financial attractiveness.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1551 | Max DuBuisson        | Criterion 8.1: Financial attractiveness | ge              | The conclusion is that these cold financial assessments make sense in the context of industrial and energy projects, especially where the decision to implement the mitigation activity is carried out following a sophisticated analysis of the investment. But they do not make sense in the reality of sectors such as agricultural land management, where decisionmaking is likely to rest as much on the behavior of one's friends, family, or neighbors as much as it rests on the highly uncertain economic returns.                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| 1553 | Phil Cryle           | Criterion 8.1: Financial attractiveness | te              | The use of a carbon price for a given type of project / credit could be informative with regard to additionality if the opportunity cost of the offsetting project is also known. Having both the carbon price and opportunity cost allows the economic attractiveness of an activity to be assessed both with and without revenues from carbon credits. This will facilitate an understanding of whether the revenues from carbon offsets are needed to make the activity economically viable. Any use of carbon prices to inform an additionality assessment should therefore acknowledge the location specificity of opportunity costs (i.e., the profitability of a given land use varies geographically). The use of carbon prices in this way should be undertaken with caution given the volatility in prices and also variation in costs depending on offset source (project origination, spot market etc.). | The use of a carbon price for a given type of project / credit could be informative with regard to additionality if the opportunity cost of the offsetting project is also known. | 1553 | Phil Cryle           | Criterion 8.1: Financial attractiveness | te              | The proposed use of marginal abatement costs (MAC) to measure additionality requires further explanation. If the logic is that activities with higher MAC (\$/tonne CO2e) are more likely to be additional because they cost more, then this needs to be undertaken with caution. In particular, consideration should be given to what cost is deemed to be “high” (i.e. cost curve quartiles) and consideration should be given to the specific geographic context in which the activity is occurring. Furthermore, a high MAC can be a misleading indicator of additionality when:                                                                                                                                                                                                                                                                                                                                                                                           | The proposed use of marginal abatement costs (MAC) to measure additionality requires further explanation. If the logic is that activities with higher MAC (\$/tonne CO2e) are more likely to be additional because they cost more, then this needs to be undertaken with caution. In particular, consideration should be given to what cost is deemed to be “high” (i.e. cost curve quartiles) and consideration should be given to the specific geographic context in which the activity is occurring. Furthermore, a high MAC can be a misleading indicator of additionality when: |

| 1553 | Phil Cryle           | Criterion 8.1: Financial attractiveness | te              | The CCP documentation could provide greater clarity on how additionality assessments will be reviewed on a periodic basis given that the additionality of a project can change over time, so what was considered to be additional 5 or 10 years ago is now financially viable and commonplace.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | The CCP documentation could provide greater clarity on how additionality assessments will be reviewed on a periodic basis given that the additionality of a project can change over time, so what was considered to be additional 5 or 10 years ago is now financially viable and commonplace.                                                                                                                                                                                                                                                                                       |
| 1553 | Phil Cryle           | Criterion 8.1: Financial attractiveness | te              | Clarity could also be provided on the statement “if a particular type of mitigation activity is found overwhelmingly profitable in the marketplace” to confirm that this means overwhelmingly profitable from a non-carbon cash flow perspective (i.e., without the carbon revenues), rather than from a carbon crediting perspective (i.e., with the carbon revenues).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Clarity could also be provided on the statement “if a particular type of mitigation activity is found overwhelmingly profitable in the marketplace” to confirm that this means overwhelmingly profitable from a non-carbon cash flow perspective (i.e., without the carbon revenues), rather than from a carbon crediting perspective (i.e., with the carbon revenues).                                                                                                                                                                                                              |
| 1554 | Luzia Bieri          | Criterion 8.1: Financial attractiveness | ge              | For the assessment of the overall likelihood that the type of mitigation activity is additional (step 1), carbon credit prices would be used to assess the change in financial attractiveness if carbon credits are considered. In criterion 8.1 (b-c and iii), it says: “The carbon credit price shall reflect the expected prices over time for the relevant type of carbon credit” and be “sourced from relevant carbon market transaction data, studies, and/or interviews with experts”. It will be difficult to use carbon credit prices in step 1 since there are no transparent sources for prices per carbon credit type and it is impossible to predict them.                                                                                                                                                                                                                                                                                                        | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1555 | Carolyn Ching        | Criterion 8.1: Financial attractiveness | te              | On bullet iii: carbon credit price. The market has very little data on carbon credit price, and strong price data is not free or publicly available to most project developers. Furthermore, the price of a credit can depend on what market the credit is being sold in. It's not realistic for NCS project developers who live in a forest community to have access to or know where to find this information.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Please remove this requirement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 1556 | Carolyn Ching        | Criterion 8.1: Financial attractiveness | te              | Financial additionality – Projects are considered additional only if revenue from selling carbon credits would make the activity financially viable. Financial additionality can be a useful test for technological projects, but it's not a good additionality test for NCS projects. In particular, for small landowners gathering the data and information needed to demonstrate financial additionality can be a burden. While some corporations may make decisions based solely on finances, a lot of individual actors (farmers and other landowners) don't often have perfect and complete information, which means they don't make decisions solely based on finances.                                                                                                                                                                                                                                                                                                 | We recommend ICVCM consider market penetration rates, positive lists, and performance standards as equally viable tests for demonstrating additionality. If there are concerns with the integrity of these approaches, we recommend identifying thresholds (as ICVCM developed for IRR thresholds in the financial additionality test) to ensure these approaches result in additional climate action instead of eliminating the options entirely.                                                                                                                                   |
| 1558 | Anonymous            | Criterion 8.1: Financial attractiveness | ge              | IC-VCM should not override the rigorous additionality requirements imposed by existing reputable registries. Furthermore, we disagree with the sentiment that the investment analysis must show that carbon revenues must specifically raise the financial feasibility above a yet to be defined financial benchmark. The sensitivity analysis even further complicates the approach. Such complexities require significant amounts of research and time to even determine whether a project is eligible, which ultimately could narrow participation to all but the largest carbon offset developers. The barrier analysis and market penetration analysis provide a good alternative to the financial analysis, but we disagree that the market penetration assessment must be combined with one of the other viability assessments rather than stand-alone and disagree with the subjective nature of applying “medium”, “high”, or “relatively low” assessment categories. | see comment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 1558 | Anonymous            | Criterion 8.1: Financial attractiveness | ge              | There are a variety of reputable means for testing additionality currently applied across the market. This includes performance standards that are used in combination with legal additionality tests, such as employed by ACR, CAR, and the California Air Resources Board. In some cases, where a wide range of individual and combined practices are additional, negative lists may be more effective than positive lists (as seen with CAR and Verra's soil organic carbon protocols). In our view, these different approaches do not need to be replaced, and we therefore recommend that the Expert Panel and IC-VCM Board carefully analyze existing approaches to additionality.                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| 1562 | Anonymous                                       | Criterion 8.1: Financial attractiveness   | te              | The IRR test required in Criterion 8.1 has multiple challenges. These include the inability to standardize an approach across sectors, geographies and financing structures; the inability to obtain benchmark IRR in certain sectors (such as forestry), the inherent variability in the cost of capital across project types, companies and geographies; the need to disclose confidential financial information on project returns and internal hurdle rates; and the ability to easily game the numbers and the difficulty in verifying the results. Benchmarks are inherently subjective. In the case of forestry projects, there is no consistent, industry accepted approach to underwriting investments in carbon projects with respect to future timber prices and carbon prices, but also related to other revenue streams (e.g., agricultural products, hunting and recreation leases). Deferring to the traditionally recognized financiers of timberland investments and agricultural activities, such as pension funds, would not provide the necessary benchmark information. There is no standard benchmark for land based carbon offset investments as there is simply not enough historical data on project performance available. Therefore, it would be very difficult to rely on sample data or literature, and, in our view, experts would be unable to provide a valid assessment of the indicators. The financial attractiveness parameters (I1, I2, I3) are not adequately defined (what's the basis of the 1, 0.7, and 0.3 values?) and requiring "no income", "very poor", or "relatively poor" financial attractiveness will ultimately disincentivize credible climate action. Embedded assumptions on benchmark IRR and carbon credit pricing further undermine the credibility of this approach. Because of this wide variability of financial inputs it could result in cases where projects that are deemed viable do not secure financing, while other projects that are deemed unviable do secure financing, somewhat weakening the use of this test to determine project additionality. | see comments                                                                                                                                                                                                                                                                                   |
| 1562 | Anonymous                                       | Criterion 8.1: Financial attractiveness   | te              | Carbon credit pricing is quite variable across project types, vintages and Standards (and other attributes), and thus, is also a source of subjectivity and potential gaming. It is also unclear what transaction costs are meant to be deducted, but project costs are also quite variable depending on a multitude of factors, and usually will be commercially sensitive. Criterion 8.2 introduces a detailed barrier assessment that would be evaluated by the Expert Panel, requiring the panel members to convert a qualitative judgement-based assessment into a statistical percentage. The subjectivity associated with this type of qualitative assessment, in particular, when conducted by experts that will not understand project details, is problematic. We recommend that Step 1 is removed from the Assessment Framework.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 0                                                                                                                                                                                                                                                                                              |
| 1563 | Belinda Rowsell                                 | Criterion 8.1: Financial attractiveness   | te              | Consider how the concept of "carbon pricing" translates into tax and accounting methods, policies, processes and procedures (including for both the physical and secondary/derivative market).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Consider establishing carbon pricing parameters (or guidance) for industry / sector / enterprise, as a frame of reference for the development of an internal cost of carbon (i.e., internalising the external carbon price) for carbon adjusted pricing (and carbon adjusted operating model). |

| 1564 | Anonymous                                       | Criterion 8.1: Financial attractiveness   | te              | IRR of type of mitigation activity is going to be quite hard to use as a benchmark for assessing any specific project or methodology, given how variable this is across geographies and scales. Carbon credit prices are a poor indicator given the immaturity of the market; there is no way for project developers to consistently predict what price they may be able to command. The Expert Panel is given an inappropriate role, given the impossibility of true expert knowledge of all types of mitigation activities and methodologies in all contexts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | This entire section should be reevaluated.                                                                                                                                                                                                                                                     |
| 1565 | Anonymous                                       | Criterion 8.2: Barriers to implementation | ge              | In the Criterion 8.2 "Barriers to implementation" we suggest reviewing the probability that the answers to all of the relevant questions is affirmative as follows: "Very high" shall be denoted if the probability is equal to or greater than 80%, "Medium" if the probability is larger than 60%, and "Low" if the probability is less than 60%.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | None                                                                                                                                                                                                                                                                                           |
| 1566 | Individual/employee, Perspectives Climate Group | Criterion 8.2: Barriers to implementation | ge              | Problematic. Barrier analysis has not worked under the CDM and will not work in the future. If at all, barrier analysis can only be undertaken for barriers that cannot be defined in monetary terms (those that can will need to be part of the investment test).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Problematic. | 1567 | Anonymous                                       | Criterion 8.2: Barriers to implementation | ge              | Having to conduct intensive barrier analyses is, in and of itself, an additional barrier for small projects and startups, which have limited personnel, time, and administrative capacity. Being a startup or small company is inherently barrier enough to warrant additional financial support. Availability of grant funding, tax credits, etc should not limit a small project's access to carbon credit funding as most grants and tax credits also require burdensome and prohibitive levels administrative time and effort to apply for.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Remove barriers to implementation as a criterion.                                                                                                                                                                                                                                              |

| 1568 | Emma van de Ven                                 | Criterion 8.2: Barriers to implementation | te              | 8.2c) grant funding will never reach the scale needed for climate smart interventions needed to achieve 1,5 degrees. Grant funding might help de-risk a loan or cover project development costs but it can never replace large-scale investments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Exclude grant funding                                                                                                                                                                                                                                                                                                                          |
| 1569 | Anonymous                                       | Criterion 8.2: Barriers to implementation | ge              | How is probability quantified? We understand that the assessment is likely to be mostly qualitative and thus do not understand how the proposed values will be used.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | n/a                                                                                                                                                                                                                                                                                                                                            |
| 1570 | Phil Cryle                                      | Criterion 8.2: Barriers to implementation | te              | It is not clear if the cookstoves example used as a barrier to implementation is the best case study because the way it is presented currently seems more like a financial attraction element than an implementation barrier one.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | It is not clear if the cookstoves example used as a barrier to implementation is the best case study because the way it is presented currently seems more like a financial attraction element than an implementation barrier one.                                                                                                              |
| 1571 | Luzia Bieri                                     | Criterion 8.2: Barriers to implementation | ge              | Criterion 8.2 (barriers to implementation): It is not clear how the Expert Panel would calculate the probability (>90%, <67%) that the implementation of a certain mitigation activity type is prevented by barriers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | n/a                                                                                                                                                                                                                                                                                                                                            |
| 1572 | Carolyn Ching                                   | Criterion 8.2: Barriers to implementation | te              | Bullet c: grant financing isn't consistent enough to be considered to be a requirement at the methodology or program level. Instead, this type of financing should be considered on a project basis through the financial additionally test. For example, in the US, there are grants available to farmers who join USDA programs to improve ag land management, but the programs are oversubscribed, and only a small fraction of landowners are able to access these grants. Even if grants are available, it doesn't mean the land owner has access to them.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Recommend removing grant financing as an example to this barrier.                                                                                                                                                                                                                                                                              |
| 1573 | Carolyn Ching                                   | Criterion 8.2: Barriers to implementation | te              | The expert panel is supposed to arrive at a probability of these barriers. It is not clear how an expert panel would calculate probabilities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Please clarify how to determine the probability given that these questions aren't framed as the likelihood of something happening.                                                                                                                                                                                                             |

| 1574 | Anonymous                                       | Criterion 8.2: Barriers to implementation | te              | The 'risk-based' scoring is a robust approach, but the 'expert judgement' scoring of probability (i.e. determining if a question can be answered affirmative with a 67% probability seems fairly complicated) does not give details as how to arrive at that expert judgement scoring.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                              |
| 1575 | Anonymous                                       | Criterion 8.2: Barriers to implementation | te              | We are concerned that using an Expert Panel to assess barriers will create bottlenecks. We are also concerned that the expert panel will not understand the variability of project types enough to make an accurate or objective assessment. It is also unclear why a financial barrier on its own would not be sufficient to demonstrate additionality in many cases. (QUESTION: For question 'c' it is unclear why an affirmative answer to this question would increase the likelihood of a project being additional.)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | see comments                                                                                                                                                                                                                                                                                                                                   |
| 1578 | Individual/employee, Perspectives Climate Group | Criterion 8.3: Market penetration         | ge              | Penetration rate could complement but should not substitute financial analysis as it cannot capture differences in resource availability dependent on the location.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Penetration rate could complement but should not substitute financial analysis as it cannot capture differences in resource availability dependent on the location.                                                                                                                                                                            |
| 1579 | Anonymous                                       | Criterion 8.3: Market penetration         | ge              | Market penetration is not a useful metric for highly decentralized industries like concrete products, especially with a cap as low as 5%. Concrete is the most abundant man made material in the world and responsible for 8-10% of global emissions, but because it is so heavy its production is highly localized and fragmented. Most concrete block producers are small mom and pop operations with little to no local competition and almost zero access to capital to decarbonize. Every single concrete plant in the world will have to decarbonize, including through the use of carbon removal. Retrofitting 5% of concrete block plants to remove carbon will not create market pressure on the remaining 95% due to the aforementioned localization, lack of competitive pressure, and lack of access to capital. Proving financial hardship for every single concrete producer is impractical and burdensome. Permanently mineralizing carbon into concrete should be considered inherently additional regardless of market penetration, because as long as any given plant is producing concrete blocks without carbon mineralization, they are both continuing to emit and leaving an opportunity for carbon removal untapped. | Increase the market penetration cap to at least 50% overall, consider an even higher cap or no market penetration cap at all for highly decentralized and fragmented industries.                                                                                                                                                               |
| 1580 | Josiah McClellan                                | Criterion 8.3: Market penetration         | ge              | Agree with using market penetration as an optional or complementary approach. Not all market penetration is parabolic, i.e., reaching a tipping point where the remaining market penetration happens naturally. Some market penetration is asymptotic, where some parts of the market face minimal barriers to transition and they transition quickly, but other parts of the market face significant barriers, have lower IRRs, and will not transition naturally. As proposed, the market penetration criterion would not apply to all markets or mitigation activities, and so it should remain optional or complementary.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Keep this criterion optional.                                                                                                                                                                                                                                                                                                                  |
| 1581 | Phil Cryle                                      | Criterion 8.3: Market penetration         | te              | Given that some of the other assessment points refer / rely on the crediting programs having appropriate mechanisms to assess viability, it would be useful to have visibility regarding how the market penetration assessment will also be linked or considered through a similar assessment on the topic by each specific crediting program.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Given that some of the other assessment points refer / rely on the crediting programs having appropriate mechanisms to assess viability, it would be useful to have visibility regarding how the market penetration assessment will also be linked or considered through a similar assessment on the topic by each specific crediting program. |

IC-VCM should ensure standards have appropriate rules for projects to set additionality, rather than stifling the market with sepcific requirements that are already out of date (and even if updated are likely to be out of date again quickly) |
| 1584 | Individual/employee, Conservation International | 0                                                                                               | te              | Financial attractiveness is the factor most heavily weighted in Step 1, which could be problematic for the pursuit of production activities such as IFM or ARR. Some level of financial attractiveness contributes to the long-term sustainability and permanence of a mitigation activity, and therefore, there may be issues if the CCP end up disincentivizing these types of "removals" activities. We have also seen projects that apply a "land-sharing" approach that uses non-native monoculture plantations on one portion of a project area to subsidize the cost of conservation efforts on another portion of a project area; it is not clear if such approaches would be considered as a whole for additionality assessments or whether such activities would be seen as two separate pieces, and there's no indication that the taxonomy of mitigation activities under CCP would be flexible enough to consider such approaches that mix high- and low-likelihood activities. | Consider a balanced weighting system between Criteria 8.1, 8.2, and 8.3 to avoid the CCP creating disincentives for specific mitigation activities.                                                                                                                                                                                                                                             |
| 1585 | Javier Castro                                   | Table 37 – Assessment of overall likelihood of additionality of the type of mitigation activity | te              | It is not clear what is meant with "typically". Such assessment might work for very special situations, like solar panels in sahara, where the exact location is not really relevant, but the same to try to apply to wind production in one region in Europe, will be a lot more delicate to define what is typical as every single location might have a different sitaution and result.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | I personally suggest to not use such appraoch for evaluation of projects as will affect projects that are totally additional, but according to IC-VCM due to a "typical" situation cannot get the status even if the standard will get the status.                                                                                                                                              |

| 1586 | Anonymous            | Table 37 – Assessment of overall likelihood of additionality of the type of mitigation activity | ge              | o we request that the IC-VCM considers the difficulties in defining a “typical project” when considering a risk-based assessment of additionality. Indeed, each project is unique and has project-specific elements, including project finances, IRR, and implementation practices. Considering the variability of each project, it would be very difficult for the Expert Panel to accurately assess additionality across an entire mitigation activity type. There is also concern that the Expert Panel’s judgement may be subjective and not easily replicable. Consider also that when assessing the financial additionality, it will be difficult to define a proper carbon credit price due to fast-changing market dynamics, difficulty finding reliable sources and the impossibility of predicting the future. The current market is not large enough nor liquid enough to provide reliable, transparent pricing of carbon credits. Since most credits are traded over the counter and crediting programmes do not require price disclosure, it is only possible to estimate an overall market average, but not a project-specific price which would be necessary to accurately use the financial criterion to assess additionality. Similarly, it will be important for the Expert Panel to clearly describe how a market-wide IRR is determined, if IRR is to be used in the additionality assessment. IRR will vary project-to-project and is both financing and geography dependent. | 0               |

| 1587 | Anonymous            | Table 37 – Assessment of overall likelihood of additionality of the type of mitigation activity | ge              | CVCM is substituting the judgment of the Expert Panel for the peer reviewed scientific criteria and subject matter experts of the registries.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0               |
| 1587 | Anonymous            | Table 37 – Assessment of overall likelihood of additionality of the type of mitigation activity | ge              | We do not agree with the proposed structure for assessing additionality, which would impose new requirements on crediting bodies and on project developers. It is unclear what problem these new requirements are solving, how they were developed, if/how they will add value and if they are even practical in terms of implementation and verifiability.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 0               |
| 1587 | Anonymous            | Table 37 – Assessment of overall likelihood of additionality of the type of mitigation activity | ge              | Specifically with regard to financial additionality, the IRR test has multiple challenges including the inability to standardize an approach across sectors, geographies and financing structures; the inability to obtain benchmark IRR in certain sectors (such as forestry); the need to disclose confidential financial information on project returns and internal hurdle rates; the ability to easily game the numbers and the difficulty in verifying the results.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0               |
| 1587 | Anonymous            | Table 37 – Assessment of overall likelihood of additionality of the type of mitigation activity | ge              | Furthermore, we disagree with the sentiment that the investment analysis must show that carbon revenues must specifically raise the financial feasibility above a yet to be defined financial benchmark. The sensitivity analysis even further complicates the approach. Such complexities require significant amounts of research and time to even determine whether a project is eligible, which ultimately could narrow participation to all but the largest carbon offset developers. The barrier analysis and market penetration analysis provide a good alternative to the financial analysis, but we disagree that the market penetration assessment must be combined with one of the other viability assessments rather than stand-alone and disagree with the subjective nature of applying “medium”, “high”, or “relatively low” assessment categories. Similarly, we agree that positive lists should be justified and periodically updated but disagree they must conform to the criteria for investment analysis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0               |

| 1587 | Anonymous            | Table 37 – Assessment of overall likelihood of additionality of the type of mitigation activity | ge              | In summary, over two decades of analysis and consideration of additionality testing has resulted in a variety of new approaches to assess additionality that are currently applied across the market. This includes performance standards that are used in combination with legal/regulatory additionality tests, such as employed by ACR (and the California Air Resources Board) as well as requirements for regulatory additionality combined with a barriers test. In our view, these do not need to be replaced, and we therefore recommend that the Expert Panel and IC-VCM Board carefully analyze commonly applied approaches to additionality. If necessary, specific suggestions can be considered from the ICVCM to identify ways to improve existing approaches, rather than imposing a new set of requirements that are impractical and do not improve the additionality assessment outcome.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0               |
| 1587 | Anonymous            | Table 37 – Assessment of overall likelihood of additionality of the type of mitigation activity | ge              | Specifically, as related to jurisdictional REDD+, the additionality test must be practical for implementation by governments, as employed by ART and as described below.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 0               |
| 1587 | Anonymous            | Table 37 – Assessment of overall likelihood of additionality of the type of mitigation activity | ge              | We are also concerned with the proposed requirement to conduct a financial attractiveness assessment on every project. In our experience, financial assessments are not always a robust approach for determining additionality, in particular when comparing the project scenario with and without carbon revenue. This is because this type of analysis is inherently subjective, due to variability in the cost of capital and pricing. The use of IRR alone is an insufficient measure of project viability since it ignores the cost of capital, which varies widely amongst project owners. For example, each company or project owner will have different access to and reliance on equity and debt, and this varies depending on the type of organization (e.g., for profit vs nonprofit). Then, different project owners will select different capital structures based on access and cost, which influences the project weighted average cost of capital (WACC), and the cost of capital will vary over time due to changes in macro and market conditions. Further, there is no consistent, industry accepted approach to underwriting investments in carbon projects with respect to future timber prices and carbon prices, but also related to other revenue streams (e.g., agricultural products, hunting and recreation leases). Deferring to the traditionally recognized financiers of timberland investments and agricultural activities, such as pension funds, would not provide the necessary benchmark information. There is no standard benchmark for land-based carbon offset investments and these would vary greatly by geography and project type (wetland restoration would be different than IFM on small private timberlands or from agricultural practices). Therefore, it would be very difficult to rely on sample data or literature, and, in our view, experts would be unable to provide a valid assessment of the indicators. Finally, because of this wide variability of financial inputs it could easily result in cases where projects that are deemed viable do not secure financing, while other projects that are deemed unviable do secure financing, somewhat weakening the use of this test to determine project additionality. | 0               |
| 1587 | Anonymous            | Table 37 – Assessment of overall likelihood of additionality of the type of mitigation activity | ge              | We also note that the subjectivity and variability of these analyses make them virtually impossible to verify with reasonable assurance, and verification bodies often lack the expertise to assess such subjective assumptions. It is equally difficult to secure qualified subcontractors to assist verifiers with this assessment, and the hired ‘experts’ often lack the relevant industry knowledge. Forcing verifiers to make these assessments will result in inconsistency across project verifications.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0               |
| 1587 | Anonymous            | Table 37 – Assessment of overall likelihood of additionality of the type of mitigation activity | ge              | As a critical input to these analyses, carbon credit price and transaction costs are highly variable and subject to change over time. Carbon projects can take years to develop. The speculative nature of this attribute in the financial analysis has real world, HUGE implications as to whether a project would be considered additional and pursued. In the absence of better, more specific guidance on how this must be implemented, this requirement could adversely affect project implementation with little actual basis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0               |

| 1587 | Anonymous                                       | Table 37 – Assessment of overall likelihood of additionality of the type of mitigation activity | ge              | As a specific example, forests are an asset with multiple potential revenue streams and management outcomes. IRR maximization is a motivator in considering multiple management pathways. However, it is not an exclusive motivator and amenity value is often equally or more important. IRR should be used as it is intended - as one attribute of a fuller decision framework for evaluating a management pathway. Requiring either “no income, cost savings or benefits other than carbon credit revenues” or “relatively poor financial attractiveness without carbon credit revenues” AND “carbon credits revenues significantly impact financial feasibility” AND “achievement of financial attractiveness with carbon credit revenues” sets an unrealistic bar for determining financial additionality. We suggest a more realistic approach which assesses whether carbon credits incentivize project action, rather than specifically or exclusively fund it. | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| 1589 | Eftimiya Salo                                   | Table 37 – Assessment of overall likelihood of additionality of the type of mitigation activity | te              | In the current draft, projects with “medium additionality” are CCP-eligible and they can pass the additionality test by demonstrating low availability of a project activity in a given area and that there are barriers for the project implementation which can be overcome by carbon credit revenues. However, this will only encourage project developers to select the “best” area where there are no similar activities to pass the low availability requirement. Choosing the project location based on commercial interests will have negative impacts on equality, leaving certain regions and their residents at a disadvantage. Similarly, barriers are easy to fudge and difficult to verify especially if VVB bodies don’t have local knowledge. This is too low a threshold which almost any project can pass.                                                                                                                                            | Only projects with high-likelihood of additionality should be CCP-eligible. The “medium” additionality likelihood is set too low and will allow projects with very questionable additionality to be CCP-eligible.                                                                                                                                                                                                                                                                                    |
| 1589 | Eftimiya Salo                                   | Table 37 – Assessment of overall likelihood of additionality of the type of mitigation activity | te              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | If assessing additionality in the final version is kept in the way it is in the draft - high likelihood and medium likelihood, this should be transparently communicated and visible as one of the attributes, so buyers could filter only projects with high likelihood of additionality. In order to avoid greenwashing, companies should reflect the likelihood of additionality in their corporate climate claims and communication, for instance being “carbon neutral with medium likelihood”. |
| 1590 | Anonymous                                       | Table 37 – Assessment of overall likelihood of additionality of the type of mitigation activity | ge              | While market penetration is more easily identifiable for certain mitigation activities (such as the installation of solar plants), it is unclear how this would be assessed for forest conservation, for example.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 8.3 Table 37 and 8.6(c)                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 1590 | Anonymous                                       | Table 37 – Assessment of overall likelihood of additionality of the type of mitigation activity | ge              | The Framework also refers 5% and 10% in two different parts of section 8. XXXX suggests a higher threshold to satisfy market penetration.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | We suggest offering more clarity on how market penetration would be assessed for different mitigation activities.                                                                                                                                                                                                                                                                                                                                                                                    |
| 1590 | Anonymous                                       | Table 37 – Assessment of overall likelihood of additionality of the type of mitigation activity | ge              | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | We also suggest a higher threshold to meet market penetration, such as 15% or 20%.                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 1591 | Individual/employee, Conservation International | Table 37 – Assessment of overall likelihood of additionality of the type of mitigation activity | te              | Hardly any procedure/details given on market penetration criterion, even an indication of whether it would be supported or penalized- needs to be further elaborated in the text in Section 8.3. The criterion comes up in the judging for a ‘medium’ likelihood of additionality in Table 37, if market penetration is low, <10%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Provide better explanation of market penetration criterion in text (clarify the additionality outcome of low vs. high penetration)                                                                                                                                                                                                                                                                                                                                                                   |

| 1595 | Individual/employee, Perspectives Climate Group | Criterion 8.4: Consideration of legal requirements | ge              | Grace period for non-enforcement should not exceed 5 years.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Grace period for non-enforcement should not exceed 5 years.                                                                                                                                                                                                                                                              |
| 1596 | Anonymous                                       | Criterion 8.4: Consideration of legal requirements | ge              | What happens when the legal requirement does not affect the financial viability of the project? For example, a legal requirement was adopted after the project was registered – however, the legal requirement does not affect project cashflow (positively or negatively) outside of revenues from the sale of carbon credits. In this case, does that mean that investors have to take the risk that a project may become non-viable if in the medium term legal requirements change and carbon credits cannot be issued anymore?                                                                                                                                                                                                                                                                   | n/a                                                                                                                                                                                                                                                                                                                      |
| 1597 | Anonymous                                       | Criterion 8.4: Consideration of legal requirements | ge              | · “Carbon-crediting programs should have provisions in place to assess whether a mitigation activity is implemented due to legal requirements. To ensure additionality is maintained, provisions should be in place to assess the existence of legal requirements both at validation of mitigation activities and regularly thereafter.”                                                                                                                                                                                                                                                                                                                                                                                                                                                              | .                                                                                                                                                                                                                                                                                                                        |
| 1597 | Anonymous                                       | Criterion 8.4: Consideration of legal requirements | ge              | The wording does not clearly specify whether crediting programs should embed in their methodologies provisions requiring assessment of legal requirements (through verification/validation processes) or whether crediting programs themselves should have that capacity in-house. We suggest the following amendment:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                                                                                                        |

| 1597 | Anonymous                                       | Criterion 8.4: Consideration of legal requirements | ge              | It is very difficult to predict for how long/when will a government enforce or put to practice legal requirements of any kind. We suggest removing the time limit requirement and rather highlight that a review of the enforcement status should be done periodically through regular validation audits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 0                                                                                                                                                                                                                                                                                                                        |
| 1598 | Anonymous                                       | Criterion 8.4: Consideration of legal requirements | ge              | It is not appropriate to assume no additionality if legal regulations are adopted after the start of the project, because this would not be consistent with the reality of the project. Whether or not to invest was determined before the adoption of laws and regulations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | No specific language proposed                                                                                                                                                                                                                                                                                            |
| 1598 | Anonymous                                       | Criterion 8.4: Consideration of legal requirements | ge              | It is big burden for businesses to annually confirm the introduction of legal regulations after the start of the project. It is disturbance to project formation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                        |
| 1598 | Anonymous                                       | Criterion 8.4: Consideration of legal requirements | ge              | It is understood that there are cases such as illegal logging where laws are in place but not followed, and that these cases are judged on a case-by-case basis. However, the scope of "non-enforcement is widespread" is unclear, and this description may be unnecessary.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                        |
| 1599 | Individual/employee, Conservation International | Criterion 8.4: Consideration of legal requirements | te              | The CCP provides a requirement that programs establish arbitrary time limits for when legal requirements are, “considered to be non-enforced,” despite changes to future enforcement being difficult or impossible to predict. This could harm perceptions or discourage development of projects in geographies where legal requirements have been created (e.g., due to internal or external political pressure) but have not been enforced (e.g., due to lack of resources or political will). Such a requirement could create barriers to scaling carbon finance and potentially cause projects to fail in contexts that have a particular need for carbon because they lack governmental enforcement of legal requirements.                                                                       | Provide a requirement that a standard/program implement a stringent evidence-based process for definitively proving non-enforcement of regulations. In general, requiring robust, evidence-based processes should be considered preferable to approaches that, although conservative, may rely on incorrect assumptions. |
| 1600 | Anonymous                                       | Criterion 8.4: Consideration of legal requirements | ge              | We believe the requirement of mitigation activities to comply ongoing with legal additionality could have perverse outcomes. A landowner could plant and manage a forest with the expectation of carbon credit revenue, but if this activity was made into law several years later, the afforestation activity would no longer meet the legal additionality requirement. However, the forest would then be negatively profitable (still meeting the financial additionality requirements). The following statement in Criterion 8.4 could deter participation in emissions removals (or reductions) activities: "Furthermore, emission reductions or removals will no longer be additional if, during the crediting periods, the mitigation activity would be implemented due to legal requirements." | We suggest removing the requirement to regularly assess compliance with legal additionality.                                                                                                                                                                                                                             |

| 1601 | Anonymous            | Rationale           | te              | "For that reason, the carbon-crediting program should limit the period that legal requirements are considered to be non-enforced" - If enforcement period is not known upfront, this recommendation may create investment uncertainty. To cater for this scenario whereby enforcement period is unknown, propose the once enforcement period is determined, past carbon projects be grandfathered to provide investment certainty.                                                                                                                                                                                                                                                                                            | In developing countries, legal requirements might not always be effectively enforced. This situation might be due to governments' time, resources and capacity limitations in establishing systems to monitor and enforce legal requirements. The history of implementing legal requirements for environmental issues is relatively recent in some developing countries compared with most developed countries, where capacities have been built to enforce such requirements over the years. If legal requirements are not enforced, a mitigation activity required by legal requirements can still be additional. However, the provisions should take into account that legal requirements could be enforced in the future. To protect investment certainty of a mitigation activity, the carbon-crediting program should allow grandfathering of mitigation activity such that any activity that is approved prior to enforcement period is considered to have met additionality criteria, and be eligible for the crediting period allowed by the crediting program.. |
| 1602 | Grace Blackham       | Rationale           | ge              | We strongly agree with the statement that mitigation activities required by legal requirements can still be additional if those legal requirements are not enforced.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | None                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 1602 | Grace Blackham       | Rationale           | ge              | However, it needs to be made clear throughout the consultation document that mitigation activities can be considered additional in when legal requirements are not enforced (there are many other places in the document where this was not made clear).                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1602 | Grace Blackham       | Rationale           | ge              | We think the requirements in Table 38 (credible and recent evidence to show that legal requirements are not enforced) are a suitable way of showing that a mitigation activity is still additional.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1602 | Grace Blackham       | Rationale           | ge              | To illustrate the importance of this caveat to additionality, we refer to the business-as-usual scenario in Brazil, as follows:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1602 | Grace Blackham       | Rationale           | ge              | Non-compliance with legal reserve requirements established by the Brazil Forest Code                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1602 | Grace Blackham       | Rationale           | ge              | The Brazil Forest Code requires that all rural properties in the country maintain a certain amount of land under native vegetation (called "Forest Legal Reserves"). In the Amazon biome, the Forest Legal Reserve required corresponds to 80% of the area. In addition, all rural landholdings must maintain natural vegetation along water courses and steep slopes to protect water resources and prevent erosion (Permanent Protection Areas or 'APPs').                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1602 | Grace Blackham       | Rationale           | ge              | Areas exceeding the legal reserve (ELR) requirements may be deforested pending authorization, provided they respect the requirements of maintaining Forest Legal Reserves and APPs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1602 | Grace Blackham       | Rationale           | ge              | The reality is different, and deforestation in the Amazon region commonly goes beyond the ELR limit. Once landowners start clearing their land, it is common practice that they do not respect the limits established by the law, and clear areas of Legal Reserve and APPs. A recent study has shown that in 92% of cases, deforestation goes beyond the areas of ELR (Trase, ICV, Imaflora 2022)[1].                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1602 | Grace Blackham       | Rationale           | ge              | The result of historic and uncontrolled deforestation results in vast areas that do not have sufficient forest legal reserve and could be restored. According to IBGE (Brazilian Institute of Geography), there are more than 6 million rural properties in Brazil, of which ca. 4 million properties covering ca. 250 million hectares don't have sufficient area of Legal Reserve[2].                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1602 | Grace Blackham       | Rationale           | ge              | While rampant illegal deforestation (and little forest restoration) has been observed, environmental agencies have been historically unprepared to monitor, verify and enforce the legislation. While modern remote sensing technology has made this job easier, a systematic dismantling of the capacity of environmental agencies have been observed in recent years. In the first year of the current government (2018), the budget of the Federal Environmental Agency, IBAMA, was reduced by 51%.[3] Declarations from the Minister of Environment at the time incited landowners to clear land for agricultural production and resulted in a significant increase in deforestation rates compared to previous years.[4] | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1602 | Grace Blackham       | Rationale           | ge              | The result of these actions is that there is no capacity and no political willingness to monitor, verify and enforce the law – only 1.2% of the illegal deforestation alerts raised in 2020 resulted in infraction notices (MapBiomas 2021). Another study MapBiomas shows that in the state of Pará, for instance, there were there were 60,857 deforestation alerts from 2019 to end of 2021; 59,774 of these had indication of illegalities but no enforcement action was taken.[5]                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 1602 | Grace Blackham       | Rationale           | ge              | Even though the justifications may vary, the overall conclusion is the same: the common practice observed in the Amazon region is the non-compliance with the regulatory framework defined by the Brazilian Forest Code. Combined with blatant lack of enforcement, these factors result in continuous and increasing loss of native vegetation in the Amazon region.                                                                                                                                                                                                                                                                                                                                                         | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| 1602 | Grace Blackham       | Rationale           | ge              | In summary, if mitigation activities required by legal requirements are not considered additional (even if those legal requirements are not enforced), no carbon finance can be used to counter these trends, and vast areas of native vegetation with high carbon stocks will continue to be at risk of deforestation and the VCM will not have any role to play in the NBS sector in Brazil.                                                                                                                                                                                                                                                                                                                                | 0                                                                                                                                                                                                                                               |

| 1602 | Grace Blackham       | Rationale           | ge              | [5] <a href="https://datastudio.google.com/embed/u/0/reporting/edba4d53-ed1d-40e7-9da7-0ad4050d55c8/page/p_ervp1r4arc">https://datastudio.google.com/embed/u/0/reporting/edba4d53-ed1d-40e7-9da7-0ad4050d55c8/page/p_ervp1r4arc</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                               |
| 1603 | Anonymous            | Rationale           | te              | I agree with the statement that mitigation activities required by legal requirements can still be additional if those legal requirements are not enforced.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | it needs to be made clear throughout the consultation document that mitigation activities can be considered additional in when legal requirements are not enforced (there are many other places in the document where this was not made clear). |
| 1603 | Anonymous            | Rationale           | te              | However, it needs to be made clear throughout the consultation document that mitigation activities can be considered additional in when legal requirements are not enforced (there are many other places in the document where this was not made clear).                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | I think the requirements in Table 38 (credible and recent evidence to show that legal requirements are not enforced) are a suitable way of showing that a mitigation activity is still additional.                                              |
| 1603 | Anonymous            | Rationale           | te              | I think the requirements in Table 38 (credible and recent evidence to show that legal requirements are not enforced) are a suitable way of showing that a mitigation activity is still additional.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                                                                               |
| 1603 | Anonymous            | Rationale           | te              | To illustrate the importance of this caveat to additionality, we refer to the business-as-usual scenario in Brazil, as follows:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0                                                                                                                                                                                                                                               |
| 1603 | Anonymous            | Rationale           | te              | Non-compliance with legal reserve requirements established by the Brazil Forest Code                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                                                                               |
| 1603 | Anonymous            | Rationale           | te              | The Brazil Forest Code requires that all rural properties in the country maintain a certain amount of land under native vegetation (called "Forest Legal Reserves"). In the Amazon biome, the Forest Legal Reserve required corresponds to 80% of the area. In addition, all rural landholdings must maintain natural vegetation along water courses and steep slopes to protect water resources and prevent erosion (Permanent Protection Areas or 'APPs').                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                                                                               |
| 1603 | Anonymous            | Rationale           | te              | Areas exceeding the legal reserve (ELR) requirements may be deforested pending authorization, provided they respect the requirements of maintaining Forest Legal Reserves and APPs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0                                                                                                                                                                                                                                               |
| 1603 | Anonymous            | Rationale           | te              | The reality is different, and deforestation in the Amazon region commonly goes beyond the ELR limit. Once landowners start clearing their land, it is common practice that they do not respect the limits established by the law, and clear areas of Legal Reserve and APPs. A recent study has shown that in 92% of cases, deforestation goes beyond the areas of ELR (Trase, ICV, Imaflora 2022)[1].                                                                                                                                                                                                                                                                                                                        | 0                                                                                                                                                                                                                                               |
| 1603 | Anonymous            | Rationale           | te              | The result of historic and uncontrolled deforestation results in vast areas that do not have sufficient forest legal reserve and could be restored. According to IBGE (Brazilian Institute of Geography), there are more than 6 million rural properties in Brazil, of which ca. 4 million properties covering ca. 250 million hectares don't have sufficient area of Legal Reserve[2].                                                                                                                                                                                                                                                                                                                                       | 0                                                                                                                                                                                                                                               |
| 1603 | Anonymous            | Rationale           | te              | While rampant illegal deforestation (and little forest restoration) has been observed, environmental agencies have been historically unprepared to monitor, verify and enforce the legislation. While modern remote sensing technology has made this job easier, a systematic dismantling of the capacity of environmental agencies have been observed in recent years. In the first year of the current government (2018), the budget of the Federal Environmental Agency, IBAMA, was reduced by 51%.[3] Declarations from the Minister of Environment at the time incited landowners to clear land for agricultural production and resulted in a significant increase in deforestation rates compared to previous years.[4] | 0                                                                                                                                                                                                                                               |
| 1603 | Anonymous            | Rationale           | te              | The result of these actions is that there is no capacity and no political willingness to monitor, verify and enforce the law – only 1.2% of the illegal deforestation alerts raised in 2020 resulted in infraction notices (MapBiomias 2021). Another study MapBiomias shows that in the state of Pará, for instance, there were there were 60,857 deforestation alerts from 2019 to end of 2021; 59,774 of these had indication of illegalities but no enforcement action was taken.[5]                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                               |

|------|----------------------|---------------------|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| 1603 | Anonymous            | Rationale           | te              | Even though the justifications may vary, the overall conclusion is the same: the common practice observed in the Amazon region is the non-compliance with the regulatory framework defined by the Brazilian Forest Code. Combined with blatant lack of enforcement, these factors result in continuous and increasing loss of native vegetation in the Amazon region.                                                                                                                                                                                                                                                                                                                                                         | 0               |
| 1603 | Anonymous            | Rationale           | te              | In summary, if mitigation activities required by legal requirements are not considered additional (even if those legal requirements are not enforced), no carbon finance can be used to counter these trends, and vast areas of native vegetation with high carbon stocks will continue to be at risk of deforestation and the VCM will not have any role to play in the NBS sector in Brazil.                                                                                                                                                                                                                                                                                                                                | 0               |
| 1604 | Grace Blackham       | Rationale           | ge              | We strongly agree with the statement that mitigation activities required by legal requirements can still be additional if those legal requirements are not enforced.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | None.           |
| 1604 | Grace Blackham       | Rationale           | ge              | However, it needs to be made clear throughout the consultation document that mitigation activities can be considered additional in when legal requirements are not enforced (there are many other places in the document where this was not made clear).                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0               |
| 1604 | Grace Blackham       | Rationale           | ge              | We think the requirements in Table 38 (credible and recent evidence to show that legal requirements are not enforced) are a suitable way of showing that a mitigation activity is still additional.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0               |
| 1604 | Grace Blackham       | Rationale           | ge              | To illustrate the importance of this caveat to additionality, we refer to the business-as-usual scenario in Brazil, as follows:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 0               |
| 1604 | Grace Blackham       | Rationale           | ge              | Non-compliance with legal reserve requirements established by the Brazil Forest Code                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0               |
| 1604 | Grace Blackham       | Rationale           | ge              | The Brazil Forest Code requires that all rural properties in the country maintain a certain amount of land under native vegetation (called "Forest Legal Reserves"). In the Amazon biome, the Forest Legal Reserve required corresponds to 80% of the area. In addition, all rural landholdings must maintain natural vegetation along water courses and steep slopes to protect water resources and prevent erosion (Permanent Protection Areas or 'APPs').                                                                                                                                                                                                                                                                  | 0               |
| 1604 | Grace Blackham       | Rationale           | ge              | Areas exceeding the legal reserve (ELR) requirements may be deforested pending authorization, provided they respect the requirements of maintaining Forest Legal Reserves and APPs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 0               |
| 1604 | Grace Blackham       | Rationale           | ge              | The reality is different, and deforestation in the Amazon region commonly goes beyond the ELR limit. Once landowners start clearing their land, it is common practice that they do not respect the limits established by the law, and clear areas of Legal Reserve and APPs. A recent study has shown that in 92% of cases, deforestation goes beyond the areas of ELR (Trase, ICV, Imaflora 2022)[1].                                                                                                                                                                                                                                                                                                                        | 0               |
| 1604 | Grace Blackham       | Rationale           | ge              | The result of historic and uncontrolled deforestation results in vast areas that do not have sufficient forest legal reserve and could be restored. According to IBGE (Brazilian Institute of Geography), there are more than 6 million rural properties in Brazil, of which ca. 4 million properties covering ca. 250 million hectares don't have sufficient area of Legal Reserve[2].                                                                                                                                                                                                                                                                                                                                       | 0               |
| 1604 | Grace Blackham       | Rationale           | ge              | While rampant illegal deforestation (and little forest restoration) has been observed, environmental agencies have been historically unprepared to monitor, verify and enforce the legislation. While modern remote sensing technology has made this job easier, a systematic dismantling of the capacity of environmental agencies have been observed in recent years. In the first year of the current government (2018), the budget of the Federal Environmental Agency, IBAMA, was reduced by 51%.[3] Declarations from the Minister of Environment at the time incited landowners to clear land for agricultural production and resulted in a significant increase in deforestation rates compared to previous years.[4] | 0               |
| 1604 | Grace Blackham       | Rationale           | ge              | The result of these actions is that there is no capacity and no political willingness to monitor, verify and enforce the law – only 1.2% of the illegal deforestation alerts raised in 2020 resulted in infraction notices (MapBiomias 2021). Another study MapBiomias shows that in the state of Pará, for instance, there were there were 60,857 deforestation alerts from 2019 to end of 2021; 59,774 of these had indication of illegalities but no enforcement action was taken.[5]                                                                                                                                                                                                                                      | 0               |
| 1604 | Grace Blackham       | Rationale           | ge              | Even though the justifications may vary, the overall conclusion is the same: the common practice observed in the Amazon region is the non-compliance with the regulatory framework defined by the Brazilian Forest Code. Combined with blatant lack of enforcement, these factors result in continuous and increasing loss of native vegetation in the Amazon region.                                                                                                                                                                                                                                                                                                                                                         | 0               |

| 1604 | Grace Blackham       | Rationale                                                                      | ge              | In summary, if mitigation activities required by legal requirements are not considered additional (even if those legal requirements are not enforced), no carbon finance can be used to counter these trends, and vast areas of native vegetation with high carbon stocks will continue to be at risk of deforestation and the VCM will not have any role to play in the NBS sector in Brazil.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                   |
| 1605 | Anonymous            | Rationale                                                                      | ge              | The language "However, the provisions should take into account that legal requirements could be enforced in the future. For that reason, the carbon-crediting program should limit the period that legal requirements are considered to be non-enforced." could be problematic. The reality on the ground is that it is highly difficult to predict or know when legal enforcement will take place and to what degree, particularly in the case of forest governance, which is notoriously poor throughout many countries globally. If a robust baseline can demonstrate that unplanned deforestation would take place over the crediting period of a project, then these emission reductions should be credited, and limits should not be artificially placed on the project. If a country is in transition and legal enforcement is improving, ongoing monitoring should capture this, and a review can be embedded into the project crediting and verification. | If a country is in transition and legal enforcement is improving, ongoing monitoring should capture this, and a review can be embedded into the project crediting and verification. |
| 1607 | Emma van de Ven      | Rationale                                                                      | te              | "Furthermore emission reductions or removals..." if a project intervention was implemented before laws changed (i.e. due to a change in leadership after an election) making the intervention mandatory, then the carbon finance was still the incentive to make the intervention happen. This is especially important in the case of NBS removals which take years to "earn back" through carbon payments. Please advise because this would exclude most countries with an ambiguous NDC commitment in the next few years, as well as any country that has impactful changes in policy due to a change in leadership (like the USA & most developing countries)                                                                                                                                                                                                                                                                                                   | Changing laws need much more thought than this brief mention. Please also consult with the UNFCCC for example.                                                                      |
| 1608 | Anonymous            | Means of assessment                                                            | te              | It is not feasible to re-check addiitonality at each issuance, and the IC-VCM seems to misunderstand the issuance process. Credits are generally issued when they are sold. For example, a project may verify 2020-2022 vintages in March of 2023. However, they will not issue 100% of these at the same time. They'll be issued as they are transacted, so that issuance fees are covered by the transaction. It makes zero sense to re-assess any technical requirements at the point of issuance.                                                                                                                                                                                                                                                                                                                                                                                                                                                              | There should be a specified time period to provide better investment certainty. For example, at every crediting period renewal, or every 5 years.                                   |
| 1608 | Anonymous            | Means of assessment                                                            | te              | The time to do so would be at verification or at crediting period renewal, when verifiers are reviewing the project monitoring reports. However, as noted above, it is a huge risk to investment to require full legal additionality at each verification (which could be annual, or even semi-annual in some cases). There should be a specified time period to provide better investment certainty. For example, at every crediting period renewal, or every 5 years.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0                                                                                                                                                                                   |
| 1609 | Anonymous            | Table 38 – Requirements for Criterion 8.4: Consideration of legal requirements | te              | Consideration of legal requirements. Initial threshold "2) an assessment shall be conducted prior to registration and prior to the renewal of the crediting period to confirm that no enforced legal requirements exist that might require the partial or full implementation of the mitigation activity;" and full "2) carbon credits shall only be issued if it is confirmed at each verification that no newly enforced legal requirements exist that would require the (full or partial) implementation of the mitigation activity during the monitoring period;"                                                                                                                                                                                                                                                                                                                                                                                              | Suggest that for existing projects this is only done at the end of the crediting period                                                                                             |
| 1609 | Anonymous            | Table 38 – Requirements for Criterion 8.4: Consideration of legal requirements | te              | If CCP alignment can be withdrawn at any point when a verification is done (in line with the "full" threshold) then this introduces a significant risk to project developers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                   |
| 1610 | Anonymous            | Table 38 – Requirements for Criterion 8.4: Consideration of legal requirements | te              | Initial threshold points 2 and 3 are confusing and in conflict with the text above. Is additionality re-assessed at issuance, verification or crediting period renewal?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Additionality should only be re-assessed at crediting period renewal or a fixed period (e.g., 5 years).                                                                             |

| 1610 | Anonymous                      | Table 38 – Requirements for Criterion 8.4: Consideration of legal requirements | te              | Full threshold: "legal requirements should be confirmed at each verification...". How often does the IC-VCM think projects verify? This can be as short as every 6 months. And with future more automated MRV systems it could be even more frequent. It is not at all feasible to re-assess additionality that frequently and would completely undermine the ability to invest. Anything less than 5 years will lead to a perverse incentive to not implement new policy, as there would be strong lobbying against action. Providing more investor certainty through longer periods of time (e.g., 5 years) would help prevent such lobbying. | Note this is too much detail for a principles-based framework as opposed to a standard, and IC-VCM should focus on governance, rather than these detailed provisions.                                                                                                                                                                                                                                                                                                                                                                   |
| 1610 | Anonymous                      | Table 38 – Requirements for Criterion 8.4: Consideration of legal requirements | te              | 4.ii- same questions on "recent" and "widespread"; "limit the length of time" - what is a reasonable time?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 1611 | Individual/employee, Finnwatch | Table 38 – Requirements for Criterion 8.4: Consideration of legal requirements | ge              | Under requirement b) 4. there should not be an exception for "other than high-income countries" to have additionality when activity is legally required, but not not enforced. Apart from challenges for the assessment, this is problematic as it can lead to a situation where the host country does not have an incentive to enforce its laws in the future, if the activity in question is funded by carbon markets.                                                                                                                                                                                                                        | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 1612 | Eftimiya Salo                  | Table 38 – Requirements for Criterion 8.4: Consideration of legal requirements | te              | "For countries other than high-income countries, legal requirements shall only be deemed to be not enforced if credible and recent evidence is provided that non-enforcement is widespread." This exception suggests that carbon projects in developing countries will pass the legal requirements even if they overlap with an already existing policy if enforcement is lacking.                                                                                                                                                                                                                                                              | The Voluntary Carbon Market's role is not to displace needed governmental action as this will only prolong the lack of enforcement by providing a short-term solution to a very deep and fundamental problem. The role of the carbon projects is to increase ambition beyond the baseline of what countries have already committed and when projects are used as fixing a failed enforcement this sends the wrong message and incentivises further inaction. Lack of enforcement is also an indicator of very high risks to permanence. |
| 1612 | Eftimiya Salo                  | Table 38 – Requirements for Criterion 8.4: Consideration of legal requirements | te              | A recent example from Indonesia, where the government amnestied 75 companies operating illegally inside forest areas. "Under the 2013 law on the prevention and mitigation of forest degradation, activities like oil palm cultivation and mining are prohibited from operating on lands zoned as forest areas, but many companies have done so anyway amid lax oversight."                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 1613 | Anonymous                      | Table 38 – Requirements for Criterion 8.4: Consideration of legal requirements | ge              | Table 38 rightfully recognizes that mitigation activities are still considered additional in low-income countries where the enforcement/adherence to legal requirements or regulations are typically not met.                                                                                                                                                                                                                                                                                                                                                                                                                                   | We suggest removing the time limit requirement under this criterion, as there is rarely a quantifiable or predictable time frame for enforcement of laws or regulations in developing/emerging economies.                                                                                                                                                                                                                                                                                                                               |
| 1613 | Anonymous                      | Table 38 – Requirements for Criterion 8.4: Consideration of legal requirements | ge              | However, XXXX' concern lies in the last section of Table 38 where crediting programs are required to set a time limit until when a legislation can be deemed unenforced. Even in a developing or emerging economy, it is not necessary that enforcement of a legislation becomes active after any number of years. Such time frames on the legislation may be purely aspirational and non-enforcement may be widespread after several years. This requirement might then end up discouraging much needed projects in the region.                                                                                                                | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 1614 | Luzia Bieri                    | Table 38 – Requirements for Criterion 8.4: Consideration of legal requirements | ge              | Criterion 8.4 (full threshold) says that "the crediting program has in place requirements that limit the length of time in which legal requirements may be deemed unenforceable after legal requirements are adopted". It is difficult to determine a fixed length of time during which non-enforcement can be accounted for. In general, it should be valid for the entire crediting period. However, it is necessary to provide clear guidance on when non-enforcement is considered to be widespread.                                                                                                                                        | No limit to the length of time in which legal requirements may be deemed unenforceable.                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| 1617 | Anonymous                                       | Table 38 – Requirements for Criterion 8.4: Consideration of legal requirements | te              | “Carbon credits shall only be issued if it is confirmed at each verification that no newly enforced legal requirements exist that would require the (full or partial) implementation of the mitigation activity during the monitoring period” – on a project level, this might create serious uncertainties restricting investments since the business case for some project types requiring upfront investment and late returns (e.g. ARR projects) would need certainty of carbon revenues over time. Suggest this wording to be softened as this is currently too restrictive.                                                                                                                                      | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1618 | Pedro Moura Costa                               | Criterion 8.5: Evidence showing expectation of carbon credits                  | te              | This requirement was used in the past to assess whether renewable energy plants, for instance, would be built without carbon finance. In most cases, this was totally ineffective, as most projects are motivated by a series of factors, not only carbon finance. In the case of NBS projects, this requirement may also preclude the involvement of a series of projects involving rural landowners that have never heard of carbon markets, but that would change their ways if a financial incentive (in this case, carbon) were to be provided. Carbon markets should be seen as a provider of additional incentives to help change behaviour, but not as the single silver bullet that makes all the difference. | This requirement is inappropriate                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

The guidance notes that at present most carbon crediting programs do not have this requirement, so the necessary documentation is not available and could not be available prior to a project start date. More guidance is needed on how this would apply to existing projects that have otherwise met the ICVCM additionality requirements.                                                                                                                                                                                         |
| 1621 | Anonymous                                       | Criterion 8.5: Evidence showing expectation of carbon credits                  | ge              | No major crediting programmes currently include this criterion in their methodologies, thus very few projects would be able to retroactively provide evidence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| 1623 | Phil Cryle                                      | Criterion 8.5: Evidence showing expectation of carbon credits                  | te              | While there is good logic in the requirement for evidence showing expectation of carbon credits, and it is definitely applicable to some project types, there are instances where carbon financing was not considered for many reasons at the start of the project (e.g., lack of knowledge, smaller size relevant to market prices at the time, etc.) and received grant / donor funding instead, which could only last for a period. It would be useful to get clarity on how the assessment considers projects that want to utilise blended financing even when the blend was not fully considered right from the start.                                                                                            | While there is good logic in the requirement for evidence showing expectation of carbon credits, and it is definitely applicable to some project types, there are instances where carbon financing was not considered for many reasons at the start of the project (e.g., lack of knowledge, smaller size relevant to market prices at the time, etc.) and received grant / donor funding instead, which could only last for a period. | 1624 | Individual/employee, Conservation International | Criterion 8.5: Evidence showing expectation of carbon credits                             | te              | There seems to be no possibility for a standard to allow projects that pursue carbon crediting after their initial conception due to unforeseen or unpredictable circumstances (e.g., loss of funding, disasters, other such conditions where carbon finance would be required to start or continue implementation of otherwise eligible mitigation activities).                                                                                                                                                                                                                                                                                                         | Provide criteria that would allow standards/programs to provide robust, evidence-based processes for proving a need for carbon-crediting finance in such circumstances.                                                                                                                                                                                                                |
| 1625 | Individual/employee, Conservation International | Criterion 8.5: Evidence showing expectation of carbon credits                             | te              | RE Criterion 8.5; criterion 8.3 :                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Eliminate the expectation of credits as a criteria for demonstrating additionality.                                                                                                                                                                                                                                                                                                    |
| 1625 | Individual/employee, Conservation International | Criterion 8.5: Evidence showing expectation of carbon credits                             | te              | The provision that activities are only additional when they can demonstrate the expectation of carbon credits is potentially perverse, discriminatory, and counterproductive. Such a criteria does not exist in any current system, for good reason.                                                                                                                                                                                                                                                                                                                                                                                                                     | 0                                                                                                                                                                                                                                                                                                                                                                                      |
| 1626 | Carolyn Ching                                   | Criterion 8.5: Evidence showing expectation of carbon credits                             | te              | Prior consideration of carbon credit revenue – All projects are required to demonstrate that they had considered carbon financing prior to the start of the project. This was required under the CDM, but VCM standards do not require this. Because this wasn't required, many of the VCM projects that have already issued credits will not meet this criterion. This could potentially strand a lot of good projects, and stranding projects will have implications for companies that either (1) have a forward purchase agreement, or (2) have already purchased and retired credits from those projects. ICVCM should reconsider if this requirement is necessary. | We recommend that ICVCM remove this requirement or develop a pathway to ensure that high quality credits, that are unable to demonstrate prior consideration of carbon credits, have a pathway to CCP eligibility.                                                                                                                                                                     |
| 1629 | Anonymous                                       | Rationale                                                                                 | te              | Re the date "or the date when the first expenditures are incurred"                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Please provide guidance on what expenditures are included and excluded. The project proponent may have to spend money on design of the project, methodology development etc to assess feasibility. Or does this only relate to expenditure on physical equipment? Or is it just sufficient to follow the "full" threshold criteria (in which case this sentence is probably redundant) |
| 1630 | Anonymous                                       | Rationale                                                                                 | te              | This is not an agreed definition of a start date and should not be used. Most programs define the start date as the date on which the action to reduce emissions begins.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Change the definition of start date.                                                                                                                                                                                                                                                                                                                                                   |
| 1631 | Anonymous                                       | Means of assessment                                                                       | ge              | For natural regeneration, it is often difficult to determine when the start date occurs. For these types of mitigation activities (natural regeneration and reforestation), it could be difficult to conclusively and objectively prove meeting this criterion.                                                                                                                                                                                                                                                                                                                                                                                                          | We suggest making this criterion less stringent for natural regeneration and reforestation activities.                                                                                                                                                                                                                                                                                 |

| 1634 | Anonymous                                       | Table 39 – Requirements for Criterion 8.5: Evidence showing expectation of carbon credits | ge              | Criterion 8.5, as noted by ICVCM, goes beyond the project start date requirements established by the registries. The existing deadlines for validation/registration of a project following the start date serves to screen out pre-existing projects while allowing project developers some flexibility in navigating robust reporting and documentation rules.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 0                                                                                                                                                                                |
| 1634 | Anonymous                                       | Table 39 – Requirements for Criterion 8.5: Evidence showing expectation of carbon credits | ge              | An additional requirement to provide evidence that carbon credits were explicitly considered prior to the project start date will add an undue administrative burden to project developers and will needlessly exclude some high-quality projects from CCP eligibility. We recommend the removal of criterion 8.5 from the assessment of additionality.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 0                                                                                                                                                                                |
| 1635 | Luzia Bieri                                     | Table 39 – Requirements for Criterion 8.5: Evidence showing expectation of carbon credits | ge              | Criterion 8.5 (full threshold): There should not be any limitation in terms of the numbers of years that may pass between the date of proof of prior consideration of carbon credits and the registration of the mitigation activity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | No limitation in terms of the numbers of years that may pass between the date of proof of prior consideration of carbon credits and the registration of the mitigation activity. |
| 1636 | Anonymous                                       | Table 39 – Requirements for Criterion 8.5: Evidence showing expectation of carbon credits | ge              | Registries' start date requirements with relevant verification/validation deadlines help ensure that carbon credits are actively considered as the activity begins implementation. Asking for additional documented evidence increases the burden on crediting program. It is typically not practical to list a project before implementation due to the complex contracting that must occur before a project proponent can commit to undertaking an activity and going through the know-your-client process to open a registry account. The small windows registries provide to list a project immediately after activity implementation recognize this reality, without reducing the quality of the projects. Furthermore, putting burden on registries to evaluate other forms of documentation (and to determine whether such documentation is legitimate and not fabricated) does not seem to be a viable option to demonstrate that carbon credits were considered prior to development.                                                                                                   | n/a                                                                                                                                                                              |

Investment analysis needs to be part of all assessments                                                                                                           |
| 1640 | Anonymous                                       | Criterion 8.6: Approaches to assess the viability of mitigation activities                | te              | "Viability" or "additionality"? This is strange wording.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | See above.                                                                                                                                                                       |
| 1640 | Anonymous                                       | Criterion 8.6: Approaches to assess the viability of mitigation activities                | te              | As noted above, these tests are flawed and the combinations required do not make sense. IC-VCM should not prescribe additionality steps. It should ensure that programs have proper governance, stakeholder input and update requirements that ensure proper additionality consideration. This section ignores one of the best ways to establish additionality and high-quality baselines-- performance benchmarks. Ignoring this option is further proof of the problem this section proposes- it contrains innovation and keeps locked-in an outdated means of assessing additionality for many project types. Especially for new technologies and approaches (which is what carbon markets are meant to help incentivize), market penetration and sector-wide performance are much better than financial additionality at gauging whether an activity (and the extent the activity) is business as usual. Missing this critical evolution of the market is evidence that this body is ill equipped to set this level of technical requirements and should not pretend to be a standards body. | 0                                                                                                                                                                                |
